		tx		Tx		u	pto X
;	,	fx		F.x		fi	ind X
							:h mark-motions
n <i>m</i>	set m (a-z)		m <i>M</i>	set mark # (A-Z) acros files	s	'[jump to first char of just- changed text
m	char o	to first if line ning #	` m	jump to ex character o		' '	jump back to last jump

Pass a directory to the :edit command to open a directory explorer. Instructions for usage are at the top of the screen.

ENTERING INSERT MODE

beginning of line	Ι	before cursor	i	after cursor	а	end of line	Α		_
previous line	0	next line	0	substitute character	s	substitute line	S	line from cursor	(

ENTERTNIC VICUAL (CELECT) MORE

ENTERING	2 A120YF (2	ELECI) M	ODE	
	l ease to varacters line.	Useful for moving churks of a program around the file. Use discussifies mode to select one or more lines.	^v	reat for working ith tables made of ext, or anything hat happens to be onveniently aligned. iswal Block mode an be used to select oxes across lines.
switch cursor to start/end C :h v_o	re-select previous area :h gv	prepend to each Visual block line :h v_b_I		to start rior area :h ' <
ZZ Write of and qu	turrent file, if modified,		without ched	

:write Write current file

: wq Use :scriptnames to list all files sourced during initialization.

Write current file and quit

Enable and configure syntax highlighting
Use :sy sync fromstart to redraw broken highlights :make Run a compiler and enter quickfix mode

Filter motion with shell

Use :earlier and :later to quickly jump backward and forward in a file's history.

Read external program output into current file :read

tabstop ts Columns per tabstop ts sw sts et use spaces only n n n on shiftwidth sw Columns per KK use tabs only softtabstop sts Spaces per tab Set n to desired tab width (default 8) expandtab et (Tab) inserts spaces MIXING TABS AND SPACES IS RIGHT OUT. Replace all tabs with spaces according to current :retab tabstop setting fileformat ff Try changing this if your line-endings are messed up Display whitespace visibly according to listchars

next 1 end of en

р	paste after cursor	Р	paste before cursor	^[return to Normal mode
u	undo	^r	redo		repeat
gf	find file under cursor in path and jump to it	dd	delete current line	уу	yank current line
x	delete character after cursor	%	jump to matching paren	r	replace char under cursor
<i>n</i> G	jump to line n	^0	jump back	^i	jump forward
zz	center screen on cursor	zt	align top of screen with cursor	zb	align bottom of screen with cursor
==	auto-indent current line	<<	shift current line left by shiftwidth	>>	shift current line right by shiftwidth

Using ^[to return to Normal mode lets you keep your fingers on the home row. It's even easier if you map Caps Lock to Control!

COOL INSERT MODE STUFF

7				
	^w	delete word before cursor	^u	delete line before cursor
	^r <u>r</u>	insert the contents of register r	^r=	use the expression register (try *r=5+10)
	^t	increase line indent by shiftwidth	^d	decrease line indent by shiftwidth
	^*^1	line completion	^n	find next completion suggestion

COMMAND-LINE MODE ONLY

				OPEN	
edit using mal mode cmdwin	insert word under cursor cmdline-editing	^r^v	V cmdline	completion suggestions -completion	^d
noremap %% (C-R)=exp	and('%:h').'/'(CR)	in your .vimre :	so you can ty	pe 🌃 in Cor	mmand-line

Put enormap %% <c-r>=expand(*%:h*).*/* mode to refer to the directory of the currer</c-r>	cRs in your living so you can type to in Common file, regardless of pad.	nand-line
Supply % as a range to the :substi	tute command to run it on every line in	the file.
:%s/Scribbl/Design/	"Scribbled" -> "Designed"	
Specify the "g" flag to apply the sub-	stitution to every match on a line.	
:s/[dla]//g	"badly" -> "by" :h s_flag:	s, :h/[]
Vim supports many regular expression	on features.	
:s/k/ax/	"Mook" -> "Max" :h usr_	27, :h /.
Use \ instead of . if you want to	search across multiple lines.	
:%s/heat*Bungle/anto/	"Cheatsheet\nBungler" -> "Cantor"	:h /\
Special escapes can be used to chan	ge the case of substitutions.	
:s_\(f\)_\U\1\E_	"foobar" -> "FOObar" :h sub-replace	e-special
Use : global to perform a comman	d on matching lines.	
:g/foobar/delete	Delete all lines containing "foobar"	
If your pattern contains slashes, just	use a different character as your delimite	r.
:s_Data/Lore_Brent Spiner_		

"10 25" -> "21 36"

Use \= to evaluate expressions with replacement groups.

:s_\d_\=submatch(0) + 1_g

:h <i>cmd</i>	Normal mode <i>cmd</i> help
:h i_ <i>cmd</i>	Insert mode <i>cmd</i> help
:h v_ <i>cmd</i>	Visual mode cmđ help
:h c_ <i>cmd</i>	Command-line editing cmd help
:h : <i>cmd</i>	Command-line cmd help
:h 'option'	Option help
:helpgrep	Search through all help docs!

^]	Jump to tag under cursor, including [tags] in help files
^t	Jump back up the tag-list
a^1	Jump to tag if it's the only match; else list matching tags

			:n keycodes
<cr></cr>	^m	\r	Enter
<tab></tab>	^i	\t	Tab
<c-n></c-n>	^n		Ctrl-n
<m-<i>n></m-<i>			Alt-n
<esc></esc>	^[Escape
<bs></bs>	^h	\b	Backspace
			Delete

Use a instead of i when beginning textobject motions to include delimiters or surrounding whitespace. For example, di (will change "(foo)" into "()", but da(will delete the parentheses as

Use : map to

custom key

view all current

mappings. Read

eys for a guide on which keys are best for your own custom mappings. Get

used to Vim's help system it's a fantastic resource!

7 words http://www.vimcheatsheet.com 1 WORD

	:h optio
:set opt?	View current value of opt
:set no <i>opt</i>	Turn off flag opt
:set opt	Turn on flag opt
:set opt=val	Overwrite value of opt
:set opt+=val	Append to value of opt
:echo &opt	Access opt as a variable

	:h buffers
:ls	List all open files
:b <i>path</i>	Jump to unique file matching path. Use Tab> to scroll through available completions!
: b <i>n</i>	Jump to file n , number from first column of :ls
:bnext	Jump to next file
:bprev	Jump to previous file
:bdelete	Remove file from the buffer list
:edit	Open a file for editing
:enew	Open a blank new file for editing
	:h windows
:split	Split current window horizontally
:vsplit	Split current window vertically
^w hjkl	Move cursor to window left, below, above or to the right of the current window
^w HJKL	Move current window to left, bottom, top, or right of screen
^w r	Rotate windows clockwise
^w +-<>	Increase/decrease current window height/width
^w T	Move current window to a new tab
-	Close all windows except current window
:only	close all willdows except current willdow

hidden	hid	Lets you switch buffers without saving	
laststatus	Is	Show status line never (0), always (2) or with 2+ windows (1)	
hlsearch	hls	Highlight search matches. Also see 'highlight'	
number	nu	Show line numbers	
showcmd	SC	Show commands as you type them	
ruler	ru	Show line and column number of the cursor	
backspace	bs	Set to '2' to make backspace work like sane editors	
wrap		Control line wrapping	
background	ba	Set to 'dark' if you have a dark color echame	

REGISTERS are CLIPBOARDS

All commands that delete, copy, or paste text use registers. To change which register is used by a command, type the register before the command. The default register is called "the unnamed register", and it is invoked with a pair of double-quotes ("""). Typing dd or vy is the same as typing ""dd or ""vy. Think of the first " as a short way

ing dd or yy is the same as typing ""dd or ""yy. Think of the first " as a short way of saying "register", so "" is pronounced "register ", and "a, "register ". h registers				
:regis	sters	View all current registers		
:echo	@ _	Access register ** as a variable		
"/	Last search pattern register	Contains the last pattern you searched for		
"_	The black hole register	Use this to delete without clobbering any register ("_dd)		
"0	Last yank register	Contains the last text you yanked		
"1	Last big delete register	Contains the last line(s) you deleted		
"2-"9	Big delete register stack	Every time "1 is written to, its content is pushed to "2, then "2 to "3, and so on		
"-	Small delete register	Contains the last text you deleted within a single line		
"+	System clipboard	If the OS integration gods smile upon you, this register reads and writes to your system clipboard.		
"a-"z	Named registers	26 registers for you to play with		
"A-"Z	Append registers	Using upper-case to refer to a register will append to it rather than overwrite it		
q r	Record	Record into register \boldsymbol{r} . Stop recording by hitting $\overline{\mathbf{q}}$ again		
@ r	Playback	Execute the contents of register r		
രര	Repeat last	Repeat the last @r, this is particularly		

useful with a count
