Religion

Details on religions, quotes and ethics

"When I do good, I feel good. When I do bad, I feel bad. That's my religion."
Abraham Lincoln

Introduction

During hardship people may seek solace in religions and ask the bigger questions in life. This category also includes a section on ethics throughout history which may be of interest or help at some point.

Purpose	The aim of RELIGION is to provide a quick summary of the big religions of the world, what they stand for and the denominational splits over time. The end of this category features preparedness related quotes from well known individuals and the different ethical standards which have been used throughout history.
Lost?	● For information on the rapture, see the MASS DESTRUCTION section. ● For the ethics of killing other humans, see the OFFENCE section. ● For mental problems such as depression, see the EMOTIONAL section.

1 Religious Differences

There's approximately 4,200 current religions on planet earth. Due to this reason they all couldn't have their own section below so just a few have been selected for this category, namely; Christianity, Judaism, Islam, Hinduism, Sikhism, Atheism and Buddhism.

Religion By Percentage	Christianity	Islam	Unaffiliated	Hinduism	Buddhism	Folk Religion	Other
	33%	24.1%	16%	16%	7%	5.9%	0.8%

Faith Comparison

	Christianity	Judaism	Islam	Hinduism	Buddhism

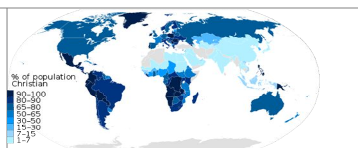
Origin of the Name	From the Greek: christos, 'Anointed' - referring to Jesus Christ.	From the Hebrew: Yehudim, 'Judah'.	Derived from an Arabic word for 'submission'. Also related to the Arabic word salaam, 'peace'.	The word Hindu is derived from the Indo-Aryan and Sanskrit word Sindhu, which means "a large body of water", covering "river, ocean".	Siddhartha Gautama was called the "Buddha". Buddha is one who has attained Bodhi - an ideal state of intellectual and ethical perfection.	**Origin of the Name**
Founder	Jesus Christ, who was crucified around A.D. 30 in Jerusalem.	The Hebrew leader Abraham founded Judaism around 2000 B.C. Moses gave the Jews the Torah around 1250 B.C.	Muhammad, who was born in A.D. 570 at Mecca, in Saudi Arabia.	Hinduism has no founder. An old religion it dates back to around 2300-1500 B.C.	Siddhartha Gautama, called the Buddha, in the 4th or 5th century B.C. in India.	**Founder**
Beliefs	Jesus taught love of God and neighbour and a concern for justice.	Jews believe in the laws of God and the words of the prophets. In Judaism, however, actions are more important than beliefs.	The Five Pillars, or main duties, are: profession of faith; prayer; charitable giving; fasting during the month of Ramadan; and pilgrimage to Mecca at least once.	Reincarnation states that all living things are caught in a cycle of death and rebirth. Life is ruled by the laws of karma, in which rebirth depends on moral behaviour.	The Four Noble Truths: (1) all beings suffer; (2) desire for possessions, power, and so on causes suffering; (3) desire can be overcome; and (4) the path that leads away from desire is the Eightfold Path (the Middle Way).	**Beliefs**
Types	Three main groups: Orthodox, Protestant and Roman Catholic	The three main types are Orthodox, Conservative, and Reform. Conservative Jews follow most traditional practices, but less strictly than the Orthodox. Reform Jews are the least traditional.	Almost 90% of Muslims are Sunnis. Shiites are the second-largest group.	No single belief system unites Hindus. A Hindu can believe in only one god, in many, or in none.	Theravada (Way of the Elders) and Mahayana (Greater Vehicle) are the two main types.	**Types**
Adherents	2.2 billion	14 million	1.6 billion	1 billion	500 million	**Adherents**
Gods	1	1	1	Many (All gods are considered different forms of one Supreme Being.)	None, but there are enlightened beings (Buddhas)	**Gods**
Nature of God	One God, who exists in three distinct persons (The Trinity): Father, Son and Holy Spirit (Matthew 28:19).	One God (known in English as 'Yahweh' or 'Jehovah') - "...Hear Israel, the Lord is our God, the Lord is one." (Deuteronomy 6:4).	One God (Arabic: Allah), who is not a trinity. The Islamic view of God is called strict Monotheism (Quran 112:1).	Many gods, but realize that they all come from Atman.	There is no belief in a personal god. Buddhists believe that nothing is fixed or permanent and that change is always possible.	**Nature of God**
Jesus Christ	The second person of the Trinity and born of the Virgin Mary.	An ordinary Jew, not the Messiah nor a divine person.	Isa (Jesus) was a prophet, sent by Allah and born of the Virgin Mary, but not divine (Quran 5:17).	Jesus' proclamation "The Father and I are one" confirmed the Hindu idea that everyone can realize his own universal "god-consciousness."	The Dalai Lama stated that "Jesus Christ also lived previous lives", and added that "So, you see, he reached a high state, either as a Bodhisattva, or an enlightened person, through Buddhist practice or something like that."	**Jesus Christ**
The Mission of Jesus Christ	To reconcile Man to God, through his death as a sacrifice for the sins of all mankind.	As Judaism rejects the idea of Jesus as Messiah, his mission is of no relevance.	To proclaim the Injil, or gospel. This gospel has been corrupted over time by human additions and alterations.	Jesus travelled across Southeast Asia, learning yogic traditions and returned home to be a guru to the Jews.	To achieve enlightenment.	**The Mission of Jesus Christ**
The Death of Jesus Christ	For our sake He was crucified, He suffered death and was buried. On the third day He rose again, then ascended into heaven.	Jesus was crucified for his claim to be divine.	Jesus was not crucified (Quran 4:157), but was raised to Heaven by Allah (4:158).	Upon his death Jesus became enlightened and merged with the Godhead, which is the Hindu idea of the force from which all creation springs.	The crucifixion of Jesus for the atonement of sins is a direct contrast to Buddhist teachings.	**The Death of Jesus Christ**
	Christianity	**Judaism**	**Islam**	**Hinduism**	**Buddhism**	
Holy Spirit	The third person of the Trinity, truly divine. With the Father and the Son he is worshipped and glorified.	Not a distinct person, but a divine power which for example, was given to the Prophets.	Identical with the Angel Gabriel, who appeared to the Prophet Mohammed giving him the Quranic text.	Many gods, but realize that they all come from Atman.	Buddhism does not believe in One God: Father, Son, and Holy Spirit.	**Holy Spirit**
Holy Writings	The Bible is the sacred text of Christianity.	The most important are the Torah, or the first five books of Moses. Others include Judaism's oral tradition, the written form of which is known as the Talmud.	The Koran is the sacred book of Islam.	The most ancient are the four Vedas.	The most important are the Tripitaka, the Mahayana Sutras, Tantra, and Zen texts.	**Holy Writings**
Sin	We inherit a sinful nature through our common ancestor Adam, who rebelled against God. Jesus Christ atoned for our sins through his death on the Cross (Romans 5:12-17).	Judaism rejects the doctrine of original sin. Atonement for sins committed is made through seeking forgiveness from God in prayer and repentance. In addition, the day of atonement (Yom Kippur) is set aside specially for this purpose.	There is no concept of original sin, nor vicarious atonement. All Humans are born sinless, but human weakness leads to sin.	Repentance for unintentional sins are prescribed, but intentional sins have to be repaid through karmic consequences.	Ordinary human beings possess greed, anger, delusion, ignorance, cravings, etc. and they were compared by the Buddha as 'the fools' and 'the blind'.	**Sin**
Salvation	By grace through faith in Jesus Christ (Ephesians 2:8-9).	Through good works, prayers and the grace of God. There is no parallel to the Christian view of substitutionary atonement.	Achieved through good works, thus personal righteousness must outweigh personal sin (Quran 23:101-103).	Reaching enlightenment by the Path of Knowledge, the Path of devotion, or the Path of Good Deeds.	Buddhism has nothing to do with "salvation". The only goal in Buddhism is to attain Nirvana. To do this, we should let go of our desires, cravings and attachments, and try to dispel our ignorance.	**Salvation**

	Christianity	Judaism	Islam	Hinduism	Buddhism	
Hell	A place of everlasting punishment for the unrighteous (Matthew 25:46). There is no crossover between Heaven and Hell.	Traditionally, there is the concept of Gehinnom or Gehenna - those who die in sin may suffer temporary punishment, but certain sins merit eternal punishment. However, Judaism's ideas of the afterlife have varied widely among different groups and in different time periods. For the most part, Judaism does not emphasize the afterlife.	A place of torment and fire (Quran 25:65, 104:6-7). In Islam, Hell is known as Jahannam. Jahannam has several levels and a person may not necessarily spend eternity there.	A constant cycle of reincarnation until enlightenment is reached.	Until one has attained Nirvana, he or she will be reborn into any of the 31 planes of existence over and over again, due to his/her karma.	**Hell**
Where	Through its missionary activity Christianity has spread to most parts of the globe.	There are large Jewish populations in Israel and the U.S.	Islam is the main religion of the Middle East, Asia, and the north of Africa.	Hinduism is practiced by more than 80% of India's population.	Buddhism is the main religion in many Asian countries.	**Where**
Meaning of Life	All have sinned and are thereby separated from God. Salvation is through faith in Christ.	Obey God's commandments, live ethically. Focus is more on this life than the next.	Submit (Islam) to the will of God to gain paradise after death.	Humans are in bondage to ignorance and illusion, but are able to escape. Purpose is to gain release from rebirth, or at least a better rebirth.	Escape the cycle of rebirth and attain nirvana (Theravada Buddhism). Become a boddhisatva then help others attain enlightenment (Mahayana Buddhism).	**Meaning of Life**
Afterlife	A new body and new soul to dwell in heaven with God forever.	Not emphasized; views vary: no afterlife, shadowy existence, World to Come (similar to heaven), Gehenna (similar to hell), reincarnation	Eternal Paradise or eternal Hell	Reincarnation until gain enlightenment.	Rebirth or nirvana. Nirvana is seen simply as the cessation of suffering by some and as a heavenly paradise by others.	**Afterlife**
Practices	Prayer, Bible study, baptism, Communion, church on Sundays, numerous holidays.	Circumcision at birth, bar/bat mitzvah at adulthood, observing Sabbath, wearing tallit and tefilin, prayer services.	Five Pillars: Faith, Prayer, Alms, Pilgrimage, Fasting. Mosque services on Fridays. Ablutions before prayer. No alcohol or pork. Holidays related to the pilgrimage and fast of Ramadan.	Yoga, meditation, worship (puja), devotion to a god or goddess, pilgrimage to holy cities, live according to one's dharma (purpose/ role).	Meditation, mantras, devotion to deities (in some sects), mandalas (Tibetan)	**Practices**
	Christianity	**Judaism**	**Islam**	**Hinduism**	**Buddhism**	

2 Christianity †

Christianity is the following of Jesus Christ's teachings and having a relationship with our father in heaven because we are all sinners and have strayed from the path set to us by going our own lustful ways. He sent his only Son to die on the cross for every one of these sins and he longs to have a relationship with each of us, and wants to see us prosper and live for him. He alone is the way, the truth and the life.

Geographic Positioning
Countries with the greatest proportion of Christians by country (as of 2010[n])



"For God so loved the world that He gave His only begotten Son, that whoever believes in Him should not perish but have everlasting life."
John 3:16

1 Introduction

Many people place the beginning of Christianity some two thousand years ago with the life of Jesus. In actuality, Christianity began as a reform movement within Judaism, which had been established nearly two thousand years earlier. To understand Christianity, we must go back to the roots of Judaism. We find aspects of the history of the Israelites recorded in the Bible, which is ultimately a collection of writings conveying the story of God's relationship with humanity. "In the beginning," the Scriptures state, "God created the heavens and the earth."

However, sometime after creating humanity, things began to go awry. People chose to defy God's command, and sin entered the world. As a direct result of this disobedience, humans have since been struggling with broken relationships with God, themselves, others, and creation. Even worse, through that act, death was introduced to the world. In order to restore everlasting relationship with his creation, God chose one righteous person - Abraham, and initiated a plan of redemption.

"Christianity, if false, is of no importance, and if true, of infinite importance. The only thing it cannot be is moderately important."
C.S. Lewis

Through Abraham's family, a people became a nation that was destined to be a light, a blessing, and a model to the entire world: Israel. Though there were moments when they forgot who they were and neglected God's commands, in time the Israelites succeeded in being God's faithful people—despite threats and attacks levelled against them from surrounding nations. In the Christian understanding, the Israelites' presence in the world and their message of the one true God prepared the peoples of the earth for the next phase of God's plan. Through his prophets, God foretold a final resolution to the broken relationship between God and humans: God himself would enter the world in the form of a human being.

He would experience what we experience. He would suffer the pain that we suffer, endure the temptations we endure, feel the emotions we feel. But more than that, he would be beaten, broken, and crushed. In his death he would take on all the sins of man, until "by his wounds we (would be) healed" and set free from the bondage of sin. And in the end, he would restore his scattered and dispirited people, ushering in an era of unending peace.

Then came Jesus. A Jewish carpenter who lived two thousand years ago, Jesus is called the Son of God. Christians believe Jesus to be fully man and fully God, equally human and divine. Early in his life, Jesus distinguished himself as an unusually precocious child, demonstrating tremendous spiritual wisdom and maturity. When Jesus knew the moment was right, he left behind his home and embarked on a new path. He began to preach, teach, perform miracles, and gather around him a band of disciples. Eventually, they recognized him as the messiah.

What his followers did not realize was that God's plan was going to take an unusual turn. He was going to restore the nation of Israel, as they hoped, but he would do it in a most unexpected way—not through shows of power and the oppression of enemies but through selfless love and compassion.

> *"Christ did not come to make bad men good, but to give dead men life!"*
> ***Chuck Missler***

Jesus, the Son of God, was crucified, died, and rose from the dead. He conquered sin and death in order to restore humanity's broken relationship with God, the Father. Jesus did what we cannot: he lived a perfect, sinless life and paid the price for our transgressions. Christians believe that Jesus' sacrifice for humanity saved us from the permanent consequence of our sins—eternal separation and isolation from God. Through Jesus, we can attain eternal life in relationship with God. Indeed, Jesus said, "I am the way and the truth and the life, and that whoever believes in Him will have everlasting life."

One day, Jesus promised, he will return to reign over his faithful followers in a peaceful kingdom where "there will be no more death or mourning or crying or pain." In the interim, he has sent the Holy Spirit to live and dwell with his followers, leading them in the way of truth. Today, Christianity is practiced in three primary forms: Roman Catholic, Eastern Orthodox, and Protestant. Within each of these three branches, there are numerous subsets and denominations. However, each group concurs on the general story and purposes described above; they divide mainly in the details of how principles should be applied practically.

Over the years, Christianity has seen its fair share of glorious, proud moments and all too many humiliating, shameful ones. But this is less an indictment on God, Jesus, or Christianity than it is on his followers. Mahatma Gandhi allegedly once said, "I like your Christ; I do not like your Christians. Your Christians are so unlike your Christ." He voiced the inconsistency found between the Son of God and those who claim to follow in his footsteps. And yet, should that surprise anyone? The Bible tells story after story of those who failed to live as God called them to live. This is not true just for Christians but for all people. This is why we need a messiah, a redeemer, a saviour. And yet, should that surprise anyone? The Bible tells story after story of those who failed to live as God called them to live.

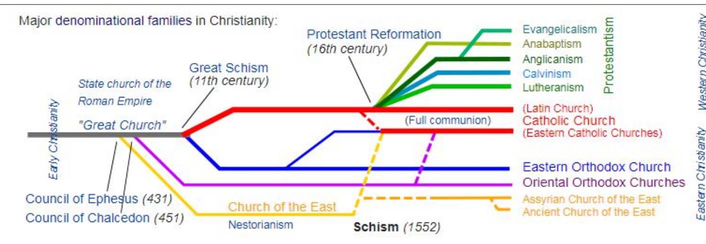
This is not true just for Christians but for all people. This is why we need a messiah, a redeemer, a saviour. Chuck Colson once said, "Christianity is an explanation of all of reality." Simply put, we all know the world is broken. The whole world, including me and you, needs fixing. And no matter how many different fix-it methods we try—whether self-help or sex, missionary work or money—none of them can fill the void that all of us feel. Christianity, from creation up through God's restoring work in Jesus, is both the explanation of and solution to that emptiness. Ultimately, Christianity is the story of God's powerful, redemptive love for his people.

2 Denominations

These are the different denominations of Christianity in the world today. In a world of rampant deception, only the Christian denominations which hold fast to the <u>whole</u> and <u>unaltered</u> word of God (the Bible) can be trusted to lead us to Him. Unfortunately many, if not most have strayed from the truth even partially.

Great Schism (1054 A.D.)
The East–West Schism is the break of communion since the 11th century between the Catholic Church and Eastern Orthodox Churches.

The schism was the culmination of theological and political differences which had developed during the preceding centuries between Eastern and Western Christianity.



(Not shown are non-Nicene, nontrinitarian, and some restorationist denominations.)

Protestant Reformation
The Reformation was a major movement within Western Christianity in 16th-century Europe that posed a religious and political challenge to the Catholic Church and in particular to papal authority, arising from what was perceived to be errors, abuses, and discrepancies by the Catholic Church. The Reformation was the start of Protestantism and the split of Protestantism from the Roman Catholic Church.

Catholicism

Catholic theology is based on the Nicene Creed. The Catholic Church teaches that it is the One, Holy, Catholic and Apostolic church founded by Jesus Christ, that its bishops are the successors of Christ's apostles, and that the Pope is the successor to Saint Peter to whom primacy was conferred by Jesus Christ. Unfortunately today it's rife with Biblical inaccuracies and doctrines of demons. You don't need a priest or interpreter for the Bible, read it for yourself!

Latin Church
It employs the Latin liturgical rites. It is headed by the Bishop of Rome - the pope - and has its headquarters in the Vatican City. The Latin Church traces its history to the earliest days of Christianity.

Protestantism

Originated with the 16th century Reformation, a movement against what its followers perceived to be errors in the Roman Catholic Church.

Ever since, Protestants reject the Roman Catholic doctrine of papal supremacy and sacraments, but disagree among themselves regarding the real presence of Christ in the Eucharist.

They emphasize the priesthood of all believers, justification by faith alone rather than by good works, and the highest authority of the Bible alone in faith and morals.

Historical Protestantism
- Baptist Churches
- Lutheranism
- Methodism
- Calvinism
- Presbyterianism
- Congregationalism
- Anabaptism

Modern Protestantism
- Pentecostalism
- Non-denominational Christianity
- Seventh-day Adventists (SDA)
- New Apostolic Church
- Restoration Movement
- Plymouth Brethren

Anglicanism
Anglicanism is a Western Christian tradition that evolved out of the practices, liturgy and identity of the Church of England following the Protestant Reformation.

Eastern Christianity

Eastern Orthodox Church
The most common estimate of the number of Eastern Orthodox Christians worldwide is 225–300 million, forming a single communion, making it the second largest, single Christian denomination behind the Catholic Church.

Oriental Orthodoxy
Oriental Orthodox churches are the churches descended from those that rejected the Council of Chalcedon in 451. Despite the similar name, they are therefore a different branch of Christianity from the Eastern Orthodox.

Restorationism / Nontrinitarianism
Restorationism, also described as Christian primitivism, is the belief that Christianity has been or should be restored along the lines of what is known about the apostolic early church, which restorationists see as the search for a more pure and more ancient form of the religion.

Latter Day Saint Movement (Mormonism)
- The Church of Jesus Christ of Latter-day Saints
- Community of Christ

Jehovah's Witnesses (JW's)
They believe that the destruction of the present world system at Armageddon is imminent, and that the establishment of God's kingdom over the earth is the only solution for all problems faced by humanity.

Other Minor Branches

Other minor branches of Christianity that have a large number of adherents.

Messianic Judaism	Messianic Judaism is a modern syncretic religious movement that combines Christianity—most importantly, the belief that Jesus is the Messiah—with elements of Judaism and Jewish tradition.

Denomination Comparison

Christianity is based on the word of God (The Bible) and in extension - the teachings of Jesus, the Son of God. Therefore any Christian denomination which strays from the truth of the Bible (both old and new testament) has been developed by the human mind and therefore not by God. Those denominations are apostate (strayed from the truth) and are highly cautioned against.

Below are a few of the main christian denominations. Those with red backgrounds differ from the original word of God. Many churches today have diverted from the truth and have fallen into apostasy, do not be deceived by the ways of the world but seek first the kingdom of heaven. For the safest bet, go with a Baptist Church, although you should always verify what any Bible teacher says yourself.

	Catholic	Presbyterian	Baptist	Anglican	Lutheran	
Founder & Date	Gregory the Great* 590-604 A.D. (*Gradual Development)	John Calvin 1536 A.D.	Jesus Christ 30-33 A.D.	Henry VIII 1534 A.D.	Martin Luther 1520 A.D.	**Founder & Date**

	Catholic	Presbyterian	Baptist	Anglican	Lutheran	
The Trinity	The Father is God, the Son is God, and the Holy Spirit is God, and yet there are not three Gods but one God.' In this Trinity of Persons the Son is begotten of the Father by an eternal generation, and the Holy The Persons are co-eternal and co-equal: all alike are uncreated and omnipotent.	God is one in essence or nature. The same immense, one and indivisible God is in person inseparably distinguished as Father, Son and Holy Spirit.	The Lord our God is the one and only living and true God; Whose subsistence is in and of Himself...In this divine and infinite Being there are three subsistences, the Father, the Word or Son, and the Holy Spirit. All are one in substance, power, and eternity; each having the whole divine essence, yet this essence being undivided.	There is only one living and true God, everlasting, without body, parts, or suffering; of infinite power, wisdom, and goodness; the Maker, and Preserver of all things both visible and invisible. And in unity of this Godhead there are three Persons, of one substance, power, and eternity; the Father, the Son, and the Holy Spirit.	We worship one God in Trinity, and Trinity in Unity; Neither confounding the Persons, nor dividing the Substance. For there is one Person of the Father, another of the Son, and another of the Holy Ghost. But the Godhead of the Father, of the Son, and of the Holy Ghost is all one: the glory equal, the majesty coeternal.	**The Trinity**
Governance	Papal/Episcopal (Clergy in local churches presided over by bishop; the pope (the Bishop of Rome) is the ultimate Church leader.)	Presbyterian (A graded organizational system by presbyters or elders.)	Congregational (Local churches are self-governing.)	Episcopal (Clergy in local churches presided over by bishop.)	Mixed (Congregational, Presbyterian, and Episcopal structures exist.)	**Governance**
Mary	From conception, Mary was without original sin, she is the Immaculate Conception. Mary is the "Mother of God." Mary was a virgin when she conceived Jesus and when she gave birth. She remained a virgin throughout her life. She delivers souls from death and continues to bring us the gifts of eternal salvation.	Jesus was conceived and born of the Virgin Mary by the power of the Holy Spirit. Mary is honoured as "God-bearer" and a model for Christians.	Mary was a virgin both when she conceived Jesus and when she gave birth. (Luke 1:34–38). Though "highly favoured" by God (Luke 1:28), Mary was still human and therefore sinned.	Anglicans believe Jesus was conceived and born of the Virgin Mary by the power of the Holy Spirit. Mary was a virgin both when she conceived Jesus and when she gave birth. "They...have difficulties with Catholic belief in her immaculate conception, that Mary was free from the stain of original sin from the moment of her own conception.	Jesus was conceived and born of the Virgin Mary by the power of the Holy Spirit. Mary was a virgin both when she conceived Jesus and when she gave birth.	**Mary**
Purgatory	All who die in God's grace and friendship, but still imperfectly purified. after death they undergo purification, so as to achieve the holiness necessary to enter the joy of heaven.	Rejected	Rejected	The Romish Doctrine concerning Purgatory... is a fond thing vainly invented, and grounded upon no warranty of Scripture, but rather repugnant to the Word of God.	Rejected	**Purgatory**
	Catholic	**Presbyterian**	**Baptist**	**Anglican**	**Lutheran**	

3 The Commandments

1 You shall have no other Gods before me	The Creator of the universe declares He is our God and our deliverer and asks us to demonstrate our love for Him by having no other Gods. The First Commandment is the first of a series of four that define our relationship with our Heavenly Father. Establishing, developing and maintaining that personal relationship with the true and living God is the most important commitment we can ever make. That is the primary focus of the first of the Ten Commandments. We should love, honour and respect Him so much that He alone is the supreme authority and model in our lives. He alone is God. We should allow nothing to prevent us from serving and obeying Him.
2 You shall not make idols	The Second Commandment deals with several crucial questions. How do we perceive God? How do we explain Him to ourselves and to others? Above all, what is the proper way to worship the only true God? The Second Commandment is a constant reminder that only we, of all created things, are made in the image of God. Only we can be transformed into the spiritual image of Christ, who of course came in the flesh as the perfect spiritual image of our heavenly Father. This Commandment protects our special relationship with our Creator, who made us in His likeness and is still moulding us into His spiritual image.
3 You shall not take the name of the LORD your God in vain	The Third Commandment focuses on showing respect to God and His law as we are His ambassadors in the world. It addresses the way we communicate Him to those around us. Ambassadors are diplomats which are meant to uphold the ideals and values of the one they advocate accurately and sincerely. Therefore if we act or behave in ways which disrespect them, the reputation of the one they are emulating will be damaged. All Christians are ambassadors to Him, therefore we should always uphold His values and show others the way He calls us to live. It also depends on the way we express respect for Him in the presence of others. We are expected always to honour and love Him.
4 Remember the Sabbath day, to keep it holy	God starts off the fourth Commandment with the word "Remember". This is because He knew we would forget it. God asks that we keep it set apart for Holy purposes so we can draw nearer to Him. The Fourth Commandment to remember the Sabbath concludes the section of the Ten Commandments that specifically helps define a proper relationship with God, how we are to love, worship and relate to Him. It explains why and when we need to take special time to draw closer to our Creator. It is also a special sign between us and God forever, that it is Him that sanctifies us Him alone we belong to and worship. The Sabbath, the seventh day of the week was set apart by God as a time of rest and spiritual rejuvenation.
5 Honour your father and your mother	The fifth through to the 10th serve as the standards of conduct in areas of human behaviour that generate the most far reaching consequences on individuals, families, groups and society. Families are the building blocks of societies that build strong nations. When families are fractured and flawed, the sad results are tragic and reflected in newspaper headlines daily. The Fifth Commandment shows us from whom and how the fundamentals of respect and honour are most effectively learned. It guides us to know how to yield to others, how to properly submit to authority and how to accept the influence of mentors.

6 You shall not murder	God asks us to demonstrate love and not hate towards others by not murdering. We must learn to control our tempers. Taking another person's life is not our right to decide. That judgment is reserved for God alone. This includes unborn babies and those that wish to die. That is the thrust of this Commandment. God does not allow us to choose to wilfully or deliberately take another person's life. The Sixth Commandment reminds us that God is the giver of life and He alone has the authority to take it or to grant permission to take it. God wants us to go far beyond avoiding murder. He requires that we not maliciously harm another human being in word or deed. God desires that we treat even those who choose to hate us respectfully and do all within our power to live in peace and harmony with them.
7 You shall not commit adultery	God asks us to express and demonstrate our love for our partner by not committing adultery. Adultery is the violation of the marriage covenant by wilful participation in sexual activity with someone other than one's spouse. Since God's law sanctions sexual relationships only within a legitimate marriage, the command not to commit adultery covers in principle, all varieties of sexual immorality. No sexual relationship of any sort should occur outside of marriage. That is the basis of this Commandment. Most of us need the support and companionship of a loving spouse. We need someone special who can share our ups and downs, triumphs and failures. No one can fill this role like a mate who shares with us a deep love and commitment.
8 You shall not steal	God instructs us to show our love and respect for others by not stealing what belongs to them. The Eighth Commandment safeguards everyone's right to legitimately acquire and own property. God wants that right honoured and protected. His approach to material wealth is balanced. He wants us to prosper and enjoy physical blessings. He also expects us to show wisdom in how we use what He provides us and He does not want possessions to be our primary pursuit in life. To Him it is important that generosity rather than greed motivate the choices we make. Because they are qualities of His own character, He asks that we, from the heart, put giving and serving ahead of lavishing possessions on ourselves.
9 You shall not bear false witness against your neighbour	God says if we love others we should not deceive or lie to them. How important is truth? To fully appreciate the Ninth Commandment with its prohibition of lying, we must realize how important truth is to God. Jesus Christ said of God the Father, “Your word is truth” John 17:17. As the source of truth, God requires that His servants always speak truthfully. Under God's inspiration, King David wrote, “…LORD, who may dwell in your sanctuary? Who may live on your holy hill? He whose walk is blameless and who does what is righteous, who speaks the truth from his heart and has no slander on his tongue, who does his neighbour no wrong and casts no slur on his fellow-man, who despises a vile man but honours those who fear the LORD, who keeps his oath even when it hurts” Psalms 15:1-3, NIV.
10 You shall not covet	God instructs us not to covet because He knows it can entrap us into even greater sin. To covet means to crave or desire, especially in excessive or improper ways. The Tenth Commandment does not tell us that all of our desires are immoral. It tells us that some desires are wrong. Coveting is an immoral longing for something that is not rightfully ours. That is usually because the object of our desire already belongs to someone else. But coveting can also include our wanting far more than we would legitimately deserve or that would be our rightful share. Our desire should be to contribute to the well being of others, to make our presence in their lives a blessing to them. In prohibiting coveting, it defines not so much what we must do but how we should think. It asks us to look deep within ourselves to see what we are on the inside.

4 Evidence for God

This section is the evidence for God in the world around us and through the Bible. This is perhaps the most important section if you're an unbeliever. Science doesn't oppose Christianity as many believe, but instead science validates the Bible's integrity.

"The only barrier to truth is the presumption that you already have it."
Chuck Missler

The Universe

The Universe (By Marilyn Adamson)
Scientists are convinced that our universe began with one enormous explosion of energy and light, which we now call the Big Bang. This was the singular start to everything that exists: the beginning of the universe, the start of space, and even the initial start of time itself. Astrophysicist Robert Jastrow, a self-described agnostic, stated, "The seed of everything that has happened in the Universe was planted in that first instant; every star, every planet and every living creature in the Universe came into being as a result of events that were set in motion in the moment of the cosmic explosion...The Universe flashed into being, and we cannot find out what caused that to happen." The universe has not always existed. It had a start...what caused that? Scientists have no explanation for the sudden explosion of light and matter.

In a book entitled "Science Speaks" by Peter Stoner, he proceeds to present scientific evidence in behalf of special creation. For example, he points out that science had previously taught that special creation was impossible because matter could not be destroyed or created. He then points out that atomic physics had now proved that energy can be turned into matter and matter into energy. He then considers the order of creation as presented in Genesis 1:1-13. He presents argument after argument from a scientific viewpoint to sustain the order which Genesis chronicles.

He then asks, “What chance did Moses have when writing the first chapter (of Genesis) of getting thirteen items all accurate and in satisfactory order?” His calculations conclude it would be one chance in 31,135,104,000,000,000,000,000 (1 in 31 x 1021). He concludes, “Perhaps God wrote such an account in Genesis so that in these latter days, when science has greatly developed, we would be able to verify His account and know for a certainty that God created this planet and the life on it.”

The Universe (By Chuck Missler)

The Nature of Light
Not only have recent scientific articles highlighted the discoveries that the speed of light has changed over the centuries (something that Barry Setterfield has been declaring for decades) the very nature of light has ripped open the entire world of quantum physics that has shattered our concepts of reality itself.

The changes in the velocity of light not only impacts our understanding of the astronomical distances and properties, it affects the atomic behaviour involved in the red shift of spectra, the reliability of radiological dating, etc. It is the peculiar properties of photons themselves that continue to astonish the quantum physicists wrestling with the very nature of our physical existence. It is now recognized that subatomic particles lack a property known as "locality." All subatomic particles are now understood to be immediately connected. There is a simultaneity - a "non-locality" - among all photons that has been confirmed in the laboratory. It now appears that our entire universe may actually be a gigantic hologram of some kind.

The Fabric of Space
Most of us assume that space is simply an empty vacuum with nothing "in it." However, it is increasingly evident that even empty space has astonishing properties that have yet to be fully understood. We now know that this "firmament," (raqia) which the Scripture presents, possesses electromagnetic properties including dielectric permittivity, magnetic permeability, an intrinsic impedance, and has an astonishing "zero-point" energy sufficient to keep all the electrons in the entire universe in their orbits. The term "stretching the heavens" appears at least 17 times in the Scriptures.

According to the Scriptures, the heavens can be "torn," "worn out" like a garment, "shaken," "burnt up," "split apart" like a scroll, rolled up" like a mantle or a scroll. The concept of being "rolled up" carries some additional insights. There must be some dimension in which space is "thin." If space can be "bent," there must be a direction it can be bent toward. Thus, this tells us that there must be additional dimensions beyond those of space itself.

It is now understood that we live in even more than four dimensions: ten dimensions is the current estimate (which is precisely what Nachmonides concluded in his commentary on Genesis back in the 13th century!) The more we understand from the current perspectives of modern physics, the more comfortable we are with the chronicle in Genesis One.

The Architecture of the Solar System
The more we study our solar system, the more questions get raised. Here, too, the prevailing assumptions that are broadly taught are totally specious. The "Nebular Hypothesis," that the planets were somehow thrown off by the sun, is mathematically untenable. There is no plausible explanation that would support a solar origin of the planets.

The sun contains 99.86% of all the mass of the solar system, and yet contains only 1.9% of the angular momentum. The nine planets contain 98.1%. Furthermore, the outer planets are far larger than the inner ones. (Jupiter is 5,750 times as massive as mercury, 2,958 times as massive as Mars, etc.)

There are many other provocative enigmas concerning our planetary history:
● There are three pairs of rapid-spin rates among our planets: Mars and Earth, Jupiter and Saturn, and Neptune and Uranus, are each within 3% of each other. Why?
● Earth and Mars have virtually identical spin axis tilts (about 23.5). Why? (From angular momentum and orbital calculations, it would seem that the three pairs of these planets may have been brought here from elsewhere.)
● Why does Mars have 93% of its craters in one hemisphere and only 7% in the other? It would appear that over 80% occurred within a single half-hour!

It's almost as if God designed it to challenge any naturalistic hypotheses!

The Bible

This section is split into many subsections because the Bible IS the primary way that God proves Himself to us. To prove the content in the Bible is from God first we have to authenticate that the Bible is the same today as when it was written as discussed below by Chuck Missler.

If you want to watch a 15 minute video instead of reading the sections below, I recommend "Why Should I Trust the Bible?" by Impact Video Ministries on YouTube. You can find it here: **www.youtube.com/watch?v=XtNcbu5oHQU** and here: **www.fluidicice.com/salvation** as a backup if YouTube has taken it down.

"And you shall know the truth, and the truth shall set you free"
John 8:32

The Christian Scriptures are historically outstanding, deserving serious consideration. One could even say that the history of the Bible is so compelling that to doubt the Bible is to doubt history itself since the Bible is the most historically verifiable book of all antiquity. The only book more historically verifiable than the Old Testament (the Hebrew Bible) is the New Testament. Consider the following:

● More manuscripts exist for the New Testament than for any other of antiquity—it has 5,000 ancient Greek manuscripts, 24,000 in all including other languages. The multiplicity of manuscripts allows for a tremendous research base by which we can test the texts against each other and identify what the originals said.

● The manuscripts of the New Testament are closer in age to the originals than are any other document of antiquity. All of the originals were written within the time of the contemporaries (eyewitnesses), in the first century A.D., and we currently have parts of manuscript dating back to A.D. 125. Whole book copies surface by A.D. 200, and the complete New Testament can be found dating back to A.D. 250. Having all the books of the New Testament initially written within the times of eyewitnesses means that the books did not have time to devolve into myth and folklore. Plus, their truth claims were held accountable by members of the Church who, as personal witnesses to the events, could check the facts.

● The New Testament documents are more accurate than any other of antiquity. John R. Robinson in Honest to God reports that the New Testament documents are 99.9 percent accurate (most accurate of any complete antique book). Bruce Metzger, an expert in the Greek New Testament, suggests a more modest 99.5 percent.

How We Got Our Bible (By Chuck Missler) - www.khouse.org/articles/2016/1260/
The Bible is the single most important book of all time, selling an estimated 5 billion copies. It has been translated into 349 languages, and 2,123 languages have at least one book of the Bible. At the same time, the Bible is scrutinized and attacked more than any other book in the world. It has been outlawed, confiscated and burned at different times and places in history. It has been smuggled into jail cells and across borders.

John Huss was burned at the stake for teaching from the Bible as the final authority for the Church over any earthly church rulers. William Tyndale was strangled and burned for translating the Bible into English. Every week, millions of Christians gather to discuss its words, even as “higher” critics attempt to explain it through the lens of metaphysical naturalism. What we believe about the Bible can be the most important, central issue in our lives, threading its way into the very fabric of who we are and how we live each day.

Where did the Bible come from? Why do we believe its origin is supernatural? Who defined the canon of Scripture? Most importantly, is the Bible the Word of God? You and I are gambling our eternity on the answer to that last question. Why do we believe God is the author of the Bible, and can each one of us defend that belief? Dark times are on the horizon, and it is increasingly important that we learn to live by faith. Where we place our faith fully depends on how we view the Scriptures.

Two World Views
Ultimately, there are two basic world views we can hold. One view regards everything we experience as the result of some cosmic accident. “In the Beginning there was nothing, and then it exploded.” The other view is that everything we experience is the deliberate result of a Creator. Of course, there are numerous variations on each of these views, but each of us must decide where we will place our trust. Each of these world views holds possible solutions to the biggest puzzles of life:

Who am I?, Where did I come from?, Where am I going?, To whom am I accountable?, It is ultimately important that we find the true answers to these questions.

"Now the serpent was more cunning than any beast of the field which the Lord God had made. And he said to the woman, “Has God indeed said, ‘You shall not eat of every tree of the garden’?”"
Genesis 3:1

You and I live in a time of rebellion and self-worship. Parental and marital authority are challenged in the homes and courts. Political, academic and ecclesiastical authority are challenged across the land.

Here, near the very beginning, we are introduced to Satan, the serpent, our adversary, and the first thing we see him do is question God’s Word. “Yea, hath God said?”

His next step is to slander God’s character with straight denial. “Ye shall not surely die,” (Gen 3:4). Thus, Satan encouraged the rejection of God’s authority at the very beginning, while humanity was yet in its infancy. Eve failed to trust God, Adam followed her in directly disobeying what God had told him, and humankind lost everything as a result.

We find the same pattern today. A number of social indicators deteriorate rapidly after 1963 in the United States. There were fewer than 10 births per 1000 unmarried teen women (ages 15–19) prior to 1947, and between 1955 and 1964, the number remained steadily between 15 and 16. After 1964, however, the numbers of teenagers giving birth out of wedlock climbed steadily during the next 30 years to more than 46 births per 1000 teen women in 1994.

Divorce rates escalated, families broke up, crime rates rose, and the acceptance of homosexuality became commonplace. As of 2015, more than 58 million unborn children have been murdered in the United States because they were considered inconvenient. Fifty-eight million. That is nearly ten times the number of Jewish victims in the Holocaust.

It’s noteworthy that in 1963, as a result of the combined court cases Abington School District v. Schempp and Murray v. Curlett, the U.S. Supreme Court banned school-led reading of the Bible and recital of the Lord’s Prayer. These court cases alleged to uphold the principles of freedom and human dignity, yet the end result of turning our backs on God has been destruction and misery. As we choose our own way over God’s way, we’re losing everything.

There is little dignity in divorce or high crime rates. It is ironic that the elements we most desire in life are rarely attained through our own weak wisdom and fleshly desires. After trying our own methods, over and over again we have had to learn that we experience human dignity and true freedom only through moral obedience and accountability to the Creator who fashioned human beings for a high spiritual destiny.

Facing the Skeptics
Skeptics have brutally attacked the Bible throughout history, and during the past century it has become popular among intellectuals to regard the Bible as merely a conglomeration of Jewish writings. It’s considered respectable to dispute the authorship of the books of the Bible and to disregard fulfilled prophecy as events reported after-the-fact.

In 1898, Hermann Schultz, professor of Theology at the University of Gottingen, declared:
"Of the legendary character of the pre-Mosaic narrators, the time of which they treat is a sufficient proof. It was a time prior to all knowledge of writing, a time separated by an interval of more than four hundred years, of which there is absolutely no history."

Yet, the patriarchal accounts in the Bible have been corroborated by archeological evidence. The information we have of Abraham, Isaac and Jacob matches the culture we know of that time in history. Job, the contemporary of Abraham, had the ability to write. Sumerian cuneiform writing certainly predates Moses by much more than 400 years; Ira Spar at the Metropolitan Museum of Art notes that, “By the middle of the third millennium B.C., cuneiform primarily written on clay tablets was used for a vast array of economic, religious, political, literary, and scholarly documents.” The old criticism that no written language existed in Moses’ day has been proven to be false.

The theories that the Gospels and the Epistles were written in the second century, over a hundred years after the fact, have been shredded and refuted by archeological discoveries, documentary discoveries and competent analysis. The common skeptical assertions thrown about in “academic” circles can be shown to be short-sighted.

As we read the Bible, we find there are a number of highly significant verses found at the address “3:16.”
John 3:16 *"For God so loved the world that He gave His only begotten Son, that whoever believes in Him should not perish but have everlasting life."*
1 John 3:16 *"By this we know love, because He laid down His life for us. And we also ought to lay down our lives for the brethren."*
1 Corinthians 3:16 *"Do you not know that you are the temple of God and that the Spirit of God dwells in you?"*
2 Timothy 3:16 *"All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness"*

2 Timothy 3:16 is one of these significant “3:16” verses — a little fact that makes it easy to remember its address. This particular verse gives us a foundational message, and we should read it carefully and take it to heart:

“All scripture is given by inspiration of God…” Note this verse says, “All Scripture” — not just certain passages that we might select because we like them best. If we accept only those parts of the Bible that suit us and reject the others, then we are believing in ourselves and our own (unreliable) judgment rather than in the Scripture.

The word “inspiration” in the Greek, θεόπνευστος — theopneustos — means “God-breathed.” That is, the Scriptures were not just influenced by good ideas about God; they were actually infused into human beings by the Spirit of God, who breathed into the hearts and minds of the Bible’s authors.

All Scripture “is profitable for doctrine, for reproof, for correction.” Doctrine is about teaching correct understanding while reproof is involved in addressing wrong conduct and correction deals with wrong understanding. As we study the epistles of Paul, for example, we discover that while Romans is a doctrinal statement of Soteriology (the study of salvation), 1 Corinthians was sent to reprove wrong conduct and Galatians to correct wrong doctrine.

Again, Ephesians presents the doctrine of Ecclesiology (the study of this mystical thing we call the “Church”), while Philippians then presents the reproof and Colossians presents the correction for the Church. 1 and 2 Thessalonians present the doctrine of Eschatology (the study of the last things), and 1 and 2 Peter and Revelation continue that theme.

The more we study the Bible, the more we discover that it’s very well organized specifically for its purposes.

This article was from Dr. Chuck Missler’s book How We Got Our Bible, available in print and eBook. Also available in Kindle format from Amazon. May God bless each one of us as we absorb this material and press onward to live it out every day.

The original Bible was written on manuscripts, these manuscripts were later compiled into the Bible as we know it today and the more manuscripts that validate the authenticity of the Bible - the better. Caesar's life was recorded on a total of 10 manuscripts.

What we know about Plato came from 7 manuscripts and everything about Tacitus was recorded on 20 manuscripts. The number of new testament manuscripts is a whopping 24,633 manuscripts and counting. The next highest number of manuscripts is The Iliad coming in at about 643 manuscripts.

Complexity

Complexity (By Marilyn Adamson)
The complexity of our planet points to a deliberate Designer who not only created our universe, but sustains it today. The Earth...its size is perfect. The Earth's size and corresponding gravity holds a thin layer of mostly nitrogen and oxygen gases, only extending about 50 miles above the Earth's surface.

If Earth were smaller, an atmosphere would be impossible, like the planet Mercury. If Earth were larger, its atmosphere would contain free hydrogen, like Jupiter. Earth is the only known planet equipped with an atmosphere of the right mixture of gases to sustain plant, animal and human life. The Earth is located the right distance from the sun.

Consider the temperature swings we encounter, roughly -30°C (86°F) to +120°C (248°F). If the Earth were any further away from the sun, we would all freeze. Any closer and we would burn up. Even a fractional variance in the Earth's position to the sun would make life on Earth impossible.

The Earth remains this perfect distance from the sun while it rotates around the sun at a speed of nearly 67,000 mph. It is also rotating on its axis, allowing the entire surface of the Earth to be properly warmed and cooled every day. And our moon is the perfect size and distance from the Earth for its gravitational pull. The moon creates important ocean tides and movement so ocean waters do not stagnate, and yet our massive oceans are restrained from spilling over across the continents.

Water...colourless, odourless and without taste, and yet no living thing can survive without it. Plants, animals and human beings consist mostly of water (about two-thirds of the human body is water). You'll see why the characteristics of water are uniquely suited to life:

It has wide margin between its boiling point and freezing point. Water allows us to live in an environment of fluctuating temperature changes, while keeping our bodies a steady 37°C (98.6°F). Water is a universal solvent. This property of water means that various chemicals, minerals and nutrients can be carried throughout our bodies and into the smallest blood vessels.

Water is also chemically neutral. Without affecting the makeup of the substances it carries, water enables food, medicines and minerals to be absorbed and used by the body. Water has a unique surface tension. Water in plants can therefore flow upward against gravity, bringing life-giving water and nutrients to the top of even the tallest trees.

Water freezes from the top down and floats, so fish can live in the winter. Ninety-seven percent of the Earth's water is in the oceans. But on our Earth, there is a system designed which removes salt from the water and then distributes that water throughout the globe.

Evaporation takes the ocean waters, leaving the salt, and forms clouds which are easily moved by the wind to disperse water over the land, for vegetation, animals and people. It is a system of purification and supply that sustains life on this planet, a system of recycled and reused water.

The human brain...simultaneously processes an amazing amount of information. Your brain takes in all the colours and objects you see, the temperature around you, the pressure of your feet against the floor, the sounds around you, the dryness of your mouth, even the texture of your keyboard.

Your brain holds and processes all your emotions, thoughts and memories. At the same time your brain keeps track of the ongoing functions of your body like your breathing pattern, eyelid movement, hunger and movement of the muscles in your hands. The human brain processes more than a million messages a second. Your brain weighs the importance of all this data, filtering out the relatively unimportant.

This screening function is what allows you to focus and operate effectively in your world. The brain functions differently than other organs. There is an intelligence to it, the ability to reason, to produce feelings, to dream and plan, to take action, and relate to other people. The eye...can distinguish among seven million colours.

It has automatic focusing and handles an astounding 1.5 million messages -- simultaneously. Evolution focuses on mutations and changes from and within existing organisms. Yet evolution alone does not fully explain the initial source of the eye or the brain -- the start of living organisms from nonliving matter.

God Pursues Us

God Pursues Us (By Marilyn Adamson)
"I was an atheist at one time. And like many atheists, the issue of people believing in God bothered me greatly. What is it about atheists that we would spend so much time, attention, and energy refuting something that we don't believe even exists?! What causes us to do that? When I was an atheist, I attributed my intentions as caring for those poor, delusional people...to help them realize their hope was completely ill-founded.

To be honest, I also had another motive. As I challenged those who believed in God, I was deeply curious to see if they could convince me otherwise. Part of my quest was to become free from the question of God. If I could conclusively prove to believers that they were wrong, then the issue is off the table, and I would be free to go about my life. I didn't realize that the reason the topic of God weighed so heavily on my mind, was because God was pressing the issue."

"I have come to find out that God wants to be known. He created us with the intention that we would know him. He has surrounded us with evidence of himself and he keeps the question of his existence squarely before us. It was as if I couldn't escape thinking about the possibility of God.

In fact, the day I chose to acknowledge God's existence, my prayer began with, "Ok, you win..." It might be that the underlying reason atheists are bothered by people believing in God is because God is actively pursuing them. I am not the only one who has experienced this. Malcolm Muggeridge, socialist and philosophical author, wrote, "I had a notion that somehow, besides questing, I was being pursued."

C.S. Lewis said he remembered, "...night after night, feeling whenever my mind lifted even for a second from my work, the steady, unrelenting approach of Him whom I so earnestly desired not to meet. I gave in, and admitted that God was God, and knelt and prayed: perhaps, that night, the most dejected and reluctant convert in all of England."

Lewis went on to write a book titled, "Surprised by Joy" as a result of knowing God. I too had no expectations other than rightfully admitting God's existence. Yet over the following several months, I became amazed by his love for me.""

Jesus Christ

Jesus Christ (By Marilyn Adamson)
Why Jesus? Look throughout the major world religions and you'll find that Buddha, Muhammad, Confucius and Moses all identified themselves as teachers or prophets. None of them ever claimed to be equal to God. Surprisingly, Jesus did. That is what sets Jesus apart from all the others.

He said God exists and you're looking at him. Though he talked about his Father in heaven, it was not from the position of separation, but of very close union, unique to all humankind. Jesus said that anyone who had seen Him had seen the Father, anyone who believed in him, believed in the Father. He said, "I am the light of the world, he who follows me will not walk in darkness, but will have the light of life."

He claimed attributes belonging only to God: to be able to forgive people of their sin, free them from habits of sin, give people a more abundant life and give them eternal life in heaven. Unlike other teachers who focused people on their words, Jesus pointed people to himself. He did not say, "follow my words and you will find truth." He said, "I am the way, the truth, and the life, no one comes to the Father but through me."

What proof did Jesus give for claiming to be divine? He did what people can't do. Jesus performed miracles. He healed people...blind, crippled, deaf, even raised a couple of people from the dead. He had power over objects...created food out of thin air, enough to feed crowds of several thousand people.

He performed miracles over nature...walked on top of a lake, commanding a raging storm to stop for some friends. People everywhere followed Jesus, because he constantly met their needs, doing the miraculous. He said if you do not want to believe what I'm telling you, you should at least believe in me based on the miracles you're seeing.

Jesus Christ showed God to be gentle, loving, aware of our self-centeredness and shortcomings, yet deeply wanting a relationship with us. Jesus revealed that although he views us as sinners, worthy of his punishment, his love for us ruled and he came up with a different plan. God himself took on the form of man and accepted the punishment for our sin on our behalf. Sounds ludicrous?

Perhaps, but many loving fathers would gladly trade places with their child in a cancer ward if they could. The Bible says that the reason we would love God is because he first loved us. Jesus died in our place so we could be forgiven. Of all the religions known to humanity, only through Jesus will you see God reaching toward humanity, providing a way for us to have a relationship with him. Jesus proves a divine heart of love, meeting our needs, drawing us to himself.

Because of Jesus' death and resurrection, he offers us a new life today. We can be forgiven, fully accepted by God and genuinely loved by God. He says, "I have loved you with an everlasting love, therefore I have continued my faithfulness to you."17 This is God, in action. Does God exist?

If you want to know, investigate Jesus Christ. We're told that "God so loved the world that he gave his only Son, that whoever believes in him should not perish but have eternal life." God does not force us to believe in him, though he could. Instead, he has provided sufficient proof of his existence for us to willingly respond to him.

The earth's perfect distance from the sun, the unique chemical properties of water, the human brain, DNA, the number of people who attest to knowing God, the gnawing in our hearts and minds to determine if God is there, the willingness for God to be known through Jesus Christ. If you need to know more about Jesus and reasons to believe in him, please see: Beyond Blind Faith.

Israel Restored to the Land

Isaiah 11:11-12
11 *It shall come to pass in that day that the Lord shall set His hand again the second time*
To recover the remnant of His people who are left,
From Assyria and Egypt, From Pathros and Cush, From Elam and Shinar, From Hamath and the islands of the sea.
12 *He will set up a banner for the nations, And will assemble the outcasts of Israel,*
And gather together the dispersed of Judah from the four corners of the earth.

Isaiah 43:5-6
5 *Fear not, for I am with you; I will bring your descendants from the east, And gather you from the west;*
6 *I will say to the north, 'Give them up!' And to the south, 'Do not keep them back!'*
Bring My sons from afar, And My daughters from the ends of the earth—

Isaiah 43:6 when it speaks of the north it means Russia and the phrase "Give Up" was a declaration from God because they would not let them go until their country started to crumble. The same applies to the south referring to Ethiopia who refused to let the Jews return to their country which started to crumble in 1991 after saying no. "Operation Solomon" was the name of the campaign to return the Jews.

The most astonishing fulfilled prophecy within the last 100 years is the return of Israel as a state. Around 722 B.C., the Assyrians invaded and destroyed the northern kingdom of Israel. In 134 A.D, the Roman Empire also invaded forcing the Israelites to flee. However recently on the 14th of May 1948 it was resurrected again as a country. Anyone can look at a map today (If you aren't in an Islamic country) and see Israel. No country in the history of the world has ever come back again from nothingness, particularly after nearly 2,000 years. Not to mention how thinly they have been spread and the fact that multiple leaders have tried to wipe the Jews out from existence multiple times.

Jeremiah 31:8
8 *Behold, I will bring them from the north country, And gather them from the ends of the earth,*
Among them the blind and the lame, The woman with child
And the one who labors with child, together; A great throng shall return there.

One of the flights from Ethiopia to Israel even landed with more passengers than it took off with, showing the intricate detail in the Bible regarding Jeremiah and the fact that there were pregnant mothers on the flight.

Isaiah 35:1-2
1 *The wilderness and the wasteland shall be glad for them, And the desert shall rejoice and blossom as the rose;*
2 *It shall blossom abundantly and rejoice, Even with joy and singing.*
The glory of Lebanon shall be given to it, The excellence of Carmel and Sharon.
They shall see the glory of the Lord, The excellency of our God.

Prior to Israel entering and nurturing the land on 14 May 1948, it was a barren desert and wasteland in which little could have survived.

Alfon Lamartine From - Recollections from the East	*"Outside the walls of Jerusalem we saw no living being, heard no living voice. We encountered that desolation and that deadly silence which we would have expected to find at the ruined gates of Pompey. A total eternal dread spell envelopes the city, the highways and the villages." "A solitude to make one dreary, unpeopled deserts, rusty mounds of barrenness."*

Mark Twain From - The Innocents Abroad	*"A blistering, naked treeless land. The further we went the hotter the sun got and the more rocky, bare, repulsive and dreary the landscape had become." He spoke of the villages as "Ugly cramped, squalid, uncomfortable and fifthy." "There was hardly a tree or shrub anywhere. Even the olive and the cactus, those were fast friends of a worthless soil, had almost deserted the country." "It truly is monotonous and uninviting. It is a hopeless, dreary, heart-broken land."*

Joel 2:21-24
21 *Fear not, O land; Be glad and rejoice, For the Lord has done marvellous things!*
22 *Do not be afraid, you beasts of the field; For the open pastures are springing up,*
And the tree bears its fruit; The fig tree and the vine yield their strength.
23 *Be glad then, you children of Zion, And rejoice in the Lord your God;*
For He has given you the former rain faithfully, And He will cause the rain to come down for you—
The former rain, And the latter rain in the first month.
24 *The threshing floors shall be full of wheat, And the vats shall overflow with new wine and oil.*

Ezekiel 36:33-36
33 *'Thus says the Lord God: "On the day that I cleanse you from all your iniquities, I will also enable you to dwell in the cities, and the ruins shall be rebuilt.*
34 *The desolate land shall be tilled instead of lying desolate in the sight of all who pass by.*
35 *So they will say, 'This land that was desolate has become like the garden of Eden; and the wasted, desolate, and ruined cities are now fortified and inhabited.'*
36 *Then the nations which are left all around you shall know that I, the Lord, have rebuilt the ruined places and planted what was desolate. I, the Lord, have spoken it, and I will do it."*

Today, not only has the land been restored but the nation of Israel is a mini super power. Israel is leading the world in water technology, military technology, digital security, agriculture and many more.[n]

Future Prophecies

The Bible still contains hundreds of future prophecies which still need to be fulfilled, most of them are found in revelation and are based on the seals, trumpets and bowls. Below are a few prophecies which will soon come to pass, keep an eye out as this is the ultimate proof that there is a God, that He is outside of space and time and that He loves you.

For a complete list of these prophecies and a guide on surviving earth after the rapture, see the "MASS DESTRUCTION > The Rapture" section found in "The Preparedness Encyclopedia" by Fluidic Ice. If this section has been separated from its parent document you can head to **www.fluidicice.com/TPE** to download the complete guide for free.

The Destruction of Damascus (Isaiah 17)	Damascus will be destroyed and never inhabited again. This prophecy seems to imply that nuclear weapons were either hit and destroyed in Damascus or one was launched against the city from another location.
The Russian Invasion of Israel (Ezekiel 38)	Russia, Iran, Turkey, Libya and Syria will launch a massive combined attack against Israel but will fail due to God's intervention and destruction of the armies.
The Rapture (1 Corinthians 15:52)	Jesus calls the believing Christians home, before His wrath is poured out on the earth and Israel.
One World Government (Revelation 13:1-2 & Daniel 7:16-24)	In his apocalyptic vision in the Book of Revelation, the Apostle John sees the "beast," also called the Antichrist, rising out of the sea having seven heads and ten horns (Revelation 13:1). Combining this vision with Daniel's similar one (Daniel 7:16-24), we can conclude that some sort of world system will be inaugurated by the beast, the most powerful "horn," who will defeat the other nine and will begin to wage war against Christians. The ten-nation confederacy is also seen in Daniel's image of the statue in Daniel 2:41-42, where he pictures the final world government consisting of ten entities represented by the ten toes of the statue. Whoever the ten are and however they come to power, Scripture is clear that the beast will either destroy them or reduce their power to nothing more than figureheads. In the end, they will do his bidding. John goes on to describe the ruler of this vast empire as having power and great authority, given to him by Satan himself (Revelation 13:2), being followed by and receiving worship from "all the world" (13:3-4), and having authority over "every tribe, people, language and nation" (13:7). From this description, it is logical to assume that this person is the leader of a one-world government which is recognized as sovereign over all other governments.
One World Religion (Revelation 17:1–18)	The one-world religion described in Revelation 17:1–18 as "the great harlot" will be part of the end-times scenario. The term harlot is used throughout the Old Testament as a metaphor for false religion. The actual identity and makeup of the religion has been debated for centuries and has resulted in a number of different views among Bible commentators and theologians. There are convincing arguments for the one world religion being Catholicism.
The Worldwide 'Mark' (Revelation 13:16-17)	The antichrist will push that everyone on the planet receives his mark on either their right hand or their forehead. "**16** He causes all, both small and great, rich and poor, free and slave, to receive a mark on their right hand or on their foreheads, **17** and that no one may buy or sell except one who has the mark or the name of the beast, or the number of his name."

5 Accepting Jesus

What is Salvation?	Salvation is the deliverance from sin. To save means to deliver or protect. Jesus equated being saved with entering the kingdom of God (Matthew 19:24-25). What are we saved from? We are saved from God's wrath, that is, His judgment of our sin when we meet Him face to face (Romans 5:9; 1 Thessalonians 5:9). Our sin has separated us from God, and the consequence of this violation of God's law is death (Romans 6:23). Biblical salvation refers to our deliverance from the consequences of sin and therefore involves the removal of sin which is already paid for by Jesus on the cross.	www.fluidicice.com/salvation

Who does the saving? Only God can remove sin and deliver us from sin's penalty (2 Timothy 1:9; Titus 3:5). How does God save? God has rescued us through Jesus's death on the cross and subsequent resurrection which achieved our salvation (Romans 5:10; Ephesians 1:7). Scripture is clear that salvation is the gracious, undeserved gift of God (Ephesians 2:5, 8) which is ours for the taking through faith in Jesus Christ (Acts 4:12). How do we receive salvation? We are saved by faith. First, we must hear the gospel—the good news of Jesus' death and resurrection (Ephesians 1:13).

Then, we must believe—fully trust the Lord Jesus (Romans 1:16). This involves repentance, a changing of mind about sin and Christ (Acts 3:19), and calling on the name of the Lord (Romans 10:9-10, 13). A definition of salvation would be "The deliverance, by the grace of God, from eternal punishment for sin which is granted to those who accept by faith God's conditions of repentance and faith in the Lord Jesus." Salvation is available in Jesus alone (John 14:6; Acts 4:12) and is dependent on God alone for provision, assurance, and security.

This is absolutely the most important section in the entire guide, outlining the path to eternal salvation as described in the Bible. Your acceptance or denial of Jesus will affect where you spend eternity, and every soul lives forever, it's just a matter of location. A prerequisite for becoming saved is knowing that God exists and that He created you, the universe and heavens.

God wrote the Bible through man to *further* prove His existence to us alongside the wondrous and spectacular world around us. There are countless incredible facts about the Bible that prove it had to be designed outside of space and time. For a few of these amazing insights read the 'Evidence for God' section in 'Christianity'.

Salvation

A	**Admit that you are a sinner.** Any gap between God's perfect law and our imperfect obedience is called sin, which everyone has committed. ● "For all have sinned, and come short of the glory of God;" (Romans 3:23) ● "There is none righteous, no, not one;" (Romans 3:10) ● "If we say that we have not sinned, we make him a liar, and his word is not in us." (1 John 1:10) ● "For the wages of sin is death, but the gift of God is eternal life in Christ Jesus our Lord." (Romans 6:23)
B	**Believe in your heart that Jesus Christ died for your sins, was buried, and that God raised Jesus from the dead on the third day, taking the punishment you deserved.** Jesus said: "I am the way, the truth, and the life: no man comes unto the Father but by me." (John 14:6) Your own good works cannot save you, no matter how good a person you are, and wouldn't the creator of heaven set the bar for entry? ● "For God so loved the world, that he gave his only begotten Son, that whosoever believes in him should not perish, but have everlasting life." (John 3:16) ● "But God commends his love toward us, in that, while we were yet sinners. Christ died for us." (Romans 5:8)
C	**Call upon the name of the Lord and confess that Jesus Christ is Lord.** Through prayer, invite Jesus into your heart to become your personal Lord and Saviour. There is an example prayer below. ● "If you shall confess with your mouth the Lord Jesus, and shall believe in your heart that God raised him from the dead, you will be saved." (Romans 10:9)

The Sinner's Prayer
"Lord Jesus, I am a sinner and am in need your forgiveness. I believe you are the Son of God who died on the cross for my sins and rose from the dead on the third day. Thank you for bearing my sins and giving me the gift of eternal life. I am ready and willing to trust you as my Lord and Saviour and to turn from my sin. I now invite you into my heart as my personal Saviour. Amen."

> ***"Whoever calls on the name of the Lord shall be saved."***
> *Joel 2:32 / Acts 2:21 / Romans 10:13*

Once you've prayed this prayer, believing it with all your heart, you're saved by the power of the blood of Jesus! He paid that ultimate price of our sin, sacrificing Himself so that we may live. However it's easy to say something with your mouth, what takes real effort is living out a life in pursuit of Jesus, walking according to His will for you and leaving your old sinful ways behind.

Below are some more verses related to salvation and justification, as well as some next steps you should take as a new Christian to help cement your faith. If there's one thing that Satan despises, it's new Christians. So be prepared to battle against the spiritual forces of wickedness by praying and reading your Bible daily as well as putting on your spiritual armour.

- ***Ephesians 2:8-9*** *"For by grace you have been saved through faith, and that not of yourselves; it is the gift of God, not of works, lest anyone should boast."*
- ***2 Corinthians 5:17*** *"Therefore, if anyone is in Christ, he is a new creation; old things have passed away; behold, all things have become new."*
- ***Luke 13:5*** *"I tell you, no; but unless you repent you will all likewise perish."*
- ***Galatians 2:16*** *"Knowing that a man is not justified by the works of the law but by faith in Jesus Christ, even we have believed in Christ Jesus, that we might be justified by faith in Christ and not by the works of the law; for by the works of the law no flesh shall be justified."*
- ***1 Corinthians 15:3-4*** *"How that Christ died for our sins according to the scriptures; And that he was buried, and that he rose again the third day according to the scriptures"*

Next Steps
You should research what the Bible has to say on prophecy and the end times. Have a look at my Christianity posts on my website and watch some of the videos using the QR code to the right to get there. If you don't have a reader you can head to: **www.christianity.fluidicice.com**.

6 After Death

This is an explanation of what happens after death according to the Bible. So what is death? We have 3 parts to our current being, these are: Body, Soul and Spirit. Physical death is the separation between body and soul, or the 'first death' as it's known in the Bible. Spiritual death is the separation of the soul from the spirit, or the 'second death' - which was paid for on the cross by Jesus for those who accepted Him. Every person's spirit lives forever, the question is where will you spend it when you are judged? For a great study by Chuck Missler on what happens after death, watch: **www.youtube.com/watch?v=eJygHgJk6rk**

Chuck Missler
What Happens When You Die?

Statistics

The Afterlife
This is what people believe about an afterlife:
- 81% of people believe in an afterlife of some sort,
- 9% aren't sure on what happens,
- 10% say there's no afterlife.

Heaven
This is what people believe about heaven:
- 46% think it's a state of eternal existence in God's presence,
- 30% think it's a place of rest and reward,
- 14% believe heaven is just symbolic,
- 5% don't believe in heaven and 5% aren't sure.

Hell
This is what people believe about hell:
- 39% believe it's a state of eternal separation from God's presence,
- 32% think it's an actual place of torment and suffering,
- 13% think it's just a symbol of a bad outcome,
- 16% aren't sure or don't believe in hell.

Their Destination
This is where people believe they will end up when they die:
- 65% think they will go to heaven,
- 24% have no idea where they will go,
- 5% think you just cease to exist,
- 5% believe they will come back as another life form,
- 0.5% think they are going to hell.

Heaven Bound
This is why people thought they would get into heaven:
- 43% believe that because they have confessed their sins and accepted Jesus as their saviour,
- 15% because they have tried to obey the ten commandments,
- 15% because they are basically a good person,
- 6% because God loves all people and He won't let them perish.

Contrary Findings
Among Born-again Christians:
- 10% believe that people are reincarnated after death,
- 29% claim it is possible to communicate with the dead,
- 50% contend that a person can earn salvation based on good works,
- Many believe there are multiple options for gaining entry into heaven.

7 The Bible

This section explains the different books of the Bible, how long they are and what the general overview of them is. Further below I've included a selection of the most pertinent books and chapters of the Bible to read. To save space I had to make the font size smaller so you'll have to zoom in to read them or use a magnifying glass if you've printed this sheet.

If you wish to read the other books which aren't included, find a KJV, NKJV, ESV, ISV or NIV Bible as most of the others are either hard to find or aren't biblically accurate. You can also find a variety of different language Bibles below including English. I pray that God will guide you to a Bible if you are truly seeking his word.

"All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness" *(2 Timothy 3:16)*

"Inasmuch as many have taken in hand to set in order a narrative of those things which have been fulfilled among us, just as those who from the beginning were eyewitnesses and ministers of the word delivered them to us, it seemed good to me also, having had perfect understanding of all things from the very first, to write to you an orderly account, most excellent Theophilus, that you may know the certainty of those things in which you were instructed." ***Luke 1:1-4***

Other Languages

Here you can download Bibles for free in your native language(s). The links below are mirrors of the site: **www.wordproject.org/bibles/** except for the few .zip files I converted to PDF for easier reading on the go. All downloads below are in the in the KJV or equivalent in the specified language to stay as close to the original text as possible. The zip file contains 66 folders representing each book of the Bible in HTML format, split by chapter. Alternatively you can view this list on my website at: **www.christianity.fluidicice.com/bibles** or via the QR code to the right.

Preparedness Bible Verses

RELIGION | Christianity | The Bible | Preparedness Bible Verses

The prudent see danger and take refuge, but the simple keep going and pay the penalty. ***Proverbs 22:3***	*A prudent person foresees the danger ahead and takes precautions. The simpleton goes blindly on and suffers the consequences.* ***Proverbs 27:12***	*Therefore, my dear brothers and sisters, stand firm. Let nothing move you. Always give yourselves fully to the work of the Lord, because you know that your labour in the Lord is not in vain.* ***1 Corinthians 15:58***	*For the wages of sin is death, but the gift of God is eternal life in Christ Jesus our Lord.* ***Romans 6:23.***	*Consider it pure joy, my brothers and sisters, whenever you face trials of many kinds, because you know that the testing of your faith produces perseverance. Let perseverance finish its work so that you may be mature and complete, not lacking anything.* ***James 1:2-4***
Be on your guard; stand firm in the faith; be courageous; be strong. ***1 Corinthians 16:13***	*Give generously to them and do so without a grudging heart; then because of this the LORD your God will bless you in all your work and in everything you put your hand to.* ***Deuteronomy 15:10***	*May the God of hope fill you with all joy and peace as you trust in him, so that you may overflow with hope by the power of the Holy Spirit.* ***Romans 15:13***	*The wise store up choice food and olive oil, but fools gulp theirs down.* ***Proverbs 21:20***	*"This, then, is how you should pray: 'Our Father in heaven, hallowed be your name, your kingdom come, your will be done, on earth as it is in heaven. Give us today our daily bread. And forgive us our debts, as we also have forgiven our debtors. And lead us not into temptation, but deliver us from the evil one.'* ***Matthew 6:9-13***
Those who work their land will have abundant food but those who chase fantasies will have their fill of poverty. ***Proverbs 28:19***	*I can do all this through him who gives me strength.* ***Philippians 4:13***	*For God so loved the world that He gave His only begotten Son, that whoever believes in Him should not perish but have everlasting life.* ***John 3:16***	*Be strong and of good courage, do not fear nor be afraid of them; for the Lord your God, He is the One who goes with you. He will not leave you nor forsake you.* ***Deuteronomy 31:6***	*Do you not know? Have you not heard? The LORD is the everlasting God, the Creator of the ends of the earth. He will not grow tired or weary, and his understanding no one can fathom. He gives strength to the weary and increases the power of the weak. Even youths grow tired and weary, and young men stumble and fall; but those who hope in the LORD will renew their strength. They will soar on wings like eagles; they will run and not grow weary, they will walk and not be faint.* ***Isaiah 40:28-31***

The Parable of the Rich Fool
"And He told them this parable: "The ground of a certain rich man yielded an abundant harvest. He thought to himself, 'What shall I do? I have no place to store my crops.' Then he said, 'This is what I'll do. I will tear down my barns and build bigger ones, and there I will store my surplus grain.
And I'll say to myself, "You have plenty of grain laid up for many years. Take life easy; eat, drink and be merry."
But God said to him, 'You fool! This very night your life will be demanded from you. Then who will get what you have prepared for yourself?'
This is how it will be with whoever stores up things for themselves but is not rich toward God."
Luke 12:13-21

8 Common Questions

RELIGION | Christianity | Common Questions

The following are some answers to the most commonly asked questions about Christianity and the Bible. This is a reduced list from the original 'The Rapture Survival Guide (TRSG)' which can be found on my website.

Are natural disasters literally "acts of God"? Does he cause them? (Mark 13:8)
When a volcano erupts, a hurricane devastates a city or lightning ignites a vast forest fire, it is natural for us to ponder God's relationship to the events. How should we regard such tragic occurrences? Are they really "acts of God," as insurance companies still label them? Jesus asked his disciples a similar question. In Luke 13:4, Jesus asked, Those eighteen who died when the tower in Siloam fell on them—do you think they were more guilty than all the others living in Jerusalem?

Jesus was apparently referring to a well-known disaster of his time that had killed 18 people. His point was simple: events and tragedies beyond our control are part of life. There is not necessarily a direct cause and effect between the people who suffer and the tragedies themselves. The Bible offers two reasons for natural disasters.

First, the world itself is beautiful but broken. All of creation suffers as a consequence of the entry of sin, death and decay into the world (Ro 5:12; 8:19–22). Second, all of human history takes place within the context of the cosmic battle between the forces of God and the forces of Satan. Job did not know that the Lord was using his life as an example of faithfulness when Satan afflicted him with sores and sadness. Thankfully, Jesus left his disciples (and us) with this encouragement: In this world you will have trouble. But take heart! I have overcome the world (Jn 16:33).

How do we know the Bible is true? (Hebrews 4:12)
According to the Bible, all Scripture is God-breathed (2Ti 3:16). Peter confirmed this when he said that those who wrote the Bible were not speaking on their own but spoke from God as they were carried along by the Holy Spirit (2Pe 1:21). Many parts of Scripture are directly attributed to God through use of phrases like This is what the LORD says (e.g., Ex 4:22). Finally, Jesus often quoted from the Old Testament and affirmed it as being God's Word. Prophecies that were later fulfilled are corroboration of the accuracy of the Bible's claim to be God's Word.

For example, the vision recorded in Daniel 7 correctly predicted the rise of the Medo-Persian Empire, the Greek Empire under Alexander the Great, and the Roman Empire. Archaeological discoveries are also important evidence of the Bible's accuracy. For example, for many years King David was believed by some to be a fictional character. But recently a composition from a king of Syria referring to the "house of David" was discovered at Tel Dan. This writing provides tangible evidence that ancient rulers indeed recognized the dynasty of David in Judah. Another reason for confidence in the Bible's authenticity is its internal consistency.

The Bible is actually a compilation of 66 books written over a period of 2,000 years by more than 40 different authors, and yet there is a unified message and a striking theological coherence—something that clearly speaks of God's guidance throughout the process of writing, transmitting and assembling the Biblical texts. It is important to remember that the original Biblical documents no longer exist. We are dependent on copies, and copyists can make mistakes.

However, scholars have carefully tracked the accuracy of ancient manuscripts from different centuries, and their consistency gives us good reason to be confident in the Bibles we read today. Furthermore, rigorous standards were applied to determine the canon—both by the Jews, who determined the collection of books that make up the Old Testament Scriptures, and by the early church, which decided the books to be included in the New Testament.

RELIGION Christianity Common Questions

Who is God, what does he value, and how can we approach him? (Exodus 3:13–14)
The Bible doesn't explain who God is or try to prove his divine existence. It assumes God is eternally present (Ge 1:1) and depicts creation as a result of his divine thought and action (Ge 1:1–2:25). God has, however, offered us a glimpse of who he is through creation (Ps 19:1–6), his Word (Ps 18:30–31), and especially through the incarnation of his Son, Jesus Christ, who is the radiance of God's glory and the exact representation of his being (Heb 1:3). Jesus demonstrated God's compassion, grace and glory in his life, death and resurrection. From this and from the empowering presence of the Holy Spirit at Pentecost (Ac 2:1–13), our awareness of God as Trinity (one God in three persons) was formed.

While God's being is beyond comprehension or perception (Ex 33:20; Jn 1:18), both the physical world and the human conscience clearly attest to his values and purposes. In addition, God revealed what he values through the Sinai covenant (Ex 20:1–24:18). The Ten Commandments (Ex 20:2–17; Dt 5:6–21) were affirmed by Jesus as a faithful summary of God's moral values (Mt 5:17–47), and they continue to shape social values and legal systems today. God also revealed what he values through the dietary regulations (Lev 11:1–47) and worship regulations (Lev 1:1–9:24; 16:1–34; 21:1–25:55) that were given to the ancient Israelites. Those regulations emphasized God's holiness and his desire for his people to be holy (Lev 11:44).

When Jesus came to earth, he taught that while actions are important, God is more concerned with the heart (Mt 5:17–47; 15:18–20). God desires that we love him, trust him, obey him and imitate his character in our interactions with others by being compassionate, loving and forgiving. So how can we approach such a holy God? Access to God is only through faith in Jesus Christ (Jn 14:6; Ro 5:1–2; Eph 2:13–18; 3:12). Christ suffered once for sins, the righteous for the unrighteous, to bring (us) to God (1Pe 3:18). Let us then approach God's throne of grace with confidence, so that we may receive mercy and find grace to help us in our time of need (Heb 4:16).

RELIGION Christianity Common Questions

How much influence does Satan have in the world today? (1 Peter 5:8)
Enormous influence! Jesus called him the prince of this world (Jn 12:31), and Paul called him the god of this age (2Co 4:4). Satan controls a vast hierarchical network of fallen angels (Eph 6:12), also called demons. Revelation 12:9 says that Satan … leads the whole world astray. He manipulates nations, rulers, economies and cultures. He remains disguised behind all the idolatries and false religions of the world. In the end, according to Revelation, Satan will orchestrate a vast, worldwide rebellion against Christ and the church, but he will be defeated and suffer eternal punishment (Rev 20:7–10). At the root of all Satan's efforts on earth is his desire to usurp God's glory.

Satan is insanely jealous of God. Created as a mighty and good angel, he fell due to his arrogant desire to take the place of God (Isa 14:12–15; Eze 28:11–19). Satan works in this world primarily through deceit (Jn 8:44). He is skilful beyond our imagination at tempting people to sin. He is also ruthless and willing to spare no one in his pursuit of glory. However, Satan is no match for Jesus Christ, who is Lord of all. Christians will certainly face Satan's attacks as he tempts, tests and accuses them (Job 1:8–12; Rev 12:10). But Christians may always take refuge in Jesus, for by the power of his name (Lk 10:17–20) they are successfully able to resist Satan (1Pe 5:8–10).

RELIGION Christianity Common Questions

Why does God allow bad things to happen? (Deuteronomy 31:16–21)
No one knows the mind of God, except for God himself. He is infinite; we are finite. We are not entirely clueless about his character, however, because God speaks to us through his Word. According to the Bible, one reason bad things happen is because the whole world is under the control of the evil one (1Jn 5:19). That's why Jesus taught us to ask God to deliver us from the evil one when we pray (Mt 6:13). Even in the Garden of Eden—in paradise, before Adam and Eve partook of the forbidden fruit—Satan was already there, waiting to tempt them to disobey God (Ge 3:1–6). Another reason bad things happen is because people sin.

The reason why God allows people to sin and be tempted to sin is not for us to know—at least for now (Dt 29:29). What we do know is that when bad things happen, we should not rage against God. To revolt against God is to fall prey to the devil. The devil is a liar (Jn 8:44) and wants us to believe that God is blameworthy. But the Bible says that God is light; in him there is no darkness at all (1Jn 1:5). God is not the enemy; Satan is the enemy. Through his Spirit God empowers us to war against the enemy by following Jesus Christ, our Lord and Saviour—during good times and bad times.

RELIGION Christianity Common Questions

Are people just pawns in God's chess game? (Job 1:13–19)
It sometimes seems that people are caught in events beyond their control, events manipulated by God or Satan. They may feel forced into situations they would not choose if they were given a choice. While this seems unfair, there is another way —a higher way—to interpret the circumstances of life. We can see them as Godgiven opportunities to cooperate with God's purposes and plans that allow us to participate in something far more significant than our own schemes. We are more than pawns in a chess game.

We can honour Almighty God by the way we live and die. Still, many unanswered questions remain. Only God knows why dozens of bystanders had to die in this unfolding drama between Satan and God. We struggle with the fact that some who are righteous have short, tragic lives, while others who are wicked enjoy wealth and long life. There is one thing we can affirm, however: what seems unfair in this life will be made right in eternity. Our problems will be resolved and many of our questions answered. God has permitted Satan certain freedoms. Satan is called the prince of this world (Jn 14:30) and the ruler of the kingdom of the air (Eph 2:2), for he sometimes uses sicknesses, plagues, wicked people and the forces of nature.

Though God dealt a fatal blow to Satan through Jesus' death and resurrection, Satan continues to struggle against God and will do so until the end (Ro 16:20). There are two sides to the suffering of the righteous: the earthly and the heavenly. The apostle Paul understood the tension of living in a corrupt world. He placed his trust in God and things eternal—God's justice, mercy and love—not in the temporary things of this world—success, wealth and fame. Paul recognized that our struggle is not against flesh and blood (Eph 6:12) and took courage in knowing that our citizenship is in heaven (Php 3:20).

RELIGION Christianity Common Questions

If we are treated unfairly, is God still good? (Job 34:19)
Because of the intrusion of sin and evil into our world, it seems to us that life is often not fair or just (Ps 73:3–12). Events occur that we do not cause or desire, and all our best efforts are not able to produce perfect results. Yet the Bible consistently declares that God is good, fair and just (Ps 9:7–12; 101:1; 145:1–21; 1Th 1:5–7; Rev 19:1–2, 11). Sometimes we find this truth difficult to grasp because of the complexity of this world and its evils. We have limited ability to clearly interpret it. But once we have spiritual insight about the truth, we can conform our behaviours more fully to reflect God's fairness, goodness and righteousness (Php 4:8–9).

Even when things happen that contradict our expressed efforts and knowledge of God's ultimate designs, we can have confidence that God's purposes will prevail (2Co 3:7–5:10); he will restore the fortunes of earth and humankind to his original desires (2Pe 3:13). Both Peter (1Pe 1:6–7; 2:19–25) and Paul (Ro 8:18–39) insisted that when we experience unfairness in life, we are gaining insights into what Jesus went through. We are also learning how to hope for the fullness of God's goodness to renew our world.

RELIGION Christianity Common Questions

Why does it sometimes seem like God is far away? (Psalm 10:1)
God promised his people, The LORD will deliver them to you, and you must do to them all that I have commanded you (Dt 31:5). Yet sometimes God seems distant. During such times, the ever-present God hasn't gone anywhere. Instead, specific obstacles we create or experience can make God seem far away. One obstacle is busyness. Our overloaded schedules can crowd out time with God and make it difficult to sense his presence in our lives.

When Jesus arrived for dinner at the home of friends, Martha chose to busy herself with kitchen duties while her sister sat at the feet of Jesus and was commended for doing what was better (Lk 10:38–42). Busyness isn't next to godliness. In fact, our crammed calendars can cause us to miss connecting with God daily. A second obstacle is "stuff," or possessions. In Matthew 19:16–22, Jesus urged a man to sell all he had and to follow him, but the man went away sad, because he had great wealth (Mt 19:22).

Unfortunately, possessions and wealth can prevent people from pursuing Jesus. He warned, Where your treasure is, there your heart will be also (Mt 6:21). So, if our hearts wander after more and more stuff, we will have little room for God. A third obstacle is sin. Christians can be secure in their relationship with God because their sins have been forgiven through Jesus' death on the cross. But lingering sin in our lives can still stand in the way of present fellowship with God. Fortunately, when we confess our sin, repent and obey God, we will feel the Father's love and personal presence once again (Jn 14:23, 25–27).

Does God send troubles? (Psalm 71:20)
We have trouble in the world and in our lives because of humanity's sinful nature. But the book of Job shows that troubles do not necessarily come in direct proportion to our sin. Troubles may come not because we have committed a particular sin but because of someone else's sin against us.
In this psalm the writer looked back on his life and admitted that God had allowed him to experience some bitter troubles. God is not the blameworthy cause or originator of evil in the world, and he is neither capricious nor a mere passive observer. Sometimes God permits trouble in people's lives; other times he seems to deliberately bring people to a place where they will experience difficulties.

The Bible says that God has many reasons for allowing the godly to experience suffering. Suffering may (1) lead someone away from sin and closer to God (Heb 12:4–11), (2) build up a person's character (Jas 1:2–6) or (3) provide a means to glorify God (Jn 9:1–3). Then again, there is the lesson of Job: explanations cannot always be found. At times we may not understand why God allows us to experience troubles, but even without answers it is good to say with the psalmist, You will restore my life again … you will again bring me up.

Is there any secular evidence to support the Bible's claims? (Psalm 119:160)
Although the Bible is not an ancient history textbook, it does report events that have been confirmed by other historical works. Consider the following examples:
● Archeological digs and ancient Assyrian records confirm the Bible's portrayal of King Sennacherib's invasion of Judah (2Ki 18:13– 19:37).
● Until recent excavations at Tell Mardikh uncovered tablets mentioning Sodom and Gomorrah (Ge 19:1–29), scholars dismissed the existence of both cities as a Biblical legend.
● The Hittites were also considered a Biblical legend until their capital and records were discovered in modern-day Turkey.
● The palace of King Sargon, an Assyrian ruler mentioned in Isaiah, was uncovered in Iraq. The events recorded in Isaiah 20 were even recorded on the palace walls.
● In 1947, the discovery of the Dead Sea Scrolls (which are copies of the Old Testament) confirmed how accurately the Bible was copied from 200 BC to AD 1200.

● Greek and Jewish writers (e.g., Pliny, Tacitus and Josephus) supported the Bible's claims that Jesus really lived, that he was executed between AD 26 and AD 36 and that he was worshiped as God.
● Many of the details of the New Testament including facts about Pontius Pilate, the census recorded in Luke 2, the death of Agrippa I, the execution of Ananias the high priest and the crucifixion of Jesus —are also mentioned in other historical works.

What is hell like? (Matthew 5:21–30)
The Bible offers a variety of disturbing pictures of hell. Hell is described as a place of unquenchable fire (Mk 9:43); condemnation (Mt 23:33); darkness, weeping and gnashing of teeth (Mt 8:11–13); chains and judgment (2Pe 2:4). While some of these images create an apparent conflict (e.g., fire and darkness), together they are a picture of misery. The clearest picture we have of hell comes from Jesus' parable of the rich man and Lazarus in Luke 16:19–31. In this parable, Jesus warned that the boundaries between heaven and hell are permanently fixed.

While Lazarus entered a place of comfort (Lk 16:25), the rich man existed in torment, longing for even a drop of cool water (Lk 16:24). Jesus' description of hell also leads to several observations. People are recognizable there, and it is a place of agony and torment (Lk 16:23). The chasm between heaven and hell prevents escape or movement from hell to heaven (Lk 16:26). And it is not possible for anyone in hell to warn loved ones alive on earth about the reality of hell (Lk 16:31).

Is there value in other religions like Islam, Buddhism and Hinduism? (Galatians 1:9)
Yes, there is value, especially ethical value, in other religions. But the more significant question is, Is there eternal value in other religions? No. Islam, Buddhism and Hinduism all provide very different answers to questions concerning the nature of God, sin, who Jesus Christ is, what the purpose of life is, the afterlife and the eternal significance of being a good person. We should acknowledge the diversity of religions and the diversity of their answers to such basic questions. The writer of Hebrews tells us that God rewards those who earnestly seek him (Heb 11:6).

God wants to be found, and traces of him can be found throughout the world's religions. But much about God's revelation of himself through nature and the world's religions has also been distorted through sin, ignorance, falsehood and superstition (Ro 1:18–32). This is why we all need a more definitive form of revelation. In the Christian faith, the most rudimentary issues concern who Jesus Christ is and whether he actually has the authority to speak on God's behalf. The Gospels record Jesus' teachings and the rest of the New Testament corroborates, clarifies and applies his teachings.
While world religions help to express the human soul's longing to know its Creator, all religions must wrestle with the question of truth about Jesus Christ. Was he a charismatic leader, a prophet, a martyr or the way and the truth and the life (Jn 14:6)? The Bible teaches that believing in Jesus and following his way is the only path to finding a personal relationship with God and receiving eternal life. Jesus said, No one comes to the Father except through me (Jn 14:6). And the apostle Peter said, when speaking about Jesus, Salvation is found in no one else, for there is no other name under heaven given to mankind by which we must be saved (Ac 4:12).

It is logically impossible for the various religions of the world to all be correct. Everyone can't be right. The common practice of picking and choosing from each of the religions creates a self-made spirituality governed by a god made with our own hands and in our own image. All roads do not lead to God. But all roads can be a way to get started on the quest to find him.

3 Islam

Islam Introduction

Islam flows out of the life, words, example and revelations of Muhammad, the Islamic prophet, messenger, or apostle, sent from Allah. The revelations he got from his deity were mainly recited on the mosque pulpit in Medina. Some of the earlier ones were cited in various places in Mecca, like the Kabah shrine where the black stone is housed, or in the marketplace. Then he moved to Medina in A.D. 622, because the Meccans persecuted him. The revelations did not stop. He recited them in various places like the marketplace, on his travels, and in the mosque itself. They were written down in the Quran. Since they came directly from Allah, the Quran is sacred and inspired. It is binding on all Muslims, if they interpret it correctly.

Quran
The book of Islamic revelation; scripture. The term means "recitation." The Quran is believed to be the word of God transmitted through the Prophet Muhammad. The Quran proclaims God's existence and will and is the ultimate source of religious knowledge for Muslims. The Quran serves as both record and guide for the Muslim community, transcending time and space. Muslims have dedicated their best minds and talents to the exegesis and recitation of the Quran because the Quran is the criterion by which everything else is to be judged; all movements, whether of radical reform or of moderate change, whether originating at the centre or at the periphery of the Islamic world, have grounded their programs in the Quran and use it as support.

What is Islam?

Islam is a religious system begun in the seventh century by Muhammad. Muslims follow the teachings of the Qur'an and strive to keep the Five Pillars.

The History of Islam
In the seventh century, Muhammad claimed the angel Gabriel visited him. During these angelic visitations, which continued for about 23 years until Muhammad's death, the angel purportedly revealed to Muhammad the words of Allah (the Arabic word for "God" used by Muslims). These dictated revelations compose the Qur'an, Islam's holy book. Islam means "submission," deriving from a root word that means "peace." The word Muslim means "one who submits to Allah."

The Doctrine of Islam
Muslims summarize their doctrine in six articles of faith:
1. Belief in one Allah: Muslims believe Allah is one, eternal, creator, and sovereign.
2. Belief in the angels
3. Belief in the prophets: The prophets include the biblical prophets but end with Muhammad as Allah's final prophet.
4. Belief in the revelations of Allah: Muslims accept certain portions of the Bible, such as the Torah and the Gospels. They believe the Qur'an is the preexistent, perfect word of Allah.
5. Belief in the last day of judgment and the hereafter: Everyone will be resurrected for judgment into either paradise or hell.
6. Belief in predestination: Muslims believe Allah has decreed everything that will happen. Muslims testify to Allah's sovereignty with their frequent phrase, inshallah, meaning, "if God wills."

The Five Pillars of Islam
These five tenets compose the framework of obedience for Muslims:
1. The testimony of faith (shahada): "la ilaha illa allah. Muhammad rasul Allah." This means, "There is no deity but Allah. Muhammad is the messenger of Allah." A person can convert to Islam by stating this creed. The shahada shows that a Muslim believes in Allah alone as deity and believes that Muhammad reveals Allah.
2. Prayer (salat): Five ritual prayers must be performed every day.
3. Giving (zakat): This almsgiving is a certain percentage given once a year.
4. Fasting (sawm): Muslims fast during Ramadan in the ninth month of the Islamic calendar. They must not eat or drink from dawn until sunset.
5. Pilgrimage (hajj): If physically and financially possible, a Muslim must make the pilgrimage to Mecca in Saudi Arabia at least once. The hajj is performed in the twelfth month of the Islamic calendar.

A Muslim's entrance into paradise hinges on obedience to these Five Pillars. Still, Allah may reject them. Even Muhammad was not sure whether Allah would admit him to paradise (Surah 46:9; Hadith 5.266).

An Evaluation of Islam
Compared to Christianity, Islam has some similarities but significant differences. Like Christianity, Islam is monotheistic. However, Muslims reject the Trinity—that God has revealed Himself as one in three Persons: the Father, Son, and Holy Spirit.

Muslims claim that Jesus was one of the most important prophets—not God's Son. Islam asserts that Jesus, though born of a virgin, was created like Adam. Muslims do not believe Jesus died on the cross. They do not understand why Allah would allow His prophet Isa (the Islamic word for "Jesus") to die a torturous death. Yet the Bible shows how the death of the perfect Son of God was essential to pay for the sins of the world (Isaiah 53:5-6; John 3:16; 14:6; 1 Peter 2:24).

Islam teaches that the Qur'an is the final authority and the last revelation of Allah. The Bible, however, was completed in the first century with the Book of Revelation. The Bible warns against anyone adding to or subtracting from God's Word (Deuteronomy 4:2; Proverbs 30:6; Galatians 1:6-12; Revelation 22:18). The Qur'an, as a claimed addition to God's Word, directly disobeys God's command.

Muslims believe that paradise can be earned through keeping the Five Pillars. The Bible, in contrast, reveals that sinful man can never measure up to the holy God (Romans 3:23; 6:23). Only by God's grace may sinners be saved through repentant faith in Jesus (Acts 20:21; Ephesians 2:8-9).

Because of these essential differences and contradictions, Islam and Christianity cannot both be true. The Bible and Qur'an cannot both be God's Word. The truth has eternal consequences.

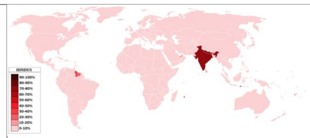
"Beloved, do not believe every spirit, but test the spirits to see whether they are from God, because many false prophets have gone out into the world. By this you know the Spirit of God: every spirit that confesses that Jesus Christ has come in the flesh is from God; and every spirit that does not confess Jesus is not from God; this is the spirit of the antichrist, of which you have heard that it is coming, and now it is already in the world" (1 John 4:1-4; see also John 3:35-36).

4 Hinduism ॐ

Hinduism is not an organized religion and has no single, systematic approach to teaching its value system. Nor do Hindus have a simple set of rules to follow like the Ten Commandments. Local, regional, caste, and community-driven practices influence the interpretation and practice of beliefs throughout the Hindu world. Yet a common thread among all these variations is belief in a Supreme Being and adherence to certain concepts such as Truth, dharma, and karma. And belief in the authority of the Vedas (sacred scriptures) serves, to a large extent, as the very definition of a Hindu, even though how the Vedas are interpreted may vary greatly. Hindus acknowledge that, at the most fundamental level, God is the One without a second — the absolute, formless, and only Reality known as Brahman, the Supreme, Universal Soul.

Brahman is the universe and everything in it. Brahman has no form and no limits; it is Reality and Truth. Thus Hinduism is a pantheistic religion: It equates God with the universe. Yet Hindu religion is also polytheistic: populated with myriad gods and goddesses who personify aspects of the one true God, allowing individuals an infinite number of ways to worship based on family tradition, community and regional practices, and other considerations.

Geographic Positioning
Countries with the greatest proportion of Hindus from Hinduism by country (as of 2010[n])



Largest Hindu Populations[n]	**India** 957,636,314	**Nepal** 21,354,570	**Bangladesh** 14,274,430	**Indonesia** 4,012,470	**Pakistan** 2,603,895	**Sri Lanka** 2,554,606	**Malaysia** 1,700,100	**United States** 1,543,730	**United Arab Emirates** 1,239,610	**South Africa** 749,870	**Mauritius** 665,820

Beliefs

Truth is Eternal	Hindus pursue knowledge and understanding of the Truth: the very essence of the universe and the only Reality. According to the Vedas, Truth is One, but the wise express it in a variety of ways.
Brahman is Truth and Reality	Hindus believe in Brahman as the one true God who is formless, limitless, all-inclusive, and eternal. Brahman is not an abstract concept; it is a real entity that encompasses everything (seen and unseen) in the universe.
The Vedas are the ultimate authority	The Vedas are Hindu scriptures that contain revelations received by ancient saints and sages. Hindus believe that the Vedas are without beginning and without end; when everything else in the universe is destroyed (at the end of a cycle of time), the Vedas remain.
Everyone should strive to achieve dharma	Understanding the concept of dharma helps you understand the Hindu faith. Unfortunately, no single English word adequately covers its meaning. Dharma can be described as right conduct, righteousness, moral law, and duty. Anyone who makes dharma central to one's life strives to do the right thing, according to one's duty and abilities, at all times.
Individual souls are immortal	A Hindu believes that the individual soul (atman) is neither created nor destroyed; it has been, it is, and it will be. Actions of the soul while residing in a body require that it reap the consequences of those actions in the next life — the same soul in a different body. The process of movement of the atman from one body to another is known as transmigration. The kind of body the soul inhabits next is determined by karma (actions accumulated in previous lives).
The goal of the individual soul is moksha	Moksha is liberation: the soul's release from the cycle of death and rebirth. It occurs when the soul unites with Brahman by realizing its true nature. Several paths can lead to this realization and unity: the path of duty, the path of knowledge, and the path of devotion (unconditional surrender to God).

What is Hinduism?

Hinduism is one of the oldest known organized religions—its sacred writings date as far back as 1400 to 1500 B.C. It is also one of the most diverse and complex, having millions of gods. Hindus have a wide variety of core beliefs and exist in many different sects. Although it is the third largest religion in the world, Hinduism exists primarily in India and Nepal. The main texts of Hinduism are the Vedas (considered most important), Upanishadas, the Mahabharata, and the Ramayana. These writings contain hymns, incantations, philosophies, rituals, poems, and stories from which Hindus base their beliefs. Other texts used in Hinduism include the Brahmanas, the Sutras, and the Aranyakas.

Though Hinduism is often understood as being polytheistic, supposedly recognizing as many as 330 million gods, it also has one "god" that is supreme—Brahma. Brahma is an entity believed to inhabit every portion of reality and existence throughout the entire universe. Brahma is both impersonal and unknowable and is often believed to exist in three separate forms: Brahma—Creator; Vishnu—Preserver; and Shiva—Destroyer. These "facets" of Brahma are also known through the many other incarnations of each. It is difficult to summarize Hindu theology since the various Hindu schools contain elements of almost every theological system.

Hinduism can be:
1) Monistic—Only one thing exists; Sankara's school
2) Pantheistic—Only one divine thing exists so that God is identical to the world; Brahmanism
3) Panentheistic—The world is part of God; Ramanuja's School
4) Theistic—Only one God, distinct from Creation; Bhakti Hinduism.

Observing other schools, Hinduism can also be atheistic, deistic, or even nihilistic. With such diversity included under the title "Hindu," one may wonder what makes them "Hindu" in the first place? About the only real issue is whether or not a belief system recognizes the Vedas as sacred. If it does, then it is Hindu. If not, then it is not Hindu. The Vedas are more than theology books. They contain a rich and colorful "theo-mythology," that is, a religious mythology which deliberately interweaves myth, theology, and history to achieve a story-form religious root. This "theo-mythology" is so deeply rooted in India's history and culture that to reject the Vedas is viewed as opposing India.

Therefore, a belief system is rejected by Hinduism if it does not embrace Indian culture to some extent. If the system accepts Indian culture and its theo-mythical history, then it can be embraced as "Hindu" even if its theology is theistic, nihilistic, or atheistic. This openness to contradiction can be a headache for Westerners who seek logical consistency and rational defensibility in their religious views. But, to be fair, Christians are no more logical when they claim belief in Yahweh yet live life as practical atheists, denying Christ with their lives. For the Hindu the conflict is genuine logical contradiction. For the Christian, the conflict is more likely simple hypocrisy.

Hinduism views mankind as divine. Because Brahma is everything, Hinduism asserts that everyone is divine. Atman, or self, is one with Brahman. All of reality outside of Brahman is considered mere illusion. The spiritual goal of a Hindu is to become one with Brahma, thus ceasing to exist in its illusory form of "individual self." This freedom is referred to as "moksha." Until moksha is achieved, a Hindu believes that he/she will be repeatedly reincarnated in order that he/she may work towards self-realization of the truth (the truth being that only Brahman exists, nothing else). How a person is reincarnated is determined by karma, which is a principle of cause and effect governed by nature's balance. What one did in the past affects and corresponds with what happens in the future, past and future lives included.

Although this is just a brief synopsis, it is readily seen that Hinduism is in opposition to biblical Christianity on almost every count of its belief system. Christianity has one God who is both personal and knowable (Deuteronomy 6:5; 1 Corinthians 8:6); has one set of Scriptures; teaches that God created the earth and all who live upon it (Genesis 1:1; Hebrews 11:3); believes that man is created in God's image and lives only once (Genesis 1:27; Hebrews 9:27-28); and teaches that salvation is through Jesus Christ alone (John 3:16; 6:44; 14:6; Acts 4:12). Hinduism as a religious system fails because it fails to recognize Jesus as the uniquely incarnated God-Man and Savior, the one solely sufficient source of salvation for humanity.

5 Buddhism

Buddhism is a path of practice and spiritual development leading to Insight into the true nature of reality. Buddhist practices like meditation are means of changing yourself in order to develop the qualities of awareness, kindness, and wisdom. The experience developed within the Buddhist tradition over thousands of years has created an incomparable resource for all those who wish to follow a path — a path which ultimately culminates in Enlightenment or Buddhahood. An enlightened being sees the nature of reality absolutely clearly, just as it is, and lives fully and naturally in accordance with that vision. This is the goal of the Buddhist spiritual life, representing the end of suffering for anyone who attains it.

Because Buddhism does not include the idea of worshipping a creator god, some people do not see it as a religion in the normal, Western sense. The basic tenets of Buddhist teaching are straightforward and practical: nothing is fixed or permanent; actions have consequences; change is possible. So Buddhism addresses itself to all people irrespective of race, nationality, caste, sexuality, or gender. It teaches practical methods which enable people to realise and use its teachings in order to transform their experience, to be fully responsible for their lives.

Geographic Positioning

The Buddha
Buddhism started with the Buddha. The word 'Buddha' is a title, which means 'one who is awake' — in the sense of having 'woken up to reality'. The Buddha was born as Siddhartha Gautama in Nepal around 2,500 years ago. He did not claim to be a god or a prophet. He was a human being who became Enlightened, understanding life in the deepest way possible. Siddhartha was born into the royal family of a small kingdom on the Indian-Nepalese border. According to the traditional story he had a privileged upbringing, but was jolted out of his sheltered life on realising that life includes the harsh facts of old age, sickness, and death. This prompted him to puzzle over the meaning of life. Eventually he felt impelled to leave his palace and follow the traditional Indian path of the wandering holy man, a seeker after Truth. He became very adept at meditation under various teachers, and then took up ascetic practices. This was based on the belief that one could free the spirit by denying the flesh. He practised austerities so determinedly that he almost starved to death.

Teachings

Soon after his Enlightenment the Buddha had a vision in which he saw the human race as a bed of lotus flowers. Some of the lotuses were still enmired in the mud, others were just emerging from it, and others again were on the point of blooming. In other words, all people had the ability to unfold their potential and some needed just a little help to do so. So the Buddha decided to teach, and all of the teachings of Buddhism may be seen as attempts to fulfil this vision — to help people grow towards Enlightenment. Buddhism sees life as a process of constant change, and its practices aim to take advantage of this fact. It means that one can change for the better.

The decisive factor in changing oneself is the mind, and Buddhism has developed many methods for working on the mind. Most importantly, Buddhists practise meditation, which is a way of developing more positive states of mind that are characterised by calm, concentration, awareness, and emotions such as friendliness. Using the awareness developed in meditation it is possible to have a fuller understanding of oneself, other people, and of life itself. Buddhists do not seek to 'evangelise' or coerce other people to adopt their religion, but they do seek to make its teachings available to whoever is interested, and people are free to take.

Three Jewels
The ideals at the heart of Buddhism are collectively known as the 'Three Jewels', or the 'Three Treasures'. These are the Buddha (the yellow jewel), the Dharma (the blue jewel), and the Sangha (the red jewel). It is by making these the central principles of your life that you become a Buddhist.

The Buddha
The Buddha refers both to the historical Buddha and to the ideal of Buddhahood itself. The whole Buddhist tradition derives from the historical Buddha and all schools regard him as their root founder, guide and inspiration. Going for Refuge to the Buddha means seeing him as your ultimate teacher and spiritual example. It also means committing yourself to achieving Buddhahood – Enlightenment for the sake of all beings – which means that you aim to become someone who sees the nature of reality absolutely clearly, just as it is, and lives fully and naturally in accordance with that vision. This is the goal of the Buddhist spiritual life, representing the end of suffering for anyone who attains it.

The Dharma
The Dharma primarily means the teachings of the Buddha, or the truth he understood. The word 'Dharma' has many meanings but most importantly it means the unmediated Truth (as experienced by the Enlightened mind). As a term it also encompasses Buddhist teachings as that same Truth mediated by language and concepts. In this second sense, Dharma is the teaching that was born when the Buddha first put his realisation into words and communicated it to others at Sarnath in Northern India. The occasion is traditionally referred to as 'the first turning of the wheel of the Dharma', and the eight-spoked Dharma wheel is a common emblem of Buddhism.

The Sangha
All of us need other people to learn from. If we are to practise the Dharma we need the example and teaching of others who have done so before us, especially those who have gained insight into the nature of reality themselves. So the third of the Three Jewels is the Sangha or the spiritual community. More broadly 'sangha' also refers to the people with whom we share our spiritual lives. We need the guidance of personal teachers who are further along the path than we are, and the support and friendship of other practitioners. This is very important because Buddhism is not an abstract philosophy or creed; it is a way of approaching life and therefore it only has any meaning when it is embodied in people. More broadly 'sangha' also refers to the people with whom we share our spiritual lives. We need the guidance of personal teachers who are further along the path than we are, and the support and friendship of other practitioners. This is very important because Buddhism is not an abstract philosophy or creed; it is a way of approaching life and therefore it only has any meaning when it is embodied in people.

Our Sangha
The Buddha once said that kalyana mitrata – spiritual friendship or 'friendship with what is beautiful' – is the whole of the spiritual life. Our community takes these words to heart. Kalyana mitrata, one might say, is the whole of the Triratna Buddhist Community. Triratna centres are not simply places for teaching the techniques of meditation, or imparting information about Buddhism. When a person first attends a Triratna centre, they are considered a Friend. They may take part in all the public activities of the centre, including meditation classes, the study and practice of Buddhism, arts events and so on. There is no obligation or pressure to take their involvement further, and some people remain as Friends for many years. For those who want it, however, there is the opportunity to get to know other practitioners and strengthen those connections. The community's structures can all be seen as a framework for kalyana mitrata and friendship.

Threefold Way
Another formulation of the path is the Threefold Way of ethics, meditation, and wisdom. This is a progressive path, as ethics and a clear conscience provides an indispensable basis for meditation, and meditation is the ground on which wisdom can develop.

Ethics
To live is to act, and our actions can have either harmful or beneficial consequences for ourselves and others. Buddhist ethics is concerned with the principles and practices that help one to act in ways that help rather than harm. The core ethical code is known as the Five Precepts. These are not rules or commandments, but 'principles of training', which are undertaken freely and put into practice with intelligence and sensitivity. The Buddhist tradition acknowledges that life is complex and throws up many difficulties, and it does not suggest that there is a single course of action that will be right in all circumstances. Indeed, rather than speaking of actions being right or wrong, Buddhism speaks of them being skilful (kusala) or unskilful (akusala). Many Buddhists around the world recite the five precepts every day, and try to put them into practice in their lives.

Meditation
Meditation is the second stage of the threefold way.

Wisdom
The aim of all Buddhist practices, including meditation, is prajna, or wisdom. The Buddha taught that the fundamental cause of human difficulties is our existential ignorance – our failure to understand the true nature of reality and wisdom is the opposite of this. To start with, we simply need to hear the teachings that indicate the Buddhist vision of life. Then we need to reflect on them and make sense of them in relation to our own experience. But prajna proper means developing our own direct understanding of the truth. It is not enough to know the Buddha's philosophy, or even to have a good understanding of it. The ultimate aim is to realise the truth for oneself and to be transformed by that realisation. The Buddha taught that life - everything we experience - has three characteristics. He called these the three marks of conditioned existence. Firstly he said that all life is dukkha, or unsatisfactory. He also said that it is impermanent. Everything in the universe, including ourselves and the thoughts that make up our minds, is in a constant process of change. And yet we act as if the world around us is predictable and stable, and we live our lives as if death were not a certainty. Buddhists reflect on the fact of impermanence, and try to live with this understanding. Thirdly, wherever we may look in life for something solid and unchanging, we only find flux. So he said that all existence is anatta or insubstantial. There is no fixed, abiding essence to things, and no eternal soul within human beings.

Four Noble Truths
The Four Aryan (or Noble) Truths are perhaps the most basic formulation of the Buddha's teaching. They are expressed as follows:

1	All existence is dukkha. The word dukkha has been variously translated as 'suffering', 'anguish', 'pain', or 'unsatisfactoriness'. The Buddha's insight was that our lives are a struggle, and we do not find ultimate happiness or satisfaction in anything we experience. This is the problem of existence.
2	The cause of dukkha is craving. The natural human tendency is to blame our difficulties on things outside ourselves. But the Buddha says that their actual root is to be found in the mind itself. In particular our tendency to grasp at things (or alternatively to push them away) places us fundamentally at odds with the way life really is.
3	The cessation of dukkha comes with the cessation of craving. As we are the ultimate cause of our difficulties, we are also the solution. We cannot change the things that happen to us, but we can change our responses.
4	There is a path that leads from dukkha. Although the Buddha throws responsibility back on to the individual he also taught methods through which we can change ourselves, for example the Noble Eightfold Path.

Noble Eightfold Path
The Buddha's 'Noble Eightfold Path' is a further 'unpacking' of the 'Threefold Way' and is perhaps the most widely known of the Buddha's teachings. It is ancient, extending back to the Buddha's first discourse and is highly valued as a treasury of wisdom and practical guidance on how to live our lives. Traditionally the teaching is seen as highlighting eight areas or 'limbs' of 'right' practice (Sangharakshita prefers 'perfect' to 'right'), which sit in mutual relationship to one other and are each essential elements in an integrated approach to the Dharma:

1. Right Understanding or Perfect Vision
2. Right Resolve or Perfect Emotion
3. Right Speech or Perfect Speech
4. Right Action or Perfect Action
5. Right Livelihood or Perfect Livelihood
6. Right Effort or Perfect Effort
7. Right Mindfulness or Perfect Awareness
8. Right Meditation or Perfect Samadhi

What is Buddhism?

Buddhism is one of the leading world religions in terms of adherents, geographical distribution, and socio-cultural influence. While largely an "Eastern" religion, it is becoming increasingly popular and influential in the Western world. It is a unique world religion in its own right, though it has much in common with Hinduism in that both teach Karma (cause-and-effect ethics), Maya (the illusory nature of the world), and Samsara (the cycle of reincarnation). Buddhists believe that the ultimate goal in life is to achieve "enlightenment" as they perceive it.

Buddhism's founder, Siddhartha Guatama, was born into royalty in Nepal around 600 B.C. As the story goes, he lived luxuriously, with little exposure to the outside world. His parents intended for him to be spared from the influence of religion and protected from pain and suffering. However, it was not long before his shelter was penetrated, and he had visions of an aged man, a sick man, and a corpse. His fourth vision was of a peaceful ascetic monk (one who denies luxury and comfort). Seeing the monk's peacefulness, he decided to become an ascetic himself. He abandoned his life of wealth and affluence to pursue enlightenment through austerity.

He was skilled at this sort of self-mortification and intense meditation. He was a leader among his peers. Eventually, his efforts culminated in one final gesture. He "indulged" himself with one bowl of rice and then sat beneath a fig tree (also called the Bodhi tree) to meditate till he either reached "enlightenment" or died trying. Despite his travails and temptations, by the next morning, he had achieved enlightenment. Thus, he became known as the 'enlightened one' or the 'Buddha.' He took his new realization and began to teach his fellow monks, with whom he had already gained great influence. Five of his peers became the first of his disciples.

What had Gautama discovered? Enlightenment lay in the "middle way," not in luxurious indulgence or self-mortification. Moreover, he discovered what would become known as the 'Four Noble Truths'—1) to live is to suffer (Dukha), 2) suffering is caused by desire (Tanha, or "attachment"), 3) one can eliminate suffering by eliminating all attachments, and 4) this is achieved by following the noble eightfold path. The "eightfold path" consists of having a right 1) view, 2) intention, 3) speech, 4) action, 5) livelihood (being a monk), 6) effort (properly direct energies), 7) mindfulness (meditation), and 8) concentration (focus).

The Buddha's teachings were collected into the Tripitaka or "three baskets." Behind these distinguishing teachings are teachings common to Hinduism, namely reincarnation, karma, Maya, and a tendency to understand reality as being pantheistic in its orientation. Buddhism also offers an elaborate theology of deities and exalted beings. However, like Hinduism, Buddhism can be hard to pin down as to its view of God. Some streams of Buddhism could legitimately be called atheistic, while others could be called pantheistic, and still others theistic, such as Pure Land Buddhism. Classical Buddhism, however, tends to be silent on the reality of an ultimate being and is therefore considered atheistic.

Buddhism today is quite diverse. It is roughly divisible into the two broad categories of Theravada (small vessel) and Mahayana (large vessel). Theravada is the monastic form which reserves ultimate enlightenment and nirvana for monks, while Mahayana Buddhism extends this goal of enlightenment to the laity as well, that is, to non-monks. Within these categories can be found numerous branches including Tendai, Vajrayana, Nichiren, Shingon, Pure Land, Zen, and Ryobu, among others. Therefore it is important for outsiders seeking to understand Buddhism not to presume to know all the details of a particular school of Buddhism when all they have studied is classical, historic Buddhism.

The Buddha never considered himself to be a god or any type of divine being. Rather, he considered himself to be a 'way-shower' for others. Only after his death was he exalted to god status by some of his followers, though not all of his followers viewed him that way. With Christianity however, it is stated quite clearly in the Bible that Jesus was the Son of God (Matthew 3:17: "And a voice from heaven said, 'This is my Son, whom I love; with him I am well pleased'") and that He and God are one (John 10:30). One cannot rightfully consider himself or herself a Christian without professing faith in Jesus as God.

Jesus taught that He is the way and not simply one who showed the way as John 14:6 confirms: "I am the way, the truth, and the life. No one comes to the Father except by me." By the time Guatama died, Buddhism had become a major influence in India; three hundred years later, Buddhism had encompassed most of Asia. The scriptures and sayings attributed to the Buddha were written about four hundred years after his death. In Buddhism, sin is largely understood to be ignorance. And, while sin is understood as "moral error," the context in which "evil" and "good" are understood is amoral. Karma is understood as nature's balance and is not personally enforced. Nature is not moral; therefore, karma is not a moral code, and sin is not ultimately immoral.

Thus, we can say, by Buddhist thought, that our error is not a moral issue since it is ultimately an impersonal mistake, not an interpersonal violation. The consequence of this understanding is devastating. For the Buddhist, sin is more akin to a misstep than a transgression against the nature of holy God. This understanding of sin does not accord with the innate moral consciousness that men stand condemned because of their sin before a holy God (Romans 1-2). Since it holds that sin is an impersonal and fixable error, Buddhism does not agree with the doctrine of depravity, a basic doctrine of Christianity.

The Bible tells us man's sin is a problem of eternal and infinite consequence. In Buddhism, there is no need for a Savior to rescue people from their damning sins. For the Christian, Jesus is the only means of rescue from eternal damnation. For the Buddhist there is only ethical living and meditative appeals to exalted beings for the hope of perhaps achieving enlightenment and ultimate Nirvana. More than likely, one will have to go through a number of reincarnations to pay off his or her vast accumulation of karmic debt. For the true followers of Buddhism, the religion is a philosophy of morality and ethics, encapsulated within a life of renunciation of the ego-self. In Buddhism, reality is impersonal and non-relational; therefore, it is not loving.

Not only is God seen as illusory, but, in dissolving sin into non-moral error and by rejecting all material reality as maya ("illusion"), even we ourselves lose our "selves." Personality itself becomes an illusion. When asked how the world started, who/what created the universe, the Buddha is said to have kept silent because in Buddhism there is no beginning and no end. Instead, there is an endless circle of birth and death. One would have to ask what kind of Being created us to live, endure so much pain and suffering, and then die over and over again? It may cause one to contemplate, what is the point, why bother? Christians know that God sent His Son to die for us, one time, so that we do not have to suffer for an eternity. He sent His Son to give us the knowledge that we are not alone and that we are loved.

Christians know there is more to life than suffering, and dying, "… but it has now been revealed through the appearing of our Savior, Christ Jesus, who has destroyed death and has brought life and immortality to light through the gospel" (2 Timothy 1:10). Buddhism teaches that Nirvana is the highest state of being, a state of pure being, and it is achieved by means relative to the individual. Nirvana defies rational explanation and logical ordering and therefore cannot be taught, only realized. Jesus' teaching on heaven, in contrast, was quite specific.

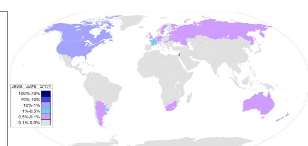
He taught us that our physical bodies die but our souls ascend to be with Him in heaven (Mark 12:25). The Buddha taught that people do not have individual souls, for the individual self or ego is an illusion. For Buddhists there is no merciful Father in heaven who sent His Son to die for our souls, for our salvation, to provide the way for us to reach His glory. Ultimately, that is why Buddhism is to be rejected.

6 Judaism

Judaism is the religion of the Jewish people. It is an ancient, monotheistic, Abrahamic religion with the Torah as its foundational text. It encompasses the religion, philosophy, and culture of the Jewish people. Judaism is considered by religious Jews to be the expression of the covenant that God established with the Children of Israel. Judaism is characterized by a belief in one transcendent God who revealed himself to Abraham, Moses, and the Hebrew prophets and by a religious life in accordance with Scriptures and rabbinic traditions. Judaism is the complex phenomenon of a total way of life for the Jewish people, comprising theology, law, and innumerable cultural traditions. The various teachings of Judaism have often been regarded as specifications of the central idea of monotheism. One God, the creator of the world, has freely elected the Jewish people for a unique covenantal relationship with himself.

This one and only God has been affirmed by virtually all professing Jews in a variety of ways throughout the ages. Jewish monotheism has had both universalistic and particularistic features. Along universal lines, it has affirmed a God who created and rules the entire world and who at the end of history will redeem all Israel (the classical name for the Jewish people), all humankind, and indeed the whole world. The ultimate goal of all nature and history is an unending reign of cosmic intimacy with God, entailing universal justice and peace. Between creation and redemption lies the particularistic designation of the Jewish people as the locus of God's activity in the world, as the people chosen by God to be "a kingdom of priests and a holy nation" (Exodus 19:6). This arrangement is designated a covenant and is structured by an elaborate and intricate law. Thus, the Jewish people are both entitled to special privileges and burdened with special responsibilities from God.

Geographic Positioning
Countries with the greatest proportion of Jews (as of 2016[n])



Largest Jewish Populations[n]	Israel	United States	France	Canada	United Kingdom	Argentina	Russia	Germany	Australia	Brazil	South Africa
	6,336,400	5,700,000	460,000	388,000	290,000	180,700	179,500	117,000	113,000	94,200	69,500

History
Israelite tradition identified YHWH (by scholarly convention pronounced Yahweh), the God of Israel, with the creator of the world, who had been known and worshipped from the beginning of time. Abraham did not discover this God but entered into a new covenantal relationship with him, in which Abraham was promised the land of Canaan and numerous progeny. God fulfilled that promise, it is believed, through the actions of the Hebrew leader Moses (14th–13th century BCE): he liberated the people of Israel from Egypt, imposed covenantal obligations on them at Mt. Sinai, and brought them to the Promised Land.

What is Judaism?

What is Judaism, and who or what is a Jew? Is Judaism simply a religion? Is it a cultural identity or just an ethnic group? Are Jews a clan of people or are they a nation? What do Jews believe, and do they all believe the same things?

Dictionary definitions of a "Jew" include "a member of the tribe of Judah," "an Israelite," "a member of a nation existing in the land of Israel from the 6th century B.C. to the 1st century A.D.," "a person belonging to a continuation through descent or conversion of the ancient Jewish people," and "one whose religion is Judaism."

According to rabbinical Judaism, a Jew is one who has a Jewish mother or one who has formally converted to Judaism. Leviticus 24:10 is often cited to give this belief credibility, although the Torah makes no specific claim in support of this tradition. Some rabbis say that it has nothing to do with what the individual actually believes. These rabbis tell us that a Jew does not need to be a follower of Jewish laws and customs to be considered Jewish.

In fact, a Jew can have no belief in God at all and still be Jewish based on the above rabbinical interpretation. Other rabbis make it clear that unless the person follows the precepts of the Torah and accepts the "Thirteen Principles of Faith" of Maimonides (Rabbi Moshe ben Maimon, one of the greatest medieval Jewish scholars), he cannot be a Jew. Although this person may be a "biological" Jew, he has no real connection to Judaism.

In the Torah—the first five books of the Bible—Genesis 14:13 teaches that Abram, commonly recognized as the first Jew, was described as a "Hebrew." The name "Jew" comes from the name of Judah, one of the twelve sons of Jacob and one of the twelve tribes of Israel. Apparently the name "Jew" originally referred only to those who were members of the tribe of Judah, but when the kingdom was divided after the reign of Solomon (1 Kings 12), the term referred to anyone in the kingdom of Judah, which included the tribes of Judah, Benjamin, and Levi. Today, many believe that a Jew is anyone who is a physical descendant of Abraham, Isaac, and Jacob, regardless of which of the original twelve tribes he descends from.

So, what is it that Jews believe, and what are the basic precepts of Judaism? There are five main forms or sects of Judaism in the world today. They are Orthodox, Conservative, Reformed, Reconstructionist, and Humanistic. The beliefs and requirements in each group differ dramatically; however, a short list of the traditional beliefs of Judaism would include the following:
- God is the creator of all that exists; He is one, incorporeal (without a body), and He alone is to be worshiped as absolute ruler of the universe.
- The first five books of the Hebrew Bible were revealed to Moses by God. They will not be changed or augmented in the future.
- God has communicated to the Jewish people through prophets.
- God monitors the activities of humans; He rewards individuals for good deeds and punishes evil.

Although Christians base much of their faith on the same Hebrew Scriptures as Jews do, there are major differences in belief: Jews generally consider actions and behavior to be of primary importance; beliefs come out of actions. This conflicts with conservative Christians for whom belief is of primary importance and actions are a result of that belief.

- Jewish belief does not accept the Christian concept of original sin (the belief that all people have inherited Adam and Eve's sin when they disobeyed God's instructions in the Garden of Eden).
- Judaism affirms the inherent goodness of the world and its people as creations of God.
- Jewish believers seek to sanctify their lives and draw closer to God by fulfilling mitzvoth (divine commandments).
- Judaism says that no savior is needed or is available as an intermediary.
- The 613 commandments found in Leviticus and other books regulate all aspects of Jewish life. The Ten Commandments, as delineated in Exodus 20:1-17 and Deuteronomy 5:6-21, form a brief synopsis of the Law.

According to Judaism, the Messiah "anointed one of God" will arrive in the future and gather Jews once more into the land of Israel. There will be a general resurrection of the dead at that time. The Jerusalem temple, destroyed in AD 70 by the Romans, will be rebuilt. Beliefs about Jesus vary considerably. Some view Him as a great moral teacher. Others see Him as a false prophet or as an idol of Christianity. Some sects of Judaism will not even say His name due to the prohibition against saying an idol's name.

The Jews are often referred to as God's chosen people. This does not mean that they are in any way to be considered superior to other groups. Bible verses such as Exodus 19:5 simply state that God has selected Israel to receive and study the Torah, to worship God only, to rest on the Sabbath, and to celebrate the festivals. Jews were not chosen to be better than others; they were simply selected to be a light to the Gentiles and to be a blessing to all the nations.

7 Atheism

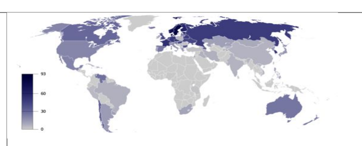
Atheism is the absence of belief in any Gods or spiritual beings. The word Atheism comes from a, meaning without, and theism meaning belief in god or gods. Atheists don't use God to explain the existence of the universe. Atheists say that human beings can devise suitable moral codes to live by without the aid of Gods or scriptures. What are the implications for a religious atheist? Without God, he arrives at the necessary philosophies of moral relativism and naturalism. But does his view line up with objective reality? And is there any evidence for a God?

Atheist Reasoning
- They find insufficient evidence to support any religion.
- They think that religion is nonsensical.
- They once had a religion and have lost faith in it.
- They live in a non-religious culture.
- Religion doesn't interest them.
- Religion doesn't seem relevant to their lives.
- Religions seem to have done a lot of harm in the world.
- The world is such a bad place that there can't be a God.

Strong Atheism
The strong atheist, also known as an explicit atheist or a positive atheist, denies the existence of God or any other deities. This person's views are based solely on what can be found to be true using the scientific method. Since the existence of God cannot be proven using science, the strong atheist concludes that God doesn't exist.

Weak Atheism
The second type of atheist is the weak atheist, also known as an implicit atheist or a negative atheist. This person does not deny the existence of God outright, but rather claims a religious relativism. That is, she would claim that anyone's belief can be true for that person, but she doesn't believe in God herself.

Geographic Positioning
Countries with the greatest proportion of people without religion (including agnostics and atheists) from Irreligion by country. (as of 2007[n])



Atheist Criticisms of Religion
Not all atheists are hostile to religion, but many do think that religion is errant. Here are some of their reasons:
- Religion gets people to believe something untrue.
- Religion makes people base the way they run their lives on a falsehood.
- Religion stops people thinking in a rational and objective way.
- Religion forces people to rely on outside authority, rather than becoming self-reliant.
- Religion imposes irrational rules of good and bad behaviour.
- Religion divides people, and is a cause of conflict and war.
- The hierarchical structure of most religions is anti-democratic, and thus offends basic human rights.
- Religion doesn't give equal treatment to women and gay people, and thus offends basic human rights.
- Religion obstructs scientific research.
- Religion wastes time and money.

Most atheists willingly concede there are some good things about religion, such as:	● Religious art and music ● Religious charities and good works ● Much religious wisdom and scripture ● Human fellowship and togetherness

What is Atheism?

Atheism is the view that God does not exist. Atheism is not a new development. Psalm 14:1, written by David around 1000 B.C., mentions atheism: “The fool says in his heart, ‘There is no God.’” Recent statistics show an increasing number of people claiming to be atheists, up to 10 percent of people worldwide. So why are more and more people becoming atheists? Is atheism truly the logical position atheists claim it to be?

Why does atheism even exist? Why doesn’t God simply reveal Himself to people, proving that He exists? Surely if God would just appear, the thinking goes, everyone would believe in Him! The problem here is that it is not God’s desire to just convince people that He exists. It is God’s desire for people to believe in Him by faith (2 Peter 3:9) and accept by faith His gift of salvation (John 3:16). God clearly demonstrated His existence many times in the Old Testament (Genesis 6-9; Exodus 14:21-22; 1 Kings 18:19-31). Did the people believe that God exists? Yes. Did they turn from their evil ways and obey God? No. If a person is not willing to accept God’s existence by faith, then he/she is definitely not ready to accept Jesus Christ as Savior by faith (Ephesians 2:8-9). God’s desire is for people to become Christians, not just theists (those who believe God exists).

The Bible tells us that God’s existence must be accepted by faith. Hebrews 11:6 declares, “And without faith it is impossible to please God, because anyone who comes to Him must believe that He exists and that He rewards those who earnestly seek Him.” The Bible reminds us that we are blessed when we believe and trust in God by faith: “Then Jesus told him, ‘Because you have seen me, you have believed; blessed are those who have not seen and yet have believed’” (John 20:29).

The existence of God must be accepted by faith, but this does not mean belief in God is illogical. There are many good arguments for the existence of God. The Bible teaches that God’s existence is clearly seen in the universe (Psalm 19:1-4), in nature (Romans 1:18-22), and in our own hearts (Ecclesiastes 3:11). With all that said, the existence of God cannot be proven; it must be accepted by faith. At the same time, it takes just as much faith to believe in atheism. To make the absolute statement “God does not exist” is to make a claim of knowing absolutely everything there is to know about everything and of having been everywhere in the universe and having witnessed everything there is to be seen.

Of course, no atheist would make these claims. However, that is essentially what they are claiming when they state that God absolutely does not exist. Atheists cannot prove that God does not, for example, live in the center of the sun, a higher dimension or beneath the clouds of Jupiter, or even in some distant nebula. Since those places are beyond our capacity to observe, it cannot be proven that God does not exist. It takes just as much faith to be an atheist as it does to be a theist.

Atheism cannot be proven, and God’s existence must be accepted by faith. Obviously, Christians believe strongly that God exists, and admit that God’s existence is a matter of faith. At the same time, we reject the idea that belief in God is illogical. We believe that God’s existence can be clearly seen, keenly sensed, and proven to be philosophically and scientifically necessary. “The heavens declare the glory of God; the skies proclaim the work of his hands. Day after day they pour forth speech; night after night they display knowledge. There is no speech or language where their voice is not heard. Their voice goes out into all the earth, their words to the ends of the world” (Psalm 19:1-4).

Atheist Reasons

These are the most common reasons why people are atheists.

Intellectual	Most atheists would offer some of the following arguments as their reason for deciding that God doesn't exist.
Non-Intellectual	Many people are atheists because of the way they were brought up or educated, or because they have simply adopted the beliefs of the culture in which they grew up. So someone raised in Communist China is likely to have no belief in God because the education system and culture make being an atheist the natural thing to do. Other people are atheists because they just feel that atheism is right.

"*It is wrong always, everywhere, and for anyone to believe anything upon insufficient evidence.*"
W. K. Clifford (1879)

Many are atheists because they think there is no evidence for God's existence - or at least no reliable evidence. They argue that a person should only believe in things for which they have good evidence. These people just haven't done their homework on Christianity yet, and other religions have no actual evidence of their god being outside of space and time.

Fortunately the Bible is overflowing with evidence, you just need to take the time to find it. Head to the Christianity > Evidence for God section for starters. In the same way an author of a book signs their name, God too shows His authenticity of His word throughout the pages. He doesn't expect us to 'blindly' believe in His existance which is why throughout the Bible it says that: "The heavens declare the glory of God; And the firmament shows His handiwork." Psalm 19:1.

Scientific Explanation	Atheists argue that because everything in the universe can be explained in a satisfactory way without using God as part of the explanation, then there is no point in saying that God exists.
Occam's Razor	The argument is based on a philosophical idea called Occam's Razor, popularised by William of Occam in the 14th century. In Latin it goes Pluralitas non est ponenda sine necessitate or in English... "Entities should not be multiplied unnecessarily".

This is usually summarised to say that the simplest answer is usually the best answer. Therefore atheists might argue that since the entire universe, and all of creation can be 'explained' by evolution and scientific cosmology, we don't need the existence of another entity called God. Unfortunately this is not one of those times where Occam's Razor applies because God is an eternal, complex being. He cannot be explained by us with our limited minds.

In summary, if Atheists are right and there is no God or afterlife, Christians lose Nothing. But if Christians are right and there is a God and an afterlife, Atheists lose Everything. You want to be absoutely sure in your conviction before following either.

8 Quotes

These are quotes to help you through tough times or to take your mind of your present situation.

Sayings & Quotes

"In a mad world, only the mad are sane." **Akiro Kurosawa**	"Hunger, love, pain, fear are some of those inner forces which rule the individual's instinct for self preservation." **Albert Einstein**	"You don't know if you're going to be rescued in a day or a month; gotta prepare for the long haul; gotta make the place your home." **Matt Graham**	"The man who goes afoot, prepared to camp anywhere and in any weather, is the most independent fellow on earth." **Horace Kephart**	"And while the law of competition may be sometimes hard for the individual, it is best for the race, because it ensures the survival of the fittest in every department." **Andrew Carnegie**	"Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe to assure the survival and the success of liberty." **John F. Kennedy**
"All I'm trying to do is not join my ancestral spirits just yet." **Joshua Nkomo**	"Through humour, you can soften some of the worst blows that life delivers. And once you find laughter, no matter how painful your situation might be, you can survive it." **Bill Cosby**	"Perhaps catastrophe is the natural human environment, and even though we spend a good deal of energy trying to get away from it, we are programmed for survival amid catastrophe." **Germaine Greer**	"It is not the strongest of the species that survives, nor the most intelligent, but rather the one most adaptable to change." **Charles Darwin**	"If you don't have a vision for the future, then your future is threatened to be a repeat of the past." **A. R. Bernard**	"People who are too weak to follow their own dreams, will always find a way to discourage yours." **Unknown**
"The rules of survival never change, whether you're in a desert or in an arena." **Bear Grylls**	"By failing to prepare, you are preparing to fail." **Benjamin Franklin**	"Extinction is the rule. Survival is the exception." **Carl Sagan**			

Prepper Quotes

"Preparedness is the ultimate confidence builder." **Vince Lombardi**	"Peace is our goal but preparedness is the price we must pay." **Omar N Bradley**	"Chance favours the prepared mind." **Louis Pasteur**	"An ounce of prevention is worth a pound of cure." **Benjamin Franklin**	"Government is the great fiction, through which everybody endeavours to live at the expense of everybody else." **Frederie Bastiat**	"Two is one and one is none." **Navy Seals**
"There's no harm in hoping for the best as long as you're prepared for the worst." **Stephen King**	"Despair is most often the offspring of ill-preparedness." **Don Williams Jr**	"For tomorrow belongs to the people who prepare for it today." **African Proverb**	"When disaster strikes, the time to prepare has passed." **Steve Cyros**	"I'd rather prep 10 years too early than 10 minutes too late." **Prepperzine**	

9 Ethics

This section contains the different values of various groups throughout history such as America, cowboys and pirates.

Subheadings

		1. War Crimes	2. The Constitution	3. Hobo Ethical Code	4. The Code of the West
		5. Knight's Code	6. Pirates Code	7. Thieves Code	

1 War Crimes

War crimes are serious violations of the rules of customary and treaty law concerning international humanitarian law that have become accepted as criminal offenses for which there is individual responsibility. Colloquial definitions of war crime include violations of established protections of the laws of war, but also include failures to adhere to norms of procedure and rules of battle, such as attacking those displaying a peaceful flag of truce, or using that same flag as a ruse to mount an attack on enemy troops. The use of chemical and biological weapons in warfare are also prohibited by numerous chemical arms control agreements and the Biological Weapons Convention. Wearing enemy uniforms or civilian clothes to infiltrate enemy lines for espionage or sabotage missions is a legitimate ruse of war, though fighting in combat or assassinating individuals behind enemy lines while so disguised is not, as it constitutes unlawful perfidy. Attacking enemy troops while they are being deployed by way of a parachute is not a war crime. However, Protocol I, Article 42 of the Geneva Conventions explicitly forbids attacking parachutists who eject from disabled aircraft and surrendering parachutists once landed. These can be used to find places of shelter which are less likely to be attacked such as medical ships.

1 Grave breaches of the Geneva Conventions, such as:

1. Willful killing, or causing great suffering or serious injury to body or health
2. Torture or inhumane treatment
3. Unlawful wanton destruction or appropriation of property
4. Forcing a prisoner of war to serve in the forces of a hostile power
5. Depriving a prisoner of war of a fair trial
6. Unlawful deportation, confinement or transfer
7. Taking hostages
8. Directing attacks against civilians
9. Directing attacks against humanitarian workers or UN peacekeepers
10. Killing a surrendered combatant
11. Misusing a flag of truce
12. Settlement of occupied territory
13. Deportation of inhabitants of occupied territory
14. Using poison weapons
15. Using civilians as shields
16. Using child soldiers
17. Firing upon a Combat Medic with clear insignia.

2	The following acts as part of a non-international conflict:
	1. Murder, cruel or degrading treatment and torture 2. Directing attacks against civilians, humanitarian workers or UN peacekeepers
3	The following acts as part of an international conflict:
	1. Taking hostages 2. Summary execution 3. Pillage 4. Rape, sexual slavery, forced prostitution or forced pregnancy

2 The American Constitution

Articles of Confederation

1	Establishes the name of the confederation with these words: "The stile of this confederacy shall be 'The United States of America.'"
2	Asserts the sovereignty of each state, except for the specific powers delegated to the confederation government: "Each state retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right, which is not by this Confederation expressly delegated."
3	Declares the purpose of the confederation: "The said States hereby severally enter into a firm league of friendship with each other, for their common defence, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other, against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretense whatever."
4	Elaborates upon the intent "to secure and perpetuate mutual friendship and intercourse among the people of the different States in this union," and to establish equal treatment and freedom of movement for the free inhabitants of each state to pass unhindered between the states, excluding "paupers, vagabonds, and fugitives from justice." All these people are entitled to equal rights established by the state into which they travel. If a crime is committed in one state and the perpetrator flees to another state, he will be extradited to and tried in the state in which the crime was committed.
5	Allocates one vote in the Congress of the Confederation (the "United States in Congress Assembled") to each state, which is entitled to a delegation of between two and seven members. Members of Congress are to be appointed by state legislatures. No congressman may serve more than three out of any six years.
6	Only the central government may declare war, or conduct foreign political or commercial relations. No state or official may accept foreign gifts or titles, and granting any title of nobility is forbidden to all. No states may form any sub-national groups. No state may tax or interfere with treaty stipulations already proposed. No state may wage war without permission of Congress, unless invaded or under imminent attack on the frontier; no state may maintain a peacetime standing army or navy, unless infested by pirates, but every State is required to keep ready, a well-trained, disciplined, and equipped militia.
7	Whenever an army is raised for common defence, the state legislatures shall assign military ranks of colonel and below.
8	Expenditures by the United States of America will be paid with funds raised by state legislatures, and apportioned to the states in proportion to the real property values of each.
9	Powers and functions of the United States in Congress Assembled: ● Grants to the United States in Congress assembled the sole and exclusive right and power to determine peace and war; to exchange ambassadors; to enter into treaties and alliances, with some provisos; to establish rules for deciding all cases of captures or prizes on land or water; to grant letters of marque and reprisal (documents authorizing privateers) in times of peace; to appoint courts for the trial of pirates and crimes committed on the high seas; to establish courts for appeals in all cases of captures, but no member of Congress may be appointed a judge; to set weights and measures (including coins), and for Congress to serve as a final court for disputes between states. ● The court will be composed of jointly appointed commissioners or Congress shall appoint them. Each commissioner is bound by oath to be impartial. The court's decision is final. ● Congress shall regulate the post offices; appoint officers in the military; and regulate the armed forces. The United States in Congress assembled may appoint a president who shall not serve longer than one year per three-year term of the Congress.
	● Congress may request requisitions (demands for payments) from the states in proportion with their population, or take credit. ● Congress may not declare war, enter into treaties and alliances, appropriate money, or appoint a commander in chief without nine states assented. Congress shall keep a journal of proceedings and adjourn for periods not to exceed six months.
10	When Congress is in recess, any of the powers of Congress may be executed by "The committee of the states, or any nine of them", except for those powers of Congress which require nine states in Congress to execute.
11	If Canada (referring to the British Province of Quebec) accedes to this confederation, it will be admitted. No other colony could be admitted without the consent of nine states.
12	Reaffirms that the Confederation accepts war debt incurred by Congress before the existence of the Articles.
13	Declares that the Articles shall be perpetual, and may be altered only with the approval of Congress and the ratification of all the state legislatures.

Constitution Amendments

1st	Prohibits Congress from making any law respecting an establishment of religion, impeding the free exercise of religion, abridging the freedom of speech, infringing on the freedom of the press, interfering with the right to peaceably assemble or prohibiting the right to petition the government.
2nd	Protects the right to keep and bear arms.
3rd	Places restrictions on the quartering of soldiers in private homes.
4th	Prohibits unreasonable searches and seizures and sets out requirements for search warrants based on probable cause.
5th	Sets out rules for indictment by grand jury and eminent domain, protects the right to due process, and prohibits self-incrimination and double jeopardy.
6th	Protects the right to a fair and speedy public trial by jury, including the rights to be notified of the accusations, to confront the accuser, to obtain witnesses and to retain counsel.
7th	Provides for the right to trial by jury in certain civil cases, according to common law.

8th	Prohibits excessive fines and excessive bail, as well as cruel and unusual punishment.
9th	Protects rights not enumerated in the Constitution.
10th	Reinforces the principle of federalism by stating that the federal government possesses only those powers delegated to it by the states or the people through the Constitution.
11th	Makes states immune from suits from out-of-state citizens and foreigners not living within the state borders; lays the foundation for state sovereign immunity.
12th	Revises presidential election procedures by having the president and vice president elected together as opposed to the vice president being the runner up in the presidential election.
13th	Abolishes slavery, and involuntary servitude, except as punishment for a crime.
14th	Defines citizenship, contains the Privileges or Immunities Clause, the Due Process Clause, the Equal Protection Clause, and deals with post–Civil War issues.
15th	Prohibits the denial of the right to vote based on race, colour or previous condition of servitude.
16th	Permits Congress to levy an income tax without apportioning it among the various states or basing it on the United States Census.
17th	Establishes the direct election of United States senators by popular vote.
18th	Prohibited the manufacturing or sale of alcohol within the United States. (Repealed December 5, 1933, via the 21st Amendment)
19th	Prohibits the denial of the right to vote based on sex.
20th	Changes the date on which the terms of the president and vice president and of members of Congress end and begin (to January 20 and January 3 respectively). States that if the president-elect becomes vacant, the vice president-elect is inaugurated as president in their place.
21st	Repeals the 18th Amendment and makes it a federal offense to transport or import intoxicating liquors into U.S. states and territories where such transport or importation is prohibited by the laws of those states and territories.
22nd	Limits the number of times that a person can be elected president: a person cannot be elected president more than twice, and a person who has served more than two years of a term to which someone else was elected cannot be elected more than once.
23rd	Grants the District of Columbia electors in the Electoral College, their number being not more than those of the least populous state.
24th	Prohibits the revocation of voting rights due to the non-payment of a poll tax or any other tax.
25th	Addresses succession to the presidency and establishes procedures both for filling a vacancy in the office of the vice president, as well as responding to presidential disabilities.
26th	Prohibits the denial of the right of US citizens, eighteen years of age or older, to vote on account of age.
27th	Delays laws affecting Congressional salary from taking effect until after the next election of representatives.

3 Hobo Ethical Code

This is the now outdated hobo code which was used in the 1800's-1900's.

1	Decide your own life, don't let another person run or rule you.
2	When in town, always respect the local law and officials, and try to be a gentleman at all times.
3	Don't take advantage of someone who is in a vulnerable situation, locals or other hobos.
4	Always try to find work, even if temporary, and always seek out jobs nobody wants. By doing so you not only help a business along, but ensure employment should you return to that town again.
5	When no employment is available, make your own work by using your added talents at crafts.
6	Do not allow yourself to become a stupid drunk and set a bad example for locals' treatment of other hobos.
7	When jungling in town, respect handouts, do not wear them out, another hobo will be coming along who will need them as badly, if not worse than you.
8	Always respect nature, do not leave garbage where you are jungling.
9	If in a community jungle, always pitch in and help.
10	Try to stay clean, and boil up wherever possible.
11	When travelling, ride your train respectfully, take no personal chances, cause no problems with the operating crew or host railroad, act like an extra crew member.
12	Do not cause problems in a train yard, another hobo will be coming along who will need passage through that yard.
13	Do not allow other hobos to molest children, expose all molesters to authorities, they are the worst garbage to infest any society.
14	Help all runaway children, and try to induce them to return home.
15	Help your fellow hobos whenever and wherever needed, you may need their help someday.
16	If present at a hobo court and you have testimony, give it. Whether for or against the accused, your voice counts!

4 The Code of the West

This is the code of the wild west which cowboys used to adhere to.

1	Don't inquire into a person's past. Take the measure of a man for what he is today.
2	Never steal another man's horse. A horse thief pays with his life.
3	Defend yourself whenever necessary.
4	Look out for your own.
5	Remove your guns before sitting at the dining table.
6	Never order anything weaker than whiskey.
7	Don't make a threat without expecting dire consequences.
8	Never pass anyone on the trail without saying "Howdy".
9	When approaching someone from behind, give a loud greeting before you get within shooting range.
10	Don't wave at a man on a horse, as it might spook the horse. A nod is the proper greeting.
11	After you pass someone on the trail, don't look back at him. It implies you don't trust him.
12	Riding another man's horse without his permission is nearly as bad as making love to his wife. Never even bother another man's horse.
13	Always fill your whiskey glass to the brim.
14	A cowboy doesn't talk much; he saves his breath for breathing.
15	No matter how weary and hungry you are after a long day in the saddle, always tend to your horse's needs before your own, and get your horse some feed before you eat.
16	Cuss all you want, but only around men, horses and cows.
17	Complain about the cooking and you become the cook.
18	Always drink your whiskey with your gun hand, to show your friendly intentions.
19	Do not practice ingratitude.
20	A cowboy is pleasant even when out of sorts. Complaining is what quitters do, and cowboys hate quitters.
21	Always be courageous. Cowards aren't tolerated in any outfit worth its salt.
22	A cowboy always helps someone in need, even a stranger or an enemy.
23	Never try on another man's hat.
24	Be hospitable to strangers. Anyone who wanders in, including an enemy, is welcome at the dinner table. The same was true for riders who joined cowboys on the range.
25	Give your enemy a fighting chance.
26	Never wake another man by shaking or touching him, as he might wake suddenly and shoot you.
27	Real cowboys are modest. A braggert who is "all gurgle and no guts" is not tolerated. Be there for a friend when he needs you.
28	Drinking on duty is grounds for instant dismissal and blacklisting.
29	A cowboy is loyal to his "brand," to his friends, and those he rides with.
30	Never shoot an unarmed or unwarned enemy. This was also known as "the rattlesnake code": always warn before you strike. However, if a man was being stalked, this could be ignored.
31	Never shoot a woman no matter what.
32	Consideration for others is central to the code, such as: Don't stir up dust around the chuck wagon, don't wake up the wrong man for herd duty, etc.
33	Respect the land and the environment by not smoking in hazardous fire areas, disfiguring rocks, trees, or other natural areas.
34	Honesty is absolute – your word is your bond, a handshake is more binding than a contract.
35	Live by the Golden Rule.

5 Knight's Code

The knights code of chivalry.

1	Thou shalt believe all that the Church teaches and thou shalt observe all its directions.
2	Thou shalt defend the Church.
3	Thou shalt respect all weaknesses, and shalt constitute thyself the defender of them.
4	Thou shalt love the country in which thou wast born.
5	Thou shalt not recoil before thine enemy.
6	Thou shalt make war against the infidel without cessation and without mercy.

7	Thou shalt perform scrupulously thy feudal duties, if they be not contrary to the laws of God.
8	Thou shalt never lie, and shalt remain faithful to thy pledged word.
9	Thou shalt be generous, and give largesse to everyone.
10	Thou shalt be everywhere and always the champion of the Right and the Good against Injustice and Evil.

6 Pirates Code

This is the old pirates code which they used to live by.

I	The Captain is to have two full Shares; the Quartermaster is to have one Share and one Half; The Doctor, Mate, Gunner and Boatswain, one Share and one Quarter.
II	He that shall be found guilty of taking up any Unlawful Weapon on Board the Privateer or any other prize by us taken, so as to Strike or Abuse one another in any regard, shall suffer what Punishment the Captain and the Majority of the Company shall see fit.
III	He that shall be found Guilty of Cowardice in the time of engagements, shall suffer what Punishment the Captain and the Majority of the Company shall think fit.
IV	If any Gold, Jewels, Silver, &c. be found on Board of any Prize or Prizes to the value of a Piece of Eight, & the finder do not deliver it to the Quarter Master in the space of 24 hours he shall suffer what Punishment the Captain and the Majority of the Company shall think fit.
V	He that is found Guilty of Gaming, or Defrauding one another to the value of a Royal of Plate, shall suffer what Punishment the Captain and the Majority of the Company shall think fit.
VI	He that shall have the Misfortune to lose a Limb in time of Engagement, shall have the Sum of Six hundred pieces of Eight, and remain aboard as long as he shall think fit.
VII	Good Quarters to be given when Craved.
VIII	He that sees a Sail first, shall have the best Pistol or Small Arm aboard of her.
IX	He that shall be guilty of Drunkenness in time of Engagement shall suffer what Punishment the Captain and Majority of the Company shall think fit.
X	No snapping of Guns in the Hold.

7 Thieves Code

The thieves code which may come in handy at some point.

1	Forsake his relatives--mother, father, brothers, sisters…
2	Not have a family of his own -- no wife, no children; this does not however, preclude him from having a lover.
3	Never, under any circumstances work, no matter how much difficulty this brings-, live only on means gleaned from thievery.
4	Help other thieves -- both by moral and material support, utilizing the commune of thieves.
5	Keep secret information about the whereabouts of accomplices (i.e. dens, districts, hideouts, safe apartments, etc.).
6	In unavoidable situations (if a thief is under investigation) to take the blame for someone else's crime; this buys the other person time of freedom.
7	Demand a convocation of inquiry for the purpose of resolving disputes in the event of a conflict between oneself and other thieves, or between thieves.
8	If necessary, participate in such inquiries.
9	Carry out the punishment of the offending thief as decided by the convocation.
10	Not resist carrying out the decision of punishing the offending thief who is found guilty, with punishment determined by the convocation.
11	Have good command of the thieves jargon ("Fehnay").
12	Not gamble without being abie to cover losses.
13	Teach the trade to young beginners.
14	Have, if possible, informants from the rank and file of thieves.
15	Not lose your reasoning ability when using alcohol.
16	Have nothing to do with the authorities (particularly with the ITU (Correctional Labour Authority)), not participate in public activities, nor join any community organizations.
17	Not take weapons from the hands of authorities; not serve in the military.
18	Make good on promises given to other thieves.

Entertainment

An endless source of enjoyment during disasters

"No entertainment is so cheap as reading, nor any pleasure so lasting."
Mary Wortley Montagu

Introduction

Keeping yourself entertained is vital to keeping your sanity when faced with tough situations, especially if you're alone. This collection of games, puzzles and facts should help pass the time if you need a distraction from everything going on around. Answers can be found beneath each section with a dark gray background. As this spreadsheet will most likely be viewed on mobile devices in SHTF you may need to write out the questions/riddles with chalk or on paper. To complete all of the activities below you may need a few extra items in your BOB. (See Below)

Equipment that would be handy to have for this section is:
● A Pen & Paper or Chalk (Or sticks and rocks in a pinch)
● Pack of playing cards and boards for other games.

Some games become distorted below a zoom level of 100% and others below 85% zoom. (Excel version only) Play the games zoomed into the cell or you may accidentally see the answers for the puzzle over the separator. The numbers in column "Q" are to maintain the integrity of the row for the puzzles and shouldn't be altered. In addition to this section, the rest of the sheet can be considered entertainment as you read and learn from it. Blank puzzles in the answer sections just help me create additional puzzles faster - so just ignore them.

Purpose	The aim of ENTERTAINMENT is to keep your mind alert and occupied in times of boredom with the included games and puzzles, as well as the other forms of entertainment you can set up yourself such as live plays and sport.
Lost?	● For arts and crafts, see the CRAFTING section. ● If you want to learn a language, see the LANGUAGE section. ● For a crash course in medicine, see the MEDICAL section. ● For information on the planets and space, see the METEOROLOGY section. ● If you're struggling with a chaotic world and can't see the good in it, read the RELIGION section.

Contents

1 Creative

These are activities that create something out of other materials.

Camp Skills

Creative skills you can do while in your camp.

Whittling	A very useful form of entertainment as you end up with a working item by the end, whether it's a spoon, figurine or a boat.
Building	Another useful skill to learn and improve on if you're in the woods.
Weaving	Create various items of clothing such as hats and footwear as well as shelter from the sun.

Constructive

This form of entertainment is constructive in nature and has a useful survival aspect to them.

Construction	If you have the space and resources you could build a shelter for yourself such as a log cabin.
Repairs	You could repair odd items around the house that you haven't had time to up until this point.
Securing	If your house is fairly open to attack or severe weather you could shore up its defences by building pallet-shields that can easily be fitted to cover your windows in an emergency.
Signal Fire Building	You can build a signal fire in the event you see or hear a plane nearby and want to be rescued.
Stone Stacking	You can stack and balance stones to reduce stress. Or you can stack stones in cairns as markers.

Destructive

A form of entertainment that involves destruction in one form or another.

Chopping Trees	Take the stress out on the wood and accomplish a task while doing it. Watching trees fall is also exciting.
Burning	Lighting fires can be fun, but watching them burn can be even better, just don't let it get out of control.
Fireworks	Designed to be visually spectacular through the controlled destruction of chemical compounds.
Demolition	The controlled destruction of a building which is no longer required.
Hunting	Hunting animals is as much sport as it is therapeutic and often required for survival, just don't let the animal go to waste if you do.

2 Paper Games

The simplest form of entertainment, all you need is a writing utensil and a medium to write on. Sudoku games are in the monospaced 'Courier' font to prevent character messups and have been typed out to save size.

Subheadings

1. Random Generators	**2. Sudoku**	**3. Crossword**	**4. Nonograms**
5. Bridges	**6. Nine Letter Word**	**7. Boggle**	**8. Yahtzee**

1 Random Generators

These are randomly generated numbers and letters for you to use if you don't have a die or boggle letters. All the player has to do is pick a number for both the column and row of the 'dice' they wish to use and find the corresponding value. Some tables have been formatted with extra 0's to keep them looking neat. Each table includes every number in the range at least once.

Eg: If you look at the 6 sided die table you will see it has 10x6 below it, you need to pick a number between 1-10 and 1-6 inclusive. If we pick 3 and 2, we would look for the second value on the third row which is a 5. To randomise the values even more you could swap to the next table in the sequence, alternatively you can rotate the direction you read the table from every turn.

- If you're using the letters for boggle, I recommend adding the letter "U" after "Q" to make "Qu" words easier to spell.
- If you want a dice that's not listed below such as a 50 sided die, use an existing dice (100 sided die) and multiply or divide the answer. So if you're after a 50 sided die, divide the roll of the 100 sided die by 2. You can also roll until you get a number in the range you want using a higher sided die than you require. A third option is combining the result of multiple die, so if you wanted a 7 sided die, roll the 3-sided die and the 4-sided die and combine the results.

Coin Flips

Coin Flip (0,1) 4x4 16 Values (Equal Distribution)	**Coin Flip #1**	**Coin Flip #2**	**Coin Flip #3**	**Coin Flip #4**	**Coin Flip #5**

2 Sudoku

Sudoku / Paper Games

How to Play
Every Sudoku has a unique solution that can be reached logically. Enter numbers into the blank spaces so that each row, column and 3x3 box contains the numbers 1 to 9. The 1's are highlighted red and underlined in the example to the right showing that there is only one 1 per line both vertically and horizontally.

Example
```
5 8 6  4 1 2  3 7 9
1 9 2  6 3 7  5 4 8
3 7 4  9 5 8  6 2 1

9 3 8  7 6 1  2 5 4
6 5 1  2 8 4  7 9 3
2 4 7  5 9 3  8 1 7

4 6 5  3 2 9  1 8 7
8 2 9  1 7 6  4 3 5
7 1 3  8 4 5  9 6 2
```

6 3 4   7 1 5   9 2 8
5 9 7   3 2 8   1 6 4
```

Puzzle 6 Solution
```
9 6 1   8 3 5   7 2 4
8 7 2   1 6 4   5 3 9
3 5 4   9 2 7   1 8 6

1 4 3   6 9 2   8 7 5
2 9 6   5 7 8   3 4 1
7 8 5   3 4 1   9 6 2

4 1 7   2 8 9   6 5 3
5 3 8   4 1 6   2 9 7
6 2 9   7 5 3   4 1 8
```

Puzzle 7 Solution
```
1 2 4   6 3 5   9 8 7
3 7 6   4 9 8   2 5 1
9 8 5   1 7 2   6 4 3

4 9 7   5 8 6   1 3 2
2 3 8   7 1 9   4 6 5
6 5 1   2 4 3   7 9 8

7 1 3   9 5 4   8 2 6
8 6 9   3 2 7   5 1 4
5 4 2   8 6 1   3 7 9
```

Puzzle 8 Solution
```
4 5 1   7 8 2   6 9 3
3 6 9   4 5 1   8 2 7
8 2 7   9 6 3   1 5 4

9 4 2   1 7 8   3 6 5
5 8 3   6 2 4   7 1 9
1 7 6   5 3 9   4 8 2

2 1 8   3 4 5   9 7 6
6 9 4   2 1 7   5 3 8
7 3 5   8 9 6   2 4 1
```

Puzzle 9 Solution
```
9 8 1   5 7 2   6 4 3
2 5 7   3 6 4   9 8 1
4 6 3   9 8 1   7 2 5

1 2 8   4 3 7   5 6 9
6 3 9   1 5 8   4 7 2

4 Nonograms

You have a grid of squares, which must be blank or filled in. The aim is to fill in the boxes so that it matches the numbers on every side. Numbers are in order regarding to the placement of squares and gaps can be any number of spaces. For example a row with a "2 3" in it could look like: ■■··■■■ or ■■·■■■· or ·■■·■■■

There may be any number of blanks before, after or between the blocks depending on the other rows. In the 15x15 puzzles the underlined double digit numbers are one number but may overlap the space of another row. It was done to keep the table formatted correctly. So 312 means the first columns has 3 and the one beside it has 12.

```
          Example
---------------------
                    2
            4 1 3 1 2
---------------------
      1 3 | ■ · ■ ■ ■
    1 1 1 | ■ · ■ · ■
        3 | ■ ■ ■ · ·
      1 1 | ■ · · · ■
        1 | · · · · ■
```

```
Example (Half Completed)
-------------------
              1 . .
            1 1 . .
          2 3 1 2 2
-------------------
        4 | · ■ ■ ■ ·
      1 2 | · · x · ·
        3 | · · ■ · ·
        1 | · · x · ·
        2 | x · ■ · x
```

Cells are aligned right to keep the formatting of the puzzle displaying correctly. The example to the far right shows the first few steps of a new puzzle being solved. Start by filling in the biggest numbers by working out which cells MUST have blocks - such as the three middle blocks of the "4" row. It's useful to put x's in cells which can't have a block.

5 Bridges

Bridges

Bridge, Hashi or Hashiwokakero is played on a rectangular grid with no standard size. Some cells start out with numbers from 1 to 8 inclusive; these are the islands. The rest of the cells are empty. The goal is to connect all of the islands into a single connected group by drawing a series of bridges between the islands.

The bridges must follow certain criteria: They must begin and end at distinct islands, travelling a straight line in between; They must not cross any other bridges or islands; They may only run orthogonally; At most two bridges connect a pair of islands; and The number of bridges connected to each island must match the number on that island.

Example

```
2---------------2 ·
| · · · · · · · | 2
| 2=============3 ‖
4=================5
| · · · · 1---2 · |
| · 1---3---1 | · |
| · · · | 2===5 · |
| · · · | · · ‖ · |
2-------3---1 ‖ · |
· · · · · 1---5===3
```

Key

```
· holds the grid
(1-8) is an island
- is a single path
| is a single path
= is a double path
‖ is a double path
```

7 Boggle

You have to find as many words as possible on the grid. You can move from one letter (dice) to another if it is a neighbour (in all directions).
You cannot use a letter (dice) more than once in a word. You get points for each word - the more letters the better.

8 Yahtzee

Yahtzee is a dice game made by Milton Bradley (now owned by Hasbro), which was first marketed as Yatzie by the National Association Service of Toledo, Ohio, in the early 1940s. It was marketed under the name of Yahtzee by game entrepreneur Edwin S. Lowe in 1956.

The objective of the game is to score points by rolling five dice to make certain combinations. The dice can be rolled up to three times in a turn to try to make various scoring combinations and dice must remain in the box. A game consists of thirteen rounds. After each round the player chooses which scoring category is to be used for that round. Once a category has been used in the game, it cannot be used again. The scoring categories have varying point values, some of which are fixed values and others for which the score depends on the value of the dice. A Yahtzee is five-of-a-kind and scores 50 points, the highest of any category. The winner is the player who scores the most points.

Yahtzee Score Card

Upper Section

In the upper section there are six boxes. The score in each of these boxes is determined by adding the total number of dice matching that box.

Categories	Descriptions	Scores	Examples

Aces	Any combination	The sum of dice with the number 1 (Scores 3 to the right)	
Twos	Any combination	The sum of dice with the number 2 (Scores 6 to the right)	
Threes	Any combination	The sum of dice with the number 3 (Scores 12 to the right)	
Fours	Any combination	The sum of dice with the number 4 (Scores 8 to the right)	
Fives	Any combination	The sum of dice with the number 5 (Scores 5 to the right)	
Sixes	Any combination	The sum of dice with the number 6 (Scores 18 to the right)	

If a player scores a total of 63 or more points in these six boxes, a bonus of 35 is added to the upper section score. Although 63 points corresponds to scoring exactly three-of-a-kind for each of the six boxes, a common way to get the bonus is by scoring four-of-a-kind for some numbers so that fewer of other numbers are needed. A player can earn the bonus even if they score a "0" in an upper section box.

In order to gauge how well a player is doing in the upper section, they often refer to being "up" or "down" compared to the average of three required for each box. So that if a player scores four "sixes" they will be "6 up"; while if they then score just two "twos" they will then be only "4 up". Similarly, if a player starts with two "twos" they will be "2 down".

Lower Section

The lower section contains a number of poker-themed categories with specific point values:

Categories	Descriptions	Scores	Examples
Three Of A Kind	At least three dice the same	Sum of all dice (Scores 17 to the right)	
Four Of A Kind	At least four dice the same	Sum of all dice (Scores 24 to the right)	
Full House	Three of one number and two of another	25 (Scores 25 to the right)	
Small Straight	Four sequential dice (1-2-3-4, 2-3-4-5, or 3-4-5-6)	30 (Scores 30 to the right)	
Large Straight	Five sequential dice (1-2-3-4-5 or 2-3-4-5-6)	40 (Scores 40 to the right)	
Yahtzee	All five dice the same	50 (Scores 50 to the right)	
Chance	Any combination	Sum of all dice (Scores 13 to the right)	

Some players count a Yahtzee as being a valid Full House. However, the official rule is that a Full House is "three of one number and two of another". Small Straight and Large Straight are sometimes called Low and High, Short and Long Straight, or Little and Big Straights.

If a category is chosen but the dice do not match the requirements of the category the player scores 0 in that category. Some combinations offer the player a choice as to which category to score them under; e.g., a full house could be scored in the Full House, the Three-Of-A-Kind, or the Chance categories. The Chance category is often used for a turn that will not score well in any other category.

3 Brain Teasers

These puzzles are aimed at exercising your mind with riddles, jokes, trivia and facts.

Subheadings

1 Logic Puzzles

These are logic puzzles and riddles you can solve with a bit of thinking.

Logic Puzzles

Q1	A pregnant lady named her children: Dominique, Regis, Michelle, Fawn, Sophie and Lara. What will she name her next child? Jessica, Katie, Abby or Tilly?
Q2	What 8 letter word can have a letter taken away and it still makes a word. Take another letter away and it still makes a word. Keep on doing that until you have one letter left. What is the word?
Q3	If you have me, you want to share me. If you share me, you haven't got me. What am I?
Q4	A man has a 12 litre jug of beer, and wants to split it in half, but only has an 8 litre and a 5 litre jug. How can he do it?
Q5	There are three light bulbs in a room, and three light switches outside the room. You are outside, and want to match up which switch goes with which light bulb. You can only travel into the room once, and cannot come back in again. You can do anything you want upon entering the room. How can you set the situation so that you will know which switch goes with which light bulb?
Q6	While looking at the Pentagon building from the ground, what is the probability that you will see three of its sides?
Q7	There are 9 coins, all except one are the same weight, the odd one is heavier than the rest. You must determine which is the odd one out using an old fashioned balance. You may use the balance twice. Explain how this can be done.

Q8	100 people stand in a circle in order 1 to 100. No. 1 has a sword. He kills the next person (i.e. No. 2) and gives the sword to the next living person (i.e. No. 3). All people do the same until only 1 survives. Which number survives to the end?
Q9	A snail is at the bottom of a 30 foot well. Every hour the snail is able to climb up 3 feet, then immediately slide back down 2 feet. How many hours does it take for the snail to get out of the well?
Q10	A blind man is alone on a deserted island. He has two blue pills and two red pills. He must take exactly one red pill and one blue pill or he will die. How does he do it?
Q11	A farmer is on his way back from the market, with him he has a fox, a chicken and some grain. When he reaches a river crossing he must use a small boat only big enough for him and one other item. Unfortunately if the fox is left alone with the chicken it will eat it, as will the chicken eat the grain. Explain how the farmer can cross the river.
Q12	We are to play a version of Russian Roulette, the revolver is a standard six shooter but I will put two bullets in the gun in consecutive chambers. I spin the chambers, put the gun to my head pull the trigger and survive. I hand you the gun and give you a choice... You may put the gun straight to your head and pull the trigger, or you may re-spin the gun before you do the same. What is your choice and why?
Q13	Alice, Bob, and Cheri, three smart people, arrange a three-way duel. Alice is a poor shot, hitting her target only 1/3 of the time on average. Bob is better, hitting his target 2/3 of the time. Cheri is a sure shot hitting 100% of the time. They take turns shooting, first Alice, then Bob, the Cheri, then back to Alice, and so on until one is left. What is Alice's best course of action? And her chances of survival?
Q14	You reach a fork in the road. A sign explains that in one direction is Heaven and the other is Hell. Each path is blocked by a Guard. The sign goes on to say that one of the guards will always lie and the other will always tell the truth, it does not say which guard is which. We assume that the guards do know which path leads to where. You may ask one question of only one guard in order that you can determine, with certainty, the way to Heaven. What is that question?
Q15	Three ants are sitting at the three corners of an equilateral triangle. Each ant randomly picks a direction and starts to move along the edge of the triangle. What is the probability that none of the ants collide?
Q16	You have 10 stacks of 10 gold coins. All of the coins in one of these stacks are counterfeit, all the other coins are not. A real coin weighs 10 grams. A counterfeit coin weighs 11 grams. You have a modern scale that provides an accurate readout. What is the minimum number of weighings needed to determine which stack is fake?
Q17	You are at a point on the Earth. You travel South 100 miles, East 100 Miles and North 100 Miles. You arrive back where you started. Where are you? You are NOT at the North Pole.
Q18	Using only a 4 minute and 7 minute hourglass or egg timer how would you measure exactly 9 minutes?
Q19	An executioner lines up 100 prisoners single file and puts a red or a blue hat on each prisoner's head. Every prisoner can see the hats of the people in front of him in the line - but not his own hat, nor those of anyone behind him. The executioner starts at the end (back) and asks the last prisoner the colour of his hat. He must answer "red" or "blue." If he answers correctly, he is allowed to live. If he gives the wrong answer, he is killed instantly and silently. (While everyone hears the answer, no one knows whether an answer was right.) On the night before the line-up, the prisoners confer on strategy to help them. What should they do?
Q20	On a deserted road, the probability of observing a car during a thirty-minute period is 95%. What is the chance of observing a car in a ten-minute period?
Q21	A regular clock has an hour and minute hand. At 12 midnight the hands are exactly aligned. When is the next time they will exactly align or overlap? How many times a day will they overlap?
Q22	A man has three daughters. A second, intelligent man, asked him the ages of his daughters. The first man told him that the product of their ages (them all multiplied together) was 36. After thinking the second man was unable to find the answer and asked for another clue. The first man replies the sum of their ages is equal to his house door number. Still the second man was unable to answer and asked for another clue. The first man told him that his youngest daughter had blue eyes, and suddenly second man gave the correct answer. Explain how?
Q23	How many squares are there on a chessboard or checkerboard?? (the answer is not 64) Can you extend your technique to calculate the number of rectangles on a chessboard?
Q24	I have three envelopes, into one of them I put a £20 note. I lay the envelopes out on a table in front of me and allow you to pick one envelope. You hold but do not open this envelope. I then take one of the envelopes from the table, demonstrate to you that it was empty, screw it up and throw it away. The question is would you rather stick with the envelope you have selected or exchange it for the one on the table. Why? What would be the expected value to you of the exchange?
Q25	A man is in a rowing boat floating on a lake, in the boat he has a brick. He throws the brick over the side of the boat so as it lands in the water. The brick sinks quickly. The question is, as a result of this does the water level in the lake go up or down?
Q26	You have a string-like fuse that burns in exactly one minute. The fuse is inhomogeneous, and it may burn slowly at first, then quickly, then slowly, and so on. You have a box of matches, and no watch. How do you measure exactly 30 seconds?
Q27	Inside of a dark closet are five hats: three blue and two red. Knowing this, three smart men go into the closet, and each selects a hat in the dark and places it unseen upon his head. Once outside the closet, no man can see his own hat. The first man looks at the other two, thinks, and says, "I cannot tell what colour my hat is." The second man hears this, looks at the other two, and says, "I cannot tell what colour my hat is either." The third man is blind. The blind man says, "Well, I know what colour my hat is." What colour is his hat?
Q28	How many degrees (if any) are there in the angle between the hour and minute hands of a clock when the time is a quarter past three?
Q29	While changing a tyre, a motorist accidentally dropped all four wheel nuts into the sewer grate. He tried everything to retrieve them, but - to no avail. The man was beginning to suspect that he would have to spend many hours by the roadside, when a passing kid suddenly helped him solve the problem. Acting on the kid's advice, he successfully fitted a new tyre and drove to the nearest service station without accidents. What was the advice that the child had given the motorist?

ENTERTAINMENT	Brain Teasers	Logic Puzzles	Logic Puzzles	Q30	Once upon a time, Prince Charming was searching far and wide for his betrothed. Summer had already ended, when he came upon a shack, inhabited by an old witch. The weary traveler asked if she could grant him refuge for the night. The witch obliged and showed her guest a warm welcome, offering him food, drink and a place to sleep. The next morning, as Prince Charming was preparing to continue on his journey, she gave him a present, saying: 'A time will come, when you'll find your way barred by a wide river with no bridge. The only way to cross it is to swim to the other bank. This enchanted tunic will help you - it won't let you drown!'. Our hero continued on his journey. A hundred days and nights had passed before he came across the river the witch had warned him about. But, in the end - he didn't need to put on the tunic to cross it! Can you guess why?!
				Q31	A farmer keeps rabbits in three large hutches that stand in a row in his back yard. Each of the hutches is painted a different color - red, yellow and green. Until recently, the number of rabbits in the green hutch was twice as large as the number of rabbits in the yellow hutch. Then, one day, the farmer took five rabbits out of the left-side hutch and gave them away to the local school's pet corner. He also took half of the rabbits that remained in the left-side hutch and moved them to the red colored hutch. Now, can you guess what color the left-side hutch is?!
				Q32	Can you name one thing that all the people on Earth do simultaneously?
				Q33	Jack is looking at Anne. Anne is looking at George. Jack is married, George is not, and we don't know if Anne is married. Is a married person looking at an unmarried person?
				Q34	A man has 53 socks in his drawer: 21 identical blue, 15 identical black and 17 identical red. The lights are out and he is completely in the dark. How many socks must he take out to make 100 percent certain he has at least one pair of black socks?
				Q35	The day before two days after the day before tomorrow is Saturday. What day is it today?
				Q36	You have two ropes that each take an hour to burn, but burn at inconsistent rates. How can you measure 45 minutes? (You can light one or both ropes at one or both ends at the same time.)
				Q37	You're at a fork in the road in which one direction leads to the City of Lies (where everyone always lies) and the other to the City of Truth (where everyone always tells the truth). There's a person at the fork who lives in one of the cities, but you're not sure which one. What question could you ask the person to find out which road leads to the City of Truth?
				Q38	A farmer wants to cross a river and take with him a wolf, a goat and a cabbage. He has a boat, but it can only fit himself plus either the wolf, the goat or the cabbage. If the wolf and the goat are alone on one shore, the wolf will eat the goat. If the goat and the cabbage are alone on the shore, the goat will eat the cabbage. How can the farmer bring the wolf, the goat and the cabbage across the river without anything being eaten?
				Q39	A man is playing Russian roulette with a six-shooter revolver. He puts in one bullet, spins the chambers and fires at you, but no bullet comes out. He gives you the choice of whether or not he should spin the chambers again before firing a second time. Should he spin again?
				Q40	Susan and Lisa decided to play tennis against each other. They bet $1 on each game they played. Susan won three bets and Lisa won $5. How many games did they play?
				Q41	If five cats can catch five mice in five minutes, how long will it take one cat to catch one mouse?
				Q42	There is a barrel with no lid and some wine in it. "This barrel of wine is more than half full," says the woman. "No, it's not," says the man. "It's less than half full." Without any measuring implements and without removing any wine from the barrel, how can they easily determine who is correct?
				Q43	There are three bags, each containing two marbles. Bag A contains two white marbles, Bag B contains two black marbles, and Bag C contains one white marble and one black marble. You pick a random bag and take out one marble, which is white. What is the probability that the remaining marble from the same bag is also white?
				Q44	Three men are lined up behind each other. The tallest man is in the back and can see the heads of the two in front of him; the middle man can see the one man in front of him; the man in front can't see anyone. They are blindfolded and hats are placed on their heads, picked from three black hats and two white hats. The extra two hats are hidden and the blindfolds removed. The tallest man is asked if he knows what color hat he's wearing; he doesn't. The middle man is asked if he knows; he doesn't. But the man in front, who can't see anyone, says he knows. How does he know, and what color hat is he wearing?
				Q45	There are three crates, one with apples, one with oranges, and one with both apples and oranges mixed. Each crate is closed and labeled with one of three labels: Apples, Oranges, or Apples and Oranges. The label maker broke and labeled all of the crates incorrectly. How could you pick just one fruit from one crate to figure out what's in each crate?
				Q46	A teacher writes six words on a board: "cat dog has max dim tag." She gives three students, Albert, Bernard and Cheryl each a piece of paper with one letter from one of the words. Then she asks, "Albert, do you know the word?" Albert immediately replies yes. She asks, "Bernard, do you know the word?" He thinks for a moment and replies yes. Then she asks Cheryl the same question. She thinks and then replies yes. What is the word?
				Q47	You have five boxes in a row numbered 1 to 5, in which a cat is hiding. Every night he jumps to an adjacent box, and every morning you have one chance to open a box to find him. How do you win this game of hide and seek?
				Q48	You are given three doors to choose from, one of which contains a car and the other two contain goats. After you've chosen one but haven't opened it, Monty, who knows where everything is, reveals the location of a goat from behind one of the other two doors. Should you stick with your original choice or switch, if you want the car?
				Q49	There are three people (Alex, Ben and Cody), one of whom is a knight, one a knave, and one a spy. The knight always tells the truth, the knave always lies, and the spy can either lie or tell the truth. Alex says: "Cody is a knave." Ben says: "Alex is a knight." Cody says: "I am the spy." Who is the knight, who the knave, and who the spy?
				Q50	You meet three gods on a mountain top. One always tells the truth, one always lies, and one tells the truth or lies randomly. We can call them Truth, False and Random. They understand English but answer in their own language, with ja or da for yes and no—but you don't know which is which. You can ask three questions to any of the gods (and you can ask the same god more than one question), and they will answer with ja or da. What three question do you ask to figure out who's who?
				Q51	A boy was 15 in 1990, and in 1995 he turned 10. How is this possible?
				Q52	You have 12 pills and they all got the same weight, except for one, which hasn't got the same weight. You don't know if it is heavier or easier. You have one scale to weight the pills. You now have to find out, which pill is the right one (the one with a different weight), but you can use the scale only three times. How do you know, which one is the right one?You have 12 pills and they all got the same weight, except for one, which hasn't got the same weight. You don't know if it is heavier or easier. You have one scale to weight the pills. You now have to find out, which pill is the right one (the one with a different weight), but you can use the scale only three times. How do you know which one is the right one?

ENTERTAINMENT | Brain Teasers | Logic Puzzles

Q53	A woman was in court for killing her husband. She said she wasn't guilty and that she dearly missed him. In the closing statement, the woman's lawyer stands up and says, "Her husband was just missing. Everyone look at the doors. He's going to walk through them in about 30 seconds." The entire jury stares at the doors waiting for waiting for this woman's husband to walk through the doors. The lawyer and the woman stare at the jury. The lawyer concludes by saying, "See! If you were so sure she killed her husband, you wouldn't be watching that door!" The jury immediately gave a guilty verdict. Why?
Q54	A guy walks into a store and steals a $100 bill from the register without the owners knowledge. He then buys $70 worth of goods using the $100 bill and the owner gives $30 in change. How much money did the owner lose? $30, $70, $100, $130, $170, or $200?
Q55	True Story: Samuel was born first, but his twin brother Ronan who was born in the same hospital is older. How?

Logic Puzzle Answers

A1	Tilly. She is following the scale Do, Re, Mi, Fa, So, La, Ti.
A2	The word is starting. Starting, staring, string, sting, sing, sin, in, I.
A3	A Secret
A4	STEP 0 1 2 3 4 5 6 7 -- 5-Liter 0 0 5 0 3 3 5 0 8-Liter 0 8 3 3 0 8 6 6 12-Liter 12 4 4 9 9 1 1 6
A5	Turn two of the light switches on. Wait a while, and then turn one of them off, then quickly enter the room. One light will be on, one off, and one off but still hot.
A6	The probability is one half, or 50%. This can be directly calculated, but is included here because of an alternative method. Suppose that you have a reflection of yourself directly opposite the pentagon from where you are, at the same distance away. Then, if you see two/three sides, it will necessarily see three/two. Since there is a one-to-one mapping between you and the double, the probability must be one half.
A7	Put 1,2 & 3 on the left side and 4,5 & 6 on the right side. There are three possible outcomes: scale tilts left - means the heavy coin is in group 1,2 & 3 scale tilts right - means the heavy coin is in group 4,5 & 6 scale balances - means the heavy coin is in group 7,8 & 9 Label the three coins we have narrowed it down to as A, B & C. Putting A on the left side, B on the right and C to one side. A goes down - A is the heavy coin B goes down - B is the heavy coin Neither goes down - C is the heavy coin
A8	Number 73
A9	28 hours
A10	Break each of the pills in half, as you do this pop one half in your mouth and lay the other half aside for tomorrow. When he's done this with all four pills he will have consumed one red pill and one blue pill. And have the same left over.
A11	Take B Return Take A (or C) Return B Take C (or A) Return Take B
A12	If we randomise the gun we have a 2 in 6 or 1 in 3 chance of dying. Shooting again we have 1 in 4 chance of dying. So in the case of 2 consecutive bullets it would not be in your interests to re-spin the chamber.
A13	Alice's best strategy is to miss both Bob and Cheri until one of them has dispatched the other, following this plan she will survive something like 39.7% of the time.
A14	We ask the guy on the left what the guy on the right would say. And then do the opposite. By asking one person what the other would suggest we have eliminated the uncertainty of who is the liar and ensured that there is always a lie present in our response.
A15	1/4
A16	So straight in to the answer we number the piles 1 through 10. We take one coin from pile #1, two coins from pile #2, three coins from pile #3 and so on until we have 10 coins from pile #10. This gives us 55 coins which if they were all pure would give us 550g. However, some of them will be fake. Lets say we place them all on the scale, for our one and only weighing, and it reads 553g. The only possible way this could have happened is if we placed 3 counterfeit coins on the balance, and that means that pile #3 is counterfeit.
A17	We start 100 miles North of a line of latitude whose entire length is 100 miles. We will travel South 100 miles, travel East 100 miles circling the South Pole completely, then travel back North 100 miles to finish where we began.
A18	Start them both together and flip the 4 minute hourglass every time it runs out the difference between the 7 minute hourglass ending and the and the 4 minute hourglass ending for the second time is 1 minute. We just then need to flip it two more times to get 9 minutes. A better solution would be one that didn't require us to wait 7 minutes before we start. We need to add 2 minutes on to the end of the 7 minute hourglass. Since the twice-flipped 4 minute hourglass will stop at 8 minutes we can flip our 7 minute hour glass here for the second time. At this point it will have been running for 1 minute, we will flip 1 minute's worth of sand back to the top and it will run for another 1 minute. This will total 9 minutes.

A19	The person at the back, lets call him person number 1, will agree that if he sees an odd number of red hats he calls out red, if he sees an even number of red hats he calls out blue. (Obviously any similar scheme would work, but we will use this one.) Unfortunately this means he has a 50% chance of survival but it guarantees everyone else's.
A20	The chance of observing a car in a ten-minute period is roughly 63.16%.
A21	Both AM and PM: 01:05:27, 02:10:55, 03:16:22, 04:21:49, 05:27:16, 06:32:44, 07:38:11, 08:43:38, 09:49:05, 10:54:33, 12:00:00
A22	The first step is to work out the ages that have a product of 36. We obviously don't know the man's door number. We can assume that the second man does. At this stage we are only assuming, but the fact that he is able later, to definitively answer the puzzle will mean that this is no longer an assumption. Even with the door number the second man does not know the ages of the daughters, so it must still be ambiguous, there are only two combinations that have the same total. The second man took this to mean that there was a youngest daughter. This is not the case with the ages 2, 2 & 9. The only possible solution is 1, 6 & 6
A23	204
A24	Say there are a 1000 envelopes on the table, 1 with a note inside. You pick 1 envelope, the chance that this has the note in it is clearly 1/1000, where as the chance that it is still on the table is 999/1000. Odds are its on the table. Now the questioner could, assuming he can remember where the note is demonstrate to you that the note is not in 998 of the envelopes on the table. In this case nothing would have happened to change the fact that there is only a 1/1000 chance of you having the note. Simply before the exchange you have 1/3 of £20 and afterwards you will have 2/3 of £20, ie the advantage to you is about £6.66
A25	The Water Level Goes Down. 1 litre of water has a mass of 1Kg:- Say the brick weighs 2 kg and is 1 litre in volume. When the brick is in the boat it is forcing the water to be displaced by 2 kg or as we know 2 litres. When the brick is over the side and sat on the bottom of the lake it is displacing just it's own volume or one litre.
A26	Light the fuse at both ends.
A27	The third person (C) must be wearing a BLUE hat.
A28	The simplest way to think of this is that each hour is made up of 30° and that the hour hand will have moved one quarter of an hour past three o'clock. ¼ x 30° = 7.5°
A29	The kid told the man to remove one nut from each of the other three wheels and use them to secure the new tyre.
A30	Prince Charming visited the witch's shack in September. After that, it took him a hundred days to reach the river. Which means that, by the time he got there, it was already mid-winter. The river was iced over and he simply walked across it to the other bank!
A31	It is yellow. As we already know, at the outset, the number of rabbits in the green hutch was twice as large as the number of rabbits in the yellow hutch. This means that the number of rabbits in the green hutch was an even number. After the farmer removed five rabbits from the left-side hutch, the number of rabbits that remained there also became an even number (this is proven by the fact that it was divisible by two). Therefore, before those five were removed, the left-side hutch contained an uneven number of rabbits. Hence, the left-side hutch can't be the green colored one. But, based on the information we've got - it can't be the red colored one, either!
A32	Age/Get older.
A33	Yes. If Anne is married, then she is married and looking at George, who is unmarried. If Anne is unmarried, then Jack, who is married, is looking at her. Either way, the statement is correct.
A34	40 socks. If he takes out 38 socks (adding the two biggest amounts, 21 and 17), although it is very unlikely, it is possible they could all be blue and red. To make 100 percent certain that he also has a pair of black socks he must take out a further two socks.
A35	Friday. The "day before tomorrow" is today; "the day before two days after" is really one day after. So if "one day after today is Saturday," then it must be Friday.
A36	Because they both burn inconsistently, you can't just light one end of a rope and wait until it's 75 percent of the way through. But, this is what you can do: Light the first rope at both ends, and light the other rope at one end, all at the same time. The first rope will take 30 minutes to burn (even if one side burns faster than the other, it still takes 30 minutes). The moment the first rope goes out, light the other end of the second rope. Because the time elapsed of the second rope burning was 30 minutes, the remaining rope will also take 30 minutes; lighting it from both ends will cut that in half to 15 minutes, giving you 45 minutes all together.
A37	"Which direction do you live?" Someone from the City of Lies will lie and point to the City of Truth; someone from the City of Truth would tell the truth and also point to the City of Truth.
A38	First, the farmer takes the goat across. The farmer returns alone and then takes the wolf across, but returns with the goat. Then the farmer takes the cabbage across, leaving it with the wolf and returning alone to get the goat.
A39	Yes. Before he spins, there's a one in six chance of a bullet being fired. After he spins, one of those chances has been taken away, leaving a one in five chance and making it more likely a bullet will be fired. Best to spin again.
A40	Eleven. Because Lisa lost three games to Susan, she had lost $3 ($1 per game). So, she had to win back that $3 with three more games, then win another five games to win $5.
A41	Five minutes. Using the information we know, it would take one cat 25 minutes to catch all five mice (5×5=25). Then working backward and dividing 25 by five, we get five minutes for one cat to catch each mouse.
A42	Tilt the barrel until the wine barely touches the lip of the barrel. If the bottom of the barrel is visible then it is less than half full. If the barrel bottom is still completely covered by the wine, then it is more than half full.
A43	2 out of 3. You know you don't have Bag B. But because Bag A has two white marbles, you could have picked either marble; if you think of it as four marbles in total from Bags A and C, three white and one black, you'll have a greater chance of picking another white marble.
A44	Black. The man in front knew he and the middle man aren't both wearing white hats or the man in the back would have known he had a black hat (since there are only two white hats). The man in front also knows the middle man didn't see him with a white hat because if he did, based on the tallest man's answer, the middle man would have known he himself was wearing a black hat. So, the man in front knows his hat must be black.

A45	Pick a fruit from the crate marked Apples and Oranges. If that fruit is an apple, you know that the crate should be labeled Apples because all of the labels are incorrect as they are. Therefore, you know the crate marked Apples must be Oranges (if it were labeled Apples and Oranges, the Oranges crate would be labeled correctly, and we know it isn't), and the one marked Oranges is Apples and Oranges. Alternately, if you picked an orange from the crate marked Apples and Oranges, you know that crate should be marked Oranges, the one marked Oranges must be Apples, and the one marked Apples must be Apples and Oranges.
A46	Dog. Albert knows right away because he has one of the unique letters that only appear once in all the words: c o h s x i. So, we know the word is not "tag." All of these unique letters appear in different words, except for "h" and "s" in "has," and Bernard can figure out what the word is from the unique letters that are left: t, g, h, s. This eliminates "max" and "dim." Cheryl can then narrow it down the same way. Because there is only one unique letter left, the letter "d," the word must be "dog." (For more on this answer, watch the video below.)
A47	Check boxes 2, 3, and 4 in order until you find him. Here's why: He's either in an odd or even numbered box. If he's in an even box (box 2 or 4) and you check box 2 and here's there, great; if not you know he was in box 4, which means the next night he will move to box 3 or 5. The next morning, check box 3; if he's not there that means he was in box 5 and so the next night he'll be in box 4, and you've got him. If he was in an odd numbered box to begin with (1, 3, or 5), though, you might not find him in that first round of checking boxes 2, 3 and 4. But if this is the case, you know that on the fourth night he'll have to be in an even-numbered box (because he switches every night: odd, even, odd, even), so then you can start the process again as described above. This means if you check boxes 2, 3, and 4 in that order, you will find him within two rounds (one round of 2, 3, 4; followed by another round of 2, 3, 4). For more on this answer, watch the video below.
A48	You should switch. At the beginning, your choice starts out as a one in three chance of picking the car; the two doors with goats contain 2/3 of the chance. But since Monty knows and shows you where one of the goats is, that 2/3 chance now rests solely with the third door (your choice retains its original 1/3 chance; you were more likely to pick a goat to begin with). So, the odds are better if you switch.
A49	We know Ben isn't telling the truth, because if he was, there would be two knights; so Ben could be either the knave or the spy. Cody also can't be the knight, because then his statement would be a lie. So that must mean Alex is the knight. Ben, therefore, must be the spy, since the spy sometimes tells the truth; leaving Cody as the knave.
A50	Before getting to the answer, let's think of a hypothetical question you know the answer to, such as "Does two plus two equal four?" Then, phrase it so you're asking it as an embedded question: "If I asked you if two plus two equals four, would you answer ja?" If ja means yes, Truth would answer ja, but so would False (he always lies, so he'd say ja even though he really would answer da). If ja means no, they both would still answer ja—in this case, False would answer the embedded question with ja, but saying da to the overall question would be telling the truth, so he says ja. (Random's answer would be meaningless because we don't know whether he lies or tells the truth.) But what if you said, "If I asked you if two plus two equals five, would you answer ja?" If ja means yes, Truth would answer da, as would False; if ja means no, they'd also both answer da. So, you know that if the embedded question is correct, Truth and False always answer with the same word you use; if the embedded question is incorrect, they always answer with the opposite word. You also know they always answer with the same word as each other. With this reasoning, ask the god in the middle your first question: "If I asked you whether the god on my left is Random, would you answer ja?" If the god answers ja and you're talking to either Truth or False, following the above logic you know the embedded question is correct, and the god to the left is Random. It's also possible that you're speaking to Random; but you know no matter who you're talking to, the god on the right is not Random. If the answer is da, the opposite is the case, and you know the god on the left isn't Random. Next, you can ask the god you definitely know isn't Random a question using the same structure: "If I were to ask you if you are Truth, would you say ja?" If they answer ja, you know you're talking to Truth; if they answer da you know you're talking with False. Then once you've identified that god as True or False, you can ask the same god a final question to identify Random: "If I asked you if the god in the middle is Random, would you say ja?" By process of elimination, you can then identify the last god.
A51	The boy lived before Christ. Therefore, in 1995 B.C. he was 10 years old, and in 1990 he turned 15.
A52	E = easier in "1", H = heavier in "1". 1: Weight 4:4. If they balance go to "2", if they don't balance, go to "3". 2: Balance 1:1 of the pills you didn't weight yet. Then weight one you didn't weight and one you did weight. If they balanced in the first weighing, and balanced in the second weighing, the last pill is the right one. If they balanced in the first weighing and didn't balance in the second, the one you didn't use before is the right pill. If they didn't balance at all, it's the pill you weighed twice. If they didn't balance in the first weighing, but balanced in the second, it is the first pill. 3: Weight EHH : EHH. If they balance, weight one you already weighed, with an unweighed and go to "4". If they don't balance go to "5". 4: If they balance, the one you didn't weight at all is the right pill. If they don't balance, the one you only weighed once is the right one. 5: Give away every pill that was once easier AND once heavier. You should only have EHH left. Weight H:H. If they balance, E is the right one. If the don't balance, the one which was only heavier the whole time, is the right pill.
A53	The woman was watching the jury and not the doors because she knew that her husband wouldn't walk through them because she had killed him. If she has really missed him like she said, she would have been watching the doors.
A54	The best answer from the choices is the owner lost $100. The $100 bill that was stolen was then given back to the owner. What the owner loses is the $70 worth of goods and the $30 in change, which makes for a total of $70 + $30 = $100. The owner has lost $100. Technically, the owner lost $30 plus the value, V, of the $70 of goods. Since stores typically sell goods at a markup, the value may be less than $70. But in the case of a loss leader, the owner may have lost more than $70.
A55	Because the clocks went back. Samuel Peterson was born on 1.39am on Sunday, November 6. His brother Ronan, meanwhile, was born 31 minutes later, but by then daylight saving hours had ended, and the clock was turned back one hour. So while Ronan was in a sense born at 2:10 am on November 6, his official time of birth is actually 1:10 am.

What Am I?

Q1	It's sometimes sharp, And good at being lead, Using this will help things to be read.
Q2	I am beautiful, up in the sky. I am magical, yet I cannot fly. To people I bring luck, to some people, riches. The boy at my end does whatever he wishes. What am I?
Q3	You saw me where I could not be. Yet, often you see me. What am I?
Q4	Reaching stiffly for the sky, I bare my fingers when its cold. In warmth I wear an emerald glove and in between I dress in gold.
Q5	His eyes were raging, that scraggly beast. His lips were bursting, with rows of angry teeth. Upon his back a razor was found. It was a fearsome battle we fought, my life – or his, one would be bought. And when we were through, and death chilled the air, we cut out his heart, and ate it with flair.

Q6	I am the fountain from which no one can drink. For many I am considered a necessary link. Like gold to all I am sought for, but my continued death brings wealth for all to want more.
Q7	The beginning of eternity, the end of time and space, the beginnings of every end, the end of every place. What am I?
Q8	White flesh above and brown gills below. Never moving an inch, and in darkness I grow.
Q9	Red as blood and sweet as wine. A hard hard heart within flesh sublime.
Q10	I touch the Earth, I touch the sky, But if I touch you, you'll surely die.
Q11	My feet stay warm, but my head is cold. No one can move me, I'm just too old.
Q12	I have an eye but cannot see. You'll head inside when you see me.
Q13	They try to beat me, they try in vain. And when I win, I end the pain.
Q14	They made me a mouth but didn't give me breath. Water gives me life but the sun brings me death.
Q15	I always run but never walk, i sometimes sing but cannot talk, no head on which a hat to place, you always look me in the face.
Q16	Tread on the living, they make not a mumble. Tread on the dead, they mutter and grumble. What are they?
Q17	With thieves I consort, With the Vilest, in short, I'm quite at ease in depravity, Yet all divines use me, And savants can't lose me, For I am the century of gravity. I am?
Q18	Alive as you but without breath, As cold in my life as in my death; Never a thirst though I always drink, Dressed in a mail but never a clink. I am a?
Q19	I go up and I go down, towards the sky and the ground. I'm present and past tense too, Let's go for a ride, me and you. What am I?
Q20	I live in the oceans, the rivers and the seas, when I'm cold I float, when I'm hot I'm free.
Q21	What flattens all mountains, wipes out all species, destroy every building, and turns everything into pieces?
Q22	I am a 8 Letter Word. I am kept Secret from Everyone. My 2nd, 3rd, 4th Letter Spell an Animal. My 4th, 5th, 6th, 7th, 8th Letter is a Weapon. My 1st, 2nd, 8th Letter is used for Writing an Exam. My 3rd, 4th Letters are the Same. Who am I?

What Am I? Answers

A1	A Pencil

ENTERTAINMENT Brain Teasers Trivia Preparedness Trivia

Trivia can keep your mind occupied during tough situations. Below are a variety of questions on a multitude of topics. The answers are in the sections below each trivia section.

Preparedness Trivia

Q1	If you are inside, what action should you take during an earthquake?
Q2	A shelter-in-place emergency kit should have a minimum of how much water, per person, per day?
Q3	In a power outage, a full freezer will keep food safe for up to...?
Q4	What other location, besides your home, should you store an emergency kit?
Q5	If you encounter floodwater while driving, what should you do?
Q6	How long can the human live without water in a survival situation?
Q7	Can you tell whether or not water is contaminated with parasites by its color and clarity?
Q8	What are the 4 steps to being prepared?
Q9	Pets should be included in emergency plans?
Q10	How far from the storm can lightning strike?
Q11	What items (at minimum) should you have in your car kit?
Q12	If you're very thirsty, is it worth drinking water contaminated with Giardia (a water born parasite) over going without drinking?
Q13	True or False, eating more food in a survival situation will result in depleting valuable water out of your digestive system.
Q14	True or False, During an emergency, its best to communicate with family or friends by calling them on your cell phone?
Q15	What is the best way to cook food in a survival situation?
Q16	How often should you update your emergency kit?
Q17	True or False, the best place to obtain water that is likely parasite-free is out in the middle of a lake and if possible a few feet down from the surface.
Q18	How long do you need to boil water to purify it?
Q19	True or False, you must always cook wild meat found or caught in a survival situation.
Q20	True or False, shelter is the most important and first consideration in a survival ordeal.
Q21	How thick should your survival "mattress" (of leaves or whatever) be?
Q22	How long can a person go without food?
Q23	If you are running low on water and only have 200ml (0.5 pints) left, is it better to ration it out or consume it?
Q24	How can you extract freshwater from saltwater?
Q25	What is a way to collect dew from plants?
Q26	What is a warning sign that an insect might be poisonous to eat?
Q27	True or False, insulation from the ground is just as important as the insulation around and on top of the shelter.
Q28	True or False, if you happen to have alcohol, it is good to drink it to absorb water into your system.
Q29	How many calories per day might you use if you are working very hard at survival?
Q30	What is the best location for a shelter in terms of hilly (small hills, not mountainous) terrain?
Q31	True or False, in a survival situation, should you attempt to break into a cabin or cottage if you come across one?
Q32	Which is better in a survival ordeal, passive patience or proactive actions?
Q33	In this day and age, is a paper map and use of a compass necessary anymore?
Q34	What is kindling wood?
Q35	What fire starting method is the best to carry which produces a fire easily?
Q36	If you are in a group, should you make one big shelter or individual shelters?
Q37	True or False, fire is one of the most important survival skills anyone should master.
Q38	True or False, it's a better practice to put your fire out at night and re-start it each morning.
Q39	What is the best location for a fire inside a shelter?
Q40	What is the main problem with handheld GPS satellite units? A) Patchy Satellite Signal, B) Dead Batteries, C) Lack of Current Maps, D) They are Difficult to Use.

ENTERTAINMENT Brain Teasers Trivia Preparedness Trivia Answers

Preparedness Trivia Answers

A1	Drop, cover, hold on!
A2	3.7L (1 Gallon)
A3	Food is safe in a full freezer for 36 to 48 hours.
A4	Car or work
A5	Turn around and find an alternative route
A6	About 3 days. After 3 to 5 days you will be incapacitated and between 6 and 12 days you will likely die of dehydration
A7	No, some of the cleanest looking water can still make you ill.
A8	Be Informed, Make a Plan, Build a Kit, Be Involved
A9	Yes
A10	Lightning can strike as far as 16km (10 miles) from where you can hear thunder or the area where it is raining.
A11	Jumper cables, blankets, flares, batteries, phone charger, car brush, good walking shoes, first aid kit
A12	You will die much quicker from dehydration than Giardia. You won't even know you have it for at least a week and it's cured by a few pills.
A13	True, digestion always requires water from your body to work.
A14	False. Texting is best because it uses less data and can get through quickly.
A15	Boil it. Boiling is helpful as you can then also drink the broth getting additional nutrients.
A16	At least once or twice per year.
A17	True.
A18	You only need to bring it to a boil.
A19	False. Although there are some parasites on wild meat, you're better off eating it raw to keep yourself from starving.
A20	False, there are many other considerations to put ahead of shelter.
A21	1 Meter (3 Feet) thick.
A22	About 3 weeks. You start to become incapacitated long before 30 days, but most people last that long and sometimes longer.
A23	Drink it. You don't have enough for rationing it out to make sense. Get it into your system now.
A24	Distill it. The steam will be evaporated and condense as pure water free of salt.
A25	Tie rags around your legs and walk through the morning grass. Then wring out the wet rags into a receptacle.
A26	It's brightly coloured.
A27	True. Insulation from the ground is the most important. It will suck the heat out of you quickly and may cause hypothermia.
A28	False, Never drink alcohol as it is a dieretic and will deplete your body of precious water.
A29	As many as 5,000. This number will be higher in the winter.
A30	The middle of the hill. The cold air will sink to the bottom and you are exposed to the wind at the top.
A31	True. In most places it's actually considered legal to 'break and enter' if you're in a survival situation.
A32	Proactive Actions. Passive patience is only utilized best in the beginning as you carry out your assessments.
A33	Yes. There is much more to map and compass skills than just finding your direction.
A34	Any very small dry and split wood or branches used to get bigger flames when starting or stoking a fire.
A35	A lighter.
A36	One large shelter.
A37	True. It cooks food, warms you, brings you comfort, signals rescue and can be used to make tools amongst so much more.
A38	False. Try and keep the fire going 24/7 if possible.
A39	The lowest part of the shelter.
A40	B) Dead batteries.

3 Facts

Astonishing pieces of information you aren't likely to have known prior.

General Facts

Boring, Oregon and Dull, Scotland have been sister cities since 2012. In 2017, they added Bland Shire, Australia to their "League of Extraordinary Communities."

Amelia Earhart and Eleanor Roosevelt once sneaked out of a White House event, commandeered an airplane, and went on a joyride to Baltimore.

During Prohibition, moonshiners would wear "cow shoes." The fancy footwear left hoofprints instead of footprints, helping distillers and smugglers evade police.

In 1974, the Journal of Applied Behaviour Analysis published a paper titled "The Unsuccessful Self-Treatment of a Case of 'Writer's Block.'" It contained a total of zero words.

Guinness estimates that 93,000 litres of beer are lost in facial hair each year in the UK alone.

Some cats are allergic to humans.

Queen Elizabeth II is a trained mechanic.

Volvo gave away the 1962 patent for their revolutionary three-point seat belt for free, in order to save lives.

Tsundoku is the act of acquiring books and not reading them.

Ravens in captivity can learn to talk better than parrots.

In Great Britain and Japan, black cats are perceived as auspicious. In the English Midlands, new brides are given black cats to bless their marriage, and the Japanese believe that black cats are good luck—particularly for single women.

Donkey Kong got his name because the creator believed 'donkey' meant 'stupid' in English and wanted to convey the impression that the character was a "Stupid Ape".

The medicinal name for a butt crack is "intergluteal cleft".

People can suffer from a psychological disorder called Boanthropy that makes them believe that they are a cow. They try to live their life as a cow.

Mr Potato Head was the first toy to be advertised on TV.

A duel between three people is actually called a truel.

In South Korea there is an emergency number (113) to report spies.

There are no bridges over the Amazon River.

The process by which bread toasts is called the "Maillard Reaction".

The human nose can remember 50,000 different scents.

Daddy longlegs have penises, which technically makes them not a spider.

The television was invented only two years after the invention of sliced bread.

Bullfrogs do not sleep.

In 2005, a fortune cookie company called Wonton Food Inc correctly foretold lottery numbers, resulting in 110 winners and an investigation. No fraud was involved.

The dark region on the north pole of Pluto's moon, Charon, is called Mordor.

In 2015, a silver coin with Superman on the heads side was made which is legal tender in Canada. There was only 350,000 produced.

Two PlayStation 1 games, Fifa 2001 and Gran Turismo 2 have scratch and sniff discs. The FIFA 2001 smells like a soccer field, while Gran Turismo 2 smelled like car tires.

In 2014, Sony made a cassette tape that can store 185TB of data.

If you die in Amsterdam with no next of kin, and no friends or family to prepare funeral or mourn over the body, a poet will write a poem for you and recite it at your funeral.

It took the creator of the Rubik's Cube, Erno Rubik, one month to solve the cube after he created it; the current world record is 5.55 seconds.

In 2014, a missing woman on a vacation in Iceland was found when it was discovered that she was in the search party looking for herself.

If you sneeze while travelling at ~100kmh (60 mph) your eyes are closed for an average of 15 meters (50 ft).

Both Nicholas Cage and Michael Jackson shared the same wife, Elvis Presley's daughter, Lisa Marie Presley.

Alligators will give manatees the right of way if they are swimming near each other.

The I'm Feeling Lucky feature in Google search actually costs Google $110 million a year, as 1% of all searches use this feature and bypass all advertising.

Magpies are considered one of the most intelligent animals in the world, and the only non-mammal species able to recognize itself in a mirror test.

Baked beans are actually not baked, but stewed.

Rowan Atkinson also known as Mr. Bean is the voice of Zazu in The Lion King.

The term "footage" comes from films being measured in feet, when being edited in the early days of film making.

In 2005, Mark Zuckerberg unsuccessfully tried to sell Facebook for $75 million. Back then it was called TheFacebook.

There is an opposite of albino animals, which aren't white, but black. These are known as Melanistic animals.

Some areas in Scotland and Japan switched to blue street lights at night, and saw a decrease in crime and suicide rates.

There are cells in human body called Faggot cells which cause leukaemia.

Elephants make friends, bury their dead, travel for "funerals", speak to each other, and show extreme intelligence.

Cat breeds (called Puppy Cats) are bred specifically to exhibit dog-like behaviour.

Bluetooth technology was named after a 10th century king, King Harold Bluetooth. He united Denmark and Norway, just like the wireless technology united computers and cell phones.

Banks have therapists known as "wealth psychologists" who help ultra-rich clients, who are unable to mentally cope with their immense wealth.

In 1999 hackers revealed a security flaw in Hotmail that permitted anybody to log into any Hotmail account using the password 'eh'. At the time it was called the most widespread security incident in the history of the web.

The state of Ohio gives out different coloured license plates for those convicted of DUI.

In Japan, you are equally likely to die from being struck by lightning as you are from being shot by a gun.

If you made $1 every second, it would take you 2,511 years to have more money than Bill Gates (over $79.2 billion dollars).

Guy Fawkes is the reason guys are called "guys".

Samuel Jackson has a clause in his film contracts that allows him to play golf during film shoots whenever he wants.

Restaurants can sing "Happy Birthday" now because the copyrights claims are now invalid. Judge George H. King ruled that a copyright filed in 1935, granted only the rights to specific piano arrangements of the music, not the song itself.

Although Australia is home to the largest number of venomous snakes in the world, it averages only one fatal snake bite per year.

Bela Lugosi was buried in full Dracula costume—cape and all.

A teacher wrote of a young Roald Dahl on his school report card: "I have never met anybody who so persistently writes words meaning the exact opposite of what is intended."

Blood donors in Sweden receive a thank you text when their blood is used.

Kea parrots warble together when they're in a good mood, making them the first known non-mammal species to communicate with infectious laughter.

Long before rap battles, there was "flyting": the exchange of witty, insulting verses. The verbal throwdowns were popular in England and Scotland from the 5th to 16th centuries.

Melbourne gave some of its trees email addresses so residents could report problems. Instead, the trees received love letters.
An estimated 1 million dogs in the U.S. have been named primary beneficiary in their owners' wills.
The Russians showed up 12 days late to the 1908 Olympics in London because they were using the Julian calendar instead of the Gregorian calendar.
In Japan, letting a sumo wrestler make your baby cry is considered good luck.
Count von Count's love of numbers isn't just a quirky character trait—in traditional vampire folklore, the bloodsuckers have arithmomania, a compulsion to count.
Portland was named by a coin flip. Had the coin landed the other way, the city would be Boston, Oregon.
Sleep literally cleans your brain. During slumber, more cerebrospinal fluid flushes through the brain to wash away harmful proteins and toxins that build up during the day.
Neil Armstrong's astronaut application arrived a week past the deadline. A friend slipped the tardy form in with the others.
Due to the restaurant's reputation for staying open in extreme weather, the so-called “Waffle House Index” is informally used by FEMA to gauge storm severity.
The manchineel tree is nicknamed the "Tree of Death" for good reason: Touching it can leave chemical burns on your skin, its fruit is toxic, and its bark—when burned—can cause blindness.
If drivers adhere to the 45 mph speed limit on a stretch of Route 66 in New Mexico, the road's rumble strips will play a rendition of "America the Beautiful."
Russian cosmonauts used to pack a shotgun in case they landed in Siberia and had to fend off bears.
Space has a distinct smell: a bouquet of diesel fumes, gunpowder, and barbecue. The aroma is mostly produced by dying stars.
The annual number of worldwide shark bites is 10 times less than the number of people bitten by other people in New York.
In 1997 a Louisville woman left actor Charles Bronson all of her money in a handwritten will—a total of about $300,000. She'd never met him; she was just a fan.
Ben & Jerry learned how to make ice cream by taking a $5 correspondence course offered by Penn State. (They decided to split one course.)
After an online vote in 2011, Toyota announced that the official plural of Prius was Prii.
Big Ben (Elizabeth Tower) in London is leaning over so much it can now be seen with the naked eye. In 4000 years it will be at the same angle as the tower in Pisa is now.
It was Nicholas Cage who first advised Johnny Depp to pursue a career in acting, during the mid 1980's.
The directors of the film Despicable Me actually wrote their own language for the Minions called Minionise.
The mayor of the Alaskan town, Talkeetna, is called Stubbs and has been mayor of the town since July 1997. Stubbs is a cat.
Due to the humid and moist conditions that a sloth lives in, moss and other similar plants will sometimes grow in its hair. Sloth's also have very bad eyesight. These two factors can sometimes culminate in a sloth grabbing its own arm, whilst thinking it is a branch, and falling to its death!
Viagra, when dissolved in water, can make cut-flowers stay erect for up to a week longer than they usually would.
Catnip is ten-times more effective at repelling mosquitoes than DEET, the main substance used in insect repellents.
There is a 51% chance that a flipped coin will land on the side that was facing up when it was flipped.
The human brain remember more negative memories than positive ones. This is due to the negativity bias the brain sets up as a defence mechanism.
Swans form monogamous pair bonds that last for many years. If one swan dies, its partner may mourn or at least remain celibate for several seasons.
Cookie Monster's real name is Sid.
When Canada's Northwest Territories considered renaming itself in the 1990s, one name that gained support was "Bob."
Tootsie Rolls were added to soldiers' rations in World War II for their durability in all weather conditions.
After OutKast sang "Shake it like a Polaroid picture," Polaroid released a statement: "Shaking or waving can actually damage the image."
Marie Curie remains the only person to earn Nobel prizes in two different sciences.
The Starry Night depicts Vincent van Gogh's view from the Saint-Paul de Mausole asylum.
Army ants that misinterpret the scent trails left by other ants will sometimes break from the crowd and march in circles. If enough ants join, they can form massive "death spirals."
A solar eclipse helped end a six-year war in 585 BCE. When the sky suddenly darkened during a battle between the Lydians and the Medes in modern Turkey, soldiers took it as a sign to cease fighting.
Dogs are capable of understanding up to 250 words and gestures. The average dog is as intelligent as a two-year-old child.
Scientists have found evidence of take-out restaurants in the remains of Pompeii.
Peter Durand patented the tin can in 1810. Ezra Warner patented a can opener in 1858. In between, people used chisels and hammers.
Goats have rectangular pupils.
The heart of a blue whale is so big, a human can swim through the arteries.
Vending machines are twice as likely to kill you than a shark is.

In Switzerland, it's illegal to own only one guinea pig.

The most common name in the world is Mohammed.

Q is the only letter in the alphabet that does not appear in the name of any of the United States.

Fortune cookies were actually invented in America, in 1918, by Charles Jung.

Bats always turn left when exiting a cave.

In England, in the 1880's, "Pants" was considered a dirty word.

It is believed that Shakespeare was 46 around the time that the King James Version of the Bible was written. In Psalms 46, the 46th word from the first word is "shake" and the 46th word from the last word is "spear".

The drive-through line on opening day at the McDonald's restaurant in Kuwait City, Kuwait was at times seven miles long.

The Pentagon in Washington, D. C. has five sides, five stories, and five acres in the middle.

There is an ATM at McMurdo Station in Antarctica, which has a winter population of 200.

One out of three employees who received a promotion use a coffee mug with the company logo on it.

If you know a (male) millionaire who happens to be married, The most likely profession of his wife is a teacher.

Foreign Accent Syndrome is a rare side effect of brain trauma. Patients speak their native language in a foreign accent.

Queen Elizabeth II has had over 30 corgis in her lifetime.

In 2016, a rogue bloodhound named Ludvine joined a half-marathon in Alabama. She ran the entire 13.1 miles and finished in 7th place.

The Library of Congress regularly receives requests for books that don't exist. The most common is the President's Book of Secrets, from the 2007 movie, National Treasure: Book of Secrets.

In 2014, Tinder made its first match on the continent of Antarctica. Not surprisingly, both parties involved were research scientists.

When times get tough, elephants will comfort each other by stroking loved ones with their trunks and emitting small chirps.

A double rainbow occurs when sunlight is reflected twice inside a raindrop. If you look closely, you can see that the colours of the secondary rainbow appear in reverse order.

There's a Nikola Tesla statue in Palo Alto that provides free Wi-Fi.

The Mobile Phone Throwing World Championships are held in Finland. One winner (not pictured) said he prepared for the event by "mainly drinking."

Frank Sinatra has three stars on the Hollywood Walk of Fame: one for film, one for music, and one for television.

One April day in 1930, the BBC reported, "There is no news." Instead they played piano music.

Continental plates drift as fast as fingernails grow.

Elvis Presley's manager sold "I Hate Elvis" badges as a way to make money off of people who weren't buying his merchandise.

LEGO has a temperature-controlled underground vault in Denmark with nearly every set they've ever made.

A reindeer's eyes change colour through the seasons. They're gold during the summer and blue in the winter.

An avocado never ripens on the tree, so farmers can use trees as storage and keep avocados fresh for up to seven months.

In The Empire Strikes Back, an extra can be seen running with what appears to be an ice cream maker. The character became legendary among fans, and was eventually given a name (Willrow Hood) and a backstory.

Salvador Dali avoided paying restaurant tabs by using checks. He would draw on the back as the waiter watched, knowing no one would ever cash the art.

China owns all of the pandas in the world. They rent them out for about $1 million a year.

10% of all photos in the world have been taken in the past 12 months.

If you earn more than $18,000 USD a year, you're among the 4% of the richest people on Earth. (2012)

61,000 people are airborne over the US at any given time.

WW1 Facts

WW1 Facts

Officially a British soldier had to be 19 years old to serve overseas but many lied about their age. About 250,000 under-age boys served. The youngest was discovered to be just 12.

Average life expectancy in the trenches was about six weeks. Junior officers and stretcher bearers were some of the people most at risk.

During four years 25 million tons of supplies were shipped to the British forces on the Western Front including three million tons of food and five million tons of oats and hay for the horses.

As the war went on the amount of food given to soldiers was reduced. A common meal in the trenches was maconochie - a stew of turnips, potatoes and carrots. Other rations included bully beef and even Marmite. There was a small rum ration but tea tasted horrible thanks to the chloride of lime used to purify the water.

The war claimed the lives of at least 6,000 men a day. More than nine million soldiers died during the fighting.

Facts

WW1 Facts

An incredible 65 million men from 30 countries fought.
Some 25,000 miles of zig-zagging trenches were dug on the Western Front alone. Many had nicknames like Bond Street or Death Valley. German lines were given names like Pilsen Trench.
German trenches were far superior to Allied ones. Built to last some had shuttered windows and even doorbells. At Hooge, near Ypres, opposing trenches were 50 yards apart.
A soldier spent 15 per cent of the year on the frontline, usually for no more than two weeks at a time.
At the Battle of Mons in 1914, the British infantry fired their Lee-Enfield rifles so efficiently that the Germans thought they were facing machine guns.
At Christmas 1914 an unofficial truce was observed along two--thirds of the Western Front. Near Ypres, Belgium, some German and British troops played a football match in No Man's Land. Germany won 3--2 (but not on penalties).
Sixty per cent of casualties on the Western Front came from shellfire. There were also 80,000 recorded cases of shell shock.
In 1917 anti--German sentiment forced George V to change the Royal Family's name from Saxe--Coburg and Gotha to Windsor. Many road names in Britain were changed too.
Famous people who served include the writers AA Milne, creator of Winnie The Pooh, Lord Of The Rings author JRR Tolkien, sculptor Henry Moore and the actor Basil Rathbone.
None of the soldiers had metal helmets in 1914. The French were the first to introduce them, in 1915. Future prime minister Winston Churchill wore a French one during his time on the front in 1916.
Air raids on Britain, carried out by Zeppelins and aircraft, along with the naval shelling of Scarborough, Hartlepool and Whitby, killed more than 700 people.
Disease accounted for a third of deaths during the war. Duck boards eventually helped ease cases of trench foot, an infection caused by damp and cold. But with semi--sanctioned brothels being set up behind the frontline a massive 150,000 British soldiers came down with venereal infections.
A total of 346 British soldiers were shot by their own side, mostly for desertion. Another sanction, called Field Punishment No 1, saw offenders strapped to a gun wheel or post, sometimes within range of enemy fire.
As well as taking up thousands of male jobs at home some 9,000 women served in France as part of the Women's Army Auxiliary Corps working in such roles as cooks and drivers.
There were 16,000 British conscientious objectors who refused to fight. Many received white feathers as a sign of cowardice. Some were given non--combatant roles, others were imprisoned.
During World War I, a Canadian soldier made a black bear his pet and named her Winnipeg. “Winnie” was later a resident of the London Zoological Gardens where she was an adored attraction, especially to a boy named Christopher Robin, son of author A.A. Milne. The boy even named his teddy bear after her.
By the end of 1915, 2,446,719 Brits had volunteered. But conscription was still needed. It was introduced for 18-41 year olds during 1916.
The Victoria Cross was awarded 628 times. The youngest recipient was Jack Cornwell, 16, who remained at his post during the Battle of Jutland despite suffering ultimately fatal injuries.
One of the biggest blasts of the war occurred when the British detonated a million pounds of explosives under the Germans at Messines Ridge, in Belgian West Flanders. The resulting explosion could be heard 150 miles away in London.
In 1917 food shortages at home caused by the loss of British shipping to German U--boats meant the government banned the use of rice at weddings and the feeding of pigeons.
At the height of the war the British Army had 870,000 horses. Dead ones were melted down for fat which was later used for making explosives.
Periscope rifles were developed to see over the 12ft trenches. Other new weapons included flame throwers and tanks - the first tank, in 1915, was called Little Willie. Tanks were split into males (armed with cannons) and females (with machine guns).
Trench language contributed many words to the English language: lousy and crummy for the lice that infested soldiers as well as dud, bumf and blotto. Trench butterflies were bits of toilet paper blowing around the battlefield.
The Eiffel Tower intercepted German radio messages that led to the execution of Dutch dancer and German spy Mata Hari. British nurse Edith Cavell was shot for helping soldiers escape behind German lines.
Initially the only protection against gas attacks was a cloth soaked in a soldier's own urine. British officer Edward Harrison invented the first practical gas mask, saving thousands of lives.
The Defence Of The Realm Act 1914 included stopping Britons from talking on the phone in a foreign language, buying binoculars or hailing a cab at night. Alcoholic drinks were watered down and pubs had to close at 10pm.
The war in the air saw Germany's Baron von Richthofen, dubbed the Red Baron, shoot down 80 Allied aircraft. The top British ace, Major Edward Mannock, shot down 61 enemy planes. Both later died in action.
When soldiers returned there was a baby boom. Births increased by 45 per cent between 1918 and 1920. But the 1918 influenza pandemic killed more people worldwide than the war.

- The band Queen's original name was "Smile".
- There's a novelty museum in Arlington, Massachusetts that only collects food that has been burnt.
- A group of porcupines is called a prickle.

ENTERTAINMENT Teasers Weird Facts

- The name of the dog that won the 2012 World's Ugliest Dog Competition was "Mugly".
- Dr. Seuss is credited with coining the derogatory term "nerd" in his 1950 book If I Ran the Zoo.
- Prop comic Gallagher, known for smashing watermelons with a sledgehammer, earned a college degree in the field of chemical engineering.
- Google was originally going to be called backrub.
- In 1976 boxing legend Muhammad Ali released an education children's album titled "Ali and His Gang Vs. Mr. Tooth Decay".
- The name of the dildo resembling Queen Elizabeth II that's sold by the Company Masturpieces is called Buckingham Phallus.
- On January 13, 2014, U.S. Secretary of State John Kerry presented to Russian Foreign Minister Sergei Lavrow the odd gift of two very large potatoes.
- The name of the Star Trek starship in creator Gene Roddenberry's original script was called Yorktown.
- In the 16th century, gin was referred to as the Mother's ruin.
- Larry is the name of the man on the Quaker Oats label.
- During a famous fire in 1567, a Norwegian man named Hans Steininger died after tripping over bread.

Weird Facts

- The fishing company E21 makes a very peculiar fishing rod that is composed of 70% carrots.
- During the mid to late-nineties, the English town of Glastonbury was on a manhunt for the old house intruder known as "The Tickler".
- Suffering from an extremely rare side effect after getting hip surgery in 2010, a Dutch man has alienated his family because he cannot stop laughing.
- According to the National Oceanic and Atmospheric Association, small icebergs are officially called "growlers." Medium icebergs go by the strange, two-word name "Bergy Bits."
- It's weird work but Jackie Samuel charges $60 an hour to snuggle.
- Huggies Brazil developed a phone app that tells you when a baby's diaper is wet. It's called tweetpee.
- Michael J. Fox's middle name is actually Andrew.
- Ben and Jerry only started making ice cream because it was too expensive to make bagels.
- A spectator in an Illinois courtroom was sentenced to six months in jail for yawning during a trial.
- "Ham" was the name of the first chimp sent into space.
- The sports teams at Freeport High School in Illinois are oddly named after an inanimate object. The teams are called the Freeport Pretzels.

Brain Weird Facts

- The inventor of the laxative Ex-Lax has the unusual name Max Kiss.
- Britt, Iowa annually crowns a King and Queen hobo.
- Tashirojima is an island off of Japan that is complete overrun by cats.
- For his voiceover work in Texas Chainsaw Massacre, John Larroqueet was paid not with money, but with marijuana.
- The fans of musician Josh Groban are called Grobanites.
- Jim Begelow, Ph.D., wrote a book called The Joy of Uncircumcising!
- While president of the United States, John Adams had a dog named Juno and a dog named Satan.
- The British call the "Hokey Pokey" the "Hokey Cokey".
- A Kickstarter campaign met its $30,000 goal on April 7, 2012 for its shoes designed for atheists.
- In 2007, Golden Laurel Entertainment published a violent board game called Kill the Hippies.
- In 2012, a 26-year-old man from London went on a mission to lick every cathedral in the United Kingdom.

ENTERTAINMENT Weird Facts

- Maryland's official state sport is jousting.
- In 2003, Morocco made the highly unusual offer to send 2,000 monkeys to assist the United States' war efforts in Iraq.
- Romano Mussolini, son of the fascist dictator Benito Mussolini, did not follow in his father's footsteps. Instead, he made his living as a jazz musician.
- Patented in 1890, U.S. Patent US435748 is for a moustache guard.
- Miley Cyrus's real first name is Destiny.
- In 2007, to make a point, Nebraskain State Sen. Ernie Chambers filed a frivolous lawsuit against God.
- When in Nepal, visit the village of Parsawa and Laxmipur, where you can enjoy the slightly off-putting 10 day cursing festival.
- A group known as the "Robin Hooders" in Keene, New Hampshire pay for other people's parking meters.
- At 65% alcohol by volume, Brewmesiter brews the world's strongest beer, which goes by armageddom.
- In an effort to push "slow TV," Norway had a 12-hour block of programming in 2013 dedicated to knitting.
- Belmont University in Nashville has offered a class called "Oh, Look, a Chicken".

ENTERTAINMENT Brain Teasers Weird Facts

- The area in the Pacific Ocean where great white sharks congregate every spring is called the White Shark Café.
- Reg Mellor is the reigning champion of a sport that just involves keeping a ferret in your pants.
- Harry Houdini once threatened to shoot all psychics.
- During the summer of 2007, Pepsi sold a green-tinted coal in Japan called Pepsi Ice Cucumber.
- Under Peter the Great, noblemen had to pay 100 rubles a year for a beard license.
- In 2000, Australia had its largest ever online petition, which called for an end to rising beer prices.
- Although very unconventional, farmer William von Schneidau feeds his pigs marijuana.
- When Paul Nelson and Andrew Hunter climbed Britain's highest mountain in 2006, they made an unusual discovery hidden behind a pile of stones. It was a piano.
- At 2:45 a.m. one day in June 2013, a man in Orlando, Florida was arrested for walking up to a police officer and punching his horse.
- Before he became pope, Pope Pius II wrote an erotic novel titled The Tale of the Two Lovers.
- A 2013 Pakistani game show caused a controversy when their grand prize was a baby.
- In 2013, two teens from Sequoyah High School near Atlanta, Georgia won $50,000 scholarships for wearing duct tape to prom.
- Since 2000, a couple in Queens, New York has been living rent-free in a cemetery in exchange for taking care of it.
- For a story he was reporting on in 1955, Dan Rather tried heroin for the first time.
- Chosen, Shunned and Reckoning are all books in an unusual series about Amish vampires.
- In 2013, a 51-year-old Swedish inmate broke out of prison a day before his scheduled release so he could go see a dentist.
- There is a riot police unit in the Russian town of Rostov-na-Donu that is comprised entirely of twins.
- In 1980, Saddam Hussein was named an honorary citizen of Detroit.
- A neurology professor at Albany Medical College documented in a 1991 medical journal that one of his patients had seizures when she heard Mary Hart's voice.
- In 2008, a couple was killed in South Africa while having sex on a railroad track.
- CELEBRITY TWEET! 2:49 PM - 15 Nov 13 Richard Simmons' Twitter handle @TheWeightSaint tweeted: "At the airport hugging everyone."
- In 2010, Customs officers on the Norway-Sweden border intercepted a truck trying to smuggle 28 tons of garlic from China.
- In 2012, a teenager from Weslaco, Texas claimed the reason he stabbed his friend was because a ouija board made him do it.
- In school, Sylvester Stallone was voted by his teachers as most likely to go to the electric chair.
- While in Alliance, Nebraska, you can visit the Stonehenge replica made out of cars.
- As a way to protest Belarus' police state, a Swedish group dropped hundreds of teddy bears from an airplane.
- Tara Reid once said, "I make Jessica Simpson look like a rock scientist."
- Advanced Comfort Technology makes waterbeds for cows.
- To make it extremely difficult for telemarketers to pronounce, Tim Price changed his name in 2012 to Tim Pppppppppprice.
- The first text message was by Neil Papworth in 1992. He texted, "Merry Christmas."
- The movie G.I. Janes was translated to Satan Female Soldier in China.
- According to the nonfiction book The Man-Eating Tigers of Sundarbans, tiger urine "smells sort of like buttered popcorn."
- At the Meitestu-Nagoya train station in Japan, there's an odd vending machine that sells porn.

- Located within the municipal boundaries of Kirkland Lake, Ontario, there lies the controversially name village of swastika.
- Located near the town of Stanley, there's a small village in England called No Place.
- The Lehigh Valley IronPigs, a minor league baseball team, held a contest where the prize was a voucher for a funeral.
- Every year residents in Ivrea, Italy re-enact a historical battle of their region, and instead of replica weapons, they use oranges.

5 Mythbusters Results

ENTERTAINMENT Brain Teasers Mythbusters Results Hidden Dangers

The MythBusters tested over 1,000 distinct myths in 271 hour-long episodes spanning 14 years, resulting in a vast amount of information about common myths and interesting phenomena. The following overview attempts to summarize and categorize the results of the entire MythBusters series as succinctly as possible.

Hidden Dangers

- A rock kicked up by a lawnmower can deliver the same force as a bullet.
- A pane of plate glass dropped from sufficient height can cut a person in half, but tempered glass will just crush the person.
- Spray sunscreens can be flammable due to the propellants.
- A railroad tanker car can implode after being steam cleaned and then sealed and cooled, but only if it has prior damage.
- A faulty water heater can explode and shoot through the roof of a house, even a two-story house. (The phenomenon can also be used to partially extinguish a house fire or to power a cannon.)
- A dog bowl can focus enough sunlight to start a fire.
- A high-rise office worker can accidentally run through a plate-glass window and fall to their death.
- If a car is driven into water, there is very little time to open the doors before the water pressure becomes too great. The pressure will also prevent the windows from being rolled down, and keys, cell phones, and steel-toed boots will be ineffective at breaking the windows. Once the car interior is flooded, the doors can be opened again.
- Under the right circumstances, a taser may ignite someone who has just been pepper sprayed.
- If a hunting revolver is held improperly when fired, escaping gases can blow the hunter's fingers off.
- A person's tongue can instantly stick to a freezing pole.
- The vortex from a passing train will not suck a person into the tracks.
- A large number of cigarette lighters in a hot car could lead to a lethal explosion.
- A cigarette lighter is not likely to explode in a pocket, in a laundry dryer, or on a car dashboard, but it is likely explode when hit with a golf club or when placed near welding tools.
- If a steel cable snaps, it will not cut a person in two.
- A lava lamp or a can of beans heated on a stove can explode with lethal force. A glass jug of milk and a can of potted meat will also explode, but less forcefully.
- A passing snowplow does not move enough air to flip a car.
- If denim pants are soaked in certain farm chemicals, they can spontaneously combust.
- A heavy insect hitting a motorcycle rider in the right spot could kill the rider.
- Steel toe boots will not amputate someone's toes when a heavy object is dropped on them.
- A boom lift cannot throw its operator great distances.
- An MRI scanner will not cause tattoos to explode, nor will a radio transmitter.
- A falling icicle can kill a person.
- Microwaving a jawbreaker can result in an explosion of molten sugar when the jawbreaker is bitten.
- Sandblasting a PVC pipe will not build up a lethal static charge.
- Using a cell phone while pumping gas will not cause an explosion.
- A penny dropped from a skyscraper will not gain enough speed to kill a pedestrian.
- Vacuuming up black powder will not cause an explosion.
- If two hammers strike each other they will not shatter with lethal force, nor will a hammer that strikes an anvil.

Counterintuitive Phenomena

ENTERTAINMENT Teasers Mythbusters Results Counterintuitive Phenomena Mythbust

- A household vacuum cleaner can lift a car via suction.
- A hovercraft can be used to cross a minefield safely.
- The tip of a whip breaks the sound barrier when it cracks.
- A piano dropped on a house will not easily fall through the roof.
- A ping pong ball can be shot a supersonic speed, but it still won't be a lethal weapon.
- Chrome ball-chain can appear to levitate as it falls from a container.
- Water falling in front of a speaker can appear to freeze in place on camera.
- A vehicle with square wheels can provide a smooth ride if driven fast, but square wheels do not give an advantage in hill climbing.
- A sailboat stranded in calm water can move forward using an on-board fan to blow air into its own sail.
- A foam cup filled with soda and ice that is thrown from a car could pierce another car's windshield, but it won't necessarily cause lethal injury.
- A person can briefly wet their hand and dip it into molten lead without injury.

- Two phone books with interlocked pages require on the order of 8,000 pounds of force to be separated.
- An airplane can take off from a runway that is moving backwards like a treadmill.
- It is possible to make a balloon out of lead.
- You can experience a smoother ride on a rough road by driving faster.
- It is not easy to light a pool of gasoline using a cigarette.
- The area near a fireplace is colder than the rest of the room while a fire is burning.

Idioms

Brain Mythbusters Results Idioms

- It is easy to punch out of a paper bag.
- 10 pounds of poop will not fit in a 5-pound bag.
- People can easily recognize the backs of their own hands.
- Taking candy from a baby is not as easy as it sounds.
- People may literally get cold feet when they are scared/timid.
- If poop hits a fan it can indeed create a large mess.
- You can teach an old dog new tricks.
- With an enormous amount of force, it is possible to literally knock someone's socks off.
- In a race, it is not literally better to hit the ground running.
- You can polish poop.
- Shooting fish in a barrel is fairly easy; the shock wave from a bullet can be enough to kill the fish.

- A bull in a china shop will actively avoid hitting the shelves.
- A rolling stone truly gathers no moss.
- Finding a needle in a haystack is difficult, even with modern technology.

Movie Myths

ENTERTAINMENT Mythbusters Results Movie Movie Myths

- The scene in Cliffhanger in which the hero leaps to safety from a collapsing rope bridge is not feasible.
- In Titanic, Jack may have been able to survive by joining Rose on the floating debris.
- Jason Bourne blowing up a house with a gas leak and a magazine in Bourne Supremacy is not feasible.
- Shooting at a scuba tank in a shark's mouth will not blow up the shark, as seen in Jaws.
- Water can quickly slow a bullet to non-lethal speeds, as seen in Mission Impossible: Ghost Protocol.
- Realistic face masks like those in the Mission Impossible series may be effective at fooling people.
- In Pirates of the Caribbean: Dead Man's Chest, the group of people in a suspended cage could not have swung to side of the ravine, but they may have been able to grab the vines and climb to the top.
- The pirates in Pirates of the Caribbean: The Curse of the Black Pearl could not have improvised a submarine by holding a rowboat upside down as they walked underwater.
- It's not feasible for a group of cars to stir up enough dust to blind a surveillance drone, as seen in Body of Lies.

Teasers Mythbusters Results Movie Myths

- It is not possible to hold a bullet over a fire and discharge it toward an enemy, as seen in Shoot 'Em Up.
- A merry-go-round cannot be started spinning by shooting at it with a handgun, as seen in Shoot 'Em Up.
- A spear with a shotgun shell on its tip is not a feasible weapon, as seen in The Grey.
- A car halfway into an elevator won't be cut in half when the elevator moves, as seen in The Green Hornet.
- With some modifications, the front half of a car cut in two can be driven, as seen in The Green Hornet.
- Explosives cannot be used to throw a bulldozer off a car without hurting passengers in the car, as seen in The Green Hornet.
- A superhuman punch to the hood of a moving SUV will not cause it to somersault, as seen in Hellboy.
- In a car crash, a surfboard on the roof of one car will not fly through the windshield of another car, as seen in Lethal Weapon 2.
- A carton of milk will not contain the muzzle flash of a pistol, as seen in Kiss the Girls.
- A bus could not jump a 50-foot gap and keep driving, as seen in Speed.
- The passengers in a city bus do not need to move to one side during a fast, sharp turn to prevent the bus from flipping over, as seen in Speed.

- A laser can pop popcorn, but popcorn could not break open a house as seen in Real Genius.
- Bullets cannot be curved around an obstacle by swinging a gun, as seen in Wanted.
- A C-4 explosion will not knock a golf ball into the hole as seen in Caddyshack.
- Liquid nitrogen can be used to cool a pressure-triggered bomb and delay its detonation, as seen in Lethal Weapon 2.
- Sea water will not conduct electricity from a car battery as seen in Deep Blue Sea, nor can a person survive an underwater explosion at close distances.
- Having a conversation while skydiving is not feasible and the fall wouldn't last as long as depicted in Point Break.
- A car that jumps off a ramp will not land with little damage, as see in The Dukes of Hazard.
- Shooting a lock with handguns will not break it, as seen in Big Trouble in Little China, but shooting it with shotgun slugs or a high-power rifle could.
- It is feasible to equip a car with a discreet seat ejector, as seen in Austin Powers in Goldmember.
- A person cannot escape through a floor by shooting a ring around themself, as seen in Underworld.
- A sword cannot cut off the blade of another sword, as seen in The Count of Monte Cristo.

ENTERTAINMENT Brain Mythbusters Results Movie Myths

- Using a system of mirrors to light an underground passage with sunlight, as seen in The Mummy, is extremely difficult.
- A human head dipped in liquid nitrogen for five seconds will not shatter when hit, as seen in Jason X.
- A sports car at high speed can skip across a lake, as seen in Cannonball, but launching off a ramp is counterproductive.
- A urine-soaked silk shirt will not bend prison bars when wrapped around and twisted, as seen in Shanghai Noon.
- A cable attaching the rear axle of a car to a light post will not yank the rear axle out, as seen in American Graffiti.
- A car cannot fire a grappling hook around a pole to make a sharp turn, as seen in Batman.
- Making a usable candle out of earwax, as seen in Shrek, is not possible.
- It is not possible for a person to punch out of a coffin as depicted in Kill Bill and it is only possible to dig out of a shallow grave with an open coffin.

Movie Clichés

ENTERTAINMENT

Movie Myths

- A car will not necessarily end up on fire after crashing down a cliff.
- The shock wave from an explosion will not throw a person long distances through the air.
- A car's fuel tank will not explode if shot with a normal bullet, but it may explode if shot with a tracer round.
- A person will not be thrown backwards when struck by a bullet.
- During a rooftop chase, jumping into a dumpster may allow survival.
- Falling or jumping through glass windows without injury is not realistic.
- Quicksand does not exist with the characteristics show in movies.
- Carrying a dead body is reasonably easy, but digging a shallow grave is not.
- An axe is a more effective weapon against zombies than a gun.
- It would be difficult to outrun a large zombie horde, but a barricaded door could stop them.
- If a car crashes through a sheet of glass held by workers, the workers will likely be injured.

- A large truck cannot plow through two lanes of traffic and continue undeterred, but it can if it has a steel wedge attached to its front.
- Most movie sound effects for punches and explosions are not realistic, but the sound effects for rattle snakes and silenced guns are realistic.
- It is not easy to drive a car and shoot a gun while the passenger steers.
- A driver and passenger in a car can switch seats while moving at speed, and the passenger can push out an incapacitated driver and continue driving.
- A car cannot realistically be driven through a fruit stand or a camper trailer, but it could be driven through a chain link gate or under a semi-trailer.
- A person can hold onto the roof or hood of a car while it crashes through cardboard boxes or goes through a car wash, but not while it makes a big turn or zig-zags. If the windows are down, it is easier to hold on to the roof. During a sudden stop, the hood can be held onto but not the bare roof.
- Movie gun fights are unrealistically long and running through gunfire does not protect a person from being hit.
- Neon signs will not explode in a shower of sparks if struck by a bullet.
- It is possible to quickly reload and fire a pistol, as seen in movies.
- A person can only hang on to a thin ledge briefly before falling, but it is possible for a single person to rescue someone hanging from a ledge.

- An SUV will not flip over if hit by an RPG.
- A car in free fall will not stay upright.
- A person can hang off the landing skid of a helicopter and climb into it.

Indiana Jones

- Throwing a wooden pole into the spokes of a motorcycle will not cause it to flip, as seen in Indiana Jones and the Last Crusade.
- Indiana Jones running through a corridor of dart launchers without getting injured in Raiders of the Lost Ark is plausible.
- It is plausible to disarm a pistol-wielding opponent using a whip, as seen in Raiders of the Lost Ark.
- It may be possible to snag a branch with a whip and swing across a chasm, as seen in Raiders of the Lost Ark.
- A person may be able to survive falling through layers of awnings, as seen in Indiana Jones and the Temple of Doom.
- Jumping from a plane and floating to earth safely in an inflatable life raft, as seen in Indiana Jones and the Temple of Doom, is not possible.

James Bond

- The ballpoint pen bomb seen in Golden Eye could be fatal, but not as powerful as depicted.
- Being completely covered in gold paint will not kill a person by skin asphyxiation, as seen in Goldfinger.
- A tuxedo worn under a dry suit can still be presentable after a scuba dive, as seen in Goldfinger.
- A metal-brimmed hat could not be thrown to knock the head off a statue, as seen in Goldfinger.
- A person with metal teeth could not bite through a steel cable, as seen in Moonraker.
- Bond's wristwatch with electromagnets could not deflect bullets, as seen in Live and Let Die.
- Shooting at a propane tank will not cause it to explode, as seen in Casino Royale.
- In Live and Let Die, the speedboat jumping off a ramp and continuing on is feasible.
- In Die Another Day, Bond's rocket-powered seat ejector would not be able to right his upside-down car.

Star Wars

- Dodging Stormtrooper blaster fire is not feasible.
- Luke Skywalker swinging across a chasm using his grappling hook is feasible, as seen in A New Hope.
- The Ewoks could crush an AT-ST between two logs if it flies into the trap, as seen in Return of the Jedi.
- In The Empire Strikes Back, Han Solo using a Tauntaun carcass (or any large mammal) to keep Luke warm is feasible.

Television

- A stick of dynamite dropped in a bucket of paint will not fully paint the room, as seen in Mr. Bean.
- A shotgun plugged by a finger will not backfire and injure the shooter, as seen in cartoons.
- A line of black powder leaking from a barrel may be able to function like a fuse, as seen in cartoons.
- A banana peel on the ground is not guaranteed to make someone fall when they step on it, as seen in cartoons.
- A car can drive into a moving semi-trailer via a ramp, as seen in Knight Rider.
- The scene in The Simpsons where Homer blocks a wrecking ball with his body has some feasibility.
- The crab pots used on Deadliest Catch are not indestructible.
- A manhole cover could potentially be launched by an explosion to disable a vehicle, as seen in The A-Team.
- The improvised cannon made of a log in The A-Team is not feasible.
- A mattress floating on water is not effective at cushioning a three-story fall, as seen in Burn Notice.
- In Breaking Bad, Walt's machine gun booby trap could work as depicted, but hydrofluoric acid will not fully decompose a body and eat through a bathtub, and Mercury fulminate will not explode if thrown on the floor.

MacGyver

- A burnt-out fuse can be repaired with tin foil, as shown in MacGyver.
- MacGyver could have stopped an acid leak with a chocolate bar.
- A bomb in a truck filled with cement will damage the truck and injure bystanders, not be fully contained as shown in MacGyver.
- The makeshift ultralight airplane in MacGyver is not feasible.
- Spraying a light bulb with liquid from a spray bottle can break it, as shown in MacGyver.
- It may be possible to blow open a lock with black powder from revolver cartridges, but it is not as easy as shown in MacGyver.

Implausible Events

ENTERTAINMENT
Teasers
Mythbusters Results
Implausible Events

- A limousine balanced on the edge of a cliff will not topple if a bird lands on it.
- A soldier who strapped jet-assisted take-off (JATO) rockets to his car could not have soared over a mile through the air.
- A person in a lawn chair can be lifted by weather balloons and a child can be lifted by a huge number of party balloons.
- Transforming a broken-down car into a working motorcycle with only basic hand tools is not feasible.
- A drum filled with methanol can't be fitted with wheels and ignited to propel itself at high speed.
- If a truck filled with bottled wine catches fire, the corks will blow out and sound like a machine gun.
- An arrow with dynamite attached will not split a tree down the middle when it explodes.
- Sliding down a supersized water slide and launching large distances into a kiddie pool is not feasible.
- A stick of dynamite thrown under a car on a frozen lake will not cause the car to sink.
- If a person is dragged by a horse, their jeans will not catch fire.
- A person wearing jeans cannot be killed from the jeans shrinking excessively in a hot bath.
- A car airbag cannot launch a toothpick into a person's skull.
- A trombonist could not have launched his mute with a firecracker, knocking over the conductor and blowing open his trombone.
- A Corvette cannot act as a ramp enabling another car to do a barrel roll.
- It is not possible for a person to catch a bullet with their teeth.
- Illegal immigrants could not be launched over the U.S. border using a giant slingshot.
- A woman could not have been impregnated by a bullet which had also hit a man's groin during the American Civil War.
- Overusing "bug bombs" can cause a house to explode.
- The Red Cross does not implant microchips in your bloodstream when you donate blood.
- Pyramid power, primary perception, and psionic helmets have no basis in science.
- A scuba diver cannot be sucked up by a firefighting helicopter and dumped onto a fire.
- A certain series of Rube Goldberg-like accidents involving a barrel of bricks is not realistic.
- Launching a human with water bottle rockets is not feasible.
- An umbrella that shoots poison capsules could be a lethal weapon.

Surviving Falls

- Falling out of an airplane is not survivable if a bomb explodes below you.
- A person cannot survive a free-falling elevator by jumping at the last moment before it hits the ground.
- A high fall over water cannot be survived by throwing a hammer to break the surface tension of the water.
- It is not feasible to improvise a parachute from materials in a hotel room.
- A person falling from a building cannot survive by holding a large sheet of plywood above their head or by opening an umbrella.
- An inflatable Zorb ball is not effective at cushioning a fall.
- A person wrapped in bubble wrap will not survive a significant fall.
- A skydiver could not have fallen onto a seesaw and safely launched a child to the top of a seven-story building.

Crime & Criminals

Brain
Crime & Criminals

- Driving at night without headlights is not an effective way to smuggle contraband.
- A car door cannot be unlocked using a tennis ball to force air into the lock.
- Some optical fingerprint readers can be fooled by a fingerprint etched in latex, a fingerprint in ballistics gel, and a paper copy that has been licked.
- A heat detector can be fooled using a sheet of glass or a fire proximity suit. It will not be fooled by cooling one's body or heating the room, by being covered in mud, or by wearing a diving suit.
- A motion detector can be fooled by moving very slowing or by holding a bed sheet in front of you, but not by wearing heavily-padded clothing.
- Laser beam detectors cannot be dodged using night vision goggles or cosmetic powder to reveal them, or by pointing another laser at the detector.
- A thief may be able to fill a safe with water and open it using an explosive, without damaging the contents.
- A police speed radar/lidar cannot be beaten by: jingling a set of keys, hanging a disco ball or CDs from the rear-view mirror, covering hubcaps with foil, lining the license plate with LEDs, using a magnetron, releasing tin foil as chaff, or painting the car matte black.
- Climbing an air duct using magnets or suction cups is possible, but too noisy to be useful. Suction cups could also be used to climb a building.

- Glass cannot be silently cut open by gently cutting a circle and removing it with a suction cup, but drilling a hole does work without too much noise.
- A pressure sensor under an item could be carefully squeezed with knife and then held down with tape while the item is taken.
- A modern safe cannot be cracked using a stethoscope, but it could be cracked by drilling a hole and visually aligning the tumblers.

Escaping Prison

- Escaping from Alcatraz using rafts made from rain ponchos is feasible.
- It could be possible, over years, to corrode prison bars using salsa.
- Steel prison bars can be cut using dental floss and toothpaste, but it takes a very long time.
- Dissolving a stockpile of antacid tablets to generate pressure will not help someone bust out of jail.
- A prisoner could not have escaped alive by loading ball-and-chain into a cannon and firing himself over the prison wall.
- A horse could not pull the bars out a prison window.
- A stick of dynamite would more likely kill a prisoner than help the prisoner escape.
- A prison inmate may be able to make a lethal crossbow out of newspaper.

Weather & Natural Phenomena

Teasers
Weather & Natural Phenomena

- A person will stay drier by running in the rain than by walking.
- Standing in a doorway is not the safest thing to do in an earthquake; rather: "drop, cover, and hold on."
- An extreme hail storm may be able to sink a boat.
- The equinoxes are not the only days you can balance an egg on its end.
- Specially built vehicles can withstand tornadoes and it is possible to build a portable tornado shelter.
- A tornado can propel window glass with enough speed to decapitate a person.
- It is not best to leave windows open during a hurricane.
- Metal body piercings do not attract lighting, nor do metal-cleated shoes.
- An avalanche will not be caused by a person yodeling, the sound of whip cracking, or people firing small guns at the mountain.
- A piece of straw will not penetrate through a palm tree if propelled by hurricane-force winds.
- Wind alone cannot blow the feathers off a chicken.

- A tidal whirlpool cannot sink a container ship or fishing trawler, but it could sink a person.
- During a lightning storm, a person can be electrocuted by talking on a corded phone and possibly by taking a shower.
- Lightning striking a kite has fatal results; Benjamin Franklin may have experimented with a kite but he probably was not struck by lightning.

Physical Sciences & Conundrums

ENTERTAINMENT | Brain Teasers | Mythbusters Results | Physical Sciences & Conundrums

- A truck carrying birds will not be lighter if the birds are flying instead of standing.
- A bullet fired into the surface of a frozen lake can spin like a top after impact.
- Swimming in bubbling water may be impossible.
- Folding a piece of paper in half more than seven times is possible.
- A ball thrown backwards from a moving vehicle, at the same speed as the vehicle, will fall straight down.
- A lock becomes easier to break when frozen with liquid nitrogen.
- Objects of different mass fall at the same rate.
- A bullet fired horizontally will land at the same time as a bullet dropped from the same height.
- Diamonds cannot be fabricated by combining chemicals in a pressure cooker, by putting charcoal and peanut butter in a microwave, or by cooling molten graphite and iron. Diamonds can be made, however, by compressing graphite with a huge amount of explosives.
- Pykrete is stronger than ice and it can be used to make a functional, but impractical, boat.

- The tensioned strings in a burning piano will not pop.
- A small car can be lifted into the air by fire hoses.
- Greenhouse gases do increase the amount of heat absorbed by air.
- Cows emit greenhouse gases and cow manure can be used to generate electricity.
- An RFID tag will not explode if placed inside an MRI scanner.
- Sound waves can put out a flame, but an unamplified human voice cannot.
- Anti-gravity is not possible.
- A pool of dense gas can make a tin foil boat appear to float in the air.
- A compressed air cylinder can blast itself through a concrete wall, but a boat cannot be effectively powered by one.
- A car sound system cannot quickly shatter all the windows; when one window breaks the pressure has a path to escape.
- A black car will heat up faster than a white one.

- A train will not be derailed if coins are placed on the tracks.
- Metronomes will synchronize on a sliding platform, but an excessive number will not.
- Soldiers marching on a bridge could cause a harmonic oscillation resulting in a collapse, but it is very unlikely.
- A frozen chicken penetrates aircraft and train windshields better than a thawed one.
- A glass of water can superheat in a microwave and boil over dangerously when removed.
- Walking over hot coals is possible because ash forms an insulating layer and because the contact time is brief.
- If thrown into a fire, a fire extinguisher can explode and put the fire out, depending on the type of fire extinguisher.
- Making a stun gun that delivers a shock over a stream of water is possible but highly impractical.
- An oversized Newton's cradle using wrecking balls will not work.
- Fire can be started by a bullet fired from a musket, by polishing a soda can with chocolate, by rubbing two sticks together, by a car battery and steel wool, or by focusing light with ice.

- It is possible to get free energy using a coil of wire under a power line, but getting enough to power a house is not practical.
- Dropping alkali metals into water will not create huge explosions, and sodium and water will not blow a hole in a wall.
- Sounds cannot be recovered from the grooves of old pottery.
- Water that has been microwaved (and cooled) is not harmful to plants.
- Falling from great heights onto water can be highly destructive, but it still is not as bad as falling onto pavement.

Household & Everyday

ENTERTAINMENT | Brain Teasers | Mythbusters Results | Household & Everyday

- A huge ball made of Legos will break apart when it is rolled downhill.
- A needle thrown at glass cannot pierce the glass without shattering it.
- A whole coconut can be mailed without packaging.
- A strike-anywhere match can be lit by a bullet fired from a pistol.
- The heads of many matches can be collected to create a large fireball.
- Pouring water on a grease fire will cause a large fireball, but a very large quantity of water can put a grease fire out.
- A single grocery line leading to multiple checkouts is slower but fairer than multiple lines.
- An MP3 player cannot be charged by simply plugging it into an onion.
- A lock can be picked using filaments from a light bulb.
- A car door cannot be unlocked by transmitting the keyless entry signal through a cell phone call.
- A frozen can of shaving cream will not fill up a car if cut open and thawed.

- Leaving a light on is not more efficient than turning it off and back on.
- To keep needles from falling out a Christmas tree, Viagra, bleach, and hairspray may work, but urethane, pain reliever medicine, soda, and fertilizer will not.
- The heat from Christmas lights will not ignite a Christmas tree.
- Performing a 360° loop on a standard swing set is not possible under one's own power, but it is possible on a rigid-arm swing set.
- A shop vacuum will not act like a jet engine if it sucks up gasoline.
- A clothed snowman melts slower than a naked one.
- A regular house fan cannot cause decapitation.
- Noise may help plants grow.
- An ordinary playing card cannot be thrown with enough power to be lethal.
- Dropping an electrical appliance into a bath can be deadly, but modern GFCI devices prevent this.
- A makeshift hovercraft can be built for under $500.

- A working speaker cannot be improvised from a paper plate, a penny, a mini jack, and tin foil.
- A CD can shatter if spun too fast, but CD-ROMs do not spin fast enough to cause this.
- A household washing machine does not have the strength to spin a flailing man.
- Microwaving metal will not blow up the microwave.
- Superglue can be used to attach a furniture to a ceiling, creating the illusion of an upside-down room.

Food & Drink

ENTERTAINMENT Teasers Mythbusters Food & Drink

- Eating poppy seeds can lead to a positive drug test for opioids.
- It may be possible to liquefy the inside of a whole fruit with an explosion and drink from it with a straw.
- It is possible to cook a meal using a car's engine compartment.
- The tryptophan in turkey is not what makes people tired.
- Not everything tastes like chicken; it is easy to differentiate chicken from other meats.
- You cannot pop popcorn instantly with an explosion, and popping popcorn with a pressure vessel is not the fasted method due to the required preparation.
- It is not possible to swallow a spoonful of ground cinnamon without drinking water.
- A beef steak can be tenderized using explosives, a cannon, or a laundry dryer.
- Swallowing both Mentos and Diet Coke will not make a person's stomach explode, nor will swallowing too much Pop Rocks and soda.
- A frozen turkey can crush your foot if dropped, and possibly your dog too.
- A turkey cannot be cooked using a microwave radio or a radar antenna.

Brain Mythbusters Results Food & Drink

- A cereal box does not have more nutritional value than the cereal within it.
- Food cannot be launched in the air through ingredients and flames and land fully cooked.
- Toast is not inherently more likely to land buttered-side down, but it could be more likely to when pushed from the height of a standard table.
- Dropping a frozen turkey into a deep fryer is very dangerous, but the turkey will not explode.
- A tin of biscuit dough can explode in a hot car, but aerosol spray and cola cans will not.
- Cola can be used as a cleaning agent to remove bloodstains or clean chrome, battery terminals, or a penny. Cola will not clean rust or greasy/oily things. It will not dissolve a steak or a tooth overnight and it will not kill sperm.
- A six-pack of beer or soda will not be quickly cooled by burying it in sand and igniting gasoline on top of it; salty ice water is the most practical solution.
- Pain from eating hot peppers can be relieved with milk, but not with water, beer, tequila, toothpaste, petroleum jelly, or wasabi.

Alcohol

ENTERTAINMENT Mythbusters Results Food & Drink

- Placing a silver spoon in a bottle of champagne will not keep it bubblier.
- Beating a breathalyzer test is not possible by eating an onion, eating breath mints, drinking mouthwash, or placing a penny in the mouth.
- A moonshine still can malfunction and explode.
- A modern car can run on moonshine.
- Filtering vodka through a charcoal filter will not improve its quality.
- Vodka will not cure poison oak or kill bees but it can help relieve the pain of a jellyfish sting, remove a bandage, clean a bathroom, remove odors from clothes and feet, and remedy bad breath.
- Rum is not better at cleaning clothes than detergent.
- Beer can instantly freeze solid after being removed from a freezer and given a shock.
- Drinking brandy may make a person trapped in the cold feel warmer, but it will actually make them die sooner.
- Alcohol does make people look more attractive.
- A hangover caused by mixing beer and liquor is not worse than one caused by beer alone.

Toilets and Bodily Functions

Teasers Mythbusters Results Toilets and Bodily Functions

- A fart cannot be seen on an infrared camera.
- A cherry bomb flushed down a toilet will not send water shooting out of all the neighboring toilets.
- Pouring gasoline down a toilet and igniting it will not cause an explosion.
- Doing the "potty dance" may help alleviate the urge to urinate.
- Flatulence can be induced by consuming beans or soft drinks, but not beef.
- Pretty girls do pass gas.
- It is not possible for a person to fart so much that they suffocate from the gases.
- A fart can be lit on fire.
- A match can be lit to mask the smell of a fart, but it does not actually burn the odorous gases.
- Lighting a cigarette in a porta-potty will not cause an explosion.
- An inaudible "brown note" will not make a person lose control of their bowels.

- During winter, a stream of urine will not freeze midair.
- Urinating on an electric fence can cause electrocution, but urinating on the third rail of a train track will not.

Germs & Health

ENTERTAINMENT Brain Mythbusters Results Germs & Health

- "Double dipping" food items is not as bad as putting all of the dip in your mouth.
- The "five second rule" is not valid when food is dropped on the floor.
- Many objects that people touch every day are dirtier than a toilet seat, including cash, keyboards, and kitchen sponges. In fact, a toilet seat may be one of the cleanest surfaces in a house.
- Toothbrushes are generally contaminated with fecal coliform, but not to a dangerous degree.
- Hot-air hand dryers are less sanitary than paper towels.
- In public restrooms, the stall closest to the door is used the least and stays the cleanest.
- Covering a sneeze with your inner elbow is more sanitary than using your hand or a handkerchief.
- A person's eyes will not fly out if they sneeze with their eyes open.
- A sneeze does not travel at 100 mph (160 km/h); it's more like 37 mph (60 km/h).
- Healthy people cannot easily avoid germs if a sick person makes no effort to contain them.

- The top of a soda can is not likely to be contaminated with rat urine, and dangerous viruses could not be transmitted that way.
- A defibrillator may burn someone who is wearing an underwire bra or a nipple piercing, but it is not likely. A defibrillator will not make a nitroglycerin chest patch explode.
- Being hit on the head with an empty beer bottle will not cause more damage than being hit by a full bottle.
- A person buried up to their neck in wet sand will not be able to escape without aid.

Cars & Driving

Mythbusters Results Cars & Driving

- Drifting is not the fastest way to race through corners, not even on dirt roads.
- It is possible, but difficult, to drift into a parallel parking space.
- It is possible to drive in reverse at high speeds.
- One car braking in traffic can cause a ripple effect that persists.
- Changing lanes frequently in traffic can save you time.
- Roundabouts are more efficient than four-way stops.
- It is not difficult to push one moving car off the road with another.
- During a car chase, the fleeing car could escape by deploying a smokescreen or an oil slick.
- A hood-mounted machine gun is an effective weapon in a car chase.
- Hollow road spikes are effective at stopping a car, but solid spikes are not reliable because they can stick in the tires.
- It is quite difficult to drive a car balanced on two wheels.

ENTERTAINMENT Brain Teasers Mythbusters Results Cars & Driving

- Driving with a full bladder is not as dangerous as driving drunk.
- Two cars stuck together nose-to-nose can drive in a straight line and spin 180°, but they can't go around a 90° turn.
- A burst of flame can be used to re-seat a tire on its rim, but another method is still needed to inflate the tire.
- An out-of-control car can be safely stopped by pulling in front of it with another car and slowing down.
- A car with a flat tire can temporarily be driven on the bare rim, or the wheel can be replaced by a manhole cover, stuffed with straw, or replaced with a carved log.
- Older sports cars were not so badly designed that they are more aerodynamic if the body is turned backward.
- Driving while tired or driving while using a cell phone can be more dangerous than driving under the influence of alcohol.
- Using a hands-free cell phone while driving is just as dangerous as holding the phone.
- A motorcycle cannot yank the cloth off a banquet table without disturbing the place settings.
- Driving a convertible through rain at high speed may prevent the driver from getting wet.
- A long, fast burnout will not cause a tire to catch fire.

Mythbusters Results Cars & Driving

- Two semi trucks that collide head-on will not stay fused together and conceal another car crushed between them.
- A blind person can drive safely by following instructions from a passenger.
- Electric cars are not more sluggish than gasoline cars.
- A speed camera cannot be beaten by a reflective license plate cover, a magnified cover, a crystallized cover, a commercial spray, plastic wrap, or hair spray. It could be beaten by an extraordinarily fast car.
- Shifting into reverse will not stop a runaway car.
- Driving backwards does not improve traction on an icy road.
- Bracing a windshield with your hand will not keep it from shattering when struck.
- An engine cannot run on gunpowder alone.
- Used cooking oil can be used as fuel in a diesel engine.
- A toy car can beat a full-size car in a short, unpowered downhill race, but it will fall behind in a longer race.

Mythbusters Results Cars & Driving

- Driving in heels or snow boots does not significantly impair a driver.
- A broken drive shaft dragging on the ground will not cause a car to pole vault end-over-end if it strikes a pothole.
- A car's engine will not be destroyed if sugar or drain cleaner are put in the fuel tank, if a coin falls in the carburetor, or if the tailpipe is plugged. It could be destroyed if bleach is put in the fuel tank or oil tank.
- A cracked egg can plug a radiator leak and cola can be used as an emergency coolant.
- Adding mothballs to a car's fuel tank may increase its horsepower.
- A car can be destroyed by a decomposing body and the smell may never go away, but a buyer could still be found.

Car Crashes

- Two cars crashing into each other will each experience the same force as a single car hitting a wall.
- A car passenger seated between two heavyset people will not be protected in a crash.
- In a car crash, a large number of party balloons will not act similarly to an airbag.
- In a car fire, the bumper can explode and present a danger, but only at short range.
- Neither carburetor magnets nor acetone in the gas tank will improve a car's fuel efficiency.
- A tissue box in the back seat of a car will not become a deadly projectile during a crash.
- A semi truck's tires can explode with lethal force.
- During a car crash, an airbag will not rip off the driver's thumbs.
- Spray-on truck bed liner resin can withstand a dog bite and even an explosion, but it will not significantly protect a car during a crash.
- A car could not be split in half with a snowplow while the occupants remain unharmed.

Fuel Efficiency

ENTERTAINMENT Brain Teasers Mythbusters Results Cars & Driving

- Driving with the windows down is more fuel-efficient at slow speeds; above roughly 50 mph (80 km/h), air conditioning becomes more efficient.
- Driving a route with only right-hand turns more efficient than driving a normal route.
- Hypermiling techniques can significantly improve, but not double, fuel efficiency.
- Although they are more fuel-efficient, motorcycles emit more air pollution than cars.
- Higher-than-normal tire pressure improves fuel efficiency.
- A driver will use more fuel when angry.
- Although dangerous and often illegal, cars and bicyclists can draft a semi truck to improve efficiency.
- It is not more fuel-efficient to drive a pick-up truck with the tailgate down. A plastic mesh tailgate is the most efficient configuration.
- A dirty car is not more fuel-efficient a clean one, but a car with dimples like a golf ball could be more fuel-efficient than a smooth one.

Aviation & Aircraft

Mythbusters Results Aviation & Aircraft

- Boarding an airplane from back-to-front is the slowest method and there are several better alternatives.
- Playing tennis on the wing of a slow-flying airplane is possible.
- Airplanes can save fuel by flying in a V-formation like birds.
- A person could improvise an aircraft powered by many fireworks, but it would be extremely unsafe.
- If the contents of an airplane toilet leak, they can freeze and cause damage by falling to the ground.
- Getting stuck on an airline vacuum toilet is not possible.
- The U-2 spy plane is challenging to operate, but fun to ride in.
- A large multirotor drone could cause serious injury with its propellers.
- The sonic boom from a fighter jet will only break glass if it occurs at a very low altitude.
- An untrained person could be instructed to successfully land an airplane over the radio.
- The jet wash from a Boeing 747 can flip a taxi, a school bus, and a small plane.

Mythbusters Results Aviation & Aircraft

- Placing a stamp on the rotor of a helicopter will not unbalance the rotors and cause a crash.
- A life raft filled with helium cannot be flown.
- Cell phones were not banned on planes to sell more in-flight phone calls.
- For short journeys, driving can be faster than flying.
- The empennage of a plane can be shredded by another plane's propeller.
- If a bullet is fired through the fuselage of airplane, the plane will not explosively decompress.
- A person strapped into the rear stewardess seat may be able to survive the destruction of an airplane in flight.
- Building an inexpensive jet pack from online plans is not feasible.
- Hair gel will not explode and decapitate a pilot in an oxygen-rich fighter jet cockpit.
- Jumping with an inflatable escape slide could make a fall from an airplane survivable, but it wouldn't be possible to inflate it and get strapped in while the plane is moving.

- Making a glider from concrete is possible but impractical.
- The airplane brace position is effective and was not deviously designed by the airline industry to kill passengers.
- Breast implants will not explode on an airplane, nor will an inflatable bra.

Boats

ENTERTAINMENT | Teasers | Mythbusters Results | Boats

- A huge number of ping pong balls can be used to raise a sunken ship.
- A boat will not be split in half if it hits a channel marker head-on.
- A ginger pill or a placebo can prevent seasickness, but cinnamon, magnets, and electroshock treatments will not.
- A large explosion cannot lift a boat out of the water without also destroying it.
- The wake from a sharply turning jet boat can put out a fire on another boat.
- A fisherman could be pulled to the bottom of the sea if his leg is caught in a rope.
- Slowing a fall by sticking a knife into a boat's sail is not effective.
- A boat can be driven with its trailer still attached.
- A sinking boat will not create enough suction to pull someone underwater.

Sports & Outdoors

Brain | Mythbusters Results | Sports & Outdoors

- A corked baseball bat will not hit a baseball farther than a normal bat.
- A baseball pitcher's fastball cannot lift itself higher into the air.
- In baseball, it is faster to slide into bases that can't be overrun.
- Practicing golf in a video game will not make you better at playing actual golf.
- Hitting golf balls through the foliage of a tree is not easier than going around it.
- A racecar does not generate enough downforce/suction to lift a manhole cover.
- A racecar driver may lose 10 pounds of water weight over a 3-hour race.
- A fish cannot pull out a fishing line so fast that the reel catches on fire.
- The black paint worn by baseball players could reduce glare from the sun.
- Escaping a ski lift by sliding down the cable using a pair of pants does not work.
- One skydiver can catch up to another by streamlining their body.
- A baseball's stitches will not tear off, even if the ball is thrown and hit with super-human strength.

- An NFL football filled with helium will not fly farther than one filled with regular air.
- Jimmy Hoffa was not buried in the Giants Stadium.

Water Activities

ENTERTAINMENT | Mythbusters Results | Sports & Outdoors

- It is possible to ride a bike underwater.
- A bicycle can be modified to operate on the surface of water relatively easily.
- It is not feasible to bob for apples while bungee jumping.
- A fast-moving motorcycle can ride across the surface of a lake.
- Surfing on still water with rockets is only possible with a highly-modified surf board.
- The body of a pre-SCUBA diver could be pushed into the helmet if the surface air supply failed.
- A harpoon gun is accurate from a distance of 100 feet (30 m).
- Water skiing behind a cruise ship is possible, and so is skiing behind a rowing team.
- It is not feasible to stay underwater by breathing air from a car tire.
- Running across the surface of water is not possible.
- A person could not surf on a wave generated by explosives.

Animals

Teasers | Mythbusters Results | Animals

- It is not possible to herd cats.
- Cats are not deterred by lion feces, aluminum foil, or water bottles.
- Snakes are not deterred by cat litter, mothballs, hemp rope, or cayenne pepper.
- Bears are deterred by cayenne pepper, but not by ammonia.
- Hanging bags of water from the ceiling will not repel flies.
- It is possible to catch a greased pig.
- One thousand honey bees cannot lift a laptop.
- Trained bloodhounds are amazingly effective and they will not be fooled by a wide array of deceptions and concealments.
- Law-enforcement "sniffer dogs" will not be fooled by covering contraband with food or masking agents, nor will they or their handler be easily distracted.
- A person may be able to get past a guard dog by travelling inside a barrel or metal sphere or by distracting it with food, a robotic cat, or certain types of urine.

Animals

- Goats can be startled into fainting.
- Cockroaches cannot survive a nuclear blast.
- Elephants may be afraid of mice; they will avoid one, but not panic.
- The color red does not make a bull charge.
- Crocodiles won't chase someone; they are ambush predators.
- A dog's mouth has less bacteria than a human's.
- The smell of skunk musk cannot be removed with beer or a douche, but tomato juice and commercial cleaners may help and a custom mixture with hydrogen peroxide is the most effective.
- Daddy longlegs spiders do not have the most potent venom of all spiders, but their bite can pierce human skin.
- A goldfish's memory is not limited to three seconds.
- Dog urine does not react with bleach to cause an explosion.
- A fertilized octopus egg could not gestate after being swallowed by a woman.

Brain | Mythbusters Results | Animals

- A wallet made of electric eel skin will not ruin a credit card's magnetic strip.
- A duck's quack does echo.

Sharks

ENTERTAINMENT | Animals

- Sharks are repelled by the scent of a dead shark and by dolphins.
- Sharks are not repelled by the sound of orca whales or by chili peppers.
- Some sharks are deterred by magnets, but not all species and not when there is food present.
- Playing dead can help prevent at shark attack. Also punching a shark in the nose, eyes, and gills may help deter an attack, and it is feasible to find and gouge a shark's eyes in the frenzy of an attack.
- Sharks are not attracted to a dog in the water but they are attracted to the sound of a flapping fish and flashlights at night.
- Most sharks won't asphyxiate if they stop moving.
- Sharks cannot detect a single drop of blood at the opposite end of a swimming pool.
- Shark skin can be used as sandpaper.
- Sharks do not sense low frequency sounds but they do sense electromagnetic fields.
- A great white shark has the strength to pull flotation barrels underwater but not to hold them there. It does not have the strength to pull a boat backwards rapidly. It does have the strength to break a lure made of piano wire.

Results

- Sharks can see food above the surface of water and will attack it.
- A great white shark can potentially penetrate a dive cage and punch a hole in a boat.
- A knight's suit of armor seems to attract sharks, so it is not a suitable as protection.

Human Behavior & Physiology

- People don't get dumber when in the presence of the opposite gender.
- Men are not more attracted to blonde women.
- Waitresses with larger breasts receiver higher tips.
- Pheromone sprays are not effective for humans.
- Women are more attracted to financially successful men.
- Taking 20-minute naps can double performance during extended sleep deprivation.
- In a Monte Hall Problem, most people don't change their decision, even though they should.
- Slapping someone in the face does help make them more alert.
- Humans use more than 10% of their brains.
- Women and redheads appear to have higher pain tolerance than others and cursing aloud can increase a person's pain tolerance.
- Humans may give off a scent when scared.
- Wearing an eyepatch over one eye does help preserve night vision.
- Dipping a sleeping person's hand into warm water will not cause them to urinate.
- Exercising vigorously and getting slapped in the face may help a drunk person sober up, but drinking coffee or ice water will not.
- Cabin fever appears to be a real phenomenon.
- It may be possible to fool a lie detector test by controlling thoughts or by self-inflicting pain.
- Hypnosis will not make someone act against their will, but it can help them remember things. Self-hypnosis will not cure seasickness, change one's eye color, or eliminate the fear of bees.
- There is not an inaudible sound that makes people feel uneasy.
- Yawning could be contagious.
- A tooth filling will not pick up radio signals.
- Tanning too often will not cook a person's internal organs.
- Mind control of another person is not possible via subliminal sounds or magnetic fields.

Gender Differences

- Men are not inherently better at throwing a ball than women, but they do generally receive more training.
- Women are better at multitasking, reading emotions based on people's eyes, and possibly observing details.
- Men are better at driving and packing for a road trip.
- Men and women do the follow equally well: parallel parking, following maps, and cooking on a grill.
- Women break the speed limit more often than men do.
- Men ask for directions sooner than women do.

Physical Feats

- A fit person may be able to carry large amounts of weapons and supplies, as seen in FPS video games.
- A human cannot outrun a race car in a 30-foot race.
- It is not possible to walk, swim, or drive in a straight line when blindfolded.
- It may be possible to swim through syrup as quickly as through water.
- Surviving for long periods when buried alive is not possible.
- Using grappling hooks to quickly scale a wall is not feasible.
- A punch will not leave a scar that matches the imprint on a ring.
- A person singing at the right tone can break a wine glass.
- An average man can break through a wooden doorframe using his own power.
- A ninja cannot catch an arrow in mid-flight, catch a sword between his palms, slap a bullet out of the air, or run across water.
- A ninja can deflect an arrow with a sword and may be able to knock out a person with a one-inch punch and hit a target with a blowgun from underwater.

War & Armaments

- It is not difficult to hold a hand grenade for a long time after the pin has been removed.
- Lying flat on the ground will not protect a person from grenade shrapnel.
- A grenade can be neutralized by placing it in a bucket of water or by covering it with a body, but not by throwing it inside a refrigerator.
- It is not feasible to shoot a handgun at an oncoming RPG and escape unharmed, but it may be possible to shoot a hand grenade in midair and render it harmless.
- It may be possible to dodge a bullet from a sniper rife that is over 500 yards (457 m) away if you see the muzzle flash, but a sniper could make sure you don't see the flash.
- Building battlefield trenches with sharp corners helps reduce the spread of a shock wave.
- Operation Valkyrie would not have been successful if Hitler's meeting remained underground.
- The wooden shrapnel from a cannonball impact does not cause more damage than the cannonball itself.
- Archers on a galloping horse will have more powerful arrow shots, but not double the power of when standing still.
- A form of torture in which bamboo slowly grows through a person's body is feasible.
- Chinese water torture could drive someone insane.
- A sniper could have shot straight through another sniper's scope during the Vietnam War.
- A wooden arrow cannot be fully split in half by a direct hit in the tail from another arrow.
- A normal fire extinguisher can't hold off an attack from a flamethrower.

Swords & Knives

- At close quarters, a fighter with a knife can defeat one with a gun.
- Slicing through real fruit with a sword is not as easy as it seems in the game Fruit Ninja.
- Having higher ground in a sword fight is not a significant advantage.
- Attacking first in a sword fight is not a disadvantage.
- A hardcover book is effective at stopping a sword thrust, while coins will just deflect the thrust.
- Cutting a machine gun in two with a sword is not possible.

Guns & Bullets

- A bullet fired straight up can still be lethal when it falls to the ground.
- It is possible to shoot a bullet through a wall and hit a moving target.
- A rifle with a bent barrel can still fire lethally.
- A rifle with a boresight left in the barrel could backfire and explode.
- Guns work underwater and would also work in the vacuum of space.
- A gun that is dropped in a deep fryer will discharge.
- A pistol dropped down a flight of stairs is not likely to discharge.
- A nail gun is not an effective weapon.
- Equally-matched opponents in a fast draw gunfight would likely kill each other.
- Silver bullets don't work well, but lead bullets can be engraved and still fire accurately.
- A bullet can't be fired at a road surface to ricochet up through a car's floorboard.
- The standard two-handed stance is the best way to hold a gun.

- It is more accurate to fire two guns simultaneously than to alternate left- and right-hand shots in a two-handed stance.
- A handgun can be used to shoot a dropped handgun out of reach of an adversary.
- A bullet may be able to ricochet three times and return to the shooter, but it will not have lethal velocity.
- It is not possible to shoot a gun out of a person's hand without injuring them.
- Guns can be shot around corners with special devices.
- A person can shoot a target while airborne after jumping.
- The sonic boom from a supersonic bullet will not break glass.
- A loud car stereo system will not cause a rifle to misfire, but the shock wave from a bomb can.
- Davy Crocket could have shot a musket and split the bullet on a distant axe blade.
- A tree can be cut down with machine gun fire.
- Cigarette butts fired from a gun can be lethal.
- You cannot shoot a hat off a person's head; the bullet will not transfer enough energy.

- A bullet can be shot into the empty chamber of another revolver, and two bullets can collide in midair and fuse together.
- An Old West gunslinger could not have shot a hole through a silver dollar, fired five times before a coin was dropped to the ground, or saved a man from hanging by shooting the rope.
- Bullets can generate sparks when they ricochet, but it's not common.
- A bullet could serve as a replacement electronic fuse and eventually heat up enough to discharge.
- Loose bullets in a hot oven or a fire will explode, but they will not have lethal velocity. However, a loaded gun in a hot oven can fire a lethal bullet.

What is Bulletproof

- Things that can stop bullets: a fish tank, a block of pykrete, inch-thick polycarbonate, and possibly a police badge, a belt buckle, certain bathroom tiles, and several pizzas in a warming bag.
- Things that are not bulletproof: a tape measure, a golf ball, a wallet, a hair weave, a refrigerator door, a car door, a car covered with phone books, an iPod, human fat, human muscle, a mixture of cornstarch and water, an over door, a deck of playing cards, a book, and ¼-inch polycarbonate.
- Three watermelons can stop a .50 caliber bullet.
- A metal cigarette lighter can stop a bullet only if the bullet has already ricocheted off another surface.
- A laptop may be able to block a shotgun blast.
- A person can hide underwater as protection from bullets.

Explosives & Explosions

- Standing between two identical explosions is not safe; rather, the shock waves accumulate.
- A vehicle containing flammable gas can explode when it receives a keyless remote signal.
- C-4 plastic explosive is stable enough to burn without exploding, even when subjected to falling anvils, gun shots, and thermite.
- C-4 will detonate in a microwave only if it is wired with a blasting cap.
- Binary explosives (Tannerite) in the trunk of a car will not detonate if the car is rear-ended.
- When exposed to fire, a small propane tank can explode and fly high into the air.
- Igniting thermite on top of ice will cause an explosion.
- A large fireball can be created by a cloud of saw dust or powdered creamer.
- If a trail of gas from a leaking car is lit on fire, the fire will not catch up to the car and blow it up.
- Diving underwater could make an above-water explosion more survivable.
- A person can float on his/her back at the surface to improve the survivability of an underwater explosion.
- A person can outrun a trail of burning gunpowder and kick it out before it reaches the source.

- Aerosol cans and beer kegs will explode in an open fire, and a keg exploding could cause lethal injury.
- A stick of dynamite might be able to help clean out a cement truck, but it will not remove a solid slab of concrete.
- A person who lights gasoline in a culvert will be burned, but not blasted out a great distance.
- A methane explosion can launch a manhole cover into the air.
- A Christmas tree doused with liquid nitrogen will not explode.
- It not possible to flatten a car using explosives without obliterating it.
- An aquarium, a garbage truck, and a bed can effectively contain an explosion, but a filing cabinet and a steel safe cannot.
- A wooden table, a car, a metal dumpster, and a cinder block wall can all protect someone from the shock wave of a bomb.
- Dry ice bombs are very dangerous.

Unusual Materials & Uses

- Bullets made of ice cannot be used to kill someone without leaving a trace, nor can bullets made of meat, gelatin, teeth, or bone.
- Gummy bears, poop, and salami can each be turned into rocket fuels.
- A cannon made of ice is not feasible, nor is a cannon made from a bamboo stalk.
- Cannonballs made of stone could be effective and disintegrate on impact, leaving the enemy nothing to fire back.
- Pirates could have improvised an effective cannonball using chains, nails, or steak knives, but not using bottles of rum, cutlery, or a wooden leg.
- A block of cheese can be fired from a cannon with enough force to shred a ship's sail.
- Warm clothing can be made of bubble wrap.
- Bed sheets can be used to make an improvised rope, and ropes made of toilet paper or hair are also plausible.
- An excavator can load itself into a truck, use its bucket as an oar to row a barge, and spin in place to allow a person to wakeboard on surrounding water. Furthermore, a skilled operator can use an excavator to thread a needle or pour a glass of wine.

Duct Tape

- Duct tape can be used to make a large trebuchet, shelter, rope, kayaks, clothing, canoes, a bridge, a sail boat, a cannon, and even a full-scale airplane.
- Duct tape can be used to lift a car, temporarily seal leaks in a boat, hold a disassembled car together, and hold a car to a pole so it can't drive away, but it is not feasible to stop a moving car with duct tape.
- Duct tape cannot be used to make an effective seat belt, nor can super glue.

Historical Feats

ENTERTAINMENT | Teasers | Mythbusters Results | Historical Feats

- The Apollo moon landings were not faked; there are not discrepancies in the photos, a flag can flap in a vacuum, a footprint can be made on the moon, the video footage is not slowed down, and the astronauts did leave behind equipment that we can detect.
- The Hindenburg was destroyed because of hydrogen gas, not its paint.
- Nikola Tesla probably did not build an earthquake machine.
- The Confederates in the American Civil War may have built a steam-powered machine gun, but it would not have been effective or reliable. They could not have launched a two stage rocket from Richmond to D.C.
- An Ottoman Turk in the 17th century could not have made the first manned rocket flight.
- A two-stage missile with rocket-propelled arrows could have been made in 14th-century China. In 18th-century China, a throwing weapon that could decapitate an opponent and return to the thrower could have been made. Neither weapon, however, would have been reliable in combat.
- 13th-century Syrians could have made a torpedo-like weapon that traveled over the surface water and exploded on impact.
- A medieval army could not have improvised a catapult built from trees and used it to hurl corpses over a castle wall.
- A 15th-century astrologer could not have made it to space on a throne powered by bamboo rockets.

Ancients

- A medieval clan could have built a cannon out of a tree that exploded and destroyed part of their own town.
- Archimedes could not have built a powerful steam cannon.
- An army of 500 people holding mirrors cannot focus enough sunlight to set a wooden ship on fire.
- The ancient people of Babylon could have created a crude battery for various uses.
- Using a drum submerged in a shaft, the ancient Chinese may have been able detect the tunneling of invading armies.
- Ancient Chinese armies could have made effective body armor from paper.
- The ancient Greeks could have built a fully-automatic weapon that fired arrows.
- Ancient armies could not have built a cannon completely out of leather.
- An ancient Korean hwacha could have fired 200 arrows that exploded on impact.

Bad Jokes

What's the best thing about Switzerland?	I don't know, but the flag is a big plus.
I invented a new word!	Plagiarism!
Did you hear about the mathematician who's afraid of negative numbers?	He'll stop at nothing to avoid them.
Why do we tell actors to "break a leg?"	Because every play has a cast.
Helvetica and Times New Roman walk into a bar.	"Get out of here!" shouts the bartender. "We don't serve your type."
Yesterday I saw a guy spill all his Scrabble letters on the road.	I asked him, "What's the word on the street?"
Hear about the new restaurant called Karma?	There's no menu: You get what you deserve.
A woman in labour suddenly shouted, "Shouldn't! Wouldn't! Couldn't! Didn't! Can't!"	"Don't worry," said the doc. "Those are just contractions."
A bear walks into a bar and says, "Give me a whiskey and . . . . cola."	"Why the big pause?" asks the bartender. The bear shrugged. "I'm not sure; I was born with them."
Did you hear about the actor who fell through the floorboards?	He was just going through a stage.
Did you hear about the claustrophobic astronaut?	He just needed a little space.
Why don't scientists trust atoms?	Because they make up everything.
Why did the chicken go to the séance?	To get to the other side.
Where are average things manufactured?	The satisfactory.
How do you drown a hipster?	Throw him in the mainstream.
What sits at the bottom of the sea and twitches?	A nervous wreck.
What does a nosy pepper do?	Gets jalapeño business!
How does Moses make tea?	He brews.
Why can't you explain puns to kleptomaniacs?	They always take things literally.
How do you keep a bagel from getting away?	Put lox on it.
A man tells his doctor, "Doc, help me. I'm addicted to Twitter!"	The doctor replies, "Sorry, I don't follow you …"
What kind of exercise do lazy people do?	Diddly-squats.
Why don't Calculus majors throw house parties?	Because you should never drink and derive.
What do you call a parade of rabbits hopping backwards?	A receding hare-line.
What does Charles Dickens keep in his spice rack?	The best of thymes, the worst of thymes.
What's the different between a cat and a comma?	A cat has claws at the end of paws; A comma is a pause at the end of a clause.
Why should the number 288 never be mentioned?	It's two gross.
What did the Tin Man say when he got run over by a steamroller?	"Curses! Foil again!"

What did the bald man exclaim when he received a comb for a present?	Thanks— I'll never part with it!
What did the Buddhist say to the hot dog vendor?	Make me one with everything.
What did the left eye say to the right eye?	Between you and me, something smells.
What do you call a fake noodle?	An impasta.
How do you make a tissue dance?	Put a little boogie in it.
What did the 0 say to the 8?	Nice belt!
What do you call a pony with a cough?	A little horse.
What did one hat say to the other?	You wait here. I'll go on a head.
What do you call a magic dog?	A labracadabrador.
What did the shark say when he ate the clownfish?	This tastes a little funny.
What's orange and sounds like a carrot?	A parrot.
Why can't you hear a pterodactyl go to the bathroom?	Because the "P" is silent.
What do you call a woman with one leg?	Eileen.
What did the pirate say when he turned 80?	Aye matey.
Why did the frog take the bus to work today?	His car got toad away.
What did the buffalo say when his son left for college?	Bison.
What is an astronaut's favourite part on a computer?	The space bar.
Why did the yogurt go to the art exhibition?	Because it was cultured.
What do you call an apology written in dots and dashes?	Re-Morse code.
Why did the hipster burn his mouth?	He drank the coffee before it was cool.
Once my dog ate all the Scrabble tiles.	He kept leaving little messages around the house.
If love is "grand," what is divorce?	A hundred grand, or more.
What is the biggest lie in the entire universe?	"I have read and agree to the Terms & Conditions."
What is a Queens favourite kind of weather?	Reign!
Why should you stand in the corner if you get cold?	It's always 90 degrees.
Which thrill ride does a wine glass love to go on the most?	A coaster!
How does a computer get drunk?	It takes screenshots.

Realistic Jokes

Why are iPhone chargers not called Apple Juice?!
Marriage is a three-ring circus: engagement ring, wedding ring, and suffering.
I just got fired from my job at the keyboard factory. They told me I wasn't putting in enough shifts.
Have you heard of that new band "1023 Megabytes"? They're pretty good, but they don't have a gig just yet.
I tried to say, "I'm a functional adult," but my phone changed it to "fictional adult," and I feel like that's more accurate.
I saw a driver texting and driving. It made me so mad I threw my beer at him.
Anyone who thinks "talk is cheap"… obviously didn't pay my daughter's last mobile phone bill!
Instagram is just Twitter for people who go outside.
You would think that taking off a snail's shell would make it move faster, but it actually just makes it more sluggish.
My boyfriend told me to stop acting like a flamingo. So I had to put my foot down.
An extensive government study has revealed that the leading cause of cancer in laboratory rats is scientists.
Client: We need you to log into YouTube and make all our company videos viral.

Dad Jokes

Dad, can you put the cat out?	I didn't know it was on fire.
The shovel was a ground-breaking invention.	

I wouldn't buy anything with velcro. It's a total rip-off.	
What did the grape do when he got stepped on?	He let out a little wine
Why couldn't the bicycle stand up by itself?	It was two tired.
What do you call cheese that isn't yours?	Nacho Cheese.
Want to hear a joke about construction?	I'm still working on it.
What do you call an elephant that doesn't matter?	An irrelephant.
I'll call you later. Don't call me later, call me Dad.	
Why don't skeletons ever go trick or treating?	Because they have no body to go with.
Why did the scarecrow win an award?	Because he was outstanding in his field.
Dad, can you put my shoes on?	No, I don't think they'll fit me.
Dad, did you get a haircut?	No, I got them all cut.
How does a penguin build its house?	Igloos it together.
Why did the coffee file a police report?	It got mugged.
I just watched a program about beavers. It was the best dam program I've ever seen.	
Want to hear a joke about paper?	Nevermind it's tearable.
How many apples grow on a tree?	All of them.
What do you call a fake noodle?	An Impasta.
Did you hear about the restaurant on the moon?	Great food, no atmosphere.
Did you hear about the cheese factory that exploded in France?	There was nothing left but de Brie.
I've just been diagnosed as colour blind. I know, it really came out of the purple.	
I hate jokes about German sausage. They're the wurst.	
Why did the can-crusher quit his job?	Because it was soda-pressing.
I'm reading a book about anti-gravity. It's impossible to put down!	
You're American when you go into the bathroom, and you're American when you come out, but do you know what you are while you're in there?	European.
If you see a robbery at an Apple Store does that make you an iWitness?	
Spring is here! I got so excited I wet my plants!	
A ham sandwich walks into a bar and orders a beer. The bartender says, "Sorry we don't serve food here."	
CASHIER: "Would you like the milk in a bag, sir?"	DAD: "No, just leave it in the carton!"
Did you hear about the guy who invented Lifesavers?	They say he made a mint.
I bought some shoes from a drug dealer. I don't know what he laced them with, but I was tripping all day!	

Long Jokes

4 Complex Concepts

The following are complicated subjects to wrap your head around but still possible given enough time. They are aimed at distracting you from what may be going on around you and to utilize the conceptual part of your brain.

Complex Questions

Do astronauts age more slowly?

Yes. According to Einstein's special theory of relativity, all processes slow down when a system moves at high speed. The result applies to astronauts since they are moving rapidly. The amount of slowing is so slight as to be imperceptible for ordinary speeds. It becomes very significant when we get close to the speed of light:	**Car at 100 miles per hour** Lose 0.35 seconds in 1,000,000 years **Rocket at earth's escape velocity (7 miles per second)** Lose 0.022 seconds in 1 year (Astronaut is 0.022 seconds younger on returning after a one year trip.)	**Rocket at 100,000 miles per second (53% speed of light)** Astronaut metabolism slows to 84% of normal. **Rocket at 185,800 miles per second (99% speed of light)** Astronaut metabolism slows to 4.5% of normal. (One year journey=aging 16 days)

How can special relativity know that these effects will happen? They arise directly from the basic supposition of the theory: all uniformly moving observers must measure the same speed for light.--186,000 miles per second.

At first this seems impossible. Say I send out a light signal from earth. I measure its speed at 186,000 miles per second.

What about another observer that chases after the light signal at, say, half the speed of light? Shouldn't that observer see the light signal slowed to half its speed? All our common sense says yes. Special relativity says no. How can that be? Something in our common sense assumptions must be wrong. There is not much room to look for the mistake. We find the speed of the light signal with just two instruments: a measuring rod to determine how far the light signal goes; and a clock to measure how long it takes to go that far.

Classically we assume that neither is affected by rapid motion. At least one of these assumptions must be wrong if the speed of light is to remain constant. When we work through the details we find that both are: the rod shrinks in the direction of motion and the clock slows. So rapidly moving clocks slow. How does that get to a rapidly moving astronaut aging more slowly. An astronaut's metabolism is a clock. You can use your pulse to time things if you like. So that metabolism clock must slow too. The legend is that Galileo used his pulse to time the period of a slowly swinging lamp while not attending to a cathedral mass and thereby arrived at the famous result of the isochrony of the pendulum, which just says that the period of a pendulum is fixed by its length. His pulse was the simple clock used to time the pendulum.

Can a finite universe have no edge?

Yes. The question is asking whether we could have a universe with a finite volume. That means if I ask "How many cubic miles of space are there?" the answer is not "infinity" but some definite number. It might be a big number. Say 63 kazillion cubic miles. But it is still a definite number, so that if you started to count off the cubic miles in space, you would eventually come to an end. At the same time it is asking if this finite universe could have no edge. An edge is just what you think. It is a place you get to where you run out of space.

Can both be possible at the same time? Can you run out of space in the sense that you count off all the cubic miles--but you never come to an edge?

Both can indeed happen in a more restricted way in a very familiar example. Consider motions on the surface of the earth. If you start in Pittsburgh, choose any direction you like and keep moving straight ahead, you will eventually come back to where you started. There will be no edge for you to fall off. So the surface of the earth has the sort of properties we are looking for. It is finite in area. It is just 196,000,000 square miles. But it has no edge.

Of course the example seems strained. While we come back to where we started, we are really not going in a straight line, but in a big circle. While the two dimensional surface of the earth is finite without edge, it gets these properties because it is really curved into a third dimension. Does that fact really make such a difference to the possibility of a surface of finite area but no edge? What if we were flat beings trapped in the two dimensional surface of the earth, unable to sense the existence of this third dimension. All we know about the surface of the earth was what can be read off our two dimensional maps. Then all we would know was that we lived in a finite two dimensional space with no edge. That a third dimension might have something to do with this, to us would be speculation of little practical importance. We would have no way of accessing this third dimension.

Could the analogous thing happen for a three dimensional space? One of the big discoveries of 19th century geometry was that this is entirely possible. To get us started, imagine that there is a fourth dimension of space into which our three dimensions curve. Then we might end up with a three dimensional space which has finite volume but no edge. No matter which way you voyage in a spaceship, you will eventually come back to where you started, without hitting an edge. We satisfied ourselves that this is possible by imagining a fourth dimension of space. How seriously should we take this fourth dimension? Our two dimensional surface dwellers could ignore the possibility of a third dimension in doing their geometry. All that mattered to them were the geometrical facts of the earth's surface that they could measure. In the three dimensional case, it is the same. All that matters are the geometrical facts about our three dimensional space that are accessible to us three dimensional beings. In the end, this fourth dimension of space becomes a comfortable fable to help us get used to the idea that a finite three dimensional space without edge is entirely possible.

In the 19th century, this sort of space was an interesting mathematical curiosity. In 1917, shortly after Einstein had completed his general theory of relativity, he proposed that our cosmic space was really like this. This was the first relativistic cosmology. Whether space has this structure remains one of the most interesting of the open questions of modern cosmology. In Einstein's original universe, space had a finite volume: 1,000,000,000,000,000,000,000,000,000,000 cubic light years. That's a one followed by 30 zeros. But there is no edge.

Can time have a beginning?

Yes. At first this seems impossible. If time has a beginning, there must be a first event or at least a clustering of events near it. Surely something must have happened before them? Einstein's cosmology of 1917 was the first of many ever stranger cosmologies to be devised on the basis of his general theory of relativity. Einstein's first universe was static in time. The cosmologies that followed, starting in the 1920s, were not. They portrayed space itself as continually expanding. We can think of Einstein's universe as a three dimensional analog of a two dimensional spherical surface, somewhat like a balloon. Then this expansion simply corresponds to the inflation of the balloon.

Here is a picture of this expansion. The universe is represented by a sphere and time advances up the screen. So the small universe of long ago grows up the page to the universe of the present. Now imagine this expansion in reverse. As we look further and further back in time, the balloon gets smaller and smaller. In the typical cosmologies considered nowadays, not too long into the past the balloon would have shrivelled to nothing. At that point in our story, space would have ceased to be. One might try to image times before that moment. But it would be futile, since there is no space associated with the time. Indeed there is something highly suspect about the moment at which the balloon shrivels to a point. Then the curvature of the space becomes infinite and the basic equations of Einstein's theory break down.

This first moment is not really a moment in time at all. It really amounts to a lower bound on our projections into the past. If we think of it as "time=0," then only moments with a time coordinate greater than 0 have physical meaning.

It is the beginning of 'known' time and is known as the creation or if you will, "the big bang".

Is time travel possible?

Yes. The "yes" is intriguing, but there is a catch. The question did not ask if there really is time travel; it asked only if it is possible. Something can be possible without actually happening. It is possible for our earth to have two moons. In fact it has only one. While we have no evidence that time travel actually occurs, all our latest work in theories of space and time tell us that it is entirely possible. Broadly speaking, there are two senses of time travel, both possible.

1. The first sense is the H. G. Wells sense. This one is named after the author of the most famous story about time travel in which a voyager hops into a machine and travels about in time. Special relativity has room for something close. If we had things that travelled faster than light, then, for some observers, they would travel backwards in time. These faster than light objects are "tachyons." For some observers, they would leave today and arrive yesterday. Of course how we could get ourselves to travel faster than light is an unsolved problem! We cannot accelerate through the speed of light. But is there some way to recreate ourselves travelling faster than light? If so, some observers would judge us to be travelling backwards in time.

"There was a young lady named Bright,
Whose speed was far faster than light.
She set out one day
In a relative way,
And returned home the previous night."
Arthur Henry Reginald Buller

2. The second sense is more topological and has been called "Goedelian" (by John Earman) in honour of the great logician Kurt, Goedel, who was a friend of Einstein's and did pioneering work on spacetimes that admit time travel.

We can imagine space and time as forming a huge sheet of paper. the vertical line is the complete history through time of a person, experiencing the years ..., 1980, 1981, ... etc.

What Einstein did in 1917 was to get us to wrap up the sheet of paper in the spatial direction so travel in the direction "left" is wrapped around to meet travel in the direction "right". That way we always end up where we started.

What Einstein's theory also allows is that travel into the future of time can be wrapped around to connect with the past, so that if we persist long enough in time we end up back at the present.

This is not a type of time travel that we create with a machine. There's no device we can build that could somehow turn our spacetime into one that has this global structure. The best advice to someone who wants to travel in time this way is that they should be sure to be born into the right universe! However there are special circumstances that might bring about the wrapping around of future into the past at least locally. It might happen near black holes generated by gravitational collapse. It also may happen if we get very dense, very rapidly rotating matter.

Does the moon change because a mouse looks at it?

Yes. This "yes" depends upon quantum mechanics, in whose founding Einstein played a major role. It is our best theory of matter and is usually applied to deal with matter in the very small, that is, little particles like electrons. It tells us that matter in the very small has properties quite unlike the ones we are used to with ordinary objects. We are used to the idea that ordinary objects are either particles or waves. It turns out that in the small, particles are both particles and waves. They have a dual character that is quite perplexing when you first learn of it and, as far as I can tell, that perplexity never really goes away, even if you know a lot about them. Take electrons, for example. They are familiar to us from old-fashioned television tubes. The electrons are fired from a glowing element at the back of the tube. They are formed into a beam by deflecting magnetic fields.

When the electron is in flight in the beam, it behaves just like a wave. It spreads out in space, has a wavelength and frequency and can produce all sorts of wavelike phenomena, like interference patterns. These are just like the rippled patterns that water waves make on the surface of a pond when pebbles are dropped in. We can only get them because the waves are spread out in space. When these electrons strike the screen of the TV tube, they behave very differently. According to the standard text book accounts of quantum mechanics, they instantly cease to be wave. They collapse to a point, so they are now behaving like a particle. We see that localization through the emitting of a brief flash of light from just one point on the screen. (Many of those flashes combine to make the images we watch.) So sometimes an electron behaves like a wave; and sometimes like a particle. So what? The odd part is what decides whether the electron behaves like a wave or a particle. In the standard text book treatments, we decide by the act of observing the electron. An electron left to itself behaves like a wave. The moment we observe it--for example by having it smash into the screen of a TV tube so that we can see where it is from the flash of light produced--then it behaves like a particle.

That means that the second picture is incomplete. The electron will only cede its wavelike character if there is someone there observing it. Only then does it collapse.

That is the odd part. Standard, text book quantum mechanics tells us that the act of our observing the electron has caused it to collapse to a point. This astonishing idea troubled Einstein very greatly and he could never accept it. What difference does it make to the electron if we observe it or not? What Einstein also saw was that the difficulty could not be confined to minute objects like electrons. If individual particles have this dual wave-particle, then so do collections of particles. Our observing of them will also cause them to collapse. Big objects like steam locomotives, moons and planets are just many, many particles all in one place. They will also have a slight wave character, too small for us to notice, but there nonetheless. And when we observe them, they will collapse!

His collaborator and biographer Abraham Pais reports
"...during one walk, Einstein suddenly stopped, turned to me, and asked whether I really believed that the moon exists only when I look at it."
Abraham Pais, Subtle is the Lord. Oxford: Clarendon Press, 1982. p.5.

The famous physicist (and inventor of the name "black hole") John Wheeler also reported of Einstein
"...No one can forget how he expressed his discomfort about the role of the observer, 'When a mouse observes, does that change the state of the universe?' "
John A.Wheeler, "Memoir", pp. 21-22 in A. P. French, Einstein: A Centenary Volume. Cambridge: Harvard Univ. Press, 1979, on p. 22.

This question is a combination of these two remarks and the answer of yes is just standard text book physics.

Fourth Dimension

"A fourth dimensional being can see all the sides of a three dimensional shape at once - irrelevant of how complex it is."

While giving someone a definition of the fourth dimension is relatively easy, giving someone an intuitive understanding of the fourth dimension can be quite difficult. A definition of the fourth dimension could go like this: The fourth dimension is all space that one can get to by travelling in a direction perpendicular to three-dimensional space. Whenever an uninitiated person hears this, they start pointing their finger around in the air, trying to figure out how it's possible for such a direction to exist.

Such a short explanation gives them no intuitive feeling of the fourth dimension. In order to give you a better understanding the fourth dimension, I will begin with a method that follows a sequence of n-hypercubes that starts with the zeroth dimension and progresses up to the fourth dimension. An n-hypercube is the generalization of the cube within n dimensions, with a 3-hypercube just being the traditional cube. By seeing each n-hypercube build up from the previous one, you should have a better understanding of the final step, from the third dimension to the fourth dimension.

Step 1 **Zeroth Dimension**	Imagine a point in space. It is a 0-hypercube. A point is zero dimensional because it has no width, length, or height, and is infinitely small. Every point is exactly the same and has the same measurements, because it has no dimension.	

Step 2 **First Dimension**	Take the zero-dimensional point and extrude it in any direction, creating a line segment, which is a 1-hypercube. All line segments are one-dimensional because they differ in size by only one measurement, length. They all have the same width and height, which is infinitely small. If you expanded the line infinitely, it would cover one-dimensional space.	
Step 3 **Second Dimension**	Now take the line segment and extrude it in any direction that is perpendicular to the first direction, creating a square, which is a 2-hypercube. All squares are two dimensional because they differ with each other in size by two measurements, width and length. They all have the same height, which is infinitely small. All of the edges are the same length, and all of the angles are right angles. If you expanded the square infinitely, it would cover two-dimensional space.	Step 4 **Third Dimension**	Take the non-infinite square and extrude it in a third direction, perpendicular to both of the first two directions, creating a cube, which is a 3-hypercube. All cubes are three dimensional because they differ with each other in size by all of the three measurements that we know of - width, length, and height. Just like the square, all of the edges within a single cube are the same length, and all of the angles are right angles. If you expanded the cube infinitely in all directions, it would cover three-dimensional space.	Step 5 **Fourth Dimension**	Now, the final step. Take the non-infinite cube and extrude it in yet another direction perpendicular to the first three. But how can we do this? It is impossible to do within the restrictions of the third dimension (which will I refer to as realmspace in this webpage). However, within the fourth dimension, it is possible. The shape that results from this extrusion of a cube into tetraspace is called a tesseract, which is a 4-hypercube. All tesseracts differ from other tesseracts in size by four measurements (equal to each other within a single tesseract) - width, length, height, and a fourth measurement, trength.	
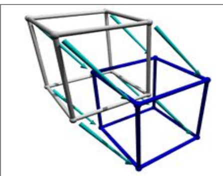
Looking back to the previous n-dimensional cubes, they all have the same trength, which is infinitely small. Just like the cube and square, all of the edges within a single tesseract are the same length, and all of the angles are right angles. If you expanded the tesseract infinitely, it would cover four-dimensional space. There are several ways to view the tesseract, and I will show three of them here. The first one is called an inner projection, and it is formed from a projecting the tesseract into realmspace with a perspective projection. The parts of the original tesseract that are farther away appear smaller in the inner projection. The original cube cell that existed before the extrusion into a tesseract is in gray, the paths of the vertices are in teal, and the stopping point of the extruded cube cell is in blue. The real tesseract isn't shaped like the inner projection shown above - the inner projection is a very distorted "image" of the original tesseract. All of the edges you see in the image are actually the same length as each other, and all angles between edges are right angles.

The second way to view a tesseract isn't actually a normal tesseract, but a parallel projection of a skewed tesseract. To make this shape, first you make a tesseract, then shift the top cube cell a short distance in a diagonal direction, parallel to realmspace. Since this shift is parallel to realmspace, it can actually be in any direction that you can point to. After the shift, you trace the shadow of the skewed tesseract's edges. The result is a shape that has two cubes with their vertices connected together. In the original shape, all of the edges within the cube cells are the same length and have right angles with each other. However, they don't have right angles with the teal connection edges, and the teal connection edges are slightly longer than the cube cells' edges.



The third way to view a tesseract is a parallel projection into realmspace. It is the same as a skewed tesseract, but without the top cube cell shifted. Since the edges of the tesseract were extruded in a direction perpendicular to realmspace, when the shape is projected back into realmspace, the edges of the blue cube cell are projected straight back onto the gray cube cell's edges. The resulting projection is a simple cube. This didn't happen with the inner projection, because that projection was a perspective projection. This last step of trying to view a tesseract shows the difficulties in portraying objects from tetraspace within the limitations of realmspace - there is an extra perpendicular direction that we can't depict within our own space without distorting the original object.

Because of these problems, it takes many examples in order to begin understanding the nature of the fourth dimension. You have now seen a glimpse of the fourth dimension. This is only the beginning - there are many more aspects of the fourth dimension to explore.

In the rest of these pages, I will discuss many properties of the fourth dimension - rotation, flatness, levitation, shapes, water, and many others. By the time you are finished, you should have learned many interesting things about the fourth dimension, and maybe you will have even made some discoveries of your own.

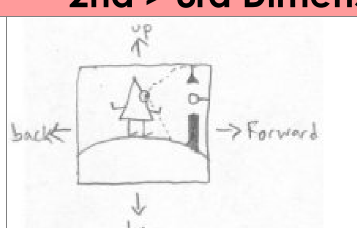
Tetraspace (four dimensional space) is a fascinating place. Events that would be bizarre and mind-bending to us puny little realmic beings would be common-place and taken for granted in tetraspace. Jumping straight into thinking about tetraspace is enough to boggle any human mind. An indirect route must be taken if there is any hope of understanding the possibilities of tetraspace. The method I use here is the one pioneered by the books Flatland and Sphereland, and is the one used in just about every other text about the fourth dimension.

First, the I tell of the adventures of a planar being (a two-dimensional being) attempting to understand realmspace. Going from planespace (two-dimensional space) to realmspace will shed light on how to conceptualize going from realmspace to tetraspace. While going from planespace to realmspace may seem overly simple, it is necessary to understand exactly what is happening so that you can understand the process of going from realmspace to tetraspace.

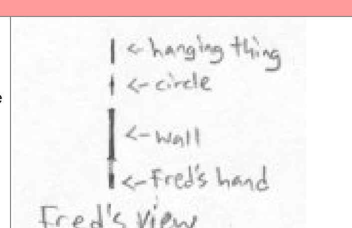
Just as tetraspace is mind-boggling to us realmic beings, realmspace is mind-boggling to planar beings. Things we take for granted are extremely difficult for planar beings to conceptualize. The only thing a planar being can see of our realmic objects is their planar cross sections in his planespace, and the effects of them rotating. At first, he will only be able to conceptualize the effects in planespace of realmic objects. He will only see planar objects in his mind. Eventually, with much deep thought and introspection, he may be able to conceptualize the realmic object itself. Similarly, when starting to think about tetraspace, we will only be able to conceptualize the effects of tetral (four-dimensional) objects in realmspace. We will only be able to see realmic objects in our mind at first. But, by the effects we see, we can carve a sculpture in our minds of how the full object really looks like, and conceptualize the whole of the tetral object.

2nd > 3rd Dimension

The name of our planar subject is "Fred". He lives in a plane called Flatland. The only directions that Fred knows of are forward, backward, up, and down. Fred has no concept of right or left. His viewing area is merely a vertical line. Here is a picture of Fred in his native habitat:

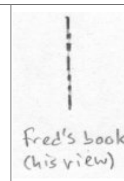


Since Fred's viewing area is only a line, he can't see as much at once as we can. Here is the view that Fred would see if he was in the picture here:



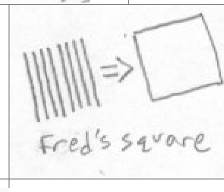
Unfortunately for Fred, he can't see backwards - he can only see forwards. It is impossible for him to simply spin around and face the opposite direction. It is easy for beings in realmspace to face a different direction because they can just spin around, left or right. The only way for beings in planespace to face a different direction though is to turn their head down and heels up. Fred either has to stand upside down to be able to see what is behind him, or he has to walk backwards blind because he only has an eye on his front side.

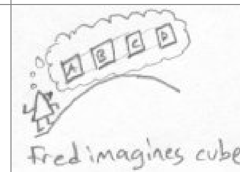
Fred's writing system is very rudimentary, since a linear surface doesn't allow much detail. His writing system looks somewhat like Morse code. Here is what a page from one of his books looks like, in his view:

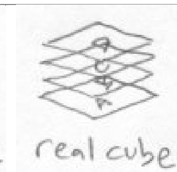


Fred understands the concept of a square. It can be imagined as a series of lines stacked side by side, so that the resulting shape has four sides. He has no concept of what a cube would look like, though. The best he could do is imagine a succession of squares next to each other. As you can see, this is far from the actual representation of a cube. A cube is a series of squares stacked on top of the other:

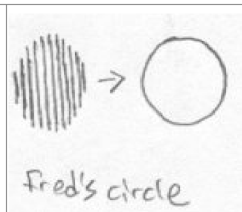
Fred understands the concept of a square. It can be imagined as a series of lines stacked side by side, so that the resulting shape has four sides. He has no concept of what a cube would look like, though. The best he could do is imagine a succession of squares next to each other. As you can see, this is far from the actual representation of a cube. A cube is a series of squares stacked on top of the other:



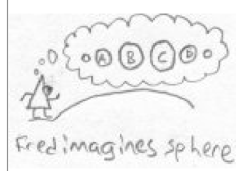




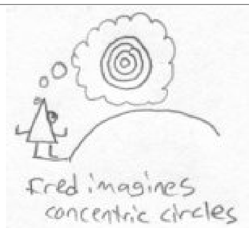
Fred also understands what a circle looks like. It can be imagined as a series of lines stacked side by side in the way that a square is formed, but the lines start small and expand to a certain size, then shrink down again at other side.



Fred can't understand what a sphere really looks like, though. He can imagine it as a series of circles, starting small and expanding, then shrinking down again. Here is how he might picture it:

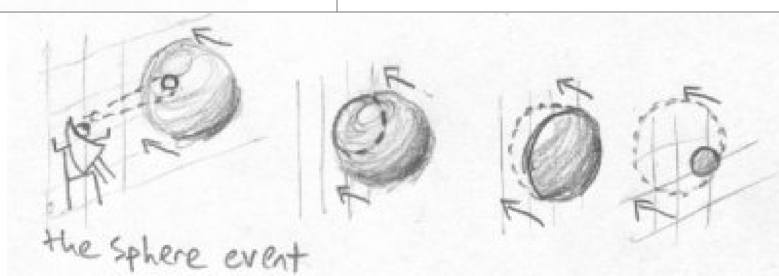


Or, he might decide to picture it as a group of concentric circles (circles with the same centre):



But, as you can see, that's not really what a sphere looks like. Now imagine Fred one day is sitting in his living room, and a sphere from realmspace passes through the air right before his eyes. To him, it will appear as if a circle appeared out of nowhere in front of him. It expands rapidly, and Fred fears that it is going to devour him and his house with him. But to his relief, its growth slows down and stops. Then, the circle starts shrinking again, but slowly. Then it starts to shrink faster and faster until it quickly disappears.

Here is what the event looks like:

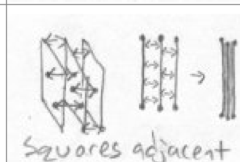


3rd > 4th Dimension

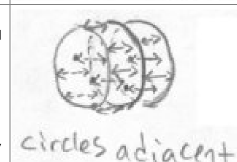
In realmspace, there is a character named Bob. He is basically your average guy - two legs, two eyes, a brain, all the usual body parts. His view of his world is a 2 dimensional plane, one dimension more than Fred has. Here is Bob in his native habitat, and his view of that habitat:

Since Bob has one dimension more than Fred has, his writing system can be more elaborate. He can write on a 2 dimensional surface. Instead of only one line of text on a page, there can be multiple lines. This allows a lot more text to me stored in a realmic book. Here is what a page from one of his books looks like:

Bob fully understands the concept of a cube. A cube is a sequence of squares laying top to bottom flat on top of each other. For any one square in this cube, every point on one surface of the square touches every other point on the surface of the square above it, and on the other side, touches every point on surface of the square below it. Here is an illustration:

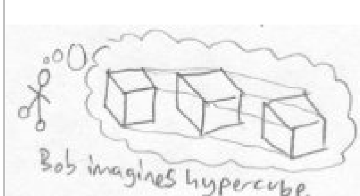


Bob also understands the concept of a sphere. A sphere is a sequence of concentric circles laying top to bottom on each other, as with a square. Like a square, adjacent slices of the circle touch each other at every point. Here is an illustration:



Bob has troubles imagining a tetracube, however. Here is the best he can do to imagine a tetracube:

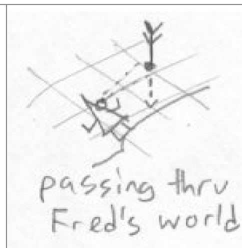
A tetracube is actually a sequence of cubes, where every part of a cube in this tetracube (all the insides of it) touch all the insides of the cube to its right and to its left (or its up and down, or its front and back).

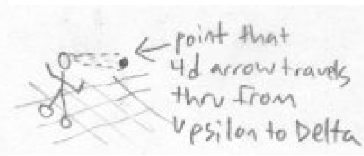


In actuality, the direction of the adjacent cubes are not imaginable in terms of 3d directions. I will call one of the directions into tetraspace Upsilon (for up) and the other Delta (for down). If Bob was viewing Fred's planar world, he would see that there are two sides to it. Bob could either be on top of Flatland or below it, but in order to get to the other side, Bob must go through Flatland.

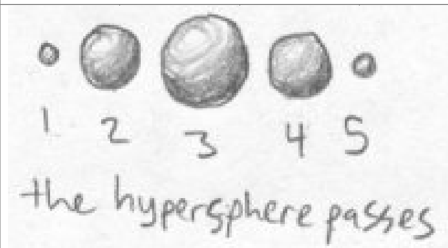
There is no other way to get to the other side. Planespace separates realmspace into two separate parts. In the same way, a tetral character (Let's call her Emily) would see that she is on one side of realmspace, and she'd have to pass through Bob's world to get to the other side of it. Realmspace separates tetraspace into two separate parts.

In the first illustration below, an arrow shows the path from one side of Flatland to the other. If the arrow was an object, Fred would only see a small point. In the second illustration, a tetral arrow that passes from one side of realmspace to the other would intersect realmspace with a small point. Bob doesn't see any other part of the arrow but this:





One day, Bob is innocently sitting in his living room (as Fred was that one day), and all of a sudden, in the middle of the air, a sphere appears and grows rather rapidly. Its size levels off at a point, then starts shrinking slowly. Its shrinking quickens until it completely disappears. Bob just experienced the passage of a tetrasphere (four dimensional sphere) through realmspace.

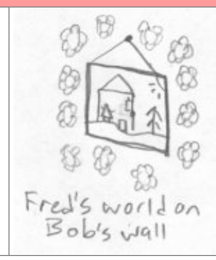


This is a table showing the relationship between the dimensions:

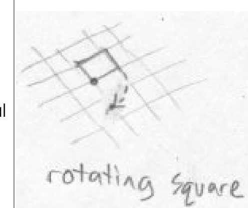
Person	Dimension	View	Rotation Axis
-	1st	Point(0D)	*None*
Fred	2nd	Line(1D)	Point(0D)
Bob	3rd	Plane(2D)	Line(1D)
Emily	4th	Realm(3D)	Plane(2D)

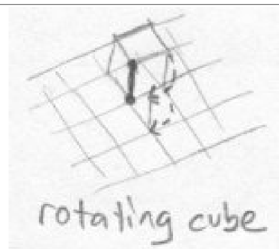
Rotation

I'm now going to describe in more detail the worlds of Fred, Bob, and Emily. Fred doesn't actually have much of an area to live in. His little 2D plane is actually hanging on the wall of Bob's living room. Bob can walk over and observe Fred any time he likes. Fred's world has a ceiling, a front, a back, and a floor. Bob's world, actually, isn't very big either. He has a ceiling, 4 walls, and a floor. His 3-D world is also hanging on a wall: in Emily's living room. Emily's world could also be hanging on someone else's wall, and so on. Here is Fred's world on Bob's wall:

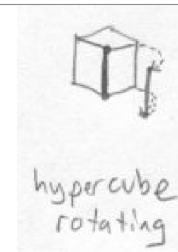


If a square is rotated in Fred's world, it rotates around a single point. This means that only a single point on the square stays at its original location as the square spins around. Thus, the axis of an object in planespace is zero-dimensional.

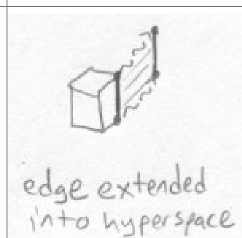




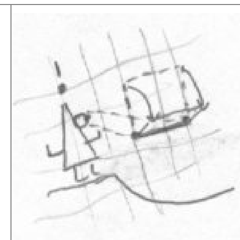
Now imagine that Emily lays Bob's world flat on a tetral table. The direction towards the table from Bob's world is delta (down in tetraspace), and the opposite direction into the air above the table is upsilon (up in tetraspace). Emily places a tetracube on top of Bob's world on the upsilon side of it. Bob's world is now sandwiched between the tetral table and the tetracube. The tetracube is intersected with Bob's world, so Bob sees a cube floating in mid-air. Now let's say that Emily rotates her tetracube around one of it's edges. Bob will only see a cube rotating, but the tetracube it's attached to is rotating with it. The axis of rotation for the tetracube isn't a line, though. It's a plane formed by extending the linear edge of the cube into Emily's world, perpendicular to realmspace. All of the points on this square stay in place as the tetracube rotates in tetraspace. Thus, the axis of an object in tetraspace is two-dimensional.



Imagining how the linear axis of a cube could extend into tetraspace is hard. We can try to picture it by imagining its axis shifting off in a random direction as pictured below, even though this isn't what is truly happening:

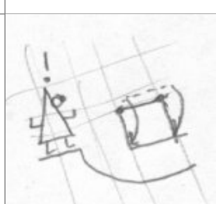


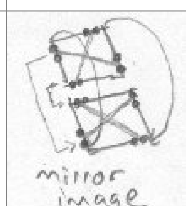
Fred is sitting in his living room the next day, and there is a square object floating in front of him in mid-air. Bob decides to play a trick on Fred. He grabs an edge of the square and pulls it into realmspace, leaving a linear edge in Fred's universe remaining. Fred only sees a line left of the original square. Here is what Bob just did:

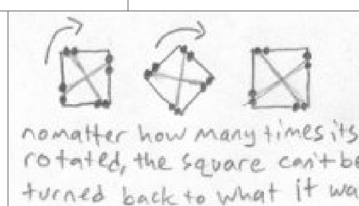


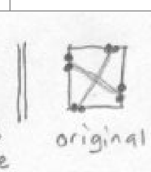
Bob completes the rotation and places the square fully back into Fred's world. But, now the edge that had disappeared is on the opposite side. Fred is now astonished to see that the square has been completely inverted.

Such an action would be impossible in a two dimensional world. Fred tries to invert the square back to its normal state, but no matter how many times he turns the square around, it doesn't work:

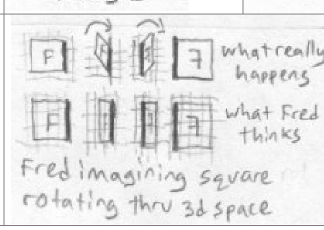




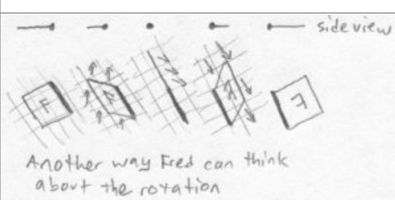




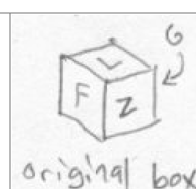
The square has become its mirror image, with its left and right sides swapped. Fred has difficulty understanding how this could have happened to his square. The first way he tries to imagine it is to imagine that one of the sides has been pushed through the middle of the square and to the opposite side, making everything inverted. This is how he imagines it:

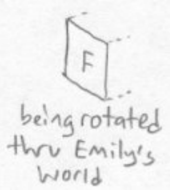


Fred contemplates what happened some more, but can't quite wrap his mind around it. He thinks about another way it might have happened. One side could have been shifted upwards and towards the other one until one side was above the other, then shifted further until it came into place on the other side. The moved side would have made a half circle around the side that stayed. Here is how he imagines it this time:

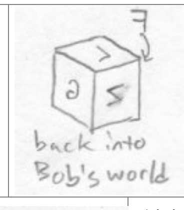


But, this is not what really happened. It is merely a futile attempt of Fred's to understand what's happened in the third dimension using only what he knows of the second dimension. The effects of Bob's actions are easy to see, but explaining them to Fred is not. Emily sees what Bob did to Fred, and decides to play a similar trick on him. Bob is sitting on his floor staring at a box that he has just filled with his favourite sentimental possessions, when all of a sudden the whole box except one of its sides disappears. Here is what he sees:



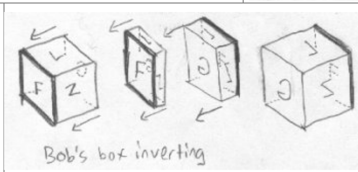


He stares at it astonished, and is even more surprised when all of a sudden the rest of the box appears again. But, the box has just appeared on the opposite side of the face that had remained. All of the lettering on the box has been turned into its mirror image. Here is what the box looks like afterwards:

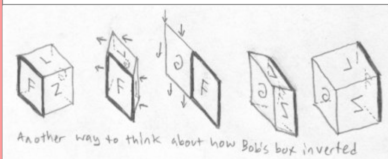


Bob looks into the box, and finds that something has happened to all the letters in the books that were in the box - they are all their mirror images! He takes one of the books and puts it up to a mirror, and finds that the mirror reverses the letters back to their original state.

As Fred did, Bob tries to understand how this could possibly occur. He tries to imagine one side of the box being squished into its opposite side, but being pushed further until it comes into place on the other side of the box from where it was before. All of the letters have been inversed:



This is analogous to Fred's solution with the disappearing side being squished through the remaining side. It isn't what really happened in tetraspace, though. Bob contemplates further, and again conceives of another idea like Fred did. Maybe one face of the box was shifted in a half circle around the side that remained. All the letters would end up being reversed just like in the previous theory:



As we know by looking at Fred's example, the size and shape of the square don't actually change as it's rotated through realmspace. The only ways that Fred has thought of to explain what happened involve the square changing shape. The real event doesn't require the square to change shape at all. It is the same situation with the cube. As it is rotated through tetraspace, the actual shape of it isn't changed at all; it remains a perfect cube. The only way we can imagine the result, however, is by distortions in realmspace.

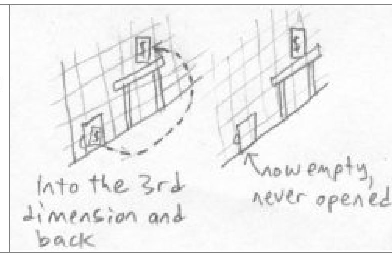
Flatness & Levitation

When Bob watches Fred's world, he can see every point in his world at once. He can see Fred's insides, what's inside his safe, what's underground, where the quarter he lost is, everything. Fred is basically naked to Bob, even though he has clothes on. Bob would be able to touch Fred's insides without having to go through Fred's skin, and there's nothing Fred would be able to do about it to stop him.

Bob doesn't realize it yet, but he is also exposed. Emily can see every part of his world at once. She can see inside his tightly locked safe, into his refrigerator, into his desk drawers, and she can see his insides. Bob is basically naked to Emily, even though he feels fully clothed. She can touch any part of his insides without having to go through his skin or his clothes. One day, Bob is feeling particularly devious and decides to remove the contents out of Fred's safe. He walks over to Fred's world, removes Fred's money from inside the safe and sticks it onto Fred's table.

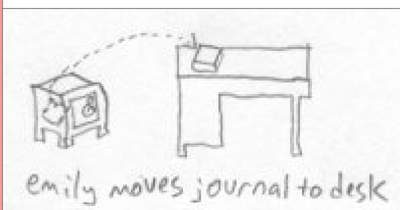
Bob doesn't have to open the safe because he can just bring it out of planespace into realmspace, move it, and then put it back into planespace. The money doesn't have to go through the walls of the safe because it can just pass "over" its walls in realmspace. Fred comes in from a leisurely walk in the woods and is astonished to see all his money lying on the table. He was sure he had put it in the safe the night before.

He checks out his safe, but nothing has happened to it. He opens it up, and it's empty. He sticks the money back into the safe, and makes sure it's closed securely. As soon as Fred closes the safe, Bob grabs the money again and puts it on the table behind Fred. Fred turns around to see the money he had just secured now lying behind him. Now Fred thinks he is going crazy.

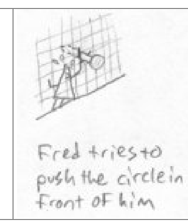


Emily has seen what Bob did to Fred, so she decides to teach him a lesson by doing the same thing to him. Bob has his journal locked up in his safe, which has both a combination lock and a key lock on it. Bob knows his safe is secure because he bought the best safe on the market and only he knows the combination to it. Emily removes the book from the safe by pulling it into tetraspace. She moves it over to Bob's desk and reinserts it back into realmspace. The book didn't have to go through the walls of the safe because it could go "over" its walls in tetraspace. Bob is reading another book and looks up to see his journal sitting right in front of him.

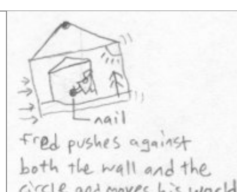
He is quite stunned and confused, because he was sure he had put the journal into his safe. He checks out the safe, and there seems to be nothing wrong with it. He takes the journal and puts it back into his safe, making sure it's definitely locked. He even ties a rope around the safe so that he can see if anyone tampers with it. He returns to his desk and resumes his reading. Emily grabs the journal again, moving it to tetraspace and inserting it back on the table in front of him. When Bob looks down and sees the journal in front of him again, he thinks he is going crazy. He looks back to see the rope still tied around the safe, exactly the way he left it. Then he remembers what he did to Fred, and realizes that someone else may be doing the same thing to him.



Bob decides to have some more fun and tease Fred again. Fred's world is hanging on Bob's wall, but not tightly. Bob takes a nail, and right in front of Fred's view, he hammers the nail right through Fred's world. All of a sudden Fred sees a circle appear in mid-air. He decides to investigate, so he grabs it and tries to move it, but it won't move. It is thoroughly fastened in mid air.

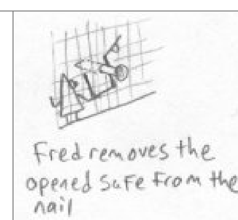


This is rather bizarre and he decides to try some things with the floating circle. He sits against a wall of his house and pushes against the circle with his feet. It requires a lot of effort, but the circle moves. It feels like he is holding up the whole world, and in reality that is what he is doing. When Fred lets go of the circle, it swings back to its original position and Fred falls to the ground.

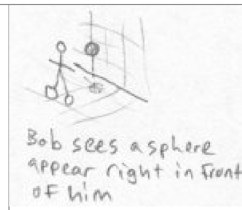


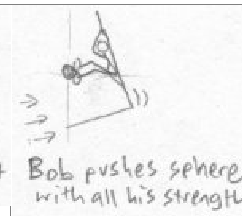
Bob removes the nail, so Fred sees the circle suddenly vanish. Bob raises Fred's safe into the air and drives a nail through the middle of it. He lets it go, and the safe hangs in mid air on the nail. The nail didn't have to go through any of the walls of the safe in order for the safe to be hanging.

The nail just went through the air through the inside of the safe. This is similar to hanging a loop with a nail on the wall in realmspace - the loop itself doesn't have to be pierced, but the nail has to go through the area in the middle of the loop. To Fred, the circle was just a strange object hanging in mid-air, but now Fred's own safe is hovering. Fred opens his safe and looks inside, and to his surprise he sees that the circle has reappeared, but now his safe is hanging on it. Fred removes the safe from the "hook" and puts it back on the ground. This has been enough bizarre events for one day, so he goes outside to get a breath of fresh air.



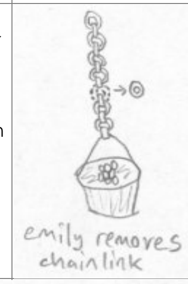
Emily sees that Bob hasn't learned his lesson. She does the same type of thing to Bob with the hope that Bob will realize what's happening to him. She has Bob's world hanging on her wall and she drives a "tetranail" (four-dimensional nail) through his world. Bob sees a sphere suddenly appear in mid-air near a wall. He remembers what he just did to Fred, and to test out his hypothesis he does the same thing that Fred did. He sits back against the wall and pushes against the sphere with all his strength. He succeeds in pushing it a few inches, but it requires a lot of effort. When he lets go, the sphere swings back to its original position and he falls on the floor. Bob is starting to realize that something else is out there.

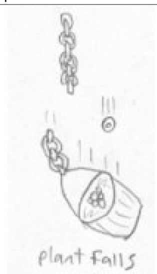




Emily also performs the "Levitating Safe" trick. She raises Bob's safe into the air and drives the tetranail through the air in the middle of it. Emily didn't have to pierce any of the sides of the safe in order to hang the Bob's safe on her wall. Bob opens the safe and sees that the safe is hanging on the sphere, just like Fred's safe was hanging on the circle. He pulls the safe off of the levitating sphere and places it back on the floor.

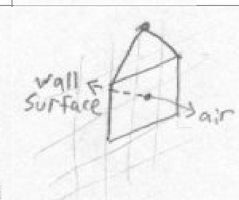
Emily decides to play another trick on Bob. Bob has a plant hanging from his ceiling by a chain. Emily holds the plant in the air while she pulls one of the chain links into tetraspace. She puts the chain link back into realmspace at a different location and lets both the plant and the chain link drop to the floor. Bob sees this and walks over cautiously to inspect the scene. He sees a plant on the ground with dirt everywhere, a single chain link intact sitting next to the plant, and the rest of the chain hanging from the ceiling, intact. None of the chains had to be bent or broken open for Emily to perform her trick. Bob couldn't have played this particular trick on Fred because chains aren't possible in planespace.



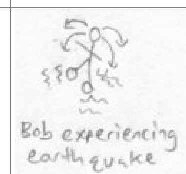


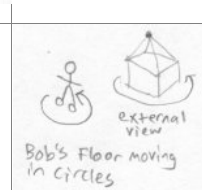
Bob decides to continue playing tricks on Fred so that he can see what the equivalent is in his own world. Bob decides to try rocking Fred's world back and forth along the wall. Since Fred's world is swaying back and forth, he can't hold his balance and falls over.

One surface of Fred's world scrapes against the wall, but on the other side is only in contact with the air in Bob's world. Fred's world can only move two directions and still be in contact with the wall. If Fred's world is moved in a third direction (outward), it is no longer in contact with Bob's wall.



Emily watches what Bob has done and does the same thing to Bob. She has 4 directions she can push Bob's world to and still have it scrape against her wall. First she pushes it front and back, then left and right. To Bob it feels like there's an earthquake happening. Emily stops Bob's world from moving, then starts it moving around in circles. This whole time, all of Bob's world is scraping against Emily's wall, not falling off. If Emily moves Bob's world in a fifth direction (outward), then it is no longer in contact with her wall.





5 Card Games

A form of entertainment for hundreds of years with almost unlimited games to play either solo or together. A pack of cards is probably the heaviest form of entertainment you want to carry. For a lighter form of playing cards, check out 'Air Deck'. They're half the width of regular cards and waterproof.

1 Solitaire

Solitare	**Age:** 8+ **Players:** 1	**Duration:** 15m	**Cards:** 52 Card Deck	**Card Rank (L > H):** A, 2, 3, 4, 5, 6, 7, 8, 9, 10, J, Q, K
Aim	The first objective is to release and play into position certain cards to build up each foundation, in sequence and in suit, from the ace through the king. The ultimate objective is to build the whole pack onto the foundations, and if that can be done, the Solitaire game is won.			
Card Rank	The rank of cards in Solitaire games is: K (high), Q, J, 10, 9, 8, 7, 6, 5, 4, 3, 2, A (low).			
Dealing	1. The Tableau: Seven piles that make up the main table. 2. The Foundations: Four piles on which a whole suit or sequence must be built up. In most Solitaire games, the four aces are the bottom card or base of the foundations. The foundation piles are hearts, diamonds, spades, and clubs. 3. The Stock (or "Hand") Pile: If the entire pack is not laid out in a tableau at the beginning of a game, the remaining cards form the stock pile from which additional cards are brought into play according to the rules. 4. The Talon (or "Waste") Pile: Cards from the stock pile that have no place in the tableau or on foundations are laid face up in the waste pile. To form the tableau, seven piles need to be created. Starting from left to right, place the first card face up to make the first pile, deal one card face down for the next six piles. Starting again from left to right, place one card face up on the second pile and deal one card face down on piles three through seven. Starting again from left to right, place one card face up on the third pile and deal one card face down on piles four through seven. Continue this pattern until pile seven has one card facing up on top of a pile of six cards facing down. The remaining cards form the stock (or "hand") pile and are placed above the tableau. When starting out, the foundations and waste pile do not have any cards.			

Solitaire	
Playing	The initial array may be changed by "building" - transferring cards among the face-up cards in the tableau. Certain cards of the tableau can be played at once, while others may not be played until certain blocking cards are removed. For example, of the seven cards facing up in the tableau, if one is a nine and another is a ten, you may transfer the nine to on top of the ten to begin building that pile in sequence. Since you have moved the nine from one of the seven piles, you have now unblocked a face down card; this card can be turned over and now is in play. As you transfer cards in the tableau and begin building sequences, if you uncover an ace, the ace should be placed in one of the foundation piles. The foundations get built by suit and in sequence from ace to king. Continue to transfer cards on top of each other in the tableau in sequence. If you can't move any more face up cards, you can utilize the stock pile by flipping over the first card. This card can be played in the foundations or tableau.

If you cannot play the card in the tableau or the foundations piles, move the card to the waste pile and turn over another card in the stock pile. If a vacancy in the tableau is created by the removal of cards elsewhere it is called a "space", and it is of major importance in manipulating the tableau. If a space is created, it can only be filled in with a king. Filling a space with a king could potentially unblock one of the face down cards in another pile in the tableau. Continue to transfer cards in the tableau and bring cards into play from the stock pile until all the cards are built in suit sequences in the foundation piles to win!

2 Klondike

Klondike	**Age:** **Players:** 1	**Duration:**	**Cards:** 52 Card Deck	**Card Rank (L > H):**
Aim	The goal is to get the four suits built onto the foundations from aces up through kings.			
Dealing	Deal out 28 cards in seven piles as follows: The first pile is one card; the second pile has two cards, and so on up to seven in the last pile. The top card of each pile is face up; all others are face down.			
Playing	The four aces form the foundations. As it becomes available, each ace must be played to a row above the piles. Cards in the appropriate suit are then played on the aces in sequence - the two, then the three, and so on - as they become available. Any movable card may be placed on a card next-higher in rank if it is of opposite colour. Example: A black five may be played on a red six. If more than one card is face up on a tableau pile, all such cards must be moved as a unit. When there is no face-up card left on a pile, the top face-down card is turned up and becomes available. Only a king may fill an open space in the layout. The player turns up cards from the top of the stock in groups of three, and the top card of the three may be used for building on the piles, if possible, played on a foundation. If a card is used in this manner, the card below it becomes available for play. If the up-card cannot be used, the one, two, or three cards of the group are placed face up on the waste pile, and the next group of three cards is turned up.			

3 Spider Solitaire

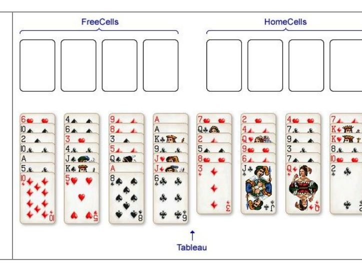
Solitare	**Age:** **Players:** 1	**Duration:**	**Cards:** 2x 52 Card Deck	**Card Rank (L > H):**
Aim	The goal is to assemble 13 cards of a suit, in ascending sequence from ace through king, on top of a pile. Whenever a full suit of 13 cards is so assembled, it is lifted off and discarded from the game. The game is won if all eight suits are played out.			
Dealing	Ten piles of five cards each are dealt by rows. The first four cards of each pile are dealt face down, the top cards face up.			
Playing	The top card of a pile may be moved, together with all face-up cards below it that follow in ascending suit and sequence. A sequence of available cards may be broken at any point by leaving some cards behind. Example: If a pile from top down shows 4, 5, 6, 7, either the first one, two, or three cards may be moved as a unit, but the 7 may not be moved until the covering three cards are removed. When all face-up cards on a pile are removed, the next card below is turned face up and becomes available. A movable unit of cards may be placed either in a space or on a card of the next-higher rank to the bottom card of the unit, regardless of colour or suit. Example: If the bottom card of a unit is the J, it may be moved onto any one of the four queens. A king can be moved only onto a space. Alternatively, the spaces may be filled with any movable unit. When all possible or desired moves come to a standstill, the player deals another row of ten cards face up. However, before such a deal may be made, all spaces must be filled. The final deal consists of only four cards, which are placed on the first four piles.			

4 FreeCell

FreeCell	**Age:** 8+ **Players:** 1	**Duration:** 15-30m	**Cards:** 52 Card Deck	**Card Rank (L > H):** A, 2, 3, 4, 5, 6, 7, 8, 9, 10, J, Q, K

FreeCell is a solitaire card game played using the standard 52-card deck. It is fundamentally different from most solitaire games in that very few deals are unsolvable, and all cards are dealt face-up from the very beginning of the game.

Aim	The object of the game is to build the four HomeCells up in ascending suit sequence from Ace to King. e.g. A♦, 2♦, 3♦, 4♦, 5♦, 6♦, 7♦, 8♦, 9♦, 10♦, J♦, Q♦, K♦ with cards of identical suit.
Setup	The game is played with a single pack of 52 playing cards. After thoroughly shuffling the deck, a row of eight cards is dealt face up to start the tableau. A further five rows of eight cards are dealt face up on top of the first to form eight columns of six cards each. The final four cards are dealt to the first four columns so that the first four columns in the tableau each contain seven cards and the last four columns on the right each contain six cards.

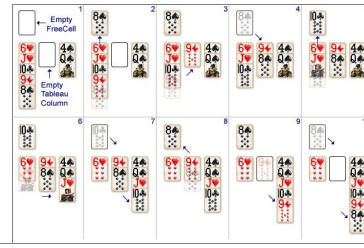


Playing	The exposed card at the end of each tableau column is available for play. You may move it to an empty FreeCell at any time to release the card beneath, but it's a good idea to keep the FreeCells empty for as long as possible. As each Ace becomes available it may be transferred to one of the HomeCells. The HomeCells are built up in ascending suit sequence to the King. You may move an exposed card from end of a tableau column or from a FreeCell to another tableau column if it will form a descending sequence of alternating colours, e.g. 6 on 7 or Q on K just like in Klondike. Empty spaces in the Tableau can be filled by any card you like, but don't waste them as empty tableau spaces are very powerful as we will see later. You keep moving single cards, one at a time, until the game either blocks or comes out.

Moving a Sequence of Cards
Although the rules of FreeCell permit you to move just one card at a time, the empty FreeCells allow you to move an entire sequence of packed cards:

Consider the arrangement of cards to the right, where you would like to move the packed sequence of five cards J♥, 10♣, 9♦, 8♠, 7♥ from the first tableau column to the exposed Q♠ at the end of the second column. If all four FreeCells are empty then you can achieve this by moving the 7♥ to the first FreeCell, the 8♠ to the second FreeCell, the 9♦ to the third and finally the 10♣ to the forth FreeCell. This releases the J♥, allowing it to be built onto the Q♠ at the end of the second column. You can then move the 10♣ down from its FreeCell to pack onto the J♥ followed by the 9♦, the 8♠ and finally the 7♥, effectively transferring the entire packed column over while keeping to the FreeCell rules that state you can only move one card at a time.

Now imagine if one of the above FreeCells were already occupied by a card leaving only three empty. It wouldn't be possible to transfer a five card sequence with single card movements; you could only move four. As a rule of thumb, the size of the packed column that you can transfer is equal to the number of empty FreeCells plus one (this increases if you have empty tableau columns as we will see later). It would be rather tedious if you had to juggle all these cards around manually in order to move a packed sequence which is why the digital versions of the game automate this process for you.



Supermoves
Usually, the maximum number of cards you can move at once is equal to the number of empty FreeCells plus one. However, this number doubles for every empty tableau column (unless you're moving the sequence to an empty tableau column, then that column doesn't count). This is because an empty tableau column acts like an extra FreeCell, only it's more powerful because you can pack extra cards onto it.

If you had four empty FreeCells and an empty tableau column then you would be able to move a sequence of ten cards rather than five, by moving the first five packed cards to the empty tableau column using the four FreeCells as temporary storage space as in the above example.

You then move the remaining five cards to their destination column by using the four FreeCells and finally you move the five cards you packed into the empty tableau column over to the destination column, again using the four FreeCells as temporary storage space. Whenever you move a sequence of cards using an empty tableau column, it's called a "Supermove".

One of the most common uses for a Supermove is to move a four card sequence from one column to another when there is only one empty FreeCell but you have an empty tableau column. The following set of diagrams illustrate how it's possible to move the packed J♥, 10♣, 9♦, 8♠ sequence from the first tableau column to the exposed Q♠ at the end of the second column using a single empty FreeCell and an empty tableau column:

5 Hearts

Hearts	Age: Players:	Duration:	Cards:	Card Rank (L > H):

Hearts is an "evasion-type" trick-taking playing card game for four players, although variations can accommodate between three and six players. The game is also known as Black Lady, Black Maria, Black Widow, and Slippery Bitch, though any of these may refer to the similar but differently-scored game Black Lady.

6 Spades

Spades	Age: Players:	Duration:	Cards:	Card Rank (L > H):

Spades is a trick-taking card game devised in the United States in the 1930s. It can be played as either a partnership or solo/"cutthroat" game. The object is to take at least the number of tricks that were bid before play of the hand began.

Dealing	
Playing	

8 President (Warlords and Scumbags)

President	**Age:** 5+ **Players:** 4-7	**Duration:**	**Cards:** 52 or 54 Card Deck	**Card Rank (L > H):**

Aim	Gameplay is similar to Dai Hin Min, in which players attempt to get rid of their cards first. It is generally played as an aces-high game, although 2s are often played as being higher than aces (so that the 3 is the lowest card).
Special Titles	There may be many titles used by players during the game. Often, players move seats to sit in the order of their place, so as not to forget the order. There is at least a President and Scum. The rankings for four players are as follows: ♣ **President / Warlord** - The winner of the previous round. ♣ **Vice President** - Second place. ♣ **Vice Scum** - Next-to-last place. ♣ **Scum** - Last place in the previous round.

For games with six or more players, more titles can be added. Common extra titles include the Secretary one level below VP, Citizens, Middle-men, Normals, Neutrals or Average Joes in between the high and low named ranks, and Clerk one level above Vice-Scum. Other ranking systems use the presidential line of succession. Rules regarding card passing or drinks can be changed to accommodate these two positions if desired. A large and/or odd number of players generally calls for having at least one Average Joe, but there can be as many as needed.

Dealing	The person who is President shuffles and deals the cards. All the cards are dealt as evenly as possible in clockwise rotation. After cards are dealt, the Scum must hand over his best two cards to the President, while the Vice-Scum must hand over his best card to the Vice President. In any event, the players who receive cards from the bottom positions always hand back an equal number of any "junk" cards they do not want. They are not obliged to pass back their lowest cards, but often do.
Playing	The player on the dealer's left begins by leading any number of cards of the same rank (1-4; 5 or more are possible with wildcards, jokers or multiple decks). The player on the left may then play an equal number of matching cards with a higher face value, or may pass. Note that the same number of cards as the lead must be played. If the leader starts with a pair, only pairs may be played on top of it. If three-of-a-kind is led, only three-of-a-kinds can be played on top of it. The next player may do the same, and so on. This continues until all players have had a turn.
Notes	♣ The ordering of the face values is a little different from most American card games - the deuce (2) is the highest value (besides the joker, if that card is used) and is unbeatable, though certain variants allow a single 2 to be topped by a pair of 2s. The ace is next highest, the King the next highest, etc. with the 3 being the lowest. A few variants allow a single deuce to be played on top of any other combination, but typically games require the same number of deuces to be played as were originally led. In a few variants, the 2 (and no other card) can be placed at any time, even if it is not the player's turn.

♣ When players pass, this does not limit them in any way from playing later, even during the same trick. This can be critical, because it is highly important to be the player who plays last on any given trick. (For instance, if Alice plays a queen, and Bob holds a king and a 2, he might not want to play either card right away. His king is likely to be taken by an ace, and his 2 would be "wasted" on a mere queen.) In some variants, however, a player actually cannot play on a trick in which he or she passed previously.
♣ Players can pass at any time, even if the player has cards that could be played.
♣ The number of cards that can be led to begin any trick is only dependent on the cards in the player's hand and his/her strategy. In a game with two decks, it is absolutely legal to start out a trick with, say, seven 5's. (In this case, obviously, seven 5's are only possible if the owner of those seven 5's is the one who begins the trick. This adds to the necessity to "capture" tricks by being the one to play the highest card.)

Round End	When one player runs out of cards, he/she is out of play for the rest of the round, but the other players can continue to play to figure out the titles. A few versions hold that once a player goes out, players count remaining card values to establish titles, or simply count the number of cards remaining in each player's hand, and other versions have one player left with cards at the end.
First Turn	The very first round of the game normally begins with whoever has the 3 of spades, since there is no sitting President. If playing with more than four players and more than one deck of cards, another opener will be decided by the players. The 3 of diamonds may be played with other 3's. After the first round has determined player rank, subsequent hands are opened by the President.

Trading	After the President (or whoever deals) has dealt and everyone has received their decks, the players are able to trade cards with one another. In a group of four, the President gives two cards of his choice to Scum (who responds with his two very best), and the VP gives one card of her choosing to Vice Scum, who responds with her very best card. In some variants, the President may choose to allow a Black Market, in which any player can trade with any other player. When this happens, the President usually has a poor hand and needs better cards.

9 Cold Hands Poker

Cold Hands Poker	Age: Players: 1-5+	Duration:	Cards: 52 Card Deck	Card Rank (L > H):
Aim	The goal of each player is to win the pot, which contains all the bets that the players have made in any one deal. A player makes a bet in hopes that he has the best hand, or to give the impression that he does. In most Poker versions, the top combination of five cards is the best hand.			
Playing	Each player puts up an agreed ante. Five cards are dealt to each player, one at a time, face up and the highest hand takes the pot. There is no draw and there are no rounds of betting.			

Hands

No Pair	This very common hand contains "nothing." None of the five cards pair up, nor are all five cards of the same suit or consecutive in rank. When more than one player has no pair, the hands are rated by the highest card each hand contains, so that an ace-high hand beats a king-high hand, and so on.
One Pair	This frequent combination contains just one pair with the other three cards being of different rank. An example is 10, 10, K, 4, 3.
Two Pairs	This hand contains a pair of one rank and another pair of a different rank, plus any fifth card of a different rank, such as Q, Q, 7, 7, 4.
Three of a Kind	This combination contains three cards of the same rank, and the other two cards each of a different rank, such as three jacks, a seven, and a four.
Straight	Five cards in sequence, but not all of the same suit is a straight. An example is 9♥, 8♣, 7♠, 6♦, 5♥.
Flush	Five cards all of the same suit, but not all in sequence, is a flush. An example is Q, 10, 7, 6, and 2 of clubs.
Full House	This colourful hand is made up of three cards of one rank and two cards of another rank, such as three 8s and two 4s.
Four of a Kind	This is the next highest hand. An example is four aces or four 3s.
Straight Flush	This is the highest possible hand when only the standard pack is used, and there are no wild cards. A straight flush consists of five cards of the same suit in sequence, such as 10, 9, 8, 7, 6 of hearts.
Five of a Kind	This is the highest possible hand and can occur only where at least one card is wild, such as a joker. Examples of five of a kind would be four 10s and a wild card or two queens and three wild cards.

10 Streets and Alleys

Streets and Alleys	Age: Players: 1	Duration:	Cards: 52 Card Deck	Card Rank (L > H):
Aim	The goal is to get all cards built onto the foundations.			
Dealing	A column of four cards is dealt to the centre of the table, slightly to the left. A column of four cards is then dealt to the right of centre, leaving room between these two columns for another column. All cards are dealt face up. The player continues dealing the cards in columns of four alternately to the left and right, overlapping outward from the centre with the cards already dealt. The entire pack is dealt out, so that each row on the left will contain seven cards and each row on the right, six cards.			
Foundations	The four aces form the foundations. As each ace is released, it is moved into the centre between the left and right rows that were dealt. The foundations are built up in suit and sequence.			
Building	Only the outermost card of each row is available for transfer. A card may be moved onto the outer end of a row, provided that it is in descending sequence with the card there, regardless of suit. Example: The 5 may be placed on 6♦, 6♥, 6♣, or 6♠. Any available card may be placed on a space.			

11 Sixty-Six

Sixty-Six	Age: Players: 2	Duration:	Cards: 9, 10, J, Q, K, A of each suit	Card Rank (L > H): 9, J, Q, K, 10, A
Dealing	Deal six cards each, three at a time, beginning with your opponent. The thirteenth card is turned up for trump and laid beside undealt cards, which become the stock.			

ENTERTAINMENT

Sixty-Six

Aim	The goal is to score 66 points as follows: ♣ Marriage in trumps (K, Q announced) 40 ♣ Marriage in any other suit (K, Q announced) 20 ♣ Each ace (taken in on tricks) 11 ♣ Each ten (taken in on tricks) 10 ♣ Each king (taken in on tricks) 4 ♣ Each queen (taken in on tricks) 3 ♣ Each jack (taken in on tricks) 2 ♣ Winning last trick 10
Playing	The non-dealer leads first. No one is obligated to follow suit. The higher card of the suit led, or a trump played to a plain-suit lead, wins the trick. The winner of the trick draws the top card of the stock (the opponent taking the next card), and leads for the next trick. Either player holding the nine of trumps may exchange it for a higher trump card at any time, provided he has previously won a trick, unless the nine is the last card in the stock. A "marriage" is announced by showing the appropriate king and queen and leading one of those cards. Marriages may be announced only when one of the two cards is played - unless a player by showing a marriage makes his score 66 or more. The non-dealer may announce a marriage on his first lead and score it after he wins a trick. After the stock is exhausted or closed, the non-leader on each trick must follow suit if possible. Marriages may still be scored.
Closing	Either player may close (end the game), when he has the lead, either before or after drawing, by turning down the trump card. Thereafter, no cards are drawn, and the last trick does not score 10 points. If either player announces during play that his score is 66 or more, the play immediately stops and the game is "closed.
Keeping Score	The player who first reaches 66 scores 1 game point. If he reaches 66 before the opponent gets 33 (a "schneider"), he scores 2 game points; if before the opponent gets a trick (a "schwarz"), he scores 3 game points. If neither player scores 66, or each has scored 66 or more without announcing it, no one scores in that hand and 1 game point is added to the score of the winner of the next hand. If a player "closing" gets 66 or more, he scores the same as if the game had been played out. If the player fails, the opponent scores 2 points. If a player closes before his opponent has taken a trick, but fails to score 66, the opponent scores 3 points. The player who scores 7 game points first, wins.

12 Guts

Guts	**Age:** **Players:** 2-5+	**Duration:**	**Cards:** 52 Card Deck	**Card Rank (L > H):**
Dealing	Each player is dealt 2 cards; face down, starting with the player to the left of the dealer.			
Playing	Each round starts with an ante. Starting with the player to dealer's left and continuing clockwise around the table, ending with the dealer, each player in turn says either "in" or "out." Players who say "out" cannot win the pot, but do not lose any extra money. If more than one player says "in," all those who are "in" show their cards, and the player with the best cards wins the pot.			
Scoring	♣ Aces are high ♣ Any pair of equal cards beats any two unequal cards ♣ A higher pair beats a lower pair ♣ Between two non-pair hands, the hand with the highest card wins ♣ If two hands have equal high cards, the hand whose other card is higher wins.			

13 Bingo

Bingo	**Age:** **Players:** 2-5+	**Duration:**	**Cards:** 2x 52 Card Deck	**Card Rank (L > H):**
Dealing	From the first deck of cards, five cards are dealt to each player face up. There will be players and one "Caller" who will call out the card values that players must match in order to complete their "Bingo" hand.			
Playing	From the second deck of cards, the "Caller" will select a card, one at a time, and call out the rank and suit of the card - for example "queen of hearts." The player with the called card turns it face down. The first player to turn all their cards face down wins.			

14 Six Card Golf

Six Card Golf	**Age:** **Players:** 2-4	**Duration:**	**Cards:** 52 Card Deck	**Card Rank (L > H):**
Dealing	Each player is dealt 6 cards face down from the deck. The remainder of the cards are placed face down, and the top card is turned up to start the discard pile beside it. Players arrange their 6 cards in 2 rows of 3 in front of them and turn 2 of these cards face up. The remaining cards stay face down and cannot be looked at.			
Playing	The object is for players to have the lowest value of the cards in front of them by either swapping them for lesser value cards or by pairing them up with cards of equal rank. Beginning with the player to the dealer's left, players take turns drawing single cards from either the stock or discard piles. The drawn card may either be swapped for one of that player's 6 cards, or discarded. If the card is swapped for one of the face down cards, the card swapped in remains face up. The round ends when all of a player's cards are face-up. A game is nine "holes" (deals), and the player with the lowest total score is the winner.			
Scoring	♣ Each ace counts 1 point. ♣ Each 2 counts minus 2 points. ♣ Each numeral card from 3 to 10 scores face value. ♣ Each jack or queen scores 10 points. ♣ Each king scores zero points. ♣ A pair of equal cards in the same column scores zero points for the column (even if the equal cards are 2s).			

15 Linger Longer

Linger Longer	Age: Players: 4-5+	Duration:	Cards: 52 Card Deck	Card Rank (L > H):
Dealing	Each player receives as many cards as there are players in the game. For example, if there are five players, each player gets five cards. The dealer shuffles the cards and deals them one at a time face down to the players. The remaining cards are placed in a stack in the centre of the players. This stack becomes the stock. Once all players have their cards, the dealer takes the last card they dealt to themselves and turns it over, showing all the other players, then places it back into their hand. The card shown is the trump suit for the game.			
Playing	The player directly to the left of the dealer goes first, putting any card in the trump suit in the middle of the table. If a trump card cannot be played, the player can play any card in his hand. The next player goes by playing the suit or a trump card. You are trying to win the trick, so play the highest ranking card possible. Play continues to the left until every player has played their card. Whichever player played the highest card or highest trump card, if a trump card was played, wins the trick. The cards from the finished trick are placed to the side and the winner of the trick takes the top card from the stock adding it to their hand. The winner then plays the first card starting the next trick. If at any time during the game a player runs out of cards, they immediately withdraw from the game			

16 Bridge

Bridge	Age: Players: 4	Duration:	Cards: 52 Card Deck	Card Rank (L > H): ♣ > ♦ > ♥ > ♠ & 3, 2, 3, 4, 5, 6, 7 ,8 ,9, 10, J, Q, K, A
Dealing	The dealer distributes 13 cards to each player, one card at a time, face down, beginning with the player on his left.			
Aim	Each partnership attempts to score points by making its bid, or by defeating the opposing partnership's bid. At the end of play, the side with the most points wins.			
The Bidding	Calls - Once the cards are dealt, each player picks up his hand and, beginning with the dealer, makes a call (pass, bid, double or redouble).			
Passing	When a player does not wish to bid, double, or redouble, he says, "Pass." If all four players pass in the first round, the deal is "passed out," and the next dealer in turn deals a new hand.			
Bidding a Suit	♣ Bid a number of tricks greater than six that the bidder expects to win, and a suit which will become the trump suit. ♣ Ex. = "One Spade" is a bid to win seven tricks (6+1) with spades as trumps. ♣ A bid may be made in "No-trump", meaning that there will be no trump suit. The lowest possible bid is one, and the highest possible bid is seven. Each bid must name a greater number of odd tricks than the last bid, or an equal number but in a higher denomination. No-trump is the highest denomination, outranking spades. Ex. = "Two No-trump" will overcall a bid of "Two Hearts", and a bid of "Four Clubs" is required to overcall a bid of "Three No-trump".			
Doubling and Redoubling	♣ Any player may double the last preceding bid if it was made by an opponent. ♣ Any player may redouble the last preceding bid if it was made by his side and doubled by an opponent. A doubled or redoubled bid may be overcalled by any bid, which would have been sufficient to overcall the same contract undoubled. Ex. = "Two Spades" is doubled and redoubled, it may still be overcalled by a bid of "Two No-trump," a bid of "Three Clubs," or by any other higher bid.			
Final Bid and the Declarer	When a bid, double, or redouble is followed by three consecutive passes, the bidding is closed. The final bid in the auction becomes the contract. The player who, for his side, first bid the denomination named in the contract becomes the "declarer." If the contract names a trump suit, every card of that suit becomes a trump. The declarer's partner becomes the "dummy," and the opposing players become the "defenders."			
Playing	Take a card and place it, face up, in the centre of the table. Four cards so played, one from each hand in rotation, constitute a trick. The first card played to a trick is a lead. The leader to a trick may lead any card. The other three hands must follow suit if they can. If a player is unable to follow suit, he may play any card. For the first trick, the defender on the declarer's left makes the first lead (the opening lead).			
Facing The Dummy Hand	As soon as the opening lead has been made, the dummy then spreads his hand face up, grouped in suits, with each suit vertically arranged so that the other three players can easily view all 13 cards. The suits may be placed in any order as long as the trump suit (if any) is placed to the declarer's left. There is no particular order for placing the suits down in a No-trump bid.			
Winning of Tricks	A trick containing a trump is won by the hand playing the highest trump. A trick not containing a trump is won by the hand playing the highest card of the suit led. The winner of each trick leads next.			
Declarer's Play	The declarer plays his own cards and the dummy's cards, but each in proper turn, since the dummy does not take an active part in the play.			
Played Card	The declarer plays a card from his own hand when he places it on the table or when it is named as an intended play. When the declarer touches a card in the dummy hand, it is considered played (except when he is merely arranging the dummies cards). Alternatively, the declarer may name a card in the dummy and such a card must be played. A defender plays a card when he exposes it so that the other defender can see its face. A card once played may not be withdrawn, except to correct a revoke or other irregularity.			
Taking in Tricks Won	A completed trick is gathered and turned face down on the table. The declarer and one of the defenders should keep all tricks won in front of them, and the tricks should be arranged so that the quantity and the order of the tricks played are apparent.			
Keeping Score	When the last (13th) trick has been played, the tricks taken by the respective sides are counted, and the points earned are then entered to the credit of that side on the score sheet. Any player may keep score. If only one player keeps score, both sides are equally responsible to see that the score for each deal is correctly entered. The score sheet is ruled with a vertical line making two columns that are titled They and We. The scorekeeper enters all scores made by his side in the We column and all scores made by the opponents in the They column. A little below the middle of the score sheet is a horizontal line. Scores designated as "trick score" are entered below the line; all other scores are "premium scores" and are written above the line.			
Trick Score	If the declarer fulfils his bid by winning as many or more odd-tricks as the contract called for, his side scores below the line for every odd-trick named in the contract. Thus, if the declarer wins eight tricks and the bid is Two Hearts, the score for making "two" in a bid of hearts would be credited, as per the Scoring Table.			
Overtricks	Odd-tricks won by the declarer in excess of the contract are called "overtricks" and are scored to the credit of his side as premium score.			

The Game	When a side has scored 100 or more points below the line, it has won a "game." To show this, the scorekeeper draws a horizontal line across the score sheet, below the score that ended the game. This signifies that the next game will begin. A game may be made in more than one deal, such as by scoring 60 and later 40, or it may be scored by making a larger bid and earning 100 or more points in a single deal. Once the next game begins, if the opponents had a score below the line for making a bid, such as 70, this score does not carry over, and each side needs the full 100 points to win the next game.
Vulnerable	A side that has won its first game becomes "vulnerable," and that side's objective is to win a second game and thus earn a bonus for the "rubber." When a side scores its second game, the rubber is over, and the scores are totalled. The winning partnership is the side with the most points. A vulnerable side is exposed to increased penalties if it fails to fulfil a future bid, but receives increased premiums for certain other bids that are fulfilled.
Honours	When there is a trump suit, the ace, king, queen, jack, and ten of trumps are "honours." If a player holds four of the five trump honours, that partnership scores 100 above the line; all five honours in one hand score 150. If the contract is in No-trump, a player holding all four aces scores 150 above the line for his side. Note that the points for honours are the same whether the side is not vulnerable or vulnerable, and that the defenders can also score for honours.
Slam Bonuses	Other premium scores are awarded for bidding and making a "small slam" (a bid at the six-level, such as Six Hearts) or a "grand slam" (a contract at the seven-level, such as Seven Spades or Seven No-trump).
Unfinished Rubber	If the players are unable to complete a full rubber and only one side has a game, that side scores a 300 bonus. If only one side has a part score, that side earns a 100 bonus.
Back Score	After each rubber, each player's standing, plus (+) or minus (-), in even hundreds of points, is entered on a separate score called the "back score." An odd 50 points or more count 100, so if a player wins a rubber by 950 he is +10, if he wins it by 940 the player is +9.

17 Authors

Authors	**Age:** **Players:** 2-5+	**Duration:**	**Cards:** 52 Card Deck	**Card Rank (L > H):**
Dealing	The whole deck is dealt, as nearly evenly as possible.			
Playing	Beginning with the player to the left of the dealer, each player requests a desired card by rank and suit. Example "Give me the Queen of Diamonds". If the opponent has the card, they must hand it over. The player's turn continues so long as the player receives the card requested. If not, the turn passes to the left. As soon as a player collects four cards of the same rank, such as four 3s or four Queen, he lays them face down. The game continues until all cards have been laid down.			

18 Indian Poker

Indian Poker	**Age:** **Players:** 4-5+	**Duration:**	**Cards:** 52 Card Deck	**Card Rank (L > H):**
Aim	The goal of each player is to win the pot, which contains all the bets that the players have made in any one deal. A player makes a bet in hopes that he has the best hand, or to give the impression that he does.			
Dealing	A single card is dealt face down to each player.			
Playing	On a signal from the dealer, each player simultaneously lifts their card, placing it on their forehead so that all of the other players can see it, but the player cannot see his own. There is a single round of betting and then a show down. In some games the suits have rank - Spades (high), Hearts, Diamonds, Clubs - so that the Ace of Spades would be the highest card, the Ace of Hearts the next highest, and so on.			

19 Hold 'Em

Hold 'Em	**Age:** **Players:** 2-5+	**Duration:**	**Cards:** 52 Card Deck	**Card Rank (L > H):**
Aim	The goal of each player is to win the pot which contains all the bets that the players have made in any one deal. A player makes a bet in hopes that he has the best hand, or to give the impression that he does. The top combination of five cards is the best hand and winner for that deal. The winner gets all the chips in the pot at the end of the round.			
Scoring	(Below in Poker Hands)			
Dealing	For this version of High Low Poker, each player receives two cards face down, and five cards are dealt face down to the centre of the table.			
Playing	Once the cards are dealt, the person to the left of the dealer begins the first round of betting. Players have the option to check, bet, raise or fold after each deal. ♣ Check: A nominal bet; usually one that does not require any chip to be put in the pot. ♣ Bet: Put a number of chips in the pot based on your likeliness of having the best hand and winning. ♣ Raise: Put more chips in the pot than are needed to meet the previous bet. ♣ Fold: Withdraw from the current deal, as signified by turning one's cards face down. After the first betting interval, three of the five centre cards are turned face up in the centre. Then there is a second betting interval, followed by one more centre card being turned up. Then there is a third betting interval, and the last centre card is turned up. Then there is a final betting round. The player must use his best five cards, taken from the two in his hand and the five turned up in the centre of the table to form the best poker hand possible. The player with the best hand wins the pot.			

20 Poker Hands

These are the different hands you can have in poker, ordered from worst to best.

No Pair	This very common hand contains nothing. None of the five cards pair up, nor are all five cards of the same suit or consecutive in rank. When more than one player has no pair, the hands are rated by the highest card each hand contains, so that an ace-high hand beats a king-high hand, and so on.
One Pair	This frequent combination contains just one pair with the other three cards being of different rank. An example is 10, 10, K, 4, 3.
Two Pairs	This hand contains a pair of one rank and another pair of a different rank, plus any fifth card of a different rank, such as Q, Q, 7, 7, 4.
Three of a Kind	This combination contains three cards of the same rank, and the other two cards each of a different rank, such as three jacks, a seven, and a four.
Straight	Five cards in sequence, but not all of the same suit is a straight. An example is 9♥, 8♣, 7♠, 6♦, 5♥.
Flush	Five cards all of the same suit, but not all in sequence, is a flush. An example is Q, 10, 7, 6, and 2 of clubs.
Full House	This colourful hand is made up of three cards of one rank and two cards of another rank, such as three 8s and two 4s.
Four of a Kind	This is the next highest hand. An example is four aces or four 3s.
Straight Flush	This is the highest possible hand when only the standard pack is used, and there are no wild cards. A straight flush consists of five cards of the same suit in sequence, such as 10, 9, 8, 7, 6 of hearts.

21 Other Card Games

These are other card games you could bring when bugging out to provide some entertainment. A pack of cards is still reasonably light and could provide endless entertainment, however the traditional pack of 'playing cards' can be used for a huge variety of games.

UNO	Uno is an American shedding-type card game that is played with a specially printed deck. A highly recommended card game for children which is easy to learn, can also be played as snap.
Exploding Kittens	Exploding Kittens is a card game designed by Elan Lee. A great card game for kids if they are bored of the classic UNO.
Pokémon	The Pokémon Trading Card Game, is a collectible card game, based on the Pokémon franchise of video games and anime, first published in October 1996 by Media Factory in Japan. Basically everyone has heard of Pokémon and this game will be perfect for kids of all ages.
Magic: The Gathering	Magic: The Gathering is both a trading card and digital collectible card game created by Richard Garfield. Released in 1993 by Wizards of the Coast, Magic was the first trading card game created and it continues to thrive, with approximately twenty million players as of 2015, and over twenty billion Magic cards produced in the period of 2008 to 2016 alone. One of the most popular card games around, will be perfect for teens to adults.

Pack O Game

A series of easily portable card-based strategy micro card games in a gum-sized tuck box with a variety of mechanics, complexity and theme.
Can be bought from: www.perplext.com/packogame

HUE	Secretly choose 3 colors and build the largest color sections in this fast-playing, tile-laying strategy game. Players build an area of color sections together. In the end, the winner is the player who chose the most valuable 3 colors.	Players: 2-5 Ages: 8+ Length: 10 Min. Level 2: Intermediate
TKO	Compete for the TKO Belt as you maneuver around the ring in this clever boxing game. You'll need more than brute strength to get inside your opponent's head. Choose from 8 different fighters and keep it clean out there! Fight!	Players: 2 Ages: 8+ Length: 10 Min. Level 1: Casual

In the end, the player who is most effective with his money and cunning in his collecting, will amass the most prestigious and valuable jewel collection.	Players: 2-4 Ages: 12+ Length: 30 Min. Level 3: Challenging
FLY	Get swattin' in this exciting dexterity, set-collecting game! Players take turns dropping the fly swatter card on the table to swat flies with like colors and symbols. You'll need at least 3 of the same color or symbol in order for a fly to count. Perfect for portable family FUN.	Players: 2-4 Ages: 8+ Length: 10 Min. Level 1: Casual
TAJ	Players assume the roles of ancient rug collectors vying to display their collection in the Taj Mahal. Vote on proposals made by opponents to shift rugs in the display to gain prestige for rugs displaying your secret color scheme.	Players: 2-4 Ages: 12+ Length: 10 Min. Level 3: Challenging
SHH	Players cooperate as a single team to spell words in order to rid their hands of as many letters as possible. The catch? Silent play proves challenging when one doesn't know his teammate's hand. Shh!	Players: 2-4 Ages: 10+ Length: 10 Min. Level 2: Intermediate
LIE	Be the last liar playing in this game of cunning speculation. If you get caught overbidding, you lose a card; but when you're caught telling the truth, your challenger pays!	Players: 2-6 Ages: 12+ Length: 20 Min. Level 2: Intermediate
BUS	You'll need absolute effiency in this quick, "Pick up and Deliver" game of balancing speed and maximum capacity. Don't get too distracted dropping off passengers, because your opponents might beat you to the bus stop or change your route through road construction.	Players: 2-3 Ages: 8+ Length: 20 Min. Level 2: Intermediate

ORC	Players use Orc clans to dominate territories and earn the most victory points in this strategy game for 2 players. You'll need to carefully plan your attacks and balance your hand of Orcs in order to beat your opponent and win!	Players: 2 Ages: 8+ Length: 5 Min. Level 2: Intermediate
GYM	Play alone or as a team and pick the best kids to compete in gym sporting events. Brats will influence which events you'll play and each kid's special actions will help you earn the most points and win the game!	Players: 2, 4, 6 Ages: 10+ Length: 15 Min. Level 3: Challenging
RUM	Argh! Players are pirates rummaging through a shipwreck. Collect sets of rum and press your luck to earn points. But watch out for the parrot, who will steal your booty! The pirate with the most points wins the game!	Players: 2-4 Ages: 10+ Length: 15 Min. Level 2: Intermediate
DIG	Each player is a dog, digging for bones and returning them to dog bowls. Bones will have different values based on the activity in the yard. The dog with the most valuable bones is the champ!	Players: 2-4 Ages: 10+ Length: 15 Min. Level 1: Casual
BOX	Players create squares with 4 corner dots of their secret color in this challenging, strategy game. The bigger the square, the greater the points! Play alone or in teams and win with the most points!	Players: 2, 3, 4, 6 Ages: 10+ Length: 20 Min. Level 3: Challenging
SPY	Protect your Top Secret plans and expose your enemies in this elegant card game of deduction. No need for a table, as the action takes place in players' hands only! Clever tactics will lead your spy to victory.	Players: 2-4 Ages: 10+ Length: 10 Min. Level 3: Challenging
SOW	Each player must use the rhythm of nature to plant seeds and grow flowers in order to collect the most beautiful bouquet. Earn the most points to win this Mandala-Inspired gardening game for 2 to 4 green thumbs.	Players: 2-4 Ages: 10+ Length: 20 Min. Level 3: Challenging
BOO	Two players battle for the graveyard in this spooky, tactical game. Players place cards to flip as many ghosts of their color face-up. In the end, the winner is the player with the most ghosts of their color!	Players: 2 Ages: 10+ Length: 15 Min. Level 2: Intermediate

6 Board Games

Generally more complicated than card games and often require more then one player, however DnD will keep a solo person occupied for many months. Board games are also cumbersome to transport and often only have little more enjoyment then the much more compact card games. However they are included because they are generally replicatable in the wild.

Subheadings

1. Chess	2. Checkers / Draughts	3. Monopoly	4. Scrabble
5. Codenames	6. Go	7. Backgammon	8. Dominos
9. Chinese Checkers	10. Mancala	11. Risk	12. Cluedo
13. Ticket to Ride			

1 Chess

Chess is a two-player strategy board game played on a chessboard, a chequered game board with 64 squares arranged in an 8×8 grid. A game semi-easily created from bush materials if you didn't pack one.

2 Checkers / Draughts

Draughts (British English) or checkers (American English) is a group of strategy board games for two players which involve diagonal moves of uniform game pieces and mandatory captures by jumping over opponent pieces. A game easily created from rocks and sticks if you didn't pack one.

3 Monopoly

Monopoly is a board game where players roll two six-sided dice to move around the game board, buying and trading properties, and develop them with houses and hotels. One of the most popular games of all time, quite hefty to carry around but worthwhile in a BOL. The game board has been included below so you can either play off a tablet screen or redraw it.

Game Pieces

Tokens		Bank Cash	Other Pieces		
● Battleship ● Boot ● Cannon ● Horse & Rider ● Iron	● Racecar ● Dog ● Thimble ● Top Hat ● Wheelbarrow	● 30 x $500 Bills ● 30 x $100 Bills ● 30 x $50 Bills ● 30 x $20 Bills ● 30 x $10 Bills ● 30 x $1 Bills	● 32 x Houses ● 12 x Hotels ● The Board		

Preparation

Preparation
To begin, place the game board on the table. Each player selects a token. Then they place their token on the table near the space labelled Go, placing it on Go only when their first turn to move arrives. One player becomes the Banker, who distributes assets from the Bank to the players. Only the player in question can use their money, money can only be lent via the Banker or by the player money.

Each player is given $1,500 in cash divided as follows: two each of $500s, $100's and $50's; six $20's, five each of $10's, $5's and $1's. All remaining cash and other equipment go to the Bank. The Banker may play too but must keep his personal funds from the bank. He/she also needs to make sure that they collect $200 when they pass GO.

Gameplay

● On a player's turn, the player must roll the dice and move his/her token forward the number of spaces as rolled on the dice. In some editions, players must do any trades, building improvements etc. at the start of their turn before rolling the dice.
● If the player lands on an unowned property, the player may buy it for the price listed on that property's space. If he or she agrees to buy it, he or she pays the Bank the amount shown on the property space and receives the deed for that property. If he or she refuses to buy the property for the amount stated on the deed, the property is auctioned. Bidding may start at any price, and all players may bid. The highest bidder wins the property and pays the Bank the amount bid and receives the property's title deed. Railroads and utilities are also considered properties.
● If the player lands on an unmortgaged property owned by another player, he or she pays rent to that person, as specified on the property's deed. It is the property owner's responsibility to demand rent, and he or she has until the beginning of the second following player's turn to do so.
● If the player lands on his or her own property, or on property which is owned by another player but currently mortgaged, nothing happens.
● If the player lands on Luxury Tax/Super Tax, he or she must pay the Bank $100 (in some editions of the game, only $75).
● If the player lands on Income Tax he or she must pay the Bank either $200 or 10% of his or her total assets (cash on hand, property, houses and hotels). In some editions of the game, this is a flat rate of $200.
● If the player lands on a Chance or Community Chest, the player takes a card from the top of the respective pack and performs the instruction given on the card.
● If the player lands on the Jail space, he or she is "Just Visiting". No penalty applies.
● If the player lands on the Go to Jail square, he or she must move his token directly to Jail.
● If the player lands on or passes Go in the course of his or her turn, he or she receives $200 from the Bank. A player has until the beginning of his or her next turn to collect this money.
● You may sell houses back to the Bank for half the purchase price or sell property deeds to other players in the game.
● Players may not loan money to other players. Only the Bank can loan money, and only through mortgaging properties.
● If a player skips another player's turn and is caught, the turn is transferred back to the player whose turn was skipped.

Doubles
When doubles are rolled, the player resolves the roll as normal (including purchase, renting or passing "GO"), but must roll the dice again for another turn. The player again moves forward as directed by the dice, and if this is also doubles, rolls again. If the third dice roll is doubles, the player is instead moved directly to jail. The sole exception is rolling doubles to exit jail, which doesn't allow for an additional turn.

Railroad
The rent a player charges for landing on a railroad varies with the number of railroads that are also owned by a player. The rent is as follows: Charge $25 if one is owned, $50 if two are owned, $100 if three are owned, $200 if all four are owned.

Utility Rent
For utilities, after a player lands on one to owe rent, the rent is 4 times the amount rolled, if the player owns one utility. If the player possesses both utilities, the rent is 10 times the amount rolled. In some editions, the rents are flat.

Jail
When landing on the square marked "Go to Jail", drawing a card marked "Go to Jail", or rolling three consecutive doubles when moving in a turn, the player is placed directly in the jail cell, and does not get any benefit for passing "GO". A player that lands normally in the Jail square is in the "Just Visiting" section, and is unhindered. In some editions, players in jail may not buy and sell properties, or collect rent on them. In others, this is allowed.

When in jail, a player may use a get out of jail free card (either owned, or purchased from another player), or pay the $50 fine or skips one turn. Otherwise, the player can attempt to escape jail by trying to roll doubles - if successful, the player moves the number of squares but doesn't get the extra turn. If the player fails to roll doubles for three turns, he or she must pay the ₩50 fine and then moves the number shown on the dice or skip one turn.

Properties, Rents, and Construction
● If a player lands on property he/she may buy it at the listed price. If the player refuses to buy it, then the bank sells it at auction to the highest bidder. All players, including the one who chose to not buy it, may bid on the property. Properties are arranged in "color groups" of two or three properties.
● Once a player owns all properties of a colour group (a monopoly), the rent is now doubled on all unimproved lots of that color group, even if any of the properties are mortgaged to the bank or if other properties in the group have houses.
● The player may purchase up to four houses or one hotel per property (and only if there are properties to hold the houses), which raise the rents that must be paid when other players land on the property.
● If a player wishes to buy a house/hotel for a property, it is not necessary to wait for their turn. The player can buy houses/hotels even if it is not their turn. The player does not need to be on the property they wish to put the house/hotel on.
● The properties in a color group must be developed evenly, i.e. each house that is built must go on a property in the group with the fewest number of houses on it so far.
● If a player owns all the lots of any colour-group, the rent is doubled on unimproved lots in that group.
● A hotel may be built on a color group only after all properties in the group have four houses. A player purchases a hotel by paying the price of an additional house, and returning the four houses on that property to the Bank in exchange for a hotel.
● If a property is owned by a player and another player lands on the property and the owner does not realize it before the second following player rolls the dice then the player does not have to pay the owner.
● At any time a player may, to raise cash, sell hotels and houses back to the Bank for half the purchase price of the houses or hotels.
● Also, properties with no houses or hotels may be mortgaged for half of the property price. A property does not collect rent while mortgaged and may not be developed. To de-mortgage a property a player must pay interest of 10% in addition to the mortgage price. Whenever a mortgaged property changes hands between players, either through a trade, sale or by bankruptcy, the new owner must immediately pay 10% interest on the mortgage and at their option may pay the principal or hold the property. If the player holds the property and later wishes to lift the mortgage they must pay an additional 10% interest at that time.
● Building Shortage: When the Bank has no houses to sell, players wishing to build must wait for some player to return or sell his/her houses to the Bank before building. If there are a limited number of houses and hotels available and two or more players wish to buy more than the Bank has, the houses or hotels must be sold at auction to the highest bidder.

5 Codenames

Codenames is a 2015 card game for 4–8 players designed by Vlaada Chvátil and published by Czech Games. Two teams compete by each having a Spymaster give one word clues which can point to multiple words on the board. The other players on the team attempt to guess their team's words while avoiding the words of the other team. In the 2–3 player variant, one Spymaster gives clues to the other player or players. Even though it's listed under 'Boardgames' it's technically a card game as it doesn't use a typical game board.

Rules

Codenames is a game of guessing which code names (words) in a set are related to a hint-word given by another player. Players split into two teams: red and blue. One player of each team is selected as the team's spymaster; the others are field operatives. Twenty-five Codename cards, each bearing a picture, are laid out in a 5×5 rectangular grid, in random order. A number of these words represent red agents, a number represent blue agents, one represents an assassin, and the others represent innocent bystanders.

The teams' spymasters are given a randomly-dealt map card showing a 5×5 grid of 25 squares of various colours, each corresponding to one of the code name cards on the table. Teams take turns. On each turn, the appropriate spymaster gives a verbal hint about the words on the respective cards. Each hint may only consist of one single word and a number. The spymaster gives a hint that is related to as many of the words on his/her own agents' cards as possible, but not to any others – lest they accidentally lead their team to choose a card representing an innocent bystander, an opposing agent, or the assassin. The hint's word can be chosen freely, as long as it is not (and does not contain) any of the words on the code name cards still showing at that time. Code name cards are covered as guesses are made.

Codenames

The hint's number tells the field operatives how many words in the grid are related to the word of the clue. It also determines the maximum number of guesses the field operatives may make on that turn, which is the hint's number plus one. Field operatives must make at least one guess per turn, risking a wrong guess and its consequences. They may also end their turn voluntarily at any point thereafter.

After a spymaster gives the hint with its word and number, their field operatives make guesses about which code name cards bear words related to the hint and point them out, one at a time. When a code name card is pointed out, the spymaster covers that card with an appropriate identity card – a blue agent card, a red agent card, an innocent bystander card, or the assassin card – as indicated on the spymasters' map of the grid. If the assassin is pointed out, the game ends immediately, with the team who identified him losing. If an agent of the other team is pointed out, the turn ends immediately, and that other team is also one agent closer to winning. If an innocent bystander is pointed out, the turn simply ends.

The game ends when all of one team's agents are identified (winning the game for that team), or when one team has identified the assassin (losing the game).

6 Go

Go is an abstract strategy board game for two players, in which the aim is to surround more territory than the opponent. It is generally too hefty to carry around when bugging out but the digital form can be carried free.

7 Backgammon

Backgammon is one of the oldest known board games. Its history can be traced back nearly 5,000 years to archaeological discoveries in the Middle East. A game easily created from bush materials if you didn't pack one.

8 Dominos

Dominoes is a family of tile-based games played with rectangular "domino" tiles. Each domino is a rectangular tile with a line dividing its face into two square ends. Quite lightweight if you get thin dominos and provides access to many game types.

9 Chinese Checkers

Chinese checkers is a strategy board game of German origin which can be played by two, three, four, or six people, playing individually or with partners. Requires a large board and coloured pieces but fun if you have multiple players.

10 Mancala

Mancala is one of the oldest known games to be played. Mancala is a generic name for a family of 2-player turn-based strategy board games played with small stones, beans, or seeds and rows of holes or pits in the earth, a board or other playing surface. A game easily created from bush materials if you didn't pack one.

11 Risk

Fairly difficult to transport, but you can draw custom maps in the dirt if need be, as well as using sticks and rocks as units.

12 Cluedo

Cluedo, known as Clue in North America, is a murder mystery game for three to six players that was devised by Anthony E. Pratt from Birmingham, England. Fun to play but requires a board and lots of cards.

13 Ticket to Ride

Ticket to Ride is a railway-themed German-style board game designed by Alan R. Moon, Illustrated by Julien Delval and Cyrille Daujean, published in 2004 by Days of Wonder. Fun to play but requires a board and lots of cards.

7 Electronic Entertainment

Electronic entertainment is in every modern household today, most people at some point have played a digital game, watched a Tv series or even the news. People today almost have an addition to noise, sound, music and entertainment and when this is gone it will be a real shock to hear -silence- for once. Having a few form of this entertainment will let people escape into these digital worlds once again or be able to slowly pry themselves from this vice which is in everyone's lives.

Types of Electronic Entertainment
- Radio
- Television
- Handheld Games
- Console Games
- Computers

Subheadings

1. Radio	2. Television	3. Audio	4. E-readers
5. Phone / Tablet Apps	6. Handheld Games	7. Game Consoles	8. Computer Entertainment
9. Other Entertainment			

1 Radio

FM Radio	Listening to nearby stations can keep you up to date with the weather and news as well as providing a nice selection of music without as much distortion as other radio broadcasts.
AM Radio	AM radio can provide a different yet pleasant listening experience over much larger ranges than FM.
Shortwave Radio	Shortwave radio stations can usually be heard across most of the world but require a special type of radio to pick up this signal. They have a large range of stations to listen to from a multitude of countries - some of which may not be in English.
HAM Radio	A HAM radio (with a licence) can be used to communicate with other amateur radio users across the country.

2 Television

There is unlikely to be live television in a SHTF disaster so if you wish to watch anything it should be pre-recorded or downloaded and stored on a USB or SD card.

Movies

Movies are great to distract you from reality for an hour and a half.

Recommened Movies

• The Dark Knight • Fight Club • Pulp Fiction • Forrest Gump • The Lord of the Rings	• Saving Private Ryan • Avatar • Gladiator • Good Will Hunting • Braveheart	• The Usual Suspects • Inception • There Will Be Blood • No Country for Old Men • Se7en	• The King's Speech • Titanic • The Matrix • Interstellar • City of God	• The Departed • American Gangster • Django Unchained • The Insider • The Shawshank Redemption	
• Donnie Darko • American History X • Memento • Moulin Rouge! • Chicago	• Shakespeare in Love • The Queen • Life Is Beautiful • L.A. Confidential • Mystic River	• Heat • The Thin Red Line • Letters from Iwo Jima • The Sixth Sense • The Pianist	• Casino • Gangs of New York • The Green Mile • A Bronx Tale • WALL-E	• American Beauty • Toy Story • Finding Nemo • The Lion King • The Curious Case of Benjamin Button	

Tv Series

Tv series are probably the best source of entertainment as they last longer than movies and can be broken up more readily.

Recommended Tv Shows

Science Fiction • Westworld • Doctor Who • Battlestar Galactica • Stranger Things • Black Mirror • Star Trek: TNG	**Science Fiction** • The X-Files • Supernatural • The Walking Dead • Vikings • Star Trek Voyager	**Comedy** • The Office • Parks and Recreation • The Simpsons • Fawlty Towers • Rick and Morty • Mr Bean	**Comedy** • Black Books • Brooklyn Nine-Nine • I.T. Crowd • Miranda • Regular Show	**Murder & Crime** • Murdoch Mysteries • Poirot • Breaking Bad • The Wire • Better Call Saul • Sherlock	**Murder & Crime** • The Sopranos • Fargo • Narcos • Dexter
Drama • Game of Thrones • Twin Peaks • House M.D. • Firefly • House of Cards • Mr. Robot • Torchwood	**Kids** • Avatar: The Last Airbender • Gravity Falls • Adventure Time • My Little Pony • Scooby Doo	**Kids** • SpongeBob Squarepants • Veggietales • Wallace and Gromit • Arthur • Paw Patrol	**Sitcom** • Seinfeld • Arrested Development • It's Always Sunny in Philadelphia • Friends	**Animated** • Death Note • Attack on Titan • One Punch Man • Archer (Sitcom)	**Historical & Other** • Downton Abbey • Rome (Historical) • The Paradise (Drama) • Top Gear (Motoring) • Hannibal (Horror Thriller) • Mythbusters

Documentaries

If you'd prefer a hit of reality or to learn some fascinating facts you should watch a documentary.

Recommended Documentaries

• Blue Planet • Little Pyongyang • Free Solo • Louis Theroux: LA Stories • World's Scariest Drug	• An Open Secret • Free to Play • 3D Printed Guns • Welcome to Leith • The Agenda - Curtis Bowers	• Seven Worlds, One Planet • 8 Days: to the Moon and Back • Jim: The James Foley Story • WIRED's 'Holy Land: Startup Nations' • WIRED's 'Shenzhen: The Silicon Valley of hardware'	• • • • •

3 Audio

Audio is any form of sound that is listened to for pleasure.

Audio Formats

This is a list of the most common audio formats today.

File Type	Creator	Description
.aa	Audible.com (Amazon.com)	A low-bitrate audiobook container format with DRM, containing audio encoded as either MP3 or the ACELP speech codec.
.aac		The Advanced Audio Coding format is based on the MPEG-2 and MPEG-4 standards. AAC files are usually ADTS or ADIF containers.
.aax	Audible.com (Amazon.com)	An Audiobook format, which is a variable-bitrate (allowing high quality) M4B file encrypted with DRM. MPB contains AAC or ALAC encoded audio in an MPEG-4 container. (More details below.)
.aiff	Apple	A standard uncompressed CD-quality, audio file format used by Apple. Established 3 years prior to Microsoft's uncompressed version wav.
.flac		A file format for the Free Lossless Audio Codec, an open-source lossless compression codec.

.gsm		Designed for telephony use in Europe, gsm is a very practical format for telephone quality voice. It makes a good compromise between file size and quality. Note that wav files can also be encoded with the gsm codec.
.m4a		An audio-only MPEG-4 file, used by Apple for unprotected music downloaded from their iTunes Music Store. Audio within the m4a file is typically encoded with AAC, although lossless ALAC may also be used.
.m4b		An Audiobook / podcast extension with AAC or ALAC encoded audio in an MPEG-4 container. Both M4A and M4B formats can contain metadata including chapter markers, images, and hyperlinks, but M4B allows "bookmarks" (remembering the last listening spot), whereas M4A does not.
.m4p	Apple	A version of AAC with proprietary Digital Rights Management developed by Apple for use in music downloaded from their iTunes Music Store.
.mmf	Yamaha, Samsung	A Samsung audio format that is used in ringtones. Developed by Yamaha (SMAF stands for "Synthetic music Mobile Application Format", and is a multimedia data format invented by the Yamaha Corporation, .mmf file format).
.mp3		MPEG Layer III Audio. It is the most common sound file format used today.
.mpc		Musepack or MPC (formerly known as MPEGplus, MPEG+ or MP+) is an open source lossy audio codec, specifically optimized for transparent compression of stereo audio at bitrates of 160–180 kbit/s.
.msv	Sony	A Sony proprietary format for Memory Stick compressed voice files.
.nmf	NICE	NICE Media Player audio file
.ogg / .oga / .mogg	Xiph.Org Foundation	A free, open source container format supporting a variety of formats, the most popular of which is the audio format Vorbis. Vorbis offers compression similar to MP3 but is less popular. Mogg, the "Multi-Track-Single-Logical-Stream Ogg-Vorbis", is the multi-channel or multi-track Ogg file format.
.opus	Internet Engineering Task Force	A lossy audio compression format developed by the Internet Engineering Task Force (IETF) and made especially suitable for interactive real-time applications over the Internet. As an open format standardised through RFC 6716, a reference implementation is provided under the 3-clause BSD license.
.ra / .rm	RealNetworks	A RealAudio format designed for streaming audio over the Internet. The .ra format allows files to be stored in a self-contained fashion on a computer, with all of the audio data contained inside the file itself.
.raw		A raw file can contain audio in any format but is usually used with PCM audio data. It is rarely used except for technical tests.
.tta		The True Audio, real-time lossless audio codec.
.voc	Creative Technology	The file format consists of a 26-byte header and a series of subsequent data blocks containing the audio information
.vox		The vox format most commonly uses the Dialogic ADPCM (Adaptive Differential Pulse Code Modulation) codec. Similar to other ADPCM formats, it compresses to 4-bits. Vox format files are similar to wave files except that the vox files contain no information about the file itself so the codec sample rate and number of channels must first be specified in order to play a vox file.
.wav		Standard audio file container format used mainly in Windows PCs. Commonly used for storing uncompressed (PCM), CD-quality sound files, which means that they can be large in size—around 10 MB per minute. Wave files can also contain data encoded with a variety of (lossy) codecs to reduce the file size (for example the GSM or MP3 formats). Wav files use a RIFF structure.
.wma	Microsoft	Windows Media Audio format, created by Microsoft. Designed with Digital Rights Management (DRM) abilities for copy protection.
.webm		Royalty-free format created for HTML5 video.

Audio Components

Audio components are the different ways of encoding the sound to create different depths of audio.

Hertz (Hz)	The hertz is the derived unit of frequency in the International System of Units (SI) and is defined as one cycle per second. Some of the unit's most common uses are in the description of sine waves and musical tones, particularly those used in radio- and audio-related applications. It is also used to describe the speeds at which computers and other electronics are driven. Hertz are commonly expressed in multiples: kilohertz (103 Hz, kHz), megahertz (106 Hz, MHz), gigahertz (109 Hz, GHz), terahertz (1012 Hz, THz), petahertz (1015 Hz, PHz), and exahertz (1018 Hz, EHz).
Bit Depth	In digital audio using pulse-code modulation (PCM), bit depth is the number of bits of information in each sample, and it directly corresponds to the resolution of each sample. Examples of bit depth include Compact Disc Digital Audio, which uses 16 bits per sample, and DVD-Audio and Blu-ray Disc which can support up to 24 bits per sample. In basic implementations, variations in bit depth primarily affect the noise level from quantization error—thus the signal-to-noise ratio (SNR) and dynamic range. However, techniques such as dithering, noise shaping and oversampling mitigate these effects without changing the bit depth. Bit depth also affects bit rate and file size. Bit depth is only meaningful in reference to a PCM digital signal. Non-PCM formats, such as lossy compression formats, do not have associated bit depths.
Sampling	In signal processing, sampling is the reduction of a continuous-time signal to a discrete-time signal. A common example is the conversion of a sound wave (a continuous signal) to a sequence of samples (a discrete-time signal). A sample is a value or set of values at a point in time and/or space. A sampler is a subsystem or operation that extracts samples from a continuous signal. A theoretical ideal sampler produces samples equivalent to the instantaneous value of the continuous signal at the desired points. Sampling can be done for functions varying in space, time, or any other dimension, and similar results are obtained in two or more dimensions. For functions that vary with time, let s(t) be a continuous function (or "signal") to be sampled, and let sampling be performed by measuring the value of the continuous function every T seconds, which is called the sampling interval or the sampling period. Then the sampled function is given by the sequence: s(nT), for integer values of n. The sampling frequency or sampling rate, fs, is the average number of samples obtained in one second (samples per second), thus fs = 1/T.

Music

Music can evoke a range of emotion and take your mind off anything that may be happening around you. Songs can come in a tiny format which allows a lot of them to be squeezed onto a fairly small storage space.

Audiobooks

Audiobooks

Lay back and immerse yourself into an alternative world with an audiobook. It doesn't take as much brainpower as reading and you don't need any light in case you're in a stealth situation. Also take a look at the "Reading" section below for more on books.

Recommended Audiobooks

It's hard to recommend audiobooks because of the vast number of books in existence and the fact that you can download programs to read out to you any content you have on your device. In a survival situation prepping eBooks would be best to listen to.

Non-Fiction
Non-fiction or nonfiction is content (sometimes, in the form of a story) whose creator, in good faith, assumes responsibility for the truth or accuracy of the events, people, or information presented.

Fiction
Literature in the form of prose, especially novels, that describes imaginary events and people.

Non-Fiction Categories ● Autobiography ● Biography ● Diary ● Dictionary ● Encyclopedia ● Guide ● Health ● History	● Journal ● Memoir ● Prayer ● Religion ● Science ● Travel ● True Crime	**Fiction Categories** ● Action ● Adventure ● Alternate History ● Children's ● Comic Book ● Crime ● Drama	● Fairytale ● Fantasy ● Graphic Novel ● Horror ● Mystery ● Poetry ● Romance	● Science Fiction ● Short Story ● Suspense ● Thriller ● Young Adult

E-readers

4 E-readers

An e-reader, also called an e-book reader or e-book device, is a mobile electronic device that is designed primarily for the purpose of reading digital e-books and periodicals. Any device that can display text on a screen may act as an e-reader, but specialized e-reader devices may optimize portability, readability (especially in sunlight), and battery life for this purpose. Their main advantages over printed books are portability since an e-reader is capable of holding thousands of books while weighing less than one and the convenience provided due to add-on features in these devices. An e-reader is a device designed as a convenient way to read e-books. It is similar in form factor to a tablet computer, but features electronic paper rather than an LCD screen. This yields much longer battery life —the battery can last for several weeks— and better readability, similar to that of paper even in sunlight. Drawbacks of this kind of display include a slow refresh rate and (usually) a grayscale-only display, which makes it unsuitable for sophisticated interactive applications as those found on tablets. The absence of such apps may be perceived as an advantage, as the user may more easily focus on reading.

E-readers can hold thousands of books (limited only by their memory) and use the same physical space as a conventional book. E-ink displays are not back-illuminated as normal LCD screens and therefore have a longer battery life and put less strain on eyes. LCD screens trigger a higher perceived and physical visual fatigue in comparison with the E-ink technology and conventional paper books. It is therefore less tiring to read on an E-ink display then on a paper book or LCD screen. Features as the possibility to adjust font size and spacing can help people with difficulty of reading or dyslexia. Some E-readers (e.g Kindle e-readers) provide the possibility of (Wikipedia) definitions, translations or dictionary lookups of key words.

Many of the major book retailers and third-party developers offer e-reader applications for desktops, tablets and mobile devices, to allow the reading of e-books and other documents independently of dedicated e-book devices. The e-reader applications are available for the Mac and PC computers as well as for Android, iOS and Windows devices.

Electronic Entertainment
Phone / Tablet Apps

5 Phone / Tablet Apps

If your phone is with you, fill it with free games prior to bugging out. Try not to choose 3D games as it will drain the battery much faster.

Recommended Games

My Boy! - GBA Emulator: Play games from the Gameboy era with this great emulator. The game file sizes are tiny at around 16mb max.
DraStic - NDS Emulator: Play any games from the Nintendo DS with this app.
The Room (1-3): 3D puzzle solving games where you manipulate objects to uncover secrets and get to the centre.
Angry Birds: The classic game of flinging birds at pigs. Should be free on most platforms and provide lots of fun during SHTF.
Cut the Rope: A cute little game where you cut a rope and try to get the lolly into the mouth of a cute critter.

Other Recommended Games

Duolingo (Free & Paid): Learn a language from scratch, however only the paid version lets you do this offline.
For prepping related apps see the ADDENDUM > Media section.

ENTERTAINMENT
Electronic Entertainment
Handheld Games

6 Handheld Games

Mini portable electronic games are lightweight and ideal for bugging out with as will provide a level of modern entertainment.

Tamagotchi: A virtual pet you feed, play with and clean up after. 5-8 Months Battery Life
Raspberry Pi: Great for emulating games from NES, SNES, Gameboy, PS1 and N64.
Pokémon Mini: A mini handheld system with Pokémon minigames.
NanoLite: A collection of 129 retro games.

Console	Description	Recommended Games
Game Boy	The first form of the Game Boy console, B/W with some good games.	• Pokémon Red / Blue • LoZ Link's Awakening • Super Mario Bros. • Tetris • Wario Land 3
Game Boy Colour	Uses large cartridges and now in colour, but hard to see in the dark.	• Pokémon Gold/Silver • LoZ Link's Awakening DX • Super Mario Bros DX • Metal Gear Solid • Stranded Kids
Game Boy Advance	Some of the best games are on the Advance from Pokémon to Mario.	• Pokémon Ruby/Sapphire • LoZ A Link to the Past • Wario Ware Twisted • Pokémon Fire/Leaf • Advance Wars
Game Boy Advance SP	More compact console with backlighting and a self-contained battery.	• Pokémon Ruby/Sapphire • LoZ A Link to the Past • Wario Ware Twisted • Pokémon Fire/Leaf • Advance Wars
Nintendo DS	A dual-screen console with more modern titles and non physical games.	• Pokémon Black/White • New Super Mario Bros. • Mario Kart DS • Pokémon Gold/Silver • Animal Crossing
Nintendo 3DS	Almost entirely non physical games and presents a 3D image on the screen. Internet required for non physical games.	• LoZ Link Between Worlds • Super Mario 3D Land • Fire Emblem: Awakening • Bravely Default • Pokémon Sun and Moon
Nintendo Switch	Downloadable games and a modular controller with a large screen. Does not need internet to play physical games.	• Super Mario Odyssey • LoZ Breath of the Wild • Mario Kart 8 • Splatoon 2 • Stardew Valley

Electronic Entertainment
Game Consoles

7 Game Consoles

Viable if you have a constant supply of electricity such as solar with a battery bank and the disaster wasn't an EMP. It's recommended to choose retro consoles as opposed to more modern ones as they use much less electricity and you don't need internet access to check keys and update games.

Console	Description	Recommended Games
SNES (Released 1990)	Uses cartridges, expensive games, fairly compact, requires Tv.	• Super Mario World • LoZ - A Link to the Past • Chrono Trigger • Final Fantasy III • Super Metroid
Playstation 1 (Released 1994)	Uses discs, great games, very small, requires Tv.	• Metal Gear Solid • Tony Hawks Pro Skater 2 • Silent Hill • Crash Bandicoot 3 • Spyro the Dragon
Nintendo 64 (Released 1996)	Uses cartridges, expensive games, amazing games, fairly compact, 6w electricity use, requires Tv. Can be adapted into a handheld console.	• Banjo Kazooie • Super Mario 64 • Mario Party 2 • Goldeneye 007 • LoZ - Ocarina of Time
Playstation 2 (Released 2000)	Fair sized console, uses discs, requires Tv.	• GTA San Andreas • Final Fantasy X • Gran Turismo 3 • Metal Gear Solid 2 • GTA Vice City
Original Xbox (Released 2001)	Large console, uses discs, great games, requires Tv. Uses 50w of power. Can be hardmodded with a new drive to put hundreds of games on it.	• Halo • Halo 2 • Star Wars KOTOR • TES Morrowind • Splinter Cell Chaos Theory
Xbox 360 (Released 2005)	More modern console with huge variety of games.	• Halo 3 • Fallout 3 • Skyrim • Portal 2 • Red Dead Redemption

Playstation 3 (Released 2006)	Fair sized console, uses discs, requires Tv.	• GTA V • The Last of Us • Uncharted 2 • Red Dead Redemption • Metal Gear Solid 4
Wii (Released 2006)	A fairly modern console that uses discs and tactile controllers.	• Wii Sports • Super Mario Galaxy • Super Mario Galaxy 2 • Super Smash Bros. Brawl • LoZ Skyward Sword
Wii-U (Released 2012)	A fairly modern console that uses discs and tactile controllers.	• Super Mario 3D World • Mario Kart 8 • Super Mario Bros. U • Xenoblade Chronicles • Splatoon
Playstation 4 (Released 2013)	A modern console with great graphics and hungry for power. **Requires Internet.**	• Horizon Zero Dawn • Uncharted 4 • Bloodborne • The Witcher 3 • Overwatch
Xbox One (Released 2013)	A modern console hungry for power but has great graphics. **Requires Internet.**	• Forza Horizon 3 • Fortnite • Halo 5 • Overwatch • The Witcher 3

8 Computer Entertainment

Computers, including laptops are generally too bulky to bug out with. Netbooks, Mobiles, Tablets and E-readers are a much smaller form factor with better battery life. If you have the power requirements to run a Pc then you have a huge selection of games you could play. The only restrictions are online or networked co-op games.

Uses

Typing / Documenting	Creating new documents such as a log so you can keep track of projects, mental notes or other survival requirements.
Reading	You can read documents on a pc.
Gaming	Pcs are much faster than portable devices so you're able to play more demanding games.
Programming	Program some applications or games if you wish.

Recommended Games

Skyrim	A hugely immersive and addictive game with weeks of gameplay, quests and items to collect.
Fallout 3	Made by the creators of Skyrim and is basically Skyrim with guns.
Age of Empires 2	The same as 1 but more civilizations to choose from and a lot more units.
Terraria	Very similar to minecraft but 2D and with more of an emphasis on bosses and progression.
Stardew Valley	A 2D exploration game where you live in a small village and have daily interactions with the locals.

9 Other Entertainment

Portable Entertainment Other electronic entertainment which is easily portable.	**Teenage Engineering: PO-16** Create whole songs on this compact digital music station.		

Virtual Reality

VR systems can provide a high level of immersion to take you out of the horrible situation which may be unravelling around you. The following list is of various VR systems and their advantages and disadvantages.

Samsung Gear VR	Uses a mobile device as the screen. More comfortable than Google Cardboard but isn't as light and can't be folded down to a tiny size.
Google Cardboard	Extremely cheap and light VR system which uses your mobile as a screen.
HTC Vive	Designed for video gaming this headset must be plugged into a PC.
Oculus Rift	Designed for video gaming this headset must be plugged into a PC.

8 Solo Entertainment

You may be alone in your bug out situation and have no survival needs to worry about. This section should hopefully assist in relieving your boredom.

Subheadings

1. Solo Activities	**2. Make A Time Capsule**	**3. Act Like a Kid Again**	**4. Teaching**
5. Learning	**6. Poetry**	**7. Storywriting**	**8. Letterwriting**

		9. Journaling	**10. Reading**	**11. Survival Stories**	**12. War Stories**		
		13. Robinson Crusoe	**14. Back to the Future I**	**15. Conspiracies**			

1 Solo Activities

Dining	Food passes the time if enjoyed and savoured as well as providing a degree of pleasure. If you have saved a rare or tasty type of food when all you have been eating is slop, treat yourself and pull out all the stops. Make sure you go the distance with a set table, proper lighting and cutlery as the anticipation can be just as good. Just be sure not to burn it.			
Relaxation / Pamper	Treating yourself to something special such as a bubble bath, spa or that bottle of wine you've been saving for 10 years. These can relax you and help pass the time.			
Taming An Animal	There may be a lot of wildlife around you but you haven't given thought to having one as a pet. Taming requires a bit of skill, patience and the means to care for the animal.	**Tame-able Animals** ● Dogs ● Cats ● Goat ● Pig ● Sheep ● Bird ● Cattle ● Chicken	**Tame-able Animals** ● Donkey ● Duck ● Camel ● Horse ● Goose ● Llama ● Ferret ● Rabbit	**Tame-able Animals** ● Fish ● Mouse ● Fox ● Hedgehog ● Ostrich ● Elephant ● Kangaroo ● Cockatoo
Complete a Project	Finish a project that has been sitting idly which you haven't wanted to finish. Finishing it will give you a sense of accomplishment and often provides you with something in return.			
Start a Big Project	If you're going to be living alone in a SHTF scenario for a while it would be beneficial to build a larger - more reinforced house or a new storage building. Not only will a new project keep your mind occupied but you'll also end up with a useful item by the end.			
Pondering Religion	Whether it's in a church or under a tree in your backyard, ponder faith, religion, God, and the purpose of life, and do some digging so you know for sure you're forming your own opinion without the input from family, friends, or peers. You can't really own your faith, or lack of faith, unless it's something you choose to believe, not something you were raised to believe. Take a look at the "Religion" section for more information about them.			
Stargaze	Lie back on the grass and look out into the sky, try to identify the star systems you know. If you want a hint there is a list of the star groups in the "Navigation" section. Wonder in awe at how big the universe is and how small you are in comparison.			
Imagining	Sit back and imagine you're on a tropical island and are surrounded by all your favourite foods which never gets cold (or hot). Pretend there's a dragon attacking your camp and you have to run around hiding from dragon breath. The floor is lava and you have to get to high ground! A beautiful man/woman has entered your camp and starts talking seductively to you.			
Fancy Dinner	If you've been saving a precious morsel for consumption at a later date now is the time to eat it. Pull out some bacon, eggs, sausage, wine or whatever you've been saving as well as some candles, a table cloth and cook up a treat. Use a knife and fork and savour the meal, don't just wolf it down.			
List Your Goals	First consider what you want to achieve, and then commit to it. Set SMART (specific, measureable, attainable, relevant and time-bound) goals that motivate you and write them down to make them feel tangible. Then plan the steps you must take to realize your goal, and cross off each one as you work through them. Goal setting is a powerful process for thinking about your ideal future, and for motivating yourself to turn your vision of this future into reality. The process of setting goals helps you choose where you want to go in life. By knowing precisely what you want to achieve, you know where you have to concentrate your efforts. You'll also quickly spot the distractions that can, so easily, lead you astray.			**Types of Goals** ● Career ● Financial ● Education ● Family ● Artistic ● Attitude ● Physical ● Pleasure ● Public Service
Create Some Artwork	Art is an inspired medium from which creativity and emotion flows. It often displays the design, thought and feelings of the artist to the world and can often be very abstract. Try picking one of the following art forms and giving it a go. Move out of your comfort zone into another field if you're feeling bored of painting or drawing all the time. If it's a 3D form of art - they can be hung around your house or even integrated with it.		**Types of Art** ● Ceramics ● Drawing ● Painting ● Sculpture ● Printmaking ● Designs	**Types of Art** ● Crafts ● Photography ● Video ● Filmmaking ● Literature ● Architecture
Invention	Have you been going through the same dreary routine every day? Try to invent something that will make your life easier and ease the daily burden of daily tasks. It doesn't have to be a revolutionary idea or concept, but something that was simple in modern life may be much more difficult now that SHTF.			**Ideas** ● Easier way to Fish ● Indoor Toilet ● Bird Trap ● Generating Electricity
Keep a Journal	If you don't already have a journal of the events that have happened to you I highly recommend keeping one. It could be a worldwide best seller one day of your survival tales and how you made it though the worst catastrophe of the century. You can also jot down notes of which plants are edible and keep other helpful hints like keeping track of what day it is.			
A Long Walk / Expedition	Walking somewhere where you haven't been before will switch your mind on as you have to remember the way you've taken. It will also provide you with new opportunities and possibly some new food to eat or sighting new animals.			

2 Make A Time Capsule

ENTERTAINMENT

Entertainment

Solo

Make A Time Capsule

Creating a time capsule will not only pass the time but give you (or someone else) something to look forward to opening in 10+ years - hopefully after this disaster has blown over. Ensure it's airtight and waterproof and that none of the contents will spoil over that timeframe. Following is a list of ideas of what you can put in.

News
- A local daily newspaper
- A videotape of the local nightly news
- A national newspaper (USA Today)
- A television guide
- A weekly news magazine (Time, Newsweek)
- An entertainment magazine (People, US)
- Special interest magazines (Sports Illustrated)
- Messages/Letters to the Future
- A copy of a future-oriented magazine
- Your favourite magazine
- Year-in-review issues of magazines or newspapers

Collectables
- Newspaper front pages with major headlines
- Ticket stubs (concerts, movies, sporting events, etc.)
- Sports trading cards (or other collectibles)
- A list of popular expressions (slang)
- A popular toy or doll (Beanie Babies, Pet Rock, etc.)
- A sample of product packaging (empty Coke can, etc.)
- An extended family tree

What to Put In
- A floor plan of your home
- A menu from a favourite restaurant
- Items from your job or school (business card, etc.)

Photos
- Downtown or suburban skyline and storefronts
- Advertising billboards
- Scenes from your neighbourhood
- The outside of your favourite restaurant
- Movie theatre marquee with movies listed
- Anything that you think is likely to change
- Interior and exterior shots of your home
- Photos of you in your favourite daily clothes
- Photos of your car(s)
- Photos of your workplace/School
- Vacation or fun-time photos

Video
- A video tour of your home
- A video tour of your work
- A video tour of your daily life
- A Predictions for the Future session with friends in front of the camera
- Family history interviews
- Video Messages to the Future

From TV/DVD
- Popular or favourite TV shows
- Year-in-review specials (usually in December)
- Major sporting events (Super Bowl, etc.)
- Major news events
- Music videos
- Awards programs (Academy Awards, etc.)
- Popular cartoons

Audio
- Top-10 music hits
- 45 or 90 minutes of radio programming
- Audio Messages to the Future
- A popular CD or taped radio show (top-10 music hits)

Documents
- A paycheck stub or utility bill
- A copy of a tax return
- A copy of a credit card bill
- A voided personal check

3 Act Like a Kid Again

Being an adult sucks sometimes. There's always work to be done. A lot is expected of you. You have to pay for food, and then when you eat it, your body does stupid things like give you heartburn. The benefits of a childlike perspective on the world are well documented. Whether it's the cardiovascular boost from a sense of wonderment or the stress-relieving properties of playfulness and laughter, studies show that going back to your youth isn't just fun: It's good for you.

Arts and crafts
Kids are inherently creative, but it's a skill that tends to drop off over time, as the vicissitudes of adult life compete for time and attention. Which is a shame, as research shows there are many cognitive benefits to maintaining a creative hobby in adulthood.

Build a Fort
Remember cozying up on a rainy day in your very own fort? Pillows and blankets stretched out across chairs, with a fat cat sprawled somewhere in the middle? That doesn't have to stop just because you're old now. In fact, it can be a downright awesome way to spend a romantic evening.

ENTERTAINMENT | Entertainment | Act Like a Kid Again

Hit the Playground
In 1995, artists Bob and Gail Cassilly launched a crazy project: turning an abandoned St. Louis shoe factory into a massive adult playground. It was a laughable idea, but upon its opening in 1997, City Museum was embraced with gusto, and today the cherished landmark draws more than 300,000 visitors a year.

Build a Treehouse
As an adult, your treehouse options expand dramatically, with the introduction of a key missing element: power tools. If you're a homeowner, building a treehouse is an awesome summer project that also boosts your property value, and it's not as expensive as you might think.

Make a Sand Castle
If you live near the beach, sandcastle building is probably a nostalgic pastime–but did you know it's also a serious craft? In the same vein as ice-sculpting or wood-carving, sandcastle building has its own associations and even major contests. Forget golf: Grab your shovel and pail, head down to the beach, and take up a hobby that's way more interesting.

Play Pretend
Playing pretend is a hobby shared by children all across the world, because it promotes creative thinking and fosters social cohesion. It's a shame, then, that it's a hobby we tend to abandon as we grow older–but it doesn't have to be. With just a handful of good friends and a bottle of cheap tequila, you too can play pretend.

Get Dirty
Rolling around in the mud and jumping in puddles is always fun for kids - not the parents. But since you're now a kid again you should go find a big hole of mud or a deep puddle to splash in.

4 Teaching

ENTERTAINMENT | Solo | Teaching

If the disaster you're facing is for the long term you will need to train up people in how to survive, especially your kids and giving them the education they deserve. TPE is aimed at proving this knowledge to anyone and everyone who will read it and will be an excellent resource in teaching people how to survive, including a lot of other topics. I also recommend having a collection of EBooks on various subjects such as Math, Physics and Chemistry to assist in teaching younger generations how the world works.	**Subjects** ● Science ● Technology ● History ● Geography ● Art ● Music ● Physical Education ● Religious Education	**Other Subjects** ● PSHE (personal, social and health education) ● Citizenship ● Modern Foreign Language

Teaching Subjects	**Science:** Science is a systematic enterprise that builds and organizes knowledge in the form of testable explanations and predictions about the universe. **Technology:** The application of scientific knowledge for practical purposes, especially in industry. **History:** History is the study of the past as it is described in written documents. **Geography:** Geography is a field of science devoted to the study of the lands, features, inhabitants, and phenomena of Earth. **Art:** Art is a diverse range of human activities in creating visual, auditory or performing artefacts (artworks), expressing the author's imaginative, conceptual idea, or technical skill, intended to be appreciated for their beauty or emotional power. **Music:** Music is an art form and cultural activity whose medium is sound organized in time. **Physical Education:** Physical education, also known as Phys Ed., PE, gym, or gym class is an educational course related of maintaining the human body through physical exercises. **Religious Education:** Religious education is the teaching of a particular religion and its varied aspects: its beliefs, doctrines, rituals, customs, rites, and personal roles.

Physical Science Physical science is an encompassing term for the branches of natural science and science that study non-living systems, in contrast to the life sciences.	**Physics:** Physics is a natural science that involves the study of matter and its motion through spacetime, along with related concepts such as energy and force. More broadly, it is the general analysis of nature, conducted in order to understand how the universe behaves. **Chemistry:** Chemistry is the science of matter and the changes it undergoes. **Earth Science:** Earth science (also known as geoscience) is an all-embracing term for the sciences related to the planet Earth. **Ecology:** Ecology is the scientific study of the relationships that living organisms have with each other and with their abiotic environment. **Oceanography:** Oceanography, or marine biology, is the branch of Earth science that study of the ocean. **Geology:** Geology is the science comprising the study of solid Earth, the rocks of which it is composed, and the processes by which they change. **Meteorology:** Meteorology is the interdisciplinary scientific study of the atmosphere. **Astronomy:** Space science or Astronomy is the study of everything in outer space.
Life Science Life science comprises the branches of science that involve the scientific study of living organisms, like plants, animals, and human beings.	**Biology:** Biology is the branch of natural science concerned with the study of life and living organisms, including their structure, function, growth, origin, evolution, distribution, and taxonomy. **Zoology:** Zoology, is the branch of science that relates to the animal kingdom, including the structure, embryology, evolution, classification, habits, and distribution of all animals, both living and extinct. **Human Biology:** Human biology is an interdisciplinary academic field of biology, biological anthropology, nutrition and medicine which focuses on humans; it is closely related to primate biology, and a number of other fields. **Botany:** Botany, plant science, or plant biology is a branch of biology that involves the scientific study of plant life.
Social Sciences The social sciences are the fields of scholarship that study society. "Social science" is commonly used as an umbrella term to refer to a plurality of fields outside of the natural sciences.	**Anthropology:** Anthropology is the study of humans and human behaviour and societies in the past and present. **Archaeology:** Archaeology, is the study of human activity through the recovery and analysis of material culture. **Business Administration:** Business administration is management of a business. It includes all aspects of overseeing and supervising business operations and related fields which include accounting, finance and marketing. **Communication:** Communication is the act of conveying meanings from one entity or group to another through the use of mutually understood signs and semiotic rules. **Criminology:** Study of the nature, causes, control, consequences, and prevention of criminal behaviour. **Economics:** Studies the production, distribution, and consumption of goods and services. **Education:** Education is the process of facilitating learning, or the acquisition of knowledge, skills, values or beliefs. **Government:** A government is the system or group of people governing an organized community, often a state. **Linguistics:** Linguistics is the scientific study of language form, language meaning, and language in context. **Political Science:** Deals with systems of governance, and the analysis of political activities, thoughts, and behaviour.

ENTERTAINMENT | Entertainment | Teaching

Formal Sciences Unlike other sciences, the formal sciences are not concerned with the validity of theories based on observations in the real world (empirical knowledge), but rather with the properties of formal systems based on definitions and rules.	**Decision Theory:** Or the theory of choice, is the study of the reasoning underlying an agent's choices. **Logic:** A subject concerned with the most general laws of truth and valid inference. **Mathematics:** Mathematics is the study of such topics as quantity, structure, space, and change. **Statistics:** Statistics is a branch of mathematics dealing with the collection, organization, analysis, interpretation and presentation of data. **Systems Theory:** Systems theory is the interdisciplinary study of systems. A system is a cohesive conglomeration of interrelated and interdependent parts that is either natural or man-made. **Theoretical Computer Science:** Theoretical computer science, or TCS, is a subset of general computer science and mathematics that focuses on more mathematical topics of computing and includes the theory of computation. **Information Theory:** Information theory studies the quantification, storage, and communication of information. **Theoretical Linguistics:** Theoretical linguistics, or general linguistics, is the branch of linguistics which inquires into the nature of language itself and seeks to answer fundamental questions as to what language is.
Applied Sciences Applied science is the application of scientific knowledge transferred into a physical environment. Examples include testing a theoretical model through the use of formal science or solving a practical problem through the use of natural science.	**Engineering:** Engineering is the creative application of science, mathematical methods, and empirical evidence to the innovation, design, construction, operation and maintenance of structures, machines, materials, devices, systems, processes, and organizations. **Applied Mathematics:** Applied mathematics is the application of mathematical methods by different fields such as science, engineering, business, computer science, and industry. **Applied Physics:** Applied physics is intended for a particular technological or practical use. It is usually considered as a bridge or connection between physics and engineering. **Medicine:** Medicine is the science and practice of the diagnosis, treatment, and prevention of disease. **Computer Science:** Computer science is the study of the theory, experimentation, and engineering that form the basis for the design and use of computers.

5 Learning

Learning

There are plenty of skills you can learn in the wild. Take a look at the "Skills" section and pick a category you want to delve into. From there pick one of the individual skills you've always been interested in but never had the time to try and learn. If you're lucky there may even be enough information in this spreadsheet to get you started, like if you picked blacksmithing.

Educate Yourself
Keeping your mind active is the best way to avoid boredom and learning something new will do this and provide you with knowledge you can use. This is different to the "Learn A Skill" distraction in the way that what you learn can't be created with your hands.

Learn an Instrument If you have access to an instrument or the ability to make one yourself you can learn to play. Be sure the instrument of your choice won't attract unwanted attention, or that you're far from civilization.	**Instruments to Learn** ● Piano ● Guitar ● Violin ● Drums ● Clarinet ● Saxophone ● Trumpet ● Banjo	**Compact Instruments** ● Recorder ● Flute ● Fiddle / Mandolin ● Ukulele ● Guitalele ● Harmonica ● Ocarina ● Erhu ● Kalimba ● Jew's Harp

6 Poetry

Poetry | Solo

Poetry is a form of literature that uses aesthetic and rhythmic qualities of language—such as phonaesthetics, sound symbolism, and metre—to evoke meanings in addition to, or in place of, the prosaic ostensible meaning.

Write Poems

A poem is an expression of art in written form, You can write them anywhere, even in your dorm!
They help you express emotions unspeakably deep, And often change others lives so they too shall weep.

Below are some various types of poems you may wish to write during SHTF, and some examples to help you get started.

Types of Poems

Poem Type	Poem Description	Example	
Sonnet	A short rhyming poem with 14 lines. The original sonnet form was invented in the 13/14th century by Dante and an Italian philosopher named Francisco Petrarch. The form remained largely unknown until it was found and developed by writers such as Shakespeare. Sonnets use iambic meter in each line and use line-ending rhymes.	**Visions (By Francesco Petrarch)** "Being one day at my window all alone, So manie strange things happened me to see, As much as it grieveth me to thinke thereon. At my right hand a hynde appear'd to mee, So faire as mote the greatest god delite; Two eager dogs did her pursue in chace. Of which the one was blacke, the other white:	With deadly force so in their cruell race They pincht the haunches of that gentle beast, That at the last, and in short time, I spide, Under a rocke, where she alas, oppress, Fell to the ground, and there untimely dide. Cruell death vanquishing so noble beautie Oft makes me wayle so hard a desire."
Limerick	A five-line witty poem with a distinctive rhythm. The first, second and fifth lines, the longer lines, rhyme. The third and fourth shorter lines rhyme. (A-A-B-B-A).	**To Miss Vera Beringer (By Lewis Carroll)** "There was a young lady of station 'I love man' was her sole exclamation; But when men cried: 'You flatter,' She replied, 'Oh! no matter Isle of Man is the true explanation.'"	

Haiku	This ancient form of poem writing is renowned for its small size as well as the precise punctuation and syllables needed on its three lines. It is of ancient Asian origin. Haiku's are composed of 3 lines, each a phrase. The first line typically has 5 syllables, second line has 7 and the 3rd and last line repeats another 5. In addition there is a seasonal reference included.	**Dust of Summers (By Ludmila Balabanova)** "Twilight… his voice deep purple" **Thirds (By Jeffrey Winke)** "Song birds at the train yard's edge two cars coupling"
Villanelle	A nineteen-line poem divided into five tercets (three-line stanzas) and a closing quatrain (four-line stanza), the villanelle is further constrained by a regular rhyming scheme and two refrains that are echoed in each stanza.	**Do not go gentle into that good night (By Dylan Thomas)** Do not go gentle into that good night, Old age should burn and rave at close of day; Rage, rage against the dying of the light. Though wise men at their end know dark is right, Because their words had forked no lightning they Do not go gentle into that good night. Good men, the last wave by, crying how bright Their frail deeds might have danced in a green bay, Rage, rage against the dying of the light. Wild men who caught and sang the sun in flight, And learn, too late, they grieved it on its way, Do not go gentle into that good night. Grave men, near death, who see with blinding sight Blind eyes could blaze like meteors and be gay, Rage, rage against the dying of the light. And you, my father, there on the sad height, Curse, bless, me now with your fierce tears, I pray. Do not go gentle into that good night. Rage, rage against the dying of the light.
Elegy	The word elegy does not describe the form of a poem, but rather its content. Elegies are poems written to lament someone's death, such as Walt Whitman's "O Captain! My Captain!" written in honour of President Lincoln. The long-standing tradition of this type of poem traces back to ancient Greece, when elegies were sung to the accompaniment of an aulos (a double-reed instrument). Elegies are distinct from short epitaphs, laudatory odes, and eulogies, which fall into the category of prose.	**In Memory of W.B. Yeats (By W.H. Auden)** "With the farming of a verse Make a vineyard of the curse, Sing of human unsuccess In a rapture of distress; In the deserts of the heart Let the healing fountain start, In the prison of his days Teach the free man how to praise."
Ballad	The ballad's lyrical rhythm and rhyme nod to the fact that this poetic form is rooted in song. The traditional ballad was performed at dances in time with the music, and the term ultimately derives from the Latin word ballāre meaning "to dance." This form of narrative poem is structured with an unspecified number of rhymed quatrains (four-line stanzas).	**Drover (By Elton John)** "From the sunburnt plains of far off North Australia Came a fella born to ride the wide brown land Oh he grew up running wil But soon by all was styled As the country's greatest-ever droving man" **Rime of an Ancient Mariner (By Samuel Taylor Coleridge)** "Day after day, day after day We stuck nor breathe, nor motion; As idle as a painted ship Upon a painted ocean."
Epic	Much like a ballad, an epic is a narrative poem that spins a tale—a lengthy one—of a hero's great valour and adventure. Much like the elegy, epics derive from ancient Greece, where epikós meant "speech," "tale," or "song," and applied not only to the subject matter but to a specific type of meter, the Epic meter.	**The Iliad (800 BCE) (By Homer)** Iliad is an example of an epic. It was written by the popular Greek poet, Homer. It relates the story of the Trojan wars, involving themes of courage, boldness, love for one's country and nostalgia of family. However, it describes many legends related to the siege of Troy, the events took place before the siege, the gathering of the warriors prior to the siege and the causes of the war. Later, the epic foretold the looming death of Achilles and the destruction of Troy. The style of narration is grand, and suits an epic poem — the reason that it is still one the most celebrated work of antiquity.
Sestina	The sestina took its name from the Italian word for "six," the number at the core of the poem's structure. This usually unrhymed poem consists of six six-line stanzas and a three-line envoy, or a short concluding stanza, at the end. Each stanza repeats the end words of the lines of the first stanza, but in a different order. Then, the envoy uses those six words again, three in the middle of the lines and three in the end.	**A Miracle for Breakfast (By Elizabeth Bishop)** "At six o'clock we were waiting for coffee, waiting for coffee and the charitable crumb that was going to be served from a certain balcony —like kings of old, or like a miracle. It was still dark. One foot of the sun steadied itself on a long ripple in the river …"
Free Verse	A Free Verse Poem does not follow any rules. Their creation is completely in the hands of the author. Rhyming, syllable count, punctuation, number of lines, number of stanzas, and line formation can be done however the author wants in order to convey the idea. There is no right or wrong way to create a Free Verse poem.	**The Garden (By Ezra Pound)** "Like a skein of loose silk blown against a wall She walks by the railing of a path in Kensington Gardens, And she is dying piece-meal of a sort of emotional anemia. And round about there is a rabble Of the filthy, sturdy, unkillable infants of the very poor. They shall inherit the earth. In her is the end of breeding. Her boredom is exquisite and excessive… will commit that indiscretion."

Read Poems

The best way to learn how to write poems is reading other's creations first and seeing what subject matter they write about. Below are some of the top rated poems from familyfriendpoems.com on a variety of subjects. Read them from left to right, top to bottom.

Read the poems from left to right and then drop a cell and continue.

Our Hearts Will Always Touch

By Ranja Kujala
Published: Sep 2007
Category: Cancer

When I lay there beside you,
Could you feel me there?
My arms were wrapped around you,
And I was stroking your hair.

I was talking about all the good times,
For me they were every single day.
I wanted you to feel love and comfort,
And happy in some way.

I watched your every breath,
And prayed that each one wasn't your last.
The time we got to share together,
Went by too quick...Too fast.

I wanted you to wake up,
Please Mum...Open your eyes.
Tell me this is a nightmare,
And not our goodbyes.

As your last breath grew closer,
We lay there peacefully together.
My heart continually breaking,
Because I wanted you forever.

Then there it was,
Your final breath of air.
I didn't want to believe it,
This is so cruel and not fair.

I held your beautiful face,
And prayed you'd breath again.
I wasn't ready for you to go,
I couldn't admit that this was the end.

But then I realized that you were now in peace,
And not suffering anymore.
You were beginning the life of an Angel,
And your body would no longer be sore.

I held you close and squeezed you tight,
And tried to say goodbye.
I've lost my Mum and my number one best friend,
All my heart could do is cry.

I slowly got up,
I wanted so much to stay.
I leaned over and gave you one more kiss,
It was so hard to walk away.

Mum, you are my entire world,
And I miss you so very much.
I wish I could feel your lovable cuddle,
And your soft and gentle touch.

But for now I have to wait,
Until we meet again.
You will always be in my heart and thoughts,
My dear Mum and best friend.

Always and Forever,
Our hearts will always touch.
Always and Forever,
Your baby girl loves you so much.

Because He Loves Cocaine

Melissa Scott
Published: Aug 2009
Category: Addiction

I can see it in his eyes
when he comes creeping in.
He's been somewhere he promised me
he'd never go again.

He thinks that I won't know it.
He thinks that I can't tell.
But he forgets how many times
he's put me through this hell.

The deceit is never-ending.
The betrayal. Silly lies.
How can he even sit there
and look me in the eyes?

I've cried so many tears.
I feel all alone.
He's sitting right beside me,
but he's not really home.

This drug has taken over him.
It's eating up his soul.
It's made his heart so ugly.
Black, like a piece of coal.

I try to stand beside him.
I try to give him love.
I beg him to love me more than it,
but I'm not good enough.

This burden is so heavy.
I cannot tell my friends.
I pray to God to help him.
I pray it someday ends.

Please God hear me praying.
Please God help him soon.
We have a little baby
who thinks he hung the moon.

He is just 8 months old
and I think it would be sad,
If a kid as great as him
has to grow up without a dad.

But his daddy is slowly dying.
Killing himself, without a care.
I wish that he could understand
that this just isn't fair.

I have no happiness anymore.
It's killing me as well.
We always fight. We never laugh.
We only scream and yell.

This is our lives he's tearing apart.
It's not a funny game.
It's destroyed our family and killed our love.
Because he loves "Cocaine."

Growing Up With Grandma

By Candy Canan
Published: Feb 2006
Category: Adoption

I don't know when it happened.
I don't know when she came,
But she's the one I always knew.
Grandma was her name.

She taught me how to tie my shoes.
She taught me how to talk,
And though I can't remember,
I think she taught me how to walk.

When all the other kids in school
Would talk about Mom and Dad,
I wondered where my parents were;
That made me kinda sad.

And sometimes there were days I'd cry
Or hide my head in shame.
But Grandma took it all in stride
And loved me all the same.

She'd wrap her arms around me
And kiss me on the head.
She'd tell me that she loved me
When she tucked me into bed.

To have a regular family,
Some siblings, a mom, and a dad.
What had I done to deserve less than others?
Sometimes I felt so mad.

Being a teen, I remember the days
When being with friends was more fun.
And I wondered what it would have been like
To actually be someone's son,

"It's alright, it's okay," Grandma would say.
"One day you'll understand why.
Life just isn't fair to everyone, you see.
It's always okay to cry."

And when I went off to college,
I met the love of my life.
It was Grandma who was the first I told
That I planned to make her my wife.

A little girl to share her name,
For all that she'd given me.
So much I owed to Grandma.
That was plain to see.

Soon after I'd become a father,
For that I could hardly wait.
To have a child of my very own,
And to make my Grandma a "Great."

As time passed and life grew short
I hoped my Grandma knew
That it was her love and her support
That always got me through.

If I could tell her one more thing,
"Thanks Grandma," is what I 'd say,
"For loving me and making me
The man I am today."

To Our Ellis

By Pamela A. Snow
Published: Feb 2006
Category: Prayer

How does a loving mother explain
Heaven to her dying child?
Please give me the words, O Lord, and
let me say them with a smile…

There is a place called heaven, Son,
beyond the skies above,
It is the place where GOD is watching,
His heart so full of love.

He watches all His children, Son,
He watches you and me,
He wants to know we love Him, and
hopes that we will be…

Always strong and healthy, always
kind and free!

But sometimes things do happen, Son,
and sickness takes a hold,
It might be something serious, it
might be just a cold.

GOD sends His special angels,
to watch over us and pray,
And by our side they linger, they
are never far away.

They lift us up on angels' wings when
we are all too weak,
And, oh!, they pray so softly, Son,
with gentle whispers do they speak.

So, have no fear, my darling, should
GOD come to take you home,
For it is up there in that heaven,
Son, where you will run and laugh
and roam!

You will hear that angel choir rejoice
in praises to the LORD,
And my darling precious child, you
never will be sick again...
No, never, anymore!!

But, most of all, you will meet the
King, our Saviour, your Best Friend, oh my!,
If I could see him take your hand, I
know that I would cry!!

You have fought so long, you gave your
all..GOD says it's time to rest,
We will always love and miss you, Ellis,
but GOD...He knows what's best!

In Your Heart

By Thomas S. Carver
Published: Feb 2006
Category: Daughter

He was so proud of his little girl.
It was her very first day of school.
He walked with her to school that day,
And she held his hand all the way.

They walked together quiet and sad,
A little girl and her loving dad.
Into the school her father led,
But he almost cried when she said,

"Daddy, Daddy, please don't go.
Don't leave me here all alone.
I'll miss you if you go away,
And I might need you; can't you stay?"

"Little Daughter, please don't cry.
You'll be okay, so dry your eyes.
You have our memories in your heart.
We're together though we're apart."

He sat up front on her wedding day
And cried as his daughter walked away.
Later that night he watched her dance.
He sat there waiting for his chance.

The band started to play their song.
Father and daughter danced along.
She looked at him and saw a tear
Then leaned and whispered in his ear,

"Daddy, Daddy, I have to go.
I hate to leave you all alone.
I'll miss you when I go away,
But if you need me then I'll stay."

"Little Daughter, I'll be just fine.
I'll love you always; you are mine.
I have our memories in my heart.
We're together though we're apart."

She came in his room and kissed his head
Then sat next to his hospital bed.
He took her hand and held it tight
And wished he had the strength to fight.

They sat together, quiet and sad,
A daughter and her dying dad.
He saw the tears she tried to hide.
She looked at him and then she cried.

"Daddy, Daddy, please don't go.
Don't leave me here all alone.
I'll miss you when you go away.
I still need you; you have to stay."

"Little Daughter, I love you so.
I want to stay but have to go.
I'll always be here in your heart.
We're together though we're apart."

Seasons of Grief

By Belinda Stotler
Published: Feb 2012
Category: Grief

Shall I wither and fall like an autumn leaf,
From this deep sorrow - from this painful grief?
How can I go on or find a way to be strong?
Will I ever again enjoy life's sweet song?

Sometimes a warm memory sheds light in the dark
And eases the pain like the song of a Meadow Lark.
Then it flits away on silent wings and I'm alone;
Hungering for more of the light it had shone.

Shall grief's bitter cold sadness consume me,
Like a winter storm on the vast angry sea?
How can I fill the void and deep desperate need
To replant my heart with hope's lovely seed?

Then I look at a photo of your playful smiling face
And for a moment I escape to a serene happy place;
Remembering the laughter and all you would do,
Cherishing the honest, caring, loving spirit of you.

Shall spring's cheerful flowers bring life anew
And allow me to forget the agony of missing you?
Will spring's burst of new life bring fresh hope
And teach my grieving soul how to cope?

Sometimes I'll read a treasured card you had given me
And each word's special meaning makes me see,
The precious gift of love I was fortunate to receive,
And I realize you'd never want to see me grieve.

Shall summer's warm brilliant sun bring new light,
And free my anguished mind of its terrible plight?
Will its gentle breezes chase grief's dark clouds away,
And show me a clear path towards a better day?

When I visit the grave where you lie in eternal peace,
I know that death and heaven brought you release;
I try to envision your joy on that shore across the sea,
And, until I join you, that'll have to be enough for me.

For all the remaining seasons of my life on earth,
There'll be days I'll miss your merriment and mirth,
And sometimes I'll sadly long for all the yesterdays;
Missing our chats and your gentle understanding ways.

Yet, the lessons of kindness and love you taught me,
And the good things in life you've helped me to see;
Linger as lasting gifts that comfort and will sustain,
Until I journey to that peaceful shore and see you again.

United

Do we stay silent
Or raise our voices?
Do we give in
Or make our choices?

This is our chance.
This is our threat.
This is our choice.
And we're not finished yet.

We stand together
And await the light
This is our chance,
This is our fight.

Here we're standing,
United and strong.
We're not giving this up.
We're not moving on.

This is our voice;
This is what we came to show.
This is our choice,
And we're not letting go

This is our word.
You give what you get.
This is our world,
And we're not finished yet.

We stand beside you,
Ready to pay our debt
We stand united
Because we're not finished yet.

Children are born every day,
Waiting for someone to trust.
Dreams are dreamed every day
But left alone to rust.

Raise your voices; stand up tall.
You know this is unjust.
Make your choices; stand from the fall,
Because dreams are counting on us.

I know that you are scared to be strong.
You have every right to be.
Show the dreamers that you care.
Come and stand with me.

Think of our future; think of the truth.
Think of the lives we share.
Think of our beginnings; think of our youth.
We're all just a kid from somewhere.

Standing together, holding hands,
We all came from the same place.
Joined we are forever;
We are running the same race.

Stand with me; we're not through yet.
We are getting what we gave.
Hand in hand with me, strongest together.
This can all be saved.

This is like our lifetimes;
This is more than just a game.
This is more than just the money,
More than ourselves, more than fame.

Speak up for what matters,
Because now it does; this love is caving.
Speak up before we shatter.
Think of all the dreams we're saving.

There are kids like us in Texas,
Out in Utah, up in Maine.
There are kids that are the future Crosby,
Skinner, Matthews, Kane.

From the mountains, valleys, cities,
Suburbs, hamlets and countryside,
There are the children of this future.
All around us they reside.

On the Pittsburgh Penguins, Boston Bruins,
The Canes and Minnesota Wild.
We often forget that before they were champions,
Each one was just a child

They once stood watching,
Dreaming with this light inside their eyes.
Together we can save that light,
And return it to more lives.

Here we're standing, grasping hands;
Here we're standing strong.
This time we're not giving in,
And we're not moving on.

THIS is our voice;
This is what we came to show.
This is our choice,
And we're not letting go.

This is the world we live in.
You must give what you get.
This is our word we're giving.
We're not finished yet.

We stand together, united.
This is our chance to repay this debt.
We stand beside you all, united.
We're not finished yet.

Reflections

Category: Death

Remember all those happy days, those times she called our own
In all those well-loved places where you now grieve alone.
And those small endearing gestures, which you thought you knew so well,
Are fading, as time passes, with her words, her kiss, her smell.

Are fading, as time passes, with her words, her kiss, her smell.
But then there is that moment, that time within the day,
When you feel she is beside you in that old familiar way.

But as you turn to see her smile or receive a tender touch,
There's only a dark shadow of the one you loved so much.
And tears begin to fall in that hole of deep despair,
And memories overwhelm you - more than your heart can bear.

As you remember her gentle grace and her love so soft but strong,
Your heart will simply miss a beat as you miss her life, her song.
You want to rewind the clock and say how much you care;
You want to silence the talk that she's not there to share.

But you smile and chat amiably to family and friends
And hope they do not notice your world is at an end.
But she knows that you will carry on because she told you true
That if she had to choose again, she would still choose you.

Imagine

By Shelby S.
Published: May 2013
Category: Alone

Imagine yourself
Alone in your head.
You're hanging, dangling
From a silver thread.

Empty, alone
With the monsters within.
Internally screaming,
You just want to give in.

Now imagine that's you
Every day, every hour.
Forever sinking
Like a wilting flower.

You try to tell your dad
And you try to tell your mom,
But they say you're being silly,
You've just got to move on.

ENTERTAINMENT Entertainment Poetry Read Poems

Because teens don't know sorrow
Nor the hardships of life.
They're just kids with imaginations
Just looking for attention, right?

You think that there's none
Who knows how you feel.
You're just so alone,
But the feelings- they're real.

Useless,
Neglected,
Forgotten,
Distressed.

Alone,
Afraid,
But mostly
Depressed.

And you're friends,
They go on
Like nothing has changed.

"They must not care,"
Your thoughts whisper,
The lies in your brain.

You can't escape it,
Trapped in your own skin.
You're ugly,
You're hated,
But you mask it with a grin.

You hate what you feel,
So instead you feel nothing.
Your insides are numb,
Your confidence crumbling.

You look to other things
To stop the pain.
Cutting, pills,
But it gives you no gain.

And the people around you
Shout abuse your way.
"You're hurting yourself, stop it!"
That's all they ever say.

No matter how you plead
That you're broken inside,
They turn the other way,
They run, they hide.

They say you're just foolish,
It's all in your head.
What they don't know is inside
You're already dead.

It's Me

By Jacqueline Grieve

Category: Addiction

Hey, you guys, don't feel guilty,
It was just my time to go.
I can see you're all feeling sad,
I can see the tears still flow.

My life's journey ended early,
The path I chose was short.
You all tried your best to change it,
But in the end it was for me to sort.

I know I caused you sadness,
I know caused you pain,
But I was captured by these demons,
They wouldn't set me free again.

They took away my freedom,
They took away my choice,
And when they got their hooks in,
You could hear it in my voice.

There were times I tried to fight them,
There was a time I nearly won,
But they came back and overpowered me,
I had nowhere left to run.

I haven't really left you guys,
I am closer than you know,
I will be the whisper in the wind,
I will be everywhere you go.

One day you will all forgive me
One day you will understand
And when your time on earth is done
I will be waiting to take your hand.

Can I Carry You?

By Brad Anderson
Published: Feb 2006
Category: Family

I guess that I can hold you
one more time before you grow
and tell you that I love you
so that you will always know.

Please let me tie your shoe again.
One day you'll tie your own.
And when you think back to this time
I hope it's love I've shown.

Can I help you put your coat on?
Can I please cut up your meat?
Can I pull you in the wagon?
Can I pick you out a treat?

One day you might just care for me,
so let me care for you.
I want to be a part
of every little thing you do.

Tonight could I please wash your hair?
Can I put toys in the bath?
Can I help you count your small ten toes
before I teach you math?

Before you join a baseball team
can I pitch you one more ball?
And one more time can I stand near
to make sure you don't fall?

Let's take another space-ship ride
Up to the Planet Zoor.
Before our Cardboard Rocket
doesn't fit us anymore.

Please let me help you up the hill.
while you're still too small to climb.
And let me read you stories
while you're young and have the time.

I know the day will come
when you will do these things alone.
Will you recall the shoulder rides
and all the balls we've thrown?

I want you to grow stronger
than your Dad could ever be.
And when you find success
there will be no soul more proud than me.

So will you let me carry you?
One day you'll walk alone.
I cannot bear to miss one day
from now until you've grown.

My Best Friends Departure

By Carina Spencer
Published: Nov 2011
Category: Suicide

I jumped, you caught me.
I laughed, you joked.
I was down, you picked me up.
I crumbled, you glued me back together.
I loved you, you loved me back.

You jumped, I couldn't catch you.
You forgot to laugh, I couldn't remind you.
You were down, I couldn't hold you.
You crumbled, I had no glue.
You loved me, I still love you.

Without no warning or sign,
You ventured to a world divine.
I refused to say goodbye,
Yet tonight I cry.
My tears are for you my friend,
But our legacy will not end.

For I shall see you soon,
But first I have living to do.
I promise I won't forget,
Your face is embedded in my heart.

Scars

By Laura R
Published: Oct 2015
Category: Sad

Here on my arm lies a mark that I made.
When I was so low, I cut with a blade
To punish my body for being a mess,
Though here is my testament, I must confess…

That seeing these scars left on my arms, legs, and chest
Makes me realize I was in a place of no rest;
I feel guilty inside for leaving this token.
Now I will see and remember that I was so broken.

But seeing these scars helps me see
That I survived so much trauma and now I am free.
So I ask you now to stand with me and fight,
To show all these demons what they're doing is not right.

You won the battle of good versus bad.
You are still alive and are no longer sad.
Here on my arm lies a mark of survival.
I got through my hate and beat my self-rival.

The Siren

By YoungPoet
Published: May 2011
Category: Heartbreak

He wrote her a song, but it never got finished
They both fell in love, but it was soon diminished
She sits on his bed and cries in his lap
He cries back at her, knowing they can't go back.

Hours go by and neither one can accept
That by letting go they are doing what's best
At the end of the day, comes the part which he fears
To let her go without shedding a tear

Never again will he kiss her goodbye
And just that thought makes him start to cry
Now he'll finish that song, and he'll write it today
This is the start and here's what it says

"You are my siren, you drew me in
With a voice like an angel and the softest skin
Your eyes shine like diamonds and your smile melts my heart
I know that nothing could tear us apart"

That's what he wrote and let me just say
That he'd never do anything to throw that away
But that's not how it works; this world's bitter and harsh
And then something happened, which drew them apart

An old boyfriend showed up and that's when he knew
That her feelings for him were not shiny and new
This person left her and crushed her heart
But she had loved him since the very start.

When our boy came along she saw a way
To end her pain and make it all go away
But by loving this person through thick and through thin
She looked at our boy and wished it was him

Now this is where the second verse starts
It's about how she seemed to break his heart
He found out her feelings, it went straight to his head
So he carried on writing and here's what he said

"You make me smile when no one else can
It just makes me happy to be your man
But it hurts me deeply that you long for his heart
I thought we would last, but this breaks us apart"

He sat in his room and just wished he
Could be just like her ex so that they could be
But as long as he was there they could never be true
So he'd sit in his room feeling sad and blue

Now comes the part where she's crying in his lap
They both just decided to never go back
The pain is immense but it's saving his heart
Because staying with her would rip him apart

Here's where he decides to finish the song
The story of how it all went wrong
He starts the last verse with tears dripping off his nose
The papers all wet but here's how it goes.

"You were my siren, you drew me in
You taught me to love and you taught me to sin
I never thought you could break my heart
But I guess we were wrong right from the start"

"You were my siren, now I'm dead at sea
You drew me in, but you didn't want me
I just wish I knew where it all went wrong
But now another lost sailor can hear your song"

My Promise

By Dan P. Brown
Published: Feb 10, 2018
Category: Romance

If you were my rose, then I'd be your sun,
painting you rainbows when the rains come.
I'd change my orbit to banish the night,
as to keep you in my nurturing light.

If you were my world, then I'd be your moon,
your silent protector, a night-light in the gloom.
Our fates intertwined, two bodies in motion
through time and space, our dance of devotion.

If you were my island, then I'd be your sea,
caressing your shores, soft and gentle I'd be.
My tidal embrace would leave gifts on your sands,
but by current and storm, I'd ward your gentle lands.

If you were love's promise, then I would be time,
your constant companion till stars align.
And though we are mere mortals, true love is divine,
and my devotion eternal, to my one valentine.

She Doesn't Know I Love Her

By Baller327
Published: Oct 2008
Category: Love

When did my feelings get so deep?
Why did they take that big long leap?
Going from friend to crush,
What a rush,

And I don't think she knows.

Since when did her smile make me go weak?
Since when did her tears make mine start to leak?
Why does this happen when I'm always so strong?
When people called me Superman I guess they were wrong,

And I don't think she knows.

When she talks I can't help but watch her lips,
To notice their shape and curves when they dip.
Wait, why am I looking? I don't even know.
And I can't help but wonder if she even knows.

Her beautiful eyes are nothing like ours.
They're so deep and bright; you'd believe they were stars
They pour forth emotions in raging rivers.
They could make even me believe that Santa always delivers,

And still she has no idea.

Her body is perfection, though she denies it.
It makes my head spin with every glance I give.
She could put any man under her spell,
But she doesn't know how I feel, and I don't think I'll tell.

I love how she looks and who she is
And how she makes me feel like this.
I love how she's beautiful and smart with a heart so strong
And how she lives every day like nothing could go wrong.

Still she hasn't got a clue.

Now school is at an end on the 11th at noon.
I wonder if she cares that I'm moving soon.
We're parting that day after school for many months.
I just wish I could have kissed her just once.

Now that I've said it with my poetic skill,
I don't think she knew, and now she never will.

If

By Rudyard Kipling
Published: N/A
Category: Famous

If you can keep your head when all about you
Are losing theirs and blaming it on you;
If you can trust yourself when all men doubt you,
But make allowance for their doubting too:

If you can wait and not be tired by waiting,
Or, being lied about, don't deal in lies,
Or being hated don't give way to hating,
And yet don't look too good, nor talk too wise;

If you can dream - and not make dreams your master;
If you can think - and not make thoughts your aim,
If you can meet with Triumph and Disaster
And treat those two impostors just the same:.

If you can bear to hear the truth you've spoken
Twisted by knaves to make a trap for fools,
Or watch the things you gave your life to, broken,
And stoop and build'em up with worn-out tools;

If you can make one heap of all your winnings
And risk it on one turn of pitch-and-toss,
And lose, and start again at your beginnings,
And never breathe a word about your loss:

If you can force your heart and nerve and sinew
To serve your turn long after they are gone,
And so hold on when there is nothing in you
Except the Will which says to them: "Hold on!"

If you can talk with crowds and keep your virtue,
Or walk with Kings - nor lose the common touch,
If neither foes nor loving friends can hurt you,
If all men count with you, but none too much:

If you can fill the unforgiving minute
With sixty seconds' worth of distance run,
Yours is the Earth and everything that's in it,
And - which is more - you'll be a Man, my son!

Survival Poems (Gnomic Poetry)

The essence of gnomic poetry is to provide serious, meaningful advice. These poems are based around survival to help you memorise various aspects of surviving. These are hard to find on the internet, any help is appreciated.

Snake Identification

Red touch yellow, kill a fellow; red touch black, friend of Jack.	This old poem was devised to help distinguish between coral snakes (Micrurus fulvius), in which the red and yellow body rings come in contact, and (primarily) the nonvenomous scarlet king snake (Lampropeltis triangulum elapsoides) in which the red and yellow (or white) body rings always are separated by black. The scarlet snake (Cemophora coccinea), which is unrelated to the king and milk snakes, also is considered a mimic by some authors.

Wood Poem

These hardwoods burn well and slowly, Ash, beech, hawthorn oak and holly. Softwoods flare up quick and fine, Birch, fir, hazel, larch and pine. Elm and willow you'll regret, Chestnut green and sycamore wet.	Beechwood fires are bright and clear If the logs are kept a year. Chestnut's only good, they say, If for long 'tis laid away. But Ash new or Ash old Is fit for a queen with crown of gold. Birch and fir logs bum too fast Blaze up bright and do not last. It is by the Irish said Hawthorn bakes the sweetest bread.	Elm wood burns like churchyard mould, E ' en the very flames are cold. But Ash green or Ash brown Is fit for a queen with golden crown. Poplar gives a bitter smoke, Fills your eyes and makes you choke. Apple wood will scent your room With an incense like perfume. Oaken logs. if dry and old. Keep away the winter's cold	But Ash wet or Ash dry A king shall warm his slippers by. Beechwood logs burn bright and clear, If the wood is kept a year Store your Beech for Christmas-tide, With new-cut holly laid aside Chestnut's only good, they say If for years it's stored away Birch and Fir wood burn too fast, Blaze too bright, and do not last
Flames from larch will shoot up high, And dangerously the sparks will fly.... But Ashwood green, And Ashwood brown Are fit for Queen with golden crown.	Oak logs will warm you well That are old and dry Logs of pine will sweetly smell But the sparks will fly Birch logs will burn too fast Chestnut scarce at all sir Hawthorn logs are good to last That are cut well in the fall sir	Holly logs will burn like wax You could burn them green Elm logs burn like smouldering flax With no flame to be seen Beech logs for winter time Yew logs as well sir Green elder logs it is a crime For any man to sell sir	Beechwood fires burn bright and clear If the logs are kept a year Store your beech for Christmastide With new holly laid beside Chestnuts only good they say If for years tis stayed away Birch and firwood burn too fast Blaze too bright and do not last
Flames from larch will shoot up high Dangerously the sparks will fly But Ashwood green and Ashwood brown Are fit for a Queen with a golden crown Oaken logs, if dry and old Keep away the winters cold Poplar gives a bitter smoke Fills your eyes and makes you choke	Elmwood burns like churchyard mould Even the very flames burn cold Hawthorn bakes the sweetest bread So it is in Ireland said Applewood will scent the room Pears wood smells like a flower in bloom But Ashwood wet and Ashwood dry A King may warm his slippers by.	Pear logs and apple logs They will scent your room And cherry logs across the dogs They smell like flowers of broom	But Ash logs smooth and grey Buy them green or old, sir And buy up all that come your way They're worth their weight in gold sir
Logs to Burn, Logs to burn, Logs to burn, Logs to save the coal a turn, Here's a word to make you wise, When you hear the woodman's cries. Never heed his usual tale, That he has good logs for sale, But read these lines and really learn, The proper kind of logs to burn.	Oak logs will warm you well, If they're old and dry. Larch logs of pine will smell, But the sparks will fly. Beech logs for Christmas time, Yew logs heat well. "Scotch" logs it is a crime, For anyone to sell.	Birch logs will burn too fast, Chestnut scarce at all. Hawthorn logs are good to last, If you cut them in the fall. Holly logs will burn like wax, You should burn them green, Elm logs like smouldering flax, No flame to be seen.	Pear logs and apple logs, They will scent your room, Cherry logs across the dogs, Smell like flowers in bloom But ash logs, all smooth and grey, Burn them green or old; Buy up all that come your way, They're worth their weight in gold.

7 Storywriting

Writing a story can be a great experience even if you've never attempted it before or believe you can't do it. Below are some tips for you to write a great novel.

The First Paragraph

In today's fast-moving world, the first sentence of your narrative should catch your reader's attention with the unusual, the unexpected, an action, or a conflict. Begin with tension and immediacy. Remember that short stories need to start close to their end.
"I heard my neighbour through the wall."

Dry. Nothing sparks the reader's imagination.
"The neighbour behind us practiced scream therapy in his shower almost every day."

The second sentence catches the reader's attention. Who is this guy who goes in his shower every day and screams? Why does he do that? What, exactly, is "scream therapy"? Let's keep reading…

"The first time I heard him, I stood in the bathroom listening at our shared wall for ten minutes, debating the wisdom of calling the police. It was very different from living in the duplex over middle-aged Mr. and Mrs. Brown and their two young sons in Duluth."

The rest of the paragraph introduces I and an internal conflict as the protagonist debates a course of action and introduces an intriguing contrast of past and present setting.

"It is important to understand the basic elements of fiction writing before you consider how to put everything together. This process is comparable to producing something delectable in the kitchen–any ingredient that you put into your bowl of dough impacts your finished loaf of bread. To create a perfect loaf, you must balance ingredients baked for the correct amount of time and enhanced with the right polishing glaze."
Laurel Yourke

Developing Characters

"Your job, as a writer of short fiction–whatever your beliefs–is to put complex personalities on stage and let them strut and fret their brief hour. Perhaps the sound and fury they make will signify something that has more than passing value–that will, in Chekhov's words, "make (man) see what he is like.""
Rick Demarnus

In order to develop a living, breathing, multi-faceted character, it is important to know way more about the character than you will ever use in the story. Here is a partial list of character details to help you get started.

● Name ● Age ● Job ● Ethnicity ● Appearance ● Residence ● Pets ● Religion	● Hobbies ● Single or married? ● Children? ● Temperament ● Favourite colour ● Friends ● Favourite foods ● Drinking patterns	● Phobias ● Faults ● Something hated? ● Secrets? ● Strong memories? ● Any illnesses? ● Nervous gestures? ● Sleep patterns	

Imagining all these details will help you get to know your character, but your reader probably won't need to know much more than the most important things in four areas:

● Appearance. Gives your reader a visual understanding of the character.
● Action. Show the reader what kind of person your character is, by describing actions rather than simply listing adjectives.
● Speech. Develop the character as a person — don't merely have your character announce important plot details.
● Thought. Bring the reader into your character's mind, to show them your character's unexpressed memories, fears, and hopes.

For example, let's say I want to develop a college student persona for a short story that I am writing. What do I know about her?

Her name is Jen, short for Jennifer Mary Johnson. She is 21 years old. She is a fair-skinned Norwegian with blue eyes, long, curly red hair, and is 5 feet 6 inches tall. Contrary to the stereotype about redheads, she is actually easygoing and rather shy. She loves cats and has two of them named Bailey and Allie. She is a technical writing major with a minor in biology. Jen plays the piano and is an amateur photographer. She lives in the dorms at the University of Wisconsin-Eau Claire. She eats pizza every day for lunch and loves Red Rose tea. She cracks her knuckles when she is nervous. Her mother just committed suicide.

Choose a Point of View

Point of view is the narration of the story from the perspective of first, second, or third person. As a writer, you need to determine who is going to tell the story and how much information is available for the narrator to reveal in the short story. The narrator can be directly involved in the action subjectively, or the narrator might only report the action objectively.

First Person	The story is told from the view of "I." The narrator is either the protagonist (main character) and directly affected by unfolding events, or the narrator is a secondary character telling the story revolving around the protagonist. "I saw a tear roll down his cheek. I had never seen my father cry before. I looked away while he brushed the offending cheek with his hand." This is a good choice for beginning writers because it is the easiest to write. (But if your viewpoint character is too much like you, a first-person story might end up being a too-transparent exercise in wish-fulfilment, or score-settling.)
Second Person	The story is told directly to "you", with the reader as a participant in the action. "You laughed loudly at the antics of the clown. You clapped your hands with joy."
Third Person	The story tells what "he", "she," or "it" does. The third-person narrator's perspective can be limited (telling the story from one character's viewpoint) or omniscient (where the narrator knows everything about all of the characters). "He ran to the big yellow loader sitting on the other side of the gravel pit shack." Your narrator might take sides in the conflict you present, might be as transparent as possible, or might advocate a position that you want your reader to challenge (this is the "unreliable narrator" strategy).

Yourke on point of view:
● First Person. "Unites narrator and reader through a series of secrets" when they enter one character's perceptions. However, it can "lead to telling" and limits readers connections to other characters in the short story.
● Second Person. "Puts readers within the actual scene so that readers confront possibilities directly." However, it is important to place your characters "in a tangible environment" so you don't "omit the details readers need for clarity."
● Third Person Omniscient. Allows you to explore all of the characters' thoughts and motivations. Transitions are extremely important as you move from character to character.
● Third Person Limited. "Offers the intimacy of one character's perceptions." However, the writer must "deal with character absence from particular scenes."

Write Meaningful Dialogue

"Make your readers hear the pauses between the sentences. Let them see characters lean forward, fidget with their cuticles, avert their eyes, uncross their legs."
-Jerome Stern

Each speaker gets his/her own paragraph, and the paragraph includes whatever you wish to say about what the character is doing when speaking.

Bad Example
"Where are you going?" John cracked his knuckles while he looked at the floor. "To the racetrack." Mary edged toward the door, keeping her eyes on John's bent head. "Not again," John stood up, flexing his fingers. "We are already maxed out on our credit cards."

The above paragraph is confusing, because it is not clear when one speech stops and the other starts.

ENTERTAINMENT Solo Storywriting Write M

Questionable Example
"Where are you going?" John asked nervously.
"To the racetrack," Mary said, trying to figure out whether John was too upset to let her get away with it this time.
"Not again," said John, wondering how they would make that month's rent. "We are already maxed out on our credit cards."

The second example is mechanically correct, since it uses a separate paragraph to present each speaker's turn advancing the conversation. But the narrative material between the direct quotes is mostly useless.

Write Meaningful Dialogue Labels
"John asked nervously" is an example of "telling." The author could write "John asked very nervously" or "John asked so nervously that his voice was shaking," and it still wouldn't make the story any more effective.

How can the author convey John's state of mind, without coming right out and telling the reader about it? By inference. That is, mention a detail that conjures up in the reader's mind the image of a nervous person.

Good Examples
John sat up. "Wh– where are you going?"
Good Example "Where are you going?" John stammered, staring at his Keds.
Good Example Deep breath. Now or never. "Where are you going?"

Bad Example
John sat up and took a deep breath, knowing that his confrontation with Mary had to come now, or it would never come at all. "Wh– where are you going?" he stammered nervously, staring at his Keds.

Beware — a little detail goes a long way. Why would your reader bother to engage with the story, if the author carefully explains what each and every line means?

Use Setting and Context

"Setting moves readers most when it contributes to an organic whole. So close your eyes and picture your characters within desert, jungle, or suburb–whichever setting shaped them. Imagining this helps balance location and characterization. Right from the start, view your characters inhabiting a distinct place."
Laurel Yourke

Setting includes the time, location, context, and atmosphere where the plot takes place.
● Remember to combine setting with characterization and plot.
● Rather than feed your readers information about the weather, population statistics, or how far it is to the grocery store, substitute descriptive details so your reader can experience the location the way your characters do.
● Include enough detail to let your readers picture the scene but only details that actually add something to the story. (For example, do not describe Mary locking the front door, walking across the yard, opening the garage door, putting air in her bicycle tires, getting on her bicycle–none of these details matter except that she rode out of the driveway without looking down the street.)
● Use two or more senses in your descriptions of setting.

Good Example
Our sojourn in the desert was an educational contrast with its parched heat, dust storms, and cloudless blue sky filled with the blinding hot sun. The rare thunderstorm was a cause for celebration as the dry cement tunnels of the aqueducts filled rapidly with rushing water. Great rivers of sand flowed around and through the metropolitan inroads of man's progress in the greater Phoenix area, forcefully moved aside for concrete and steel structures. Palm trees hovered over our heads and saguaro cactuses saluted us with their thorny arms.

Set Up the Plot

Plot is what happens, the storyline, the action. Jerome Stern says it is how you set up the situation, where the turning points of the story are, and what the characters do at the end of the story.	*A plot is a series of events deliberately arranged so as to reveal their dramatic, thematic, and emotional significance."* ***Janet Burroway***

Understanding these story elements for developing actions and their end results will help you plot your next short story.
● Explosion or "Hook." A thrilling, gripping, stirring event or problem that grabs the reader's attention right away.
● Conflict. A character versus the internal self or an external something or someone.
● Exposition. Background information required for seeing the characters in context.
● Complication. One or more problems that keep a character from their intended goal.
● Transition. Image, symbol, dialogue, that joins paragraphs and scenes together.
● Flashback. Remembering something that happened before the short story takes place.
● Climax. When the rising action of the story reaches the peak.
● Falling Action. Releasing the action of the story after the climax.
● Resolution. When the internal or external conflict is resolve.

Brainstorming. If you are having trouble deciding on a plot, try brainstorming. Suppose you have a protagonist whose husband comes home one day and says he doesn't love her any more and he is leaving. What are actions that can result from this situation?

1. She becomes a workaholic.
2. Their children are unhappy.
3. Their children want to live with their dad.
4. She moves to another city.
5. She gets a new job.
6. They sell the house.
7. She meets a psychiatrist and falls in love.
8. He comes back and she accepts him.
9. He comes back and she doesn't accept him.
10. She commits suicide.
11. He commits suicide.
12. She moves in with her parents.

The next step is to select one action from the list and brainstorm another list from that particular action.

Create Conflict and Tension

"Conflict is the fundamental element of fiction, fundamental because in literature only trouble is interesting. It takes trouble to turn the great themes of life into a story: birth, love, sex, work, and death."
-Janet Burroway

Conflict produces tension that makes the story begin. Tension is created by opposition between the character or characters and internal or external forces or conditions. By balancing the opposing forces of the conflict, you keep readers glued to the pages wondering how the story will end.

Possible Conflicts
● The protagonist against another individual
● The protagonist against nature (or technology)
● The protagonist against society
● The protagonist against God
● The protagonist against himself or herself.

Yourke's Conflict Checklist
● Mystery. Explain just enough to tease readers. Never give everything away.
● Empowerment. Give both sides options.
● Progression. Keep intensifying the number and type of obstacles the protagonist faces.
● Causality. Hold fictional characters more accountable than real people. Characters who make mistakes frequently pay, and, at least in fiction, commendable folks often reap rewards.
● Surprise. Provide sufficient complexity to prevent readers predicting events too far in advance.
● Empathy. Encourage reader identification with characters and scenarios that pleasantly or (unpleasantly) resonate with their own sweet dreams (or night sweats).
● Insight. Reveal something about human nature.
● Universality. Present a struggle that most readers find meaningful, even if the details of that struggle reflect a unique place and time.
● High Stakes. Convince readers that the outcome matters because someone they care about could lose something precious. Trivial clashes often produce trivial fiction.

Build to a Crisis or Climax

This is the turning point of the story–the most exciting or dramatic moment.	*"The crisis may be a recognition, a decision, or a resolution. The character understands what hasn't been seen before, or realizes what must be done, or finally decides to do it. It's when the worm turns. Timing is crucial. If the crisis occurs too early, readers will expect still another turning point. If it occurs too late, readers will get impatient–the character will seem rather thick."* ***Jerome Stern***

Jane Burroway says that the crisis "must always be presented as a scene. It is "the moment" the reader has been waiting for. In Cinderella's case, "the payoff is when the slipper fits."

While a good story needs a crisis, a random event such as a car crash or a sudden illness is simply an emergency –unless it somehow involves a conflict that makes the reader care about the characters.

Find a Resolution
The solution to the conflict. In short fiction, it is difficult to provide a complete resolution and you often need to just show that characters are beginning to change in some way or starting to see things differently. Yourke examines some of the options for ending a story:

● Open. Readers determine the meaning. "Brendan's eyes looked away from the priest and up to the mountains."
● Resolved. Clear-cut outcome.
While John watched in despair, Helen loaded up the car with her belongings and drove away.
● Parallel to Beginning. Similar to beginning situation or image.
They were driving their 1964 Chevrolet Impala down the highway while the wind blew through their hair.
Her father drove up in a new 1964 Chevrolet Impala, a replacement for the one that burned up.
● Monologue. Character comments. "I wish Tom could have known Sister Dalbec's prickly guidance before the dust devils of Sin City battered his soul."
● Dialogue. Characters converse.
● Literal Image. Setting or aspect of setting resolves the plot.
The aqueducts were empty now and the sun was shining once more.
● Symbolic Image. Details represent a meaning beyond the literal one.
Looking up at the sky, I saw a cloud cross the shimmering blue sky above us as we stood in the morning heat of Sin City.

8 Letterwriting

If you have been separated from a loved one you can write them a letter to give to them when you see them again. There's many other forms of letters you can write, as long as you know who it's destined for you can write it.

Love Letter

1	Start off by stating the purpose of your letter. You want your love to know right away that this is a love letter and not a note to give her the brush off or to voice some kind of displeasure with the relationship. Begin with something like, "I was thinking today about how very much I love you, and how I really don't tell you that enough. So I wanted to sit down and let you know how truly in love with you I really am."
2	Recall a romantic memory. What's special about couplehood is that the two of you have a shared history, a history that is unique to you and your love. Thus the best way to start a love letter is to refer to a shared memory; this conjures up feelings of your history together and scores you points for remembering details of your past. For example, begin by saying, "I still remember clearly the moment when you walked into Rob's party, wearing that stunning red dress. You were smiling ear-to-ear and absolutely lit up the room. I knew immediately that I had to meet you. I went to the bathroom to try to summon up my courage and think of what to say. But it was no use; I was totally tongue tied when I approached you. I was smitten from the very start."
3	Now transition to a section about the things you love about her. Move from your memory to the present with a line like, "And here we are more than a decade later, and you still leave me weak in the knees."
4	Tell her all the things you love about her. Before you write this section, make a list on a separate sheet of paper of all the things you that you love about your significant other. Think about her physical characteristics, her personality, her character, and all the wonderful things she does for you. Then, turn the things you listed into sentences. "I truly think you are the most beautiful women in the world. I love the feeling of your legs intertwined with mine and the smell of your hair and skin. Your smile lifts my spirits on even my worst days. I love your laugh and your ability to find humour in every situation. I'm so grateful for everything you do for me, from your delicious dinners to your magnificent backrubs."

5	Tell her how your life has changed since meeting her. “You truly complete me. These last few years have been the happiest of my life. I can’t tell you how lucky I feel to always have my best friend by my side.”
6	Reaffirm your love and commitment. “I will always love you, no matter what happens, through thick and thin. I will be absolutely true and faithful to you forever.”
7	End with a line that sums up your love. “I can’t wait to grow old with you.” “My love for you will never end.” “You are my best friend and soul mate and I will love you until the end of our lives.”

9 Journaling

Journaling generally involves the practice of keeping a diary or journal that explores thoughts and feelings surrounding the events of your life. There are several different ways to do this. Journaling, as a stress management and self-exploration tool, works best when done consistently, but even occasional, sporadic journaling can be stress relieving when the practice is focused on gratitude or emotional processing. One of the most effective ways to reduce stress with journaling is to write in detail about feelings and thoughts related to stressful events, as one would discuss topics in therapy, and brainstorm solutions, but there are several different ways to practice journaling. The method you choose can depend on your needs at the time, and your personality; just do what feels right.

Benefits	Journaling allows people to clarify their thoughts and feelings, thereby gaining valuable self-knowledge. It’s also a good problem-solving tool; oftentimes, one can hash out a problem and come up with solutions more easily on paper. Journaling about traumatic events helps one process them by fully exploring and releasing the emotions involved, and by engaging both hemispheres of the brain in the process, allowing the experience to become fully integrated within one’s mind. Journaling can also help you to focus on areas of your life that you're like to focus on more often, as is the case with gratitude journaling or even coincidence journaling. As for the health benefits of journaling, they've been scientifically proven. Research shows the following: ● Journaling decreases the symptoms of asthma, arthritis, and other health conditions. ● It improves cognitive functioning. ● It strengthens the immune system, preventing a host of illnesses. ● It counteracts many of the negative effects of stress.
Journaling Strategies	Journaling is a highly effective tool for stress relief and can take several forms, so there are multiple options that can work for you. If you already have a favourite journaling habit, by all means, keep it up! But you may want to try something new in addition to it. And if you're new to journaling, here are several practices to try.

Types of Journals

Gratitude Journal	Some people keep a daily gratitude journal where they list three or more aspects of each day for which they are grateful. This is a highly effective strategy for relieving stress because it helps you to focus on the resources you have in your life already and create a more positive mood at the moment, both of which have been shown to build long-term resilience. A bonus benefit is that you are left with a record of the many nice things that have happened throughout your days, so if you're feeling down in the future, you can cheer yourself up with a few pages of reminders for the things you have to appreciate in life.
Emotional Release	You may also write about your emotional responses to events that have happened throughout the day as a way of coping with the stress. This can help you to process what you are feeling and perhaps even explore more positive reframing options. When writing about positive experiences, this allows you the ability to maximize and savour the positive feelings you may have for the good things that have happened in your day. This is also a great way to expand on the positive and manage the negative things that happen in your life, increasing your positivity ratio, which is an important aspect of stress management.
Bullet Journal or Personal Planning Journal	Some people simply keep journals to track what they need to do each day, goals they have, memories they create, and other things they don't want to forget. Because writing things down can help keep your mind uncluttered and help you to remember what's important to you, this can relieve stress as well. Being more organized and balanced is a great way to feel less stressed.

10 Reading

Reading was the most popular past-time in recent history before the invention of television, portable music and social media. If you don't have your own books to read, below is a collection of stories ranging from a few minutes to read to a full novel entitled "Robinson Crusoe".

Types of Books

	Non-Fiction	Non-Fiction	Fiction	Fiction
Non-Fiction Non-fiction is content whose creator, in good faith, assumes responsibility for the truth or accuracy of the events, people, or information presented. **Fiction** Literature in the form of prose, especially novels, that describes imaginary events and people.	● Art ● Autobiography ● Biography ● Cookbook ● Diary ● Dictionary ● Encyclopedia ● Guide ● Health	● History ● Journal ● Math ● Memoir ● Prayer ● Religion ● Science ● Travel ● True Crime	● Action ● Adventure ● Alternate History ● Children's ● Comic Book ● Crime ● Drama ● Fairytale ● Fantasy ● Graphic Novel	● Horror ● Mystery ● Picture Book ● Poetry ● Romance ● Science Fiction ● Short Story ● Suspense ● Thriller ● Young Adult

11 Survival Stories

These are true stories about people thrown into survival situations.

12 War Stories

True stories about various historical wars which will engage your mind.

Short Stories

Operation FALCONER

ENT Entertainment War Stories Short Stories

Trooper X's patrol was tasked with clearing an Iraqi installation, to prevent it being used for the command and control of Iraqi theatre ballistic missiles. Trooper X was the machine gunner in the exposed .50 Calibre mounting ring in his patrol vehicle. During the action, an enemy special operations force of two vehicles and up to 20 heavily armed personnel engaged the SAS patrol. Whilst in contact with numerically superior enemy forces, Trooper X's actions in destroying the enemy vehicles gave the Australian force the freedom of movement to complete the mission. In a hazardous situation and under fire, Trooper X immediately engaged and destroyed the first enemy vehicle with his Javelin missile system. Having limited the enemy's ability to manoeuvre, the patrol assaulted forward and Trooper X engaged a further Iraqi position located to the south with his machine gun.

Trooper X re-engaged the enemy with his machine gun, demonstrating great composure. Trooper X then re-engaged and destroyed the second enemy vehicle with the Javelin, dispersing nearby enemy soldiers who were setting up a mortar position. Subsequently, as the patrol closed on the enemy position, Trooper X engaged a mortar tube with his sniper rifle, hitting the tube with his first round and causing the weapon to explode. At this stage individual enemy started to surrender, creating a situation where surrendering soldiers were intermingled with other enemy who were still engaging the SAS patrol. Trooper X then judiciously placed well aimed shots within close proximity of the enemy that were still engaging from concealed positions, forcing them to surrender.

John Babington GC

In late 1940, a German mine landed in Chatham Dockyard in Kent, bringing the place to a standstill. Such was the size and weight of the mine it had driven itself into the ground and ended up in a 16-feet-deep pit. It was fitted with a new type of anti-handling fuse, which made it a particularly dangerous prospect for bomb disposal. A few weeks earlier, an RAF officer had died trying to disarm a similar device. Ignoring the danger, Sub Lieutenant John Babington volunteered to tackle the mine. He was lowered into the pit. Babington attached a line to the head of the fuse to remove it, but it broke. Although the device could have detonated at any moment, he went into the pit three times, but each time the line broke. Finally, he succeeded and had the bomb lifted out and safely destroyed.

His bravery helped the bomb disposal authorities in understanding how to deal with the mechanisms of these new devices. John Babington was a sub lieutenant in the Royal Naval Volunteer Reserve who worked in bomb disposal during the Second World War. He had a scientific background and was teaching physics when war broke out. A calm, thoughtful man, he put his skills to good use in the dangerous and high-risk field of bomb disposal. Throughout the war, he passed on his knowledge in tackling devices to others. Babington survived the war and went back to teaching. He died in 1992. John Babington's George Cross is on display in the Lord Ashcroft Gallery: Extraordinary Heroes at IWM London.

Working Through the Air Raid

In November 1940, three women of the Women's Auxiliary Air Force (WAAF) were awarded 50% of all the Military Medals (MM) received by members of that service during the Second World War. They were stationed at RAF Biggin Hill in Kent, which suffered some of the worst air raids during the Battle of Britain. In a devastating attack on 30 August, 39 people were killed. The next morning, those who had survived reported for duty as usual, at the start of a day that would see further air raids. Sergeant Joan Mortimer, Flight Officer Elspeth Henderson and Sergeant Helen Turner were all WAAF teleprinter operators who stayed at their posts during the heavy Luftwaffe (German Air Force) attacks on 1 September. Elspeth Henderson continued her work keeping in contact with Fighter Command Headquarters, Uxbridge while the raid was on. She carried on even after she was knocked to the ground as the operations room where she was working took a direct hit.

Helen Turner was the switchboard operator and also kept working as the building was hit and bombs fell nearby. It was only when a fire broke out and they were ordered to leave that the two women finally abandoned their posts. Sergeant Joan Mortimer was in the armoury when the air raid started. Although surrounded by several tons of high explosive, she remained at her telephone switchboard relaying messages to the defence posts around the airfield. Mortimer then picked up a bundle of red flags and hurried out to mark the numerous unexploded bombs scattered around the area. Even when one went off close by, she carried on. For the bravery all three WAAFs displayed in their determination to carry out their duties during such danger, each was awarded a Military Medal in November 1940.

Putting Out Flames with Bare Hands

On 15 September 1940, Flight Sergeant John Hannah was the wireless operator and air gunner in a Hampden bomber that was carrying out a raid on German invasion barges at Antwerp, Belgium. After releasing its bombs, the Hampden quickly came under attack from anti-aircraft guns. It took a direct hit, which started a fierce fire that soon engulfed the whole fuselage. Gunner George James bailed out after the floor melted beneath him in the intense heat. Surrounded by flames, Hannah would have been justified in following him. But instead he began trying to put out the fire with the aircraft's two fire extinguishers. When those were empty, he used his log book and then his own hands to stop the spread of the blaze. He worked for ten minutes in the blistering heat, as ammunition exploded around him and another member of the crew bailed out of the stricken aircraft.

Hannah managed to stop the fire, but suffered burns to his eyes and face in the process. He then crawled through to the pilot, Connor, to tell him the inferno was out. On discovering they were the only two left on board, Hannah took over the navigation while Connor flew the badly-damaged bomber (pictured here) back to their base. Hannah was taken to hospital for emergency treatment where he learned on 1 October that he had been awarded a Victoria Cross (VC), the highest decoration for gallantry, for his incredible bravery. He was just 18 years old at the time. Hannah recovered and remained in the RAF, but contracted tuberculosis and was discharged in 1942. He died just five years later and is buried in Leicester.

Saving a Village

Pilot Officer Bill Millington was flying as part of a section on aerodrome guard patrol over Kent on 31 August 1940. A large number of German Dornier and Messerschmitt aircraft were sighted and the RAF pilots went into the attack. Millington managed to cause damage to one of the Dornier bombers but he soon found himself under fire from three Messerschmitts. He quickly put one out of action and shook off the other two. Millington was now outnumbered by the Luftwaffe aircraft but he didn't leave the fight, and instead fired on the bombers. Now the Messerschmitt fighters began to target him, and he drew on all his flying skills to evade one and shoot another down. But as he did so, one more fired a cannon shell into the engine of his Hurricane, which also wounded him in the thigh. With his aircraft ablaze and his leg in agony, Millington knew he would have to abandon the battle.

His immediate thought was to bail out and parachute to safety – but he noticed that, if he did so, his aircraft would almost certainly crash into a small village. Despite his injuries, the intense danger of remaining in his rapidly burning aircraft and the difficulties of controlling it, Millington stayed in the cockpit. He managed to crash-land his Hurricane clear of the village and escape from it before it exploded. For his determination to avoid causing harm to others, whilst placing himself at risk, Millington was awarded the Distinguished Flying Cross (DFC) in October 1940. Bill Millington was born in Britain but emigrated with his family to Australia in 1926. With the Second World War imminent, he joined the RAF in 1939 and served with 79 Squadron during the Battle of Britain. Following his crash-landing on 31 August, he was treated for severe burns in hospital. After recovering, he continued to fly successful missions until he was shot down over the Channel on 30 October 1940.

Robert Davies GC

On 12 September 1940, in a night of heavy raids over London, a huge bomb fell to the ground and became buried almost underneath St Paul's Cathedral. Lieutenant Robert Davies of the Royal Engineers was sent to tackle the unexploded device. The bomb had fallen at 2.25 am and forced its way 8 metres down into the ground. It could not be disarmed, and detonating it would have destroyed the cathedral. The only option was to remove it intact. Davies led a team of men in their painstaking task of digging out the bomb, which took them three days to complete. They had to be extremely careful, as one wrong move could have set it off. Damaged electrical cables and ruptured gas mains made the work even more dangerous. Once Davies and his men had successfully excavated the massive bomb, they used two lorries to pull it carefully from the ground. St Paul's Cathedral was safe, but the bomb, now loaded onto one of the lorries, was still very dangerous.

To protect his men from any further risk, Davies decided to drive it away himself to be disposed of. He took the wheel and drove on his own, quickly but carefully, to Hackney Marshes in East London. This was the nearest bomb 'cemetery', a place designated for destroying fuses or exploding live devices. In the middle of the marshes, he detonated the bomb, which blew a 30-metre-wide crater. Robert Davies and his team of Royal Engineers became the 'bomb squad which saved St Paul's' and were widely congratulated for their life-saving actions. If such an important London landmark had been seriously damaged, it would have had a crushing impact on British morale. Davies was awarded the newly-established George Cross in September 1940. He later emigrated to Australia, where he died in 1975. Robert Davies's George Cross is on display in the Lord Ashcroft Gallery: Extraordinary Heroes at IWM London.

Flying Blind

Flying Officer Gordon Cleaver was defending his base, RAF Tangmere, from intense Luftwaffe air raids on 15 August 1940. Cleaver was an experienced fighter pilot who had already destroyed a number of enemy aircraft in operations over France. During the raid, he led his section with courage and determination against the German bombers. Cleaver went into the attack and destroyed one of the German aircraft. But his Hurricane was hit – a cannon shell smashed into it, shattering the cockpit's hood and sending Perspex splinters into Cleaver's eyes.

With his aircraft damaged and his sight severely impaired, the obvious choice would have been to bail out. But he refused to abandon his aircraft and instead, with great difficulty, made a successful landing. Cleaver was rushed to hospital where his sight was partially saved, but he was unable to continue his flying career in the RAF. In September 1940, he was awarded the Distinguished Flying Cross for his bold bravery in attacking the enemy bombers and in saving his aircraft despite such painful, impairing injuries.

Not Giving Up

Flight Lieutenant James Nicolson was on patrol near Southampton on 16 August 1940, when his Hawker Hurricanewas fired on by a German fighter aircraft. Making the 'loudest noises [he] had ever heard', four cannon shells thudded into his cockpit, damaging his machine, setting his petrol tank alight and wounding him in the eye, leg and heel. Surrounded by flames and with blood pouring down him from his injuries, Nicolson prepared to bail out. But just as he did so, he spotted a Messerschmitt Bf 110 ahead. Despite being in severe pain, he put down his parachute and reached instead for his gun controls. He poured fire into the German aircraft, keeping up his assault even as it tried to turn and twist away from him. As he attacked, Nicolson noticed that the intense heat of the cockpit was burning his flesh.

Only then did he abandon his Hurricane. After giving the Messerschmitt one last burst, he struggled free of his blazing cockpit and tumbled out into the sky. Nicolson deployed his parachute and, as he fell, he took stock of his extensive injuries, noticing that he could see the bones of his left hand showing through the knuckles. He managed to land in a field and was rushed to hospital, where his life hung in the balance. After several weeks, he had recovered enough to make it out of danger, but the burns he had received took much longer to heal. Nicolson was awarded the Victoria Cross, which he received from King George VI at Buckingham Palace in November 1940.

Brandon Moss GC

The city of Coventry suffered particularly badly during the Blitz. On the night of 14--15 November 1940, German bombs rained down for 11 hours in one of the most devastating attacks on the English city. Brandon Moss was on duty that night. He was a Special Constable throughout the Second World War, serving with the defence forces. After working a 12-hour shift in a factory, he went out at night to help during air raids. It was a dangerous job and Moss narrowly escaped death a number of times. During the 14-15 November raid, a house was demolished by a direct hit. Knowing there were three people trapped inside, Moss ignored the threat of further attacks to clear a tunnel to them. He led a rescue party in highly dangerous conditions that included collapsing debris and a gas leak. When the situation became too perilous, the other rescuers gave up. But Moss kept going alone. His tireless efforts paid off and he finally freed all three people.

Moss then learned that more people were trapped in the neighbouring house. Trying to reach them again meant risking the falling beams and rubble of the bomb-hit home. Fighting sheer exhaustion, Moss worked alone throughout the night to rescue another person. Moss's 'superhuman' efforts to save these people were carried out between 11.00 at night and 6.30 the next morning. Further explosives fell while he was working, and it was known that a delayed-action bomb had fallen nearby. The following month, Brandon Moss became the first Special Constable to earn a George Cross. He continued his dangerous voluntary work for the rest of the war. He retired from the Special Constabulary in 1948 and died in Coventry aged 90. Brandon Moss's George Cross is on display in the Lord Ashcroft Gallery: Extraordinary Heroes at IWM London.

Reginald Ellingworth GC

Reginald Ellingworth served with the Royal Navy during the First World War. By the Second World War, he was a torpedo specialist based in the shore establishment HMS Vernon. He became part of a Rendering Mines Safe team, working closely with Lieutenant-Commander Richard Ryan. During the Blitz, the pair specialised in defusing unexploded magnetic mines. It was dangerous work, where any movement could restart the mines' timers. On 21 September 1940, Ellingworth and Ryan were called to defuse a German mine in Dagenham in East London. They had already cleared several mines that day, including one at nearby Hornchurch that threatened the airfield and an explosives factory there.

The Dagenham mine was hanging from the roof of a house in a densely-populated area. Undeterred by the danger, the two men strode confidently towards the mine. But as they were working to make it safe, the mine suddenly exploded, killing both men. Ellingworth and Ryan were both awarded a posthumous George Cross for their bravery. Reginald Ellingworth's George Cross is on display in the Lord Ashcroft Gallery: Extraordinary Heroes at IWM London.

Untrained Pilot

Among the many airfields targeted in raids on 15 August 1940 was RAF Driffield in Yorkshire. As part of 219 Squadron, which was stationed nearby, Sergeant Oswald Dupee and Sergeant Thomas Banister were scrambled to intercept the incoming Luftwaffe force. Dupee was the pilot and Banister the air gunner of their Blenheim bomber. They engaged a German aircraft off the Yorkshire coast, but it soon stopped returning fire on them. Dupee closed in and was about to continue to attack the German aircraft when it opened its guns on them once more. The Blenheim's front windscreen was smashed and Dupee was severely injured in his arm.

They were now in a dangerous position – Dupee was unable to keep control of the aircraft and they were still vulnerable to enemy attack. Banister crawled forward, helped Dupee from his seat and took charge of the Blenheim. Banister was untrained as a pilot and the aircraft he was flying was badly damaged. Dupee's strength was failing through loss of blood, but he managed to give enough help and directions to Banister to enable him to get them back. Banister made a forced landing at RAF Driffield, with only minor damage to the aircraft despite doing so with the wheels up. Both Dupee and Banister were awarded the Distinguished Flying Medal for their actions.

Arthur Merriman GC

During the Second World War, Arthur Merriman's experience as a science teacher was put to good use. In early 1939, he began work as Assistant Director Bomb Disposal with the Directorate of Scientific Research. He soon became Joint Secretary of the Unexploded Bomb Committee and began to undertake a great deal of research work in connection with bombs. As the war escalated, his work took him around the country. To carry out his job, he often went 'under cover', using the story that he was an air raid inspector. In reality, he had a far more dangerous – and hands-on – role in bomb disposal. In the early hours of 11 September 1940, just days into the Blitz, a 550-lb bomb landed on London's Regent Street but didn't explode. After the area had been evacuated, Arthur Merriman arrived on the scene. The unexploded bomb started ticking and he knew he would have to work against the clock to make it safe. Merriman carefully began removing the highly explosive material inside, making it steadily less dangerous.

But he didn't know how long he had until it detonated so he worked as quickly as he could to extract the explosive. He drew on his scientific knowledge to estimate how long he had. When he felt the bomb was significantly safer, he withdrew to a safe distance. Soon afterwards, it exploded. Thanks to Merriman's skilful work, instead of the mass casualties and huge damage the bomb could have caused, just a few windows were shattered nearby. Merriman earned a George Cross for his coolness and brave determination in saving London's West End from imminent disaster. Soon after, he was commissioned into the Royal Engineers. As a technical adviser in bomb disposal, his expert knowledge was much sought after and he travelled to various locations to examine explosive devices. Arthur Merriman survived the war and died in 1972.

Selby Armitage GC

As an officer in the Royal Naval Volunteer Reserve, Lieutenant Selby Armitage was mobilised for war in 1939. He went to HMS Vernon, the Royal Navy's torpedo and mine school in Portsmouth. There he learned about dangerous mines and soon became an expert in defusing them. When the Germans dropped huge bombs known as parachute mines during the Blitz in 1940, he was called on to deal with them. Parachute mines often landed in awkward places and Armitage tackled one that had fallen on the roof of a factory. Another mine he dealt with was found hanging in a tree in Orpington in Kent. He could only reach it by climbing up an unsteady ladder, which would have made escape impossible had it started ticking. But Armitage worked with cool determination despite the danger and managed to successfully defuse the bomb.

The huge mines were very unstable. When one he was working on started ticking, Armitage had only run 25 metres before it exploded. Despite this near miss, he was back on duty next day. For undertaking months of this dangerous work, he was awarded the George Cross in December 1940. He was one of only eight people ever to receive both the George Cross and the George Medal, which he received in 1944. Selby Armitage survived the war. He died in 1982. Selby Armitage's George Cross is on display in the Lord Ashcroft Gallery: Extraordinary Heroes at IWM London.

Running on Empty

Acting Flight Lieutenant Jack Adams of 29 Squadron RAF was on a night patrol on 20 August 1940 when he saw a German aircraft around a mile in front of him. He had spotted a light in the rear gunner position, making it possible for him to follow it, in his Blenheim bomber, for 50 minutes. During this time, he lost communication with his base, RAF Digby, but carried on in spite of this, determined to destroy the German aircraft. Finally, he made contact with it off the south coast, near the Isle of Wight. Adams went in for the attack, skilfully shooting at the aircraft over the sea and destroying it. He then returned to his base. When he landed, it was discovered that both of his petrol gauges were at nil – he'd been running on empty.

On 24 September 1940, it was announced that Adams had been awarded the Distinguished Flying Cross for his bravery. The official report for this also stated that Adams had been 'continuously employed on night flying duties' since the start of the war and had always shown 'conspicuous devotion to duty'. Adams had joined the RAF in 1936 and had a successful career in the service, retiring in 1958 as a Wing Commander.

Harold Newgass GC

Harold Newgass joined the Royal Naval Volunteer Reserve when the Second World War broke out. He never went to sea, but instead volunteered for special duties in bomb disposal. By late 1940, Newgass was an expert in rendering unexploded German parachute mines safe. He was commanding a naval bomb disposal party working to clear these mines in Liverpool. On the night of 28 November 1940, the city was hit by a particularly devastating air raid. During this attack, a large mine fell through the roof of a gasholder in Garston in Merseyside.

Its parachute became tangled in the hole in the roof and it failed to explode. The gasometer held some 2 million cubic feet of gas, meaning the gas supply for half of Liverpool was threatened. Had the mine exploded, it would have caused great damage and destroyed many homes. The whole surrounding area came to a halt, industry was paralysed and 6,000 people were evacuated. Before the mine could be dealt with, the base of the gasometer had to be drained of the 1.25 million gallons of water that was there and a hole cut in the top for access.

Despite these preparations, which took several days, it was clearly still going to be an extremely perilous operation. Although he knew that the mine would be difficult and dangerous to defuse, Harold Newgass decided to tackle it on his own. On 3 December he went into the gasometer. He had to wear an oxygen cylinder inside as the air was unsafe. Each cylinder lasted 30 minutes and, had the mine begun to tick, he would not have had time to climb out and escape before it exploded. Newgass made six trips down into the gasholder.

He first assessed the situation and planned his approach, then took down the necessary equipment he'd need. He then placed sandbags around the mine, lashed it securely, and turned the mine so he could access the fuse. He was then able to remove the fuse, detonator and primer. On his last oxygen cylinder, he finally withdrew the timer and made the bomb safe. Newgass had shown great bravery and endurance in undertaking this exhausting work. He was awarded the George Cross in March 1941.

Michael Gibson GC

Soon after the outbreak of the Second World War, Sergeant Michael Gibson was transferred from the Durham Light Infantry to the Royal Engineers. He was posted to the No 9 Bomb Disposal Company, based in Birmingham. It was responsible for dealing with unexploded devices across the West Midlands. A Luftwaffe raid on Coventry on 14 September 1940 resulted in two unexploded bombs in a factory complex in the city. Sergeant Michael Gibson and other members of his company were sent to deal with them. One of the devices exploded but, luckily, no-one was harmed. Gibson's team then worked to uncover the other bomb from the rubble.

Suddenly, they heard it emitting 'an unusual hissing noise'. It seemed highly probable that it could detonate at any moment. Fully aware of the dangers, Gibson sent the rest of his team away to safety and worked by himself to extract the fuse. This he managed to do and the bomb was removed from the factory, saving many lives. Michael Gibson earned a George Cross for the bravery he displayed on 14 September. A month later, he was back in action after another air raid on Coventry. Along with six other bomb disposal men, on 18 October Gibson went to deal with a 550-lb bomb from a housing estate. They transported it to an open space to defuse it. But as they were unloading it, the bomb exploded, killing them all. A memorial plaque in Coventry commemorates Michael Gibson's wartime bravery.

A Close Escape

As well as the danger that pilots faced in aerial combat, there were also risks involved in taking off and landing aircraft at their bases. As the Battle of Britain reached its peak, one pilot took off from RAF Biggin Hill (pictured here) but lost control of his aircraft, which crash-landed and turned over in the garden of the house next door to Sergeant Arthur Cole of the Kent Special Constabulary. The pilot was trapped in the stricken aircraft, hanging upside down and kept in place by his harness. Despite the chance that the plane could catch fire and explode at any moment, Cole immediately rushed to help. Working quickly and calmly, he freed the pilot and dragged him away to safety. Cole's swift actions undoubtedly saved the pilot's life – just minutes after he rescued him, the aircraft's petrol tank ignited and there was a huge explosion. For his bravery, Sergeant Cole was awarded the British Empire Medal.

Francis Brooke-Smith GC

Francis Brooke-Smith served with the merchant navy and the Royal Naval Reserve before the Second World War. In 1940, Brooke-Smith, now a sub-lieutenant, volunteered for mine disposal work. He travelled where he was needed around Britain to defuse German parachute mines. In December, a mine fell on the deck of a fire-float on the Manchester Ship Canal. It ended up wedged awkwardly near the engine, in a way that presented a considerable challenge to Brooke-Smith, whose task it was to disarm it. Firstly, he lifted the mine out of where it had lodged. This helped him, but he still had to lie in an uncomfortable position to work on the device.

But, just as he began to do so, the fuse clock started to whir. Brooke-Smith stayed calm and tried to stop the timer before it detonated. Due to the position of the bomb, he had to work purely by touch, at full stretch, and using a new, unfamiliar piece of equipment in order to make it safe. Despite these difficulties and the pressure of the situation, Brooke-Smith stopped the clockwork in time. A month later, he disarmed a highly unstable mine buried nearly two metres down in an East London allotment. In all, Francis Brooke-Smith defused 16 mines during the Second World War. For his cool courage, he received the George Cross.

Bennett Southwell GC

A German mine fell on a house in Shoreditch, East London on 17 October 1940 and failed to explode. Ordinary Seaman Bennett Southwell and his commanding officer, Sub Lieutenant Jack Easton, went to deal with it. The mine had fallen through the roof of a house and the surrounding area had been evacuated. It had come to rest in an awkward position so Easton decided to try to defuse it where it was, to avoid disturbing it. As he worked, Southwell stayed close by and passed him the tools he needed. Easton had not been working for long when suddenly the device dropped. It started ticking. Knowing that they had only 12 seconds until it detonated, they both fled the scene.

Southwell ran full pelt down the street, while Easton dived for cover. Easton was buried under rubble from the blast but was eventually freed. The mine generated a huge explosion, which destroyed a large area of housing. Southwell was caught in the blast and died. Such was the devastation that it was six weeks until his body was found. Both Bennett Southwell and Jack Easton were awarded the George Cross for their actions. Bennett had only started work in bomb disposal a month before he was killed. His widow, Marion, collected his posthumous GC from King George VI at Buckingham Palace in October 1941. Bennett Southwell's George Cross is on display in the Lord Ashcroft Gallery: Extraordinary Heroes at IWM London.

In war, the best of you shines

There was actually one dog that we almost had to shoot because he was standing next to a body, eating it, and as we went to go pick it up he stood there growling at us and he wouldn't let us come near it. I think someone threw a rock or something and shooed him away. But then there were other dogs that would run through the city with human feet in their mouths and other things. I was pretty desensitized at the time. It actually didn't register as it should have. ... I mean, a dog running through the city with a femur in its mouth. It should have registered as something a lot more than it actually did. It just seemed reasonable at the time that a dog would try to chew on the bodies. Dominick King, 7th Marine Regiment, 1st Marine Division, August 2004-March 2005.

Long Stories

Twice Bailed Out of Burning Bombers

Leonard Siegfried, son of a bricklayer, grew up in the Hecktown section of Lower Nazareth Township. He studied machining at Bethlehem Technical High School while working part time at a lumber company and was drafted into the Army as World War II raged. In the summer of 1944, he was a 19-year-old sergeant in the 15th Air Force, flying as a nose turret gunner in B-24 Liberator bombers from a base in Italy. Our second mission, on Aug. 27, we got shot down on the border between Austria and Yugoslavia. We were at maybe 25,000 feet, on our way to a target to drop bombs. I was sitting right outside the nose turret. We got into clouds and couldn't see.

They used to instruct our pilots: Stick your left wing into the next guy's waist window. That's how close they wanted us to fly, because the German fighters used to come in from the top and go straight down through the formation. Pretty soon, another ship and ours bumped together. The whole plane rocked, but there was no damage that we knew of. Right away, the pilot peeled off to the left and we came down about 4,000 feet and broke out of the clouds. That put us in more danger. Now we were a target. We got hit by antiaircraft fire. Our right outboard engine caught fire. I saw the engine burning. The pilot tried different things but couldn't put it out, so he came on the intercom and said, "Pilot to crew: Stand by to bail out."

I put my chute on and went back to where the waist gunners are — in the middle of the plane. The radio operator was laying on the floor. A piece of shrapnel got him in the kidney, a big hole. He knew what was going on — he was conscious but bleeding badly. "We're going to push you out," we said, and we put his hand on the chute handle. "You pull the cord." There's a door on each side under the waist windows. I sat down and grabbed my ankles and rolled out. My chute opened. I'm looking up and counting chutes. Where's the pilot? Then I see his chute open, and he's floating down and the plane is making circles. I thought, oh my God, that's getting close! But he made it OK. The plane crashed into the side of a mountain and just wiped the trees off for about a mile.

As I'm coming down, I started looking for a place to hide as quick as I got down there because there were Germans all around. So I steered into a fence line, which was fairly close to a farmhouse, and I landed right on the side of the wooden fence, with trees around. I hit the ground hard, whacked the back of my head. I pulled the chute down quick, crawled in the fence line. I'm sitting there thinking I'm in Austria, only a short distance away from Yugoslavia — a partner to America. I'm going to stay in here until just about dark and then head south and I should be able get to friendly people.

I didn't see the nine other guys from my crew. Pretty soon, I looked out and there was a field that had rows of plants, and here's a woman hoeing at the other end of the field. I thought, she isn't cutting weeds, she's walking too fast. And here she knew where I was. She came to warn me. She said in German, "Stay there, the Germans are all around you." I'm Pennsylvania Dutch, so I knew what she was saying. I thanked her and stayed put. Just before dark, a man comes out and he spoke English. He's calling me, "American flier, American flier." I waited until he got pretty close and I said, "I'm here." "Come on, we've got to go fast, the Germans know you're in this area."

We went to the farmhouse and he put me right down in the cellar and brought a plate down and I ate. He says, "OK, we've got to go. We're going to head for the border." We took a trail on the side of a mountain. He whispered: "We're getting close to the Germans' lookout station. You're going to have to stay with me and bend down when you pass the windows. Don't let them see you. There are four soldiers in there. They're always playing pinochle. Follow me close and stay down quiet, and don't go to your right because it's a drop-off cliff."

After that, we met Yugoslav soldiers on a trail, and the Austrian guy turned around and went back. The soldiers took me to a cabin up in the mountain, where there were five or six wounded partisans and some women soldiers. We slept on the floor under old parachutes that were infected with lice. The Yugoslavs had a telephone on a tree in the woods, and a guy would stand there cranking, trying to get somebody to talk on the phone and find out what's happening. The next day, the Yugoslav captain says, "You've got to stay here. We're going down to meet the German troops that are coming up the valley." I said, "Give me a gun, I'll help you." "No, we'll be back."

There were six or seven of them, and they were so confident. I'm thinking, if they get beat, what do I do? But after two hours, here they came tramping up the mountain. Later, one of the Yugoslavs said, "If you hurry up and go down to the valley, some of your planes will be landing to take our wounded soldiers to Italy." There were three C-47s plus two fighter planes. The fighters kept circling the area. The C-47s landed in a pasture. I helped load the wounded and jumped on board. All the guys from my crew made it back to Italy, and they gave us a new plane and we had practice runs to see whether we could do battle again — and we could.

So we were back on missions. As you were going to a target, you'd pick up 50 planes at a certain city, now you go for 20 minutes and you pick up another 25. A lot of our planes flew out of England and joined up with us. By the time you got to the target, you could look out your window and it looked like a black highway, planes as far as you could see, like 600 B-17s and B-24s. We had the German air force beaten. We would see their fighters way up above us, just tracking where we were going, but they no longer attacked us. We had our own fighters following with us. Above 12,000 feet, we put oxygen on. The fellas in the turrets like myself had electric suits to keep us warm — it would get to 35 below — because we couldn't get into the turrets with heavy wool suits. I didn't go into the turret until we saw enemy fighters.

It was a place you didn't want to be, out there sitting on a ball. They had to lock me in, and I couldn't get out by myself. There were double doors, a door on the turret and then there's another door on the body of the plane. The bombardier and the navigator are in that compartment behind me, so they've got to open the doors if anything happens. I always said I had it worse in the nose than the guy in the tail because the antiaircraft shells came up three at a time. So in the nose, I'd see the explosion, a black puff, and know the next one is going to be closer than that, and the next one even closer. But the tail gunner would see one puff and think, oh boy, that's passed. He was happy.

Besides manning the .50-caliber machine guns in the turret, I was the assistant engineer, so I had to do the running. The pilot would call and say, "Siegfried, arm the bombs." We had 10 bombs, five on the rack on this side and five on the rack on that side, and they had a 9-inch-wide catwalk going down the belly. They'd open the bomb bay doors in case I had trouble and they could get rid of the bombs. That used to be a frightening thing. To arm the bombs, I had to pull their pins, but the pins stayed hanging on a chain.

On one of the early missions, after I'd done that, the pilot called and said we were going to change targets. So I had to go out on that catwalk again with the bomb bay doors open and put the pins back in. And when we got close to the second target, it was: "Siegfried, go arm the bombs." ^On our ninth mission, Oct. 17, we got hit with ack-ack [antiaircraft fire] before we reached the target and the right outboard engine caught fire — same as before. In fact, part of the wing was gone. I was in the bombardier's compartment. A piece of flak got me in the left leg above the knee. We had to bail out again over Austria.

Coming down in the chute, I saw the German soldiers running out of their camp, trying to get my direction. I landed on a dirt road, and the Germans were running toward me. When I stood up, a guy reached from behind me and took my pistol from my shoulder holster. I didn't even know he was there. It was that quick. They took me into a country house for interrogation. A German captain talked to me in English. He wanted to know how many planes we had up there. I didn't have any idea about any of that. He had my pistol and said, "Take the gun apart for me. We know you soldiers are all trained to clean your guns." I took it apart. He said, "Now put it back together." I said, "I don't know how to do that."

I did know, but I was afraid he'd use it on me. He laughed and then got mad and whacked me on the side of the head with his own pistol. I went down off my chair. They put me on a truck. I sat in the centre of the flatbed on a folding chair with German guys on each side with their rifle barrels against my ribs. It was a bumpy ride. Each time I bounced, I got a gun pushed in me. I expected one to go off any minute. When I arrived at Stalag Luft IV, up near the Baltic Sea, there was no bed for me in the barracks. "You have to sleep on the table." We usually started the day by eating two slices of brown German bread with spreads from the parcels and a cup of coffee. Noon brought us a meal of thin soup, one cup per man, except for about every 10th day when we might get millet or barley.

At 2 o'clock, the kitchen gave us enough hot water for another brew. Supper at 6 o'clock was usually boiled spuds, one bucket for the 24 men in my barracks. With all this, we received a half-Red Cross parcel per man per week. We were fenced in, but some escaped. Some in my barracks had been digging a tunnel. It must have been during the night when the rest of us were sleeping. I was out of the camp before I even heard about it. They had the floorboards up under one bed. The guys would bring the dirt up, and they carried it in their pockets as they walked around the camp. They'd pull a drawstring and lose it on the ground. I think some guys did get out, but a few were caught.

We heard that two prisoners got under the fence once, but they got shot from the towers as they were running for the woods. On Feb. 6, they started moving us out of camp — 8,000 of us. They said they were going to move us to a new camp. They had us in columns, five guys across and five rows deep, with a rope separating each group of 25 men so you couldn't run for it. The guards walked on both sides, and they had police dogs on short leashes. If a column didn't move fast enough, they'd have the dogs nip at the guys in the back rows. It was the dead of winter, one of the worst winters they ever had in Europe. I had a German overcoat on. The Germans gave overcoats to any fliers who had electric suits on. Those that had the heavy wool suits didn't get them. I had my Army shoes, and I got frostbite in my right foot.

The first night out, it was snowing, and the German leader told us to dig a hole in the snow, which was 16 inches deep, and lay two guys back to back or we'll freeze by morning. I dug a hole with another guy, kicking the snow away, and we crawled in and we're back to back. He says, "Where are you from?" "Pennsylvania." The first night out, it was snowing, and the German leader told us to dig a hole in the snow, which was 16 inches deep, and lay two guys back to back or we'll freeze by morning. I dug a hole with another guy, kicking the snow away, and we crawled in and we're back to back. He says, "Where are you from?" "Pennsylvania." He said, "So am I? What city?" "Bethlehem." He said, "So am I." I said, "Where in Bethlehem?" "A sporting goods store on the South Side." I said, "Tachovsky!" He said, "That's me!" He was Harry Tachovsky.

One day we were strafed by an American fighter plane. We were walking on this dirt road. A truck passed us with three German soldiers sitting on the tailgate. I saw this P-38 way off, and I yelled, "American plane coming!" I jumped a barbed-wire fence. When the pilot started strafing, a pig got hit with one of those bullets, and he squealed, and I didn't know he was even in there with me. The truck was destroyed, and the guys on it got blown to smithereens.

As we walked down the road, we saw pieces of their bodies. We stopped at places where the Germans put us in a barn overnight. They'd call ahead to the farmers, who would put a big black kettle on the fireplace and put potatoes in so that when we got there, they'd hand them out as we walked by — two or three pig potatoes, an inch-and-a-half long or so, and a slice of bread.

Once, two guys stole a lot of gallon cans of meat from a farmhouse cellar where the Germans had stored them. The guys handed them to everybody who was in the barn we were staying in — most of us were up in the hay mow. But around midnight, the Germans caught these guys in the cellar and knew how many cans of meat were stolen from the army's supply. In the barn, they called to us, "Throw them down to the floor, because if we don't get the same count, we're going to start shooting." Empty cans, full cans, we were all throwing them down, and the Germans counted them and they were satisfied. The next morning, they had the two guys tied to a tree. And after we left, we heard shots. We figured they waited till we were gone and they killed those guys. I'm sure of it.

One time, we came to get on a train in a town. The guards lined us up against the wall at the side of the railroad station, waiting for the train to get in. The hospital in that town had been hit by American bombs. A school was hit, I guess, and a church. And then the townspeople heard that American fliers were there. Imagine how they wanted us! Well, these people were in an uproar. They came out to see us, and it was pretty scary. We had our backs to the wall, and they were coming toward us — until the guards clipped the bayonets on their rifles. That kept them away. I don't know how long we were on the train or where it took us.

The Russians were to the east, and the Americans and British were to the west. Every time we heard guns getting close, the Germans would change our direction. We'd turn and go south for a while, and pretty soon you heard guns from the east, and they'd turn us again. They were afraid if the Russians got us, they would arm us. We covered 600 miles. The guards used to tell us: "The war is almost over. We lose, you win." We walked to Stalag XI-B, a tent camp. It was in terrible shape. The next morning I heard a commotion going on. The Germans had wagons and horses parked out in front of the tent, and as they found these people who didn't make it through the night, they carried the bodies out and put them on the wagons. They disappeared over a hill, going to a pit where they buried the dead.

Every morning, they came to take the dead that were lying on the ground — rows, just rows of them. I was glad when the Germans called out names of prisoners to move on and I was one of them. That was after about a week. They marched us north toward Luebeck. One day we were in a barn. German troops were guarding us. All of a sudden there were tanks and trucks moving behind the barn. And the first thing you know, the guards who had been around the barn were gone. The British had circled around and captured those guards, pulled them away. They were in trucks and gone. The British told us: "You're free to go. We can't help you with food right now, but just stay on this main road for maybe a couple of days and we'll have a food truck to meet you." We walked the rest of that day, and the next day we started walking again, and we finally hit the food truck.

It was loaded with pea soup and some doughnuts. The doughnuts didn't last long. The first guys gulped them down. I didn't get any. Good old pea soup. I got that. At Camp Lucky Strike, France, they fed us, built us up. Any prisoner of war could go to the kitchen any time of the day or night. Only trouble is, it was always turkey. They kept us on a turkey diet for weeks. And the funny part is, I still like turkey — and pea soup.

Epilogue
Siegfried weighed 100 pounds at war's end. He had lost 50 pounds since he was taken prisoner. He and his fellow POWs were liberated by the British 2nd Army. He had kept notes in a logbook throughout his captivity and recorded the exact time and place: 12:29 p.m. May 2, 1945, at Boizenburg, Germany, near the Elbe River and about 40 miles southeast of Hamburg. That was six days before the war against Germany ended. The prisoners' zigzag trek from Stalag Luft IV was called the Black March, begun by the Germans to escape the Soviet army approaching from the east. It took them from the camp at Gross Tychow in Pomerania, a Third Reich province now in Poland, to Stalag XI-B near Fallingbostel, east of Bremen. The subsequent forced march from Stalag XI-B toward Luebeck lasted three weeks. Altogether, the POWs were on the road for almost three months. Hundreds of Americans died. Siegfried's friend, Harry Tachovsky, who is 92 and lives in east Allentown, remembers their comradeship on the road from Stalag Luft IV: "We buddied up in the snow and got to know each other on the march." Siegfried flew with the 762nd Squadron, 460th Bombardment Group, based at Spinazzola, Italy. He has two Air Medals for meritorious achievement in flight, and a Purple Heart for the flak wound he suffered Oct. 17, 1944 — the second time he had to bail out of a flaming B-24.

In June 1945, he was sent home aboard the troopship USS General H.W. Butner. He took a train from Virginia to Bethlehem, and then a taxi to Newburg in Lower Nazareth, where his parents had moved while he was in the service. Though he'd written to them while a POW, the latest Army telegram they received said he had been killed in action. He knocked on their door at 2:30 in the morning. "They were really shocked. They thought I was a ghost." He went back to Brown-Borhek lumber company in Bethlehem, where he met Gloria Meese, who worked in the office and sent him candy in the lumber yard, where he was the foreman. They were married May 21, 1955. Gloria became a secretary for the Lehigh Valley Railroad and Conrail. Leonard got a job at Bethlehem Steel in 1960 and retired from there 31 years later. He also serviced Lower Nazareth's water system. The couple had a daughter, Tina Siegfried of Lower Nazareth, and a son, Alan, in Woodbine, Md., and two grandsons. Gloria died in 2005 at age 81. In the 1950s, Siegfried pitched in the East Penn softball league, baffling batters with his knuckleball. He played golf in the Coke Plant League for many years. Now 90 and still living in Lower Nazareth, he is stoic about his wartime brushes with death, saying he is "not an excitable guy" and that he took it all in stride.

"There's an old friend of the family, she's my age and quite often I stop to see her, and she always says, 'You know, a cat has nine lives, but from the stories I hear, you have more lives than a cat.' "I was well taken care of from up above."

Morris Metz recalls the Battle of the Bulge

When Morris Metz was about 6, his father lost his job in a lumber mill, so the family of six baked bread, Dutch cakes and cinnamon buns to sell. They had chickens and a garden, but it was still difficult at times to put food on the table. Metz, who was a longtime Forks Township public official and leader of the Lehigh Valley Chapter of Veterans of the Battle of the Bulge, remembers growing up in Wind Gap during the Great Depression and fighting his way across Europe during World War II. In our small town, Trinity Union Church of Wind Gap was the centre of activity. They had parties, concerts with the choir. They had Easter egg hunts and picnics in the summer and plays. Every Christmas you got an orange and a bag of chocolates. You went to Sunday school and church. We were taught the sanctity of life: Thou shalt not kill. Love thy neighbour. There was a Sunday school teacher by the name of Claude Steiner, and when I was about 10 years old he introduced me to the promises of the 91st Psalm. Several of them were really relevant to being in combat:

Thou shall not be afraid for the terror by night, nor for the arrow that flieth by day; … nor for the destruction that wasteth at noonday. A thousand shall fall at thy side, and 10 thousand at thy right hand; but it shall not come nigh thee….There shall no evil befall thee.

Words like that, when you're in a foxhole and you hear the artillery shells and the screaming meemies [German rockets], it's comforting to think about those words. I was always a dreamer. I used to get up early in the morning and stand in the sun and think about being a cowboy. And I used to fish and hunt and trap animals. If you got $3 for a muskrat pelt or $12 for a mink pelt, it helped the family at a difficult time. I had a newspaper route, delivering the Allentown Morning Call on a bicycle at 5 in the morning. The Wind Gap school system was independent at that time, offering elementary school and junior high. The school was centrally located, so no matter where you lived, you had to walk.

No snow days. Your responsibility was to get there. We had a large playground but no cafeteria, so we either walked home for lunch or brought a lunch in our book bags. We were big shots when we took the bus to Pen Argyl High School. That was a really great school. We Windy Gappers, as we were called, blended in with our schoolmates from Pen Argyl. Marcus Stopp, a mathematics teacher, inspired me to love math. I was the recipient of the Rensselaer Polytechnic Institute medal for excellence in mathematics. Edna Imhof, our homeroom teacher and Latin teacher, demanded respect.

My biggest regret is that when I got home from the war, I didn't go visit Edna Imhof. When I was 17, I tried to enlist in the Navy, but they rejected me because I had bad eyes. I graduated June 10, 1943, turned 18 on July 10, had a part-time summer job until I received a letter from the president of the United States ordering me to report for induction at 5:45 a.m. Sept. 21, 1943, in Bangor. I wanted to get into the service. I loved adventure. But I realized my eyes were a problem, so I memorized the eye chart, thanks to my doctor. I took the physical and all the other examinations, and on Sept. 21 raised my right hand and became a member of the United States Army.

In New Cumberland, we traded in our civvies for a uniform, went through the Army general classification tests. We were encouraged when we were kids in my family to study, study, study. I breezed through the tests and I was eligible for the Army Specialized Training Program. There were 200 of us assigned to Fort Benning, Ga., for basic training. It was a gruelling 15 weeks — calisthenics, marching, obstacle courses, 25-mile hikes with full field packs. It changed you from a boy into a man. I was scheduled to go to Washington University in St. Louis to study engineering. I got my orders, everything was ready to go and nothing happened. The cadre said, "You guys ain't going to school, you're going to war."

The invasion of Europe was just over the horizon. The program was disbanded, all the boys who were in school were pulled out, and a group of us was assigned to the 94th Infantry Division in Camp McCain, Miss. I was assigned to an anti-tank unit with Headquarters Company, 3rd Battalion, 301st Infantry Regiment. We had a 57 mm anti-tank gun and a bazooka. It was a strange transformation, because like I said before, when we were kids we were taught the sanctity of life. All of a sudden, we had to learn to kill and destroy. One of the experiences I totally dreaded was bayonet practice. They had bags filled with straw and you had to stab at them.

Years earlier, Life magazine had a picture of a Japanese soldier using a trussed-up Chinese prisoner for bayonet practice. I'll never forget that. I often thought if I have to die, I hope it's not with a bayonet, and I hoped I'd never hear the command, "Fix bayonets!" It was the possibility of slaughtering another human being or being slaughtered yourself. We were in Camp McCain training until early July 1944, when our division was moved to Camp Shanks in New York, up on the Hudson. While we were there, the last Saturday in July, I got a 12-hour pass. I had this crazy notion I was going to get to Wind Gap and see my parents, because it could've been the last time I ever saw them. So I took a train from Camp Shanks down to New York City, a half-hour trip.

When I got to Grand Central Station, I said, "Is there anything for Easton, Pennsylvania?" "Black Diamond, just boarding." Got a ticket, jumped on the train and I was on my way. Got in Easton around 8 o'clock, just getting dusk, and my thought was to walk up Third Street to the foot of College Hill and hitchhike. There was a minimum of traffic. I thought I might be in trouble. I saw a single car drive up and stop, back up into a parking spot. It's a green LaSalle! My sister, Sarah, was getting out of the back door, "Morris," she screamed. "What are you doing here?" My older brother Harold, it was his car, and they took me home and I was there for about an hour with Mom and Dad, and Harold and Sarah. We all drove back to Easton and I got the last bus out. I have no idea how I got from the New York bus terminal to Camp Shanks, 5:30 in the morning.

Early in September, our units moved from England to France and were assigned to what's been called the forgotten war. There were 60,000 Germans trapped in the area of Lorient and St. Nazaire, the submarine ports. It was our assignment for 111 days. There were confrontations every day, men were killed, wounded. In December, the 66th Division relieved us in Brittany. Simultaneous with that, the Battle of the Bulge started, and when they recognized the significance and magnitude of the German attack, we were assigned to Patton's 3rd Army and moved up to the battle in early January in Luxembourg.

I remember the intense cold and the danger. Oh, the cold! At night, you took off your shoes. We had a truck to pull our 57 mm gun. We were fortunate; we could sit in back of the truck. You'd take off your shoes and socks and you'd massage your feet. Then you put on fresh socks. You put the old socks between your shirt and your undershirt. Next day, the socks you had there overnight would be dry, so you put those on and put the others inside your shirt.

In January, we captured Nennig [in Germany's Saarland]. We moved in at 10 o'clock at night and set up our weapons in case there was a counterattack the next day. Dave Kaplan and I were in a foxhole together, cold as hell. We had our overcoats laying over us. As soon as it was daylight we got up and walked around just to see where we were and what the situation was. Over there was a dead American soldier. He'd been running and was hit and laid there and froze to death. There was a German tank in the middle of the town, burned out, the crew was laying there dead, their uniforms burned. There were about six other American soldiers dead, one shot between the eyes.

For a while, I was assigned to a machine gun with K Company in the 301st. We were involved in what I thought was closer to hell than you could possibly be. Horrible, horrible! I'll never forget these medics running out carrying this litter with a guy with his leg blown off, and the smoke. They claim that one of our bazooka men fired at a tank, and it didn't disable it, and the Germans lowered their main gun and fired directly at him and blew him to bits. Along the road, there was a jeep that had six litters, three on each side, that had been carrying wounded men to the aid station. The jeep had been strafed. Its driver and all six men were dead. There were so many incidents. You forget, conveniently I guess, some of those experiences. But there were cases where shells would land over there instead of here. There shall no evil befall thee. Maybe I'm naive, but 405,399 Americans died. I could've been 405,400.

One of our greatest accomplishments was Trier, a critical city that had to be prevented from capture by the Germans. The 94th Division and the 10th Armoured Division captured Trier [on March 2, 1945]. Patton got orders from HQ: Don't attempt to capture Trier until we get two more divisions up there. Patton responded, "We've already captured it with two divisions. Do you want us to give it back?" I did something that you never do, I volunteered when they needed someone to carry messages from a gun emplacement to battalion headquarters because our communications were out.

Here I was, 19 years old and I thought to myself: These guys are married, I don't want them running around and getting killed. So I volunteered. There was another feller, too, Joe Burke.

On the last trip Joe and I made back to battalion, we got ambushed. There was a hail of bullets. We were in a farm area, animals running around. We hit the deck. Afterward, there was a pig laying next to me, dead. I expected to hear boots walking toward us and "Are they dead?" and being kicked in the head and shot. After the war, I got a Bronze Star for valour for carrying the messages, and I was embarrassed when I read the certificate: "Pvt. Metz voluntarily carried messages from the guns to the command post [on March 4, 1945, near Zerf, Germany] disregarding his own personal safety. He exposed himself many times to the incessant rain of shrapnel to deliver vital messages.

I remembered the event but I didn't think it was worthy of any award. I thought that's what you were supposed to do. After we captured Zerf, I walked into this barn and there was a big pile of loose hay and a pitchfork nearby. Just for fun I was poking around and I hit something solid. It was a cask with a big cork in the top. I went to Sgt. Reynolds: "I want to show you something." He came into the barn, uncorked the cask. "Metz, this is schnapps!" I was a hero for a day. We were one of the first to reach the Rhine [on March 21].

We captured Ludwigshafen, the chemical centre of Germany, and then Duesseldorf. We were pulled back out of combat and billeted in a town called Solingen, where I was when the war ended. We took over homes and I was assigned to a small room. When the war against Germany was over [May 8], it was a peaceful day so I took a walk after breakfast. I heard music and I walked on, and a couple of doors away there was this record player sitting on a sidewalk, playing Strauss waltzes. And I just stood there, amazed, and listened until it was over. Then I walked back slowly to the house I lived in and I thanked God it was over.

I went from Solingen to occupation duty in Czechoslovakia — Kienberg, on the Moldau River. The 15th of September in 1945, they had a ceremonial day, a review, we were all lined up and Gen. Patton drove up in a Packard, got out with his riding crop, walked down, reviewed us. He stopped about five men from me, I heard him talk but I didn't understand what he was saying. Years later, Tony Pagano joined our [Bulge veterans] chapter. "You know what, Morris? I was reviewed by Gen. Patton in Czechoslovakia.

He stopped right in front of me and said, 'Where are you from, soldier?' I said, 'Roseto, Pennsylvania, sir.' He said, 'Where in the hell is that?'" I said, "Tony, you were here, and I was here. If I would've heard you say Roseto, Pennsylvania!" After I came home from overseas, I was sent to Fort Indiantown Gap for dental work and discharged Feb. 6, 1946, as a sergeant. That morning I took a Greyhound bus home. It was a local. It stopped at Wind Gap. I got off the bus around 11:30, walked down West Third Street with my duffel bag on my back.

My mom was out sweeping the porch. "Hi Mom, I'm home." She started crying. Fortunately, I wasn't wounded in the war, though I had some close calls. No one in our squad was ever wounded or killed, and I credit that to the 91st Psalm: There shall no evil befall thee. To my knowledge, I never killed anyone. We fired our weapons at stationary targets — pillboxes and gun emplacements. I never aimed a weapon at another person, I never had to fix bayonet. My conscience is clear.

Epilogue
On July 30, 1946, Metz's older brother, Harold, asked him if he'd like to go to the Henryville House Resort in the Poconos, where his younger brother orchestra used to play. A classmate of Metz's joined them. "We drove up and we were sitting there having a drink and Harold said, 'There's three young ladies over there. Let's ask them to dance.' I picked out this young lady, Dottie Hoferer, and we danced, and immediately I sensed that she was special. We put our tables together and chatted. We found out there were four of them — Dottie and her sister, and each had a friend. But Dottie's sister didn't feel well and stayed in her room.

If there'd been four of them at their table, it would've been awkward. "We went back again two nights later and again there were three of them at a table. I asked Dottie if she'd like to go horseback riding the next day. We went riding, had dinner together and I kissed her for the first time. We exchanged addresses and she went home to New York. She'd come to Pennsylvania and I'd go to New York. "My grandfather was a lover of mules, and Dottie was one who always helped.

She never had to be asked if she saw that something had to be done. My grandfather observed, 'She's just like a mule. She gets right into the harness and starts pulling.' And that was the ultimate compliment." Morris and Dottie were married Aug. 23, 1947, in New York. They rented an apartment on the 100 block of Spring Garden Street in Easton. After starting at what was then the State Teachers College at East Stroudsburg, Metz switched to Lafayette College and graduated in 1950 with a Bachelor of Arts in psychology. The next year, he got a job at Mack Printing in Easton. He worked there for the next 35 years as a proofreader, assistant production manager, superintendent of pre-press and director of quality control.

When he was in a foxhole during the Bulge, he dreamed of living in the country. That came true in 1952, when he and Dottie moved to an 1840 farmhouse in Forks Township. They accumulated 35 acres. Metz served on the Forks Recreation Board in 1966-67 and the Planning Commission for 10 years, until 1982. Then he was appointed to the Board of Supervisors and twice won election. He served until 1995. Dottie worked for the Easton Area School District for 33 years as secretary/bookkeeper for the athletic director. The couple have a daughter, Debbie Zarate, and a son, Doug, both of whom live in Forks near their parents; five grandchildren; and four great-grandchildren. In May 1998, Morris and Dottie attended the first meeting of what would become the Lehigh Valley Chapter, Veterans of the Battle of the Bulge, at the Terrace Restaurant in Walnutport. It was called by Peter Leslie Jr. The group was chartered the following October. Seventy Bulge veterans who belonged to the group have since died. Twenty remain.

Metz led VBOB from 2003 until stepping down last year and taking the title president emeritus. He is 89. Dottie was the group's historian and archivist. Members have done hundreds of programs in schools to teach young people that "freedom is not free." They speak to other groups as well, Metz said, and have "enriched the lives of over 100,000 people."

One of his favourite stories, he said, illustrates the power of prayer. During the Bulge, Patton grew impatient for good weather that would allow planes to support his troops. He asked a chaplain to compose a prayer, which was distributed to every man in the 3rd Army. "Miraculously, the skies cleared," Metz said. "We wreaked havoc on the Germans, killed thousands of troops, knocked out much of their equipment." He said he always ends his talks with this thought: "When the power of love overcomes the love of power, there can be peace." After one high school speaking engagement, he said, "I got a letter from a young lady. She said, 'In a short two hours you have impacted the way I look at this country and I thank you for that.'

"It doesn't get any better than that," Metz said.

Marine Veteran, Recalls Battle for Iwo Jima

Charlie Gubish grew up in the Wassergass section of Lower Saucon Township, the sixth of seven children born to dairy farmers. His mother died when he was 5. He attended the South-eastern School on Hellertown-Ironville Road through sixth grade, then left to help on the farm. In 1937, when he was 18, he got a job in the soaking pits at Bethlehem Steel. Two years later, he started driving trucks in the company's fire department. He married, lived in an apartment on Mechanic Street in south Bethlehem and had two sons. The war against Germany and Japan had been raging for several years when Gubish signed up for the Marines, leaving his young family in the early summer of 1944. The 3rd Marine Division, in which Gubish served, landed on Iwo Jima on Feb. 24, 1945. The famous flag-raising on Mount Suribachi had taken place the day before. The first Marines on the island came ashore Feb. 19.

The day I was supposed to go in, we were on this big troopship. We had to go down the ropes on the side of the ship into these Higgins boats, and these boats would take us in to the beach. We went around in circles in groups of four or five boats. I was in a special group. I was a private, 26 years old, in the 134th Replacement Draft. They used to call me Pop, because I was a lot older than most of the guys — they were only 18, 19. We weren't supposed to do no fighting. We were going in to help unload ships wherever they needed us. But they couldn't land us because the beach was so tied up, with smashed equipment and whatnot.

The next day we go in on this LST [landing ship, tank], and it was cold that day, drizzling, foggy. That LST got us onto the beach. They opened the plank, I run off, all of us were running off, jumping off the big gate. So now when half of us were off, the LST was starting to go back in the ocean. He went way out, we could hardly see him. We're standing there. We didn't know what the hell to do. We had no officers or nothing. Somebody said, "Look at those dead Japs laying there." They were on a pile about 3 feet high, with rubber ponchos on top of them. All we could see was their shoes sticking out. One guy said, "What the hell, they've got shoes like we do." And their leggings were the same. We pulled the ponchos up a little higher. They were dead Marines. All of a sudden we see this LST coming back, back, back. And then the rest of the group got off. Then it was almost dark. That was a day that if a Japanese would've come up to me and shot me, I would've thanked him.

I was so disgusted, cold, wet. An officer told us we should dig in for the night. But the dead Marines were laying so thick on the beach, we could hardly find a space to dig a foxhole. It was awful. My foxhole buddy and me saw there was something like a pillbox made out of blocks. And boy we thought all we had to do was dig out the sand a little and put our poncho over the top and we'd have a nice hole. But there was a dead Marine on the pillbox with his head hanging down.

Well, I didn't want to move him and my buddy didn't want to move him. We dug another hole. Our job was to unload these LSTs, be a stretcher bearer, carry supplies to the front line. We'd roll 50-gallon oil drums down the ramp of the LST. We'd take the food off the ship and make piles on the beach. We did that for so many days. Then we had to go pick up the dead, take off their dog tags. That was a hard job to do. I did that for two, three days. I hoped that I never did it again. We picked the dead up and put them on payloaders, a couple at a time, then the payloaders buried them in that sand. The tanks, alligators and ducks [amphibious tractors and transports] didn't want to drive over the dead.

I saw Japanese — and some of our men — squashed as flat as the palm of my hand. One time it was pretty close to getting dark and a captain said, "Hey Gubish, take your squad and some other men and take some supplies up to B Company." I just happened to see a corporal walk by. Nobody liked to lead because they're the ones that got hit — sometimes the Japanese snuck up and stabbed you in the back. I said, "There's a corporal, why should I lead?" He called the corporal over. So we went up a ridge, and the fighting was up on a second ridge.

I'm behind the corporal carrying a box, and it was dark now but you could still see. We just got up to this coral rock, and a Japanese stepped out in front of it. The corporal saw him and I saw him too. We both dropped. We fired our rifles, emptying the clips. Then we're laying there waiting five, 10 minutes. Nothing moves. We pick our stuff up, and we're walking with our rifles slung over our shoulders. Then we come back down, and we're all afraid to go by this rock, and there was nothing there. But the next morning, Marines that were in the outfit up on the ridge found five dead Japanese. One had a rifle and one had a pistol. I think they wanted to surrender but we never gave them the chance. Why would one guy step out there like that and they have one rifle and one pistol between the five of them?

I don't know anything about the flag-raising [Feb. 23]. All I know is that somebody said there was a flag up on Mount Suribachi. There was so much stuff going on, you had no time to think. You were watching every move, your head's going back and forth to make sure there's no Japanese coming at you. Sometimes you didn't know who your officers were, because they got killed and somebody else would come in, and they got killed. When I was wounded, we had to go up to relieve B Company on the second ridge, so we were travelling through an open area. A big guy we used to call Texas was leading and there was about 10 guys behind him, and my squad of six was behind them.

We were 5 to 8 feet apart all the time when we walked. That morning, before we left the command post, my foxhole buddy said, "Charlie, if something happens to me, see that my father gets this pocket watch." The watch had some kind of medal on it. I said, "What are you talking about, Graeter?" He said, "Every day, somebody gets it." I took it that he thought he was going to get killed. I didn't want to listen to him. But anyway, as we're walking, they were joking and laughing up front. I couldn't see them.

A mortar shell exploded on the right-hand side of me about 50 feet away. Nobody paid any attention to it. At the same time, I saw there was some kind of a motor laying near me, from maybe an airplane. And before I knew, a mortar landed on the left-hand side about the same distance. I thought the first was one of ours that fell short, but when I saw the second one land at the same distance, I figured that was for us, so I hollered "Hit the deck!" I'm diving down to lay alongside this motor, and that's all I remember. The shell hit between my foxhole buddy and my other buddy in the squad. It knocked me out.

Somebody must've called the command post. A corpsman saw me laying there and he went past me — he was treating some others. When I came to, I couldn't talk. I was in shock. I seen my foxhole buddy laying dead, and my other buddy laying dead. I got up. The corpsman saw me and come running back. He said, "I thought you were dead." Something was burning me on my left side. He saw that I had my hand on it, and the blood. He quick cut my jacket away and put a compress on it. That was about 10 o'clock in the morning. From that time on, I didn't know anything. The next morning when I wake up, I'm on a hospital ship in a big ward with maybe 50 other wounded and some nurse going around with a needle injecting the guys with antibiotics. To this day, I don't know how the hell I got on that hospital ship.

My one buddy, his head was split open, blood running out. He was from Boston. My foxhole buddy would have lived, the way a corpsman told me later on, because he only had a shrapnel wound in his leg, but the concussion killed him. Son of a gun, when he told me I should send that pocket watch to his father, he was right about getting killed. He was only 19, but he'd watched over me. He did. All I knew was he came from Dayton, Ohio, and his last name, Graeter. I didn't get his watch — we'd left our stuff in the command post — and I could never find his parents. That bothers me, about his pocket watch. Every Memorial Day, Veterans Day, that comes in my mind. I just can't talk about it.

They sent me to Guam and I was in a fleet hospital for two weeks. Then they put me in the 9th Marines a short period, until they found out I couldn't hear. My eardrums were broken from that mortar shell, so they sent me to the division hospital on Guam. From there they took me out of the combat area and put me in the Guam fire department, and I was there until the war ended. I had it good in the fire department. We were right next to a B-29 base. There was no windows on the firehouse. When the B-29s took off, you'd think they were coming right through the building. The pilots used to come down to the firehouse and ask for Coke. We could get all the Coke we wanted. They could get all the booze they wanted, but they couldn't get Coke. We used to trade — a bottle of booze for a case of Coke.

In December [1945], we were in San Diego for two weeks trying to get home, but the troop trains were full. Then they took us up to Great Lakes, Ill. We were discharged and put on trains Christmas Day, and we didn't get to Philadelphia until 2 o'clock the next morning. How are we going to get home? The place was dead. There was no trolleys, nothing. Four of us got together and chipped in for a taxi. That was our Christmas gift.

Epilogue
Gubish, a rifleman with sharpshooter and expert badges, was honourably discharged as a private first class. He has a Purple Heart medal for the wound he suffered March 13, 1945, three days before Iwo Jima was secured. "The Japanese must've had good steel, because for 70 years I'm carrying their shrapnel in my chest," he said. "The doctors said they couldn't take it out of me because it was too close to my heart. It would either kill me or come out. I can still feel it, right on the edge of my skin." American casualties on Iwo Jima totaled nearly 7,000 dead and 20,000 wounded.

Eighteen thousand Japanese were killed. Gubish returned to the fire department at Bethlehem Steel, working there until his retirement. His wife, Ethel, whom he married in 1940, worked for many years at Modern Slacks in Allentown. She died in 1998 at age 78. Their sons are Charles and Richard, both in Bethlehem. Gubish lives in the Sterling Heights retirement community in Hanover Township, Northampton County. He is 96 and has seven grandchildren, 14 great-grandchildren and six great-great-grandchildren.

"I don't know why I'm still here," he said. "Maybe the Lord or the devil don't want me." He belongs to the American Legion, the Veterans of Foreign Wars and the Disabled American Veterans. His name is on a brick in the Pacific War Memorial's Walkway of Honour at the entrance to Marine Corps Base Hawaii. His foxhole buddy, Marine Pvt. Herman R. Graeter, who died in the mortar blast that wounded Gubish, is buried in the National Memorial Cemetery of the Pacific in Honolulu.

13 Robinson Crusoe

Robinson Crusoe's seafaring adventures are abruptly ended when he is shipwrecked, the solitary survivor on a deserted island. He gradually creates a life for himself, building a house, cultivating the land, and making a companion from the native whose life he saves. Daniel Defoe's enthralling story-telling and imaginatively detailed descriptions have ensured that his fiction masquerading as fact remains one of the most famous stories in English literature.

On one level a simple adventure story, the novel also raises profound questions about moral and spiritual values, society, and man's abiding acquisitiveness. The book has 20 chapters. I recommend rotating the screen into landscape to make reading easier. Hopefully the book will keep you occupied and even give you ideas on your own survival situation.

Chapter 1 - Start In Life

I was born in the year 1632, in the city of York, of a good family, though not of that country, my father being a foreigner of Bremen, who settled first at Hull. He got a good estate by merchandise, and leaving off his trade, lived afterwards at York, from whence he had married my mother, whose relations were named Robinson, a very good family in that country, and from whom I was called Robinson Kreutznaer; but, by the usual corruption of words in England, we are now called—nay we call ourselves and write our name—Crusoe; and so my companions always called me.

I had two elder brothers, one of whom was lieutenant-colonel to an English regiment of foot in Flanders, formerly commanded by the famous Colonel Lockhart, and was killed at the battle near Dunkirk against the Spaniards. What became of my second brother I never knew, any more than my father or mother knew what became of me.

Being the third son of the family and not bred to any trade, my head began to be filled very early with rambling thoughts. My father, who was very ancient, had given me a competent share of learning, as far as house-education and a country free school generally go, and designed me for the law; but I would be satisfied with nothing but going to sea; and my inclination to this led me so strongly against the will, nay, the commands of my father, and against all the entreaties and persuasions of my mother and other friends, that there seemed to be something fatal in that propensity of nature, tending directly to the life of misery which was to befall me.

My father, a wise and grave man, gave me serious and excellent counsel against what he foresaw was my design. He called me one morning into his chamber, where he was confined by the gout, and expostulated very warmly with me upon this subject. He asked me what reasons, more than a mere wandering inclination, I had for leaving father's house and my native country, where I might be well introduced, and had a prospect of raising my fortune by application and industry, with a life of ease and pleasure. He told me it was men of desperate fortunes on one hand, or of aspiring, superior fortunes on the other, who went abroad upon adventures, to rise by enterprise, and make themselves famous in undertakings of a nature out of the common road; that these things were all either too far above me or too far below me; that mine was the middle state, or what might be called the upper station of low life, which he had found, by long experience, was the best state in the world, the most suited to human happiness, not exposed to the miseries and hardships, the labour and sufferings of the mechanic part of mankind, and not embarrassed with the pride, luxury, ambition, and envy of the upper part of mankind.

He told me I might judge of the happiness of this state by this one thing—viz. that this was the state of life which all other people envied; that kings have frequently lamented the miserable consequence of being born to great things, and wished they had been placed in the middle of the two extremes, between the mean and the great; that the wise man gave his testimony to this, as the standard of felicity, when he prayed to have neither poverty nor riches.

He bade me observe it, and I should always find that the calamities of life were shared among the upper and lower part of mankind, but that the middle station had the fewest disasters, and was not exposed to so many vicissitudes as the higher or lower part of mankind; nay, they were not subjected to so many distempers and uneasinesses, either of body or mind, as those were who, by vicious living, luxury, and extravagances on the one hand, or by hard labour, want of necessaries, and mean or insufficient diet on the other hand, bring distemper upon themselves by the natural consequences of their way of living; that the middle station of life was calculated for all kind of virtue and all kind of enjoyments; that peace and plenty were the handmaids of a middle fortune; that temperance, moderation, quietness, health, society, all agreeable diversions, and all desirable pleasures, were the blessings attending the middle station of life; that this way men went silently and smoothly through the world, and comfortably out of it, not embarrassed with the labours of the hands or of the head, not sold to a life of slavery for daily bread, nor harassed with perplexed circumstances, which rob the soul of peace and the body of rest, nor enraged with the passion of envy, or the secret burning lust of ambition for great things; but, in easy circumstances, sliding gently through the world, and sensibly tasting the sweets of living, without the bitter; feeling that they are happy, and learning by every day's experience to know it more sensibly.

After this he pressed me earnestly, and in the most affectionate manner, not to play the young man, nor to precipitate myself into miseries which nature, and the station of life I was born in, seemed to have provided against; that I was under no necessity of seeking my bread; that he would do well for me, and endeavour to enter me fairly into the station of life which he had just been recommending to me; and that if I was not very easy and happy in the world, it must be my mere fate or fault that must hinder it; and that he should have nothing to answer for, having thus discharged his duty in warning me against measures which he knew would be to my hurt; in a word, that as he would do very kind things for me if I would stay and settle at home as he directed, so he would not have so much hand in my misfortunes as to give me any encouragement to go away; and to close all, he told me I had my elder brother for an example, to whom he had used the same earnest persuasions to keep him from going into the Low Country wars, but could not prevail, his young desires prompting him to run into the army, where he was killed; and though he said he would not cease to pray for me, yet he would venture to say to me, that if I did take this foolish step, God would not bless me, and I should have leisure hereafter to reflect upon having neglected his counsel when there might be none to assist in my recovery.

I observed in this last part of his discourse, which was truly prophetic, though I suppose my father did not know it to be so himself—I say, I observed the tears run down his face very plentifully, especially when he spoke of my brother who was killed: and that when he spoke of my having leisure to repent, and none to assist me, he was so moved that he broke off the discourse, and told me his heart was so full he could say no more to me.

I was sincerely affected with this discourse, and, indeed, who could be otherwise? and I resolved not to think of going abroad any more, but to settle at home according to my father's desire. But alas! a few days wore it all off; and, in short, to prevent any of my father's further importunities, in a few weeks after I resolved to run quite away from him. However, I did not act quite so hastily as the first heat of my resolution prompted; but I took my mother at a time when I thought her a little more pleasant than ordinary, and told her that my thoughts were so entirely bent upon seeing the world that I should never settle to anything with resolution enough to go through with it, and my father had better give me his consent than force me to go without it; that I was now eighteen years old, which was too late to go apprentice to a trade or clerk to an attorney; that I was sure if I did I should never serve out my time, but I should certainly run away from my master before my time was out, and go to sea; and if she would speak to my father to let me go one voyage abroad, if I came home again, and did not like it, I would go no more; and I would promise, by a double diligence, to recover the time that I had lost.

This put my mother into a great passion; she told me she knew it would be to no purpose to speak to my father upon any such subject; that he knew too well what was my interest to give his consent to anything so much for my hurt; and that she wondered how I could think of any such thing after the discourse I had had with my father, and such kind and tender expressions as she knew my father had used to me; and that, in short, if I would ruin myself, there was no help for me; but I might depend I should never have their consent to it; that for her part she would not have so much hand in my destruction; and I should never have it to say that my mother was willing when my father was not.

Though my mother refused to move it to my father, yet I heard afterwards that she reported all the discourse to him, and that my father, after showing a great concern at it, said to her, with a sigh, "That boy might be happy if he would stay at home; but if he goes abroad, he will be the most miserable wretch that ever was born: I can give no consent to it."

It was not till almost a year after this that I broke loose, though, in the meantime, I continued obstinately deaf to all proposals of settling to business, and frequently expostulated with my father and mother about their being so positively determined against what they knew my inclinations prompted me to. But being one day at Hull, where I went casually, and without any purpose of making an elopement at that time; but, I say, being there, and one of my companions being about to sail to London in his father's ship, and prompting me to go with them with the common allurement of seafaring men, that it should cost me nothing for my passage, I consulted neither father nor mother any more, nor so much as sent them word of it; but leaving them to hear of it as they might, without asking God's blessing or my father's, without any consideration of circumstances or consequences, and in an ill hour, God knows, on the 1st of September 1651, I went on board a ship bound for London. Never any young adventurer's misfortunes, I believe, began sooner, or continued longer than mine. The ship was no sooner out of the Humber than the wind began to blow and the sea to rise in a most frightful manner; and, as I had never been at sea before, I was most inexpressibly sick in body and terrified in mind. I began now seriously to reflect upon what I had done, and how justly I was overtaken by the judgment of Heaven for my wicked leaving my father's house, and abandoning my duty. All the good counsels of my parents, my father's tears and my mother's entreaties, came now fresh into my mind; and my conscience, which was not yet come to the pitch of hardness to which it has since, reproached me with the contempt of advice, and the breach of my duty to God and my father.

All this while the storm increased, and the sea went very high, though nothing like what I have seen many times since; no, nor what I saw a few days after; but it was enough to affect me then, who was but a young sailor, and had never known anything of the matter. I expected every wave would have swallowed us up, and that every time the ship fell down, as I thought it did, in the trough or hollow of the sea, we should never rise more; in this agony of mind, I made many vows and resolutions that if it would please God to spare my life in this one voyage, if ever I got once my foot upon dry land again, I would go directly home to my father, and never set it into a ship again while I lived; that I would take his advice, and never run myself into such miseries as these any more. Now I saw plainly the goodness of his observations about the middle station of life, how easy, how comfortably he had lived all his days, and never had been exposed to tempests at sea or troubles on shore; and I resolved that I would, like a true repenting prodigal, go home to my father.

These wise and sober thoughts continued all the while the storm lasted, and indeed some time after; but the next day the wind was abated, and the sea calmer, and I began to be a little inured to it; however, I was very grave for all that day, being also a little sea-sick still; but towards night the weather cleared up, the wind was quite over, and a charming fine evening followed; the sun went down perfectly clear, and rose so the next morning; and having little or no wind, and a smooth sea, the sun shining upon it, the sight was, as I thought, the most delightful that ever I saw.

I had slept well in the night, and was now no more sea-sick, but very cheerful, looking with wonder upon the sea that was so rough and terrible the day before, and could be so calm and so pleasant in so little a time after. And now, lest my good resolutions should continue, my companion, who had enticed me away, comes to me; "Well, Bob," says he, clapping me upon the shoulder, "how do you do after it? I warrant you were frighted, wer'n't you, last night, when it blew but a capful of wind?" "A capful d'you call it?" said I; "'twas a terrible storm." "A storm, you fool you," replies he; "do you call that a storm? why, it was nothing at all; give us but a good ship and sea-room, and we think nothing of such a squall of wind as that; but you're but a fresh-water sailor, Bob. Come, let us make a bowl of punch, and we'll forget all that; d'ye see what charming weather 'tis now?" To make short this sad part of my story, we went the way of all sailors; the punch was made and I was made half drunk with it: and in that one night's wickedness I drowned all my repentance, all my reflections upon my past conduct, all my resolutions for the future. In a word, as the sea was returned to its smoothness of surface and settled calmness by the abatement of that storm, so the hurry of my thoughts being over, my fears and apprehensions of being swallowed up by the sea being forgotten, and the current of my former desires returned, I entirely forgot the vows and promises that I made in my distress. I found, indeed, some intervals of reflection; and the serious thoughts did, as it were, endeavour to return again sometimes; but I shook them off, and roused myself from them as it were from a distemper, and applying myself to drinking and company, soon mastered the return of those fits—for so I called them; and I had in five or six days got as complete a victory over conscience as any young fellow that resolved not to be troubled with it could desire.

But I was to have another trial for it still; and Providence, as in such cases generally it does, resolved to leave me entirely without excuse; for if I would not take this for a deliverance, the next was to be such a one as the worst and most hardened wretch among us would confess both the danger and the mercy of. The sixth day of our being at sea we came into Yarmouth Roads; the wind having been contrary and the weather calm, we had made but little way since the storm. Here we were obliged to come to an anchor, and here we lay, the wind continuing contrary—viz. at south-west—for seven or eight days, during which time a great many ships from Newcastle came into the same Roads, as the common harbour where the ships might wait for a wind for the river.

We had not, however, rid here so long but we should have tided it up the river, but that the wind blew too fresh, and after we had lain four or five days, blew very hard. However, the Roads being reckoned as good as a harbour, the anchorage good, and our ground-tackle very strong, our men were unconcerned, and not in the least apprehensive of danger, but spent the time in rest and mirth, after the manner of the sea; but the eighth day, in the morning, the wind increased, and we had all hands at work to strike our topmasts, and make everything snug and close, that the ship might ride as easy as possible. By noon the sea went very high indeed, and our ship rode forecastle in, shipped several seas, and we thought once or twice our anchor had come home; upon which our master ordered out the sheet-anchor, so that we rode with two anchors ahead, and the cables veered out to the bitter end.

By this time it blew a terrible storm indeed; and now I began to see terror and amazement in the faces even of the seamen themselves. The master, though vigilant in the business of preserving the ship, yet as he went in and out of his cabin by me, I could hear him softly to himself say, several times, "Lord be merciful to us! we shall be all lost! we shall be all undone!" and the like. During these first hurries I was stupid, lying still in my cabin, which was in the steerage, and cannot describe my temper: I could ill resume the first penitence which I had so apparently trampled upon and hardened myself against: I thought the bitterness of death had been past, and that this would be nothing like the first; but when the master himself came by me, as I said just now, and said we should be all lost, I was dreadfully frighted. I got up out of my cabin and looked out; but such a dismal sight I never saw: the sea ran mountains high, and broke upon us every three or four minutes; when I could look about, I could see nothing but distress round us; two ships that rode near us, we found, had cut their masts by the board, being deep laden; and our men cried out that a ship which rode about a mile ahead of us was foundered. Two more ships, being driven from their anchors, were run out of the Roads to sea, at all adventures, and that with not a mast standing. The light ships fared the best, as not so much labouring in the sea; but two or three of them drove, and came close by us, running away with only their spritsail out before the wind. Towards evening the mate and boatswain begged the master of our ship to let them cut away the fore-mast, which he was very unwilling to do; but the boatswain protesting to him that if he did not the ship would founder, he consented; and when they had cut away the fore-mast, the main-mast stood so loose, and shook the ship so much, they were obliged to cut that away also, and make a clear deck.

Any one may judge what a condition I must be in at all this, who was but a young sailor, and who had been in such a fright before at but a little. But if I can express at this distance the thoughts I had about me at that time, I was in tenfold more horror of mind upon account of my former convictions, and the having returned from them to the resolutions I had wickedly taken at first, than I was at death itself; and these, added to the terror of the storm, put me into such a condition that I can by no words describe it. But the worst was not come yet; the storm continued with such fury that the seamen themselves acknowledged they had never seen a worse. We had a good ship, but she was deep laden, and wallowed in the sea, so that the seamen every now and then cried out she would founder. It was my advantage in one respect, that I did not know what they meant by founder till I inquired. However, the storm was so violent that I saw, what is not often seen, the master, the boatswain, and some others more sensible than the rest, at their prayers, and expecting every moment when the ship would go to the bottom. In the middle of the night, and under all the rest of our distresses, one of the men that had been down to see cried out we had sprung a leak; another said there was four feet water in the hold. Then all hands were called to the pump. At that word, my heart, as I thought, died within me: and I fell backwards upon the side of my bed where I sat, into the cabin. However, the men roused me, and told me that I, that was able to do nothing before, was as well able to pump as another; at which I stirred up and went to the pump, and worked very heartily. While this was doing the master, seeing some light colliers, who, not able to ride out the storm were obliged to slip and run away to sea, and would come near us, ordered to fire a gun as a signal of distress.

I, who knew nothing what they meant, thought the ship had broken, or some dreadful thing happened. In a word, I was so surprised that I fell down in a swoon. As this was a time when everybody had his own life to think of, nobody minded me, or what was become of me; but another man stepped up to the pump, and thrusting me aside with his foot, let me lie, thinking I had been dead; and it was a great while before I came to myself.

We worked on; but the water increasing in the hold, it was apparent that the ship would founder; and though the storm began to abate a little, yet it was not possible she could swim till we might run into any port; so the master continued firing guns for help; and a light ship, who had rid it out just ahead of us, ventured a boat out to help us. It was with the utmost hazard the boat came near us; but it was impossible for us to get on board, or for the boat to lie near the ship's side, till at last the men rowing very heartily, and venturing their lives to save ours, our men cast them a rope over the stern with a buoy to it, and then veered it out a great length, which they, after much labour and hazard, took hold of, and we hauled them close under our stern, and got all into their boat. It was to no purpose for them or us, after we were in the boat, to think of reaching their own ship; so all agreed to let her drive, and only to pull her in towards shore as much as we could; and our master promised them, that if the boat was staved upon shore, he would make it good to their master: so partly rowing and partly driving, our boat went away to the northward, sloping towards the shore almost as far as Winterton Ness.

We were not much more than a quarter of an hour out of our ship till we saw her sink, and then I understood for the first time what was meant by a ship foundering in the sea. I must acknowledge I had hardly eyes to look up when the seamen told me she was sinking; for from the moment that they rather put me into the boat than that I might be said to go in, my heart was, as it were, dead within me, partly with fright, partly with horror of mind, and the thoughts of what was yet before me.

While we were in this condition—the men yet labouring at the oar to bring the boat near the shore—we could see (when, our boat mounting the waves, we were able to see the shore) a great many people running along the strand to assist us when we should come near; but we made but slow way towards the shore; nor were we able to reach the shore till, being past the lighthouse at Winterton, the shore falls off to the westward towards Cromer, and so the land broke off a little the violence of the wind. Here we got in, and though not without much difficulty, got all safe on shore, and walked afterwards on foot to Yarmouth, where, as unfortunate men, we were used with great humanity, as well by the magistrates of the town, who assigned us good quarters, as by particular merchants and owners of ships, and had money given us sufficient to carry us either to London or back to Hull as we thought fit.

Had I now had the sense to have gone back to Hull, and have gone home, I had been happy, and my father, as in our blessed Saviour's parable, had even killed the fatted calf for me; for hearing the ship I went away in was cast away in Yarmouth Roads, it was a great while before he had any assurances that I was not drowned.

But my ill fate pushed me on now with an obstinacy that nothing could resist; and though I had several times loud calls from my reason and my more composed judgment to go home, yet I had no power to do it. I know not what to call this, nor will I urge that it is a secret overruling decree, that hurries us on to be the instruments of our own destruction, even though it be before us, and that we rush upon it with our eyes open. Certainly, nothing but some such decreed unavoidable misery, which it was impossible for me to escape, could have pushed me forward against the calm reasonings and persuasions of my most retired thoughts, and against two such visible instructions as I had met with in my first attempt.

My comrade, who had helped to harden me before, and who was the master's son, was now less forward than I. The first time he spoke to me after we were at Yarmouth, which was not till two or three days, for we were separated in the town to several quarters; I say, the first time he saw me, it appeared his tone was altered; and, looking very melancholy, and shaking his head, he asked me how I did, and telling his father who I was, and how I had come this voyage only for a trial, in order to go further abroad, his father, turning to me with a very grave and concerned tone "Young man," says he, "you ought never to go to sea any more; you ought to take this for a plain and visible token that you are not to be a seafaring man." "Why, sir," said I, "will you go to sea no more?" "That is another case," said he; "it is my calling, and therefore my duty; but as you made this voyage on trial, you see what a taste Heaven has given you of what you are to expect if you persist. Perhaps this has all befallen us on your account, like Jonah in the ship of Tarshish. Pray," continues he, "what are you; and on what account did you go to sea?" Upon that I told him some of my story; at the end of which he burst out into a strange kind of passion: "What had I done," says he, "that such an unhappy wretch should come into my ship? I would not set my foot in the same ship with thee again for a thousand pounds." This indeed was, as I said, an excursion of his spirits, which were yet agitated by the sense of his loss, and was farther than he could have authority to go. However, he afterwards talked very gravely to me, exhorting me to go back to my father, and not tempt Providence to my ruin, telling me I might see a visible hand of Heaven against me. "And, young man," said he, "depend upon it, if you do not go back, wherever you go, you will meet with nothing but disasters and disappointments, till your father's words are fulfilled upon you."

We parted soon after; for I made him little answer, and I saw him no more; which way he went I knew not. As for me, having some money in my pocket, I travelled to London by land; and there, as well as on the road, had many struggles with myself what course of life I should take, and whether I should go home or to sea.

As to going home, shame opposed the best motions that offered to my thoughts, and it immediately occurred to me how I should be laughed at among the neighbours, and should be ashamed to see, not my father and mother only, but even everybody else; from whence I have since often observed, how incongruous and irrational the common temper of mankind is, especially of youth, to that reason which ought to guide them in such cases—viz. that they are not ashamed to sin, and yet are ashamed to repent; not ashamed of the action for which they ought justly to be esteemed fools, but are ashamed of the returning, which only can make them be esteemed wise men.

In this state of life, however, I remained some time, uncertain what measures to take, and what course of life to lead. An irresistible reluctance continued to going home; and as I stayed away a while, the remembrance of the distress I had been in wore off, and as that abated, the little motion I had in my desires to return wore off with it, till at last I quite laid aside the thoughts of it, and looked out for a voyage.

Chapter 2 - Slavery and Escape

That evil influence which carried me first away from my father's house—which hurried me into the wild and indigested notion of raising my fortune, and that impressed those conceits so forcibly upon me as to make me deaf to all good advice, and to the entreaties and even the commands of my father—I say, the same influence, whatever it was, presented the most unfortunate of all enterprises to my view; and I went on board a vessel bound to the coast of Africa; or, as our sailors vulgarly called it, a voyage to Guinea.

It was my great misfortune that in all these adventures I did not ship myself as a sailor; when, though I might indeed have worked a little harder than ordinary, yet at the same time I should have learnt the duty and office of a fore-mast man, and in time might have qualified myself for a mate or lieutenant, if not for a master. But as it was always my fate to choose for the worse, so I did here; for having money in my pocket and good clothes upon my back, I would always go on board in the habit of a gentleman; and so I neither had any business in the ship, nor learned to do any.

It was my lot first of all to fall into pretty good company in London, which does not always happen to such loose and misguided young fellows as I then was; the devil generally not omitting to lay some snare for them very early; but it was not so with me. I first got acquainted with the master of a ship who had been on the coast of Guinea; and who, having had very good success there, was resolved to go again. This captain taking a fancy to my conversation, which was not at all disagreeable at that time, hearing me say I had a mind to see the world, told me if I would go the voyage with him I should be at no expense; I should be his messmate and his companion; and if I could carry anything with me, I should have all the advantage of it that the trade would admit; and perhaps I might meet with some encouragement.

I embraced the offer; and entering into a strict friendship with this captain, who was an honest, plain-dealing man, I went the voyage with him, and carried a small adventure with me, which, by the disinterested honesty of my friend the captain, I increased very considerably; for I carried about £40 in such toys and trifles as the captain directed me to buy. These £40 I had mustered together by the assistance of some of my relations whom I corresponded with; and who, I believe, got my father, or at least my mother, to contribute so much as that to my first adventure.

This was the only voyage which I may say was successful in all my adventures, which I owe to the integrity and honesty of my friend the captain; under whom also I got a competent knowledge of the mathematics and the rules of navigation, learned how to keep an account of the ship's course, take an observation, and, in short, to understand some things that were needful to be understood by a sailor; for, as he took delight to instruct me, I took delight to learn; and, in a word, this voyage made me both a sailor and a merchant; for I brought home five pounds nine ounces of gold-dust for my adventure, which yielded me in London, at my return, almost £300; and this filled me with those aspiring thoughts which have since so completed my ruin.

Yet even in this voyage I had my misfortunes too; particularly, that I was continually sick, being thrown into a violent calenture by the excessive heat of the climate; our principal trading being upon the coast, from latitude of 15 degrees north even to the line itself.

I was now set up for a Guinea trader; and my friend, to my great misfortune, dying soon after his arrival, I resolved to go the same voyage again, and I embarked in the same vessel with one who was his mate in the former voyage, and had now got the command of the ship. This was the unhappiest voyage that ever man made; for though I did not carry quite £100 of my new-gained wealth, so that I had £200 left, which I had lodged with my friend's widow, who was very just to me, yet I fell into terrible misfortunes. The first was this: our ship making her course towards the Canary Islands, or rather between those islands and the African shore, was surprised in the grey of the morning by a Turkish rover of Sallee, who gave chase to us with all the sail she could make. We crowded also as much canvas as our yards would spread, or our masts carry, to get clear; but finding the pirate gained upon us, and would certainly come up with us in a few hours, we prepared to fight; our ship having twelve guns, and the rogue eighteen. About three in the afternoon he came up with us, and bringing to, by mistake, just athwart our quarter, instead of athwart our stern, as he intended, we brought eight of our guns to bear on that side, and poured in a broadside upon him, which made him sheer off again, after returning our fire, and pouring in also his small shot from near two hundred men which he had on board. However, we had not a man touched, all our men keeping close. He prepared to attack us again, and we to defend ourselves. But laying us on board the next time upon our other quarter, he entered sixty men upon our decks, who immediately fell to cutting and hacking the sails and rigging. We plied them with small shot, half-pikes, powder-chests, and such like, and cleared our deck of them twice. However, to cut short this melancholy part of our story, our ship being disabled, and three of our men killed, and eight wounded, we were obliged to yield, and were carried all prisoners into Sallee, a port belonging to the Moors.

The usage I had there was not so dreadful as at first I apprehended; nor was I carried up the country to the emperor's court, as the rest of our men were, but was kept by the captain of the rover as his proper prize, and made his slave, being young and nimble, and fit for his business. At this surprising change of my circumstances, from a merchant to a miserable slave, I was perfectly overwhelmed; and now I looked back upon my father's prophetic discourse to me, that I should be miserable and have none to relieve me, which I thought was now so effectually brought to pass that I could not be worse; for now the hand of Heaven had overtaken me, and I was undone without redemption; but, alas! this was but a taste of the misery I was to go through, as will appear in the sequel of this story.

As my new patron, or master, had taken me home to his house, so I was in hopes that he would take me with him when he went to sea again, believing that it would some time or other be his fate to be taken by a Spanish or Portugal man-of-war; and that then I should be set at liberty. But this hope of mine was soon taken away; for when he went to sea, he left me on shore to look after his little garden, and do the common drudgery of slaves about his house; and when he came home again from his cruise, he ordered me to lie in the cabin to look after the ship.

Here I meditated nothing but my escape, and what method I might take to effect it, but found no way that had the least probability in it; nothing presented to make the supposition of it rational; for I had nobody to communicate it to that would embark with me—no fellow-slave, no Englishman, Irishman, or Scotchman there but myself; so that for two years, though I often pleased myself with the imagination, yet I never had the least encouraging prospect of putting it in practice.

After about two years, an odd circumstance presented itself, which put the old thought of making some attempt for my liberty again in my head. My patron lying at home longer than usual without fitting out his ship, which, as I heard, was for want of money, he used constantly, once or twice a week, sometimes oftener if the weather was fair, to take the ship's pinnace and go out into the road a-fishing; and as he always took me and young Maresco with him to row the boat, we made him very merry, and I proved very dexterous in catching fish; insomuch that sometimes he would send me with a Moor, one of his kinsmen, and the youth—the Maresco, as they called him—to catch a dish of fish for him.

It happened one time, that going a-fishing in a calm morning, a fog rose so thick that, though we were not half a league from the shore, we lost sight of it; and rowing we knew not whither or which way, we laboured all day, and all the next night; and when the morning came we found we had pulled off to sea instead of pulling in for the shore; and that we were at least two leagues from the shore. However, we got well in again, though with a great deal of labour and some danger; for the wind began to blow pretty fresh in the morning; but we were all very hungry.

But our patron, warned by this disaster, resolved to take more care of himself for the future; and having lying by him the longboat of our English ship that he had taken, he resolved he would not go a-fishing any more without a compass and some provision; so he ordered the carpenter of his ship, who also was an English slave, to build a little state-room, or cabin, in the middle of the long-boat, like that of a barge, with a place to stand behind it to steer, and haul home the main-sheet; the room before for a hand or two to stand and work the sails. She sailed with what we call a shoulder-of-mutton sail; and the boom jibed over the top of the cabin, which lay very snug and low, and had in it room for him to lie, with a slave or two, and a table to eat on, with some small lockers to put in some bottles of such liquor as he thought fit to drink; and his bread, rice, and coffee.

We went frequently out with this boat a-fishing; and as I was most dexterous to catch fish for him, he never went without me. It happened that he had appointed to go out in this boat, either for pleasure or for fish, with two or three Moors of some distinction in that place, and for whom he had provided extraordinarily, and had, therefore, sent on board the boat overnight a larger store of provisions than ordinary; and had ordered me to get ready three fusees with powder and shot, which were on board his ship, for that they designed some sport of fowling as well as fishing.

I got all things ready as he had directed, and waited the next morning with the boat washed clean, her ancient and pendants out, and everything to accommodate his guests; when by-and-by my patron came on board alone, and told me his guests had put off going from some business that fell out, and ordered me, with the man and boy, as usual, to go out with the boat and catch them some fish, for that his friends were to sup at his house, and commanded that as soon as I got some fish I should bring it home to his house; all which I prepared to do.

This moment my former notions of deliverance darted into my thoughts, for now I found I was likely to have a little ship at my command; and my master being gone, I prepared to furnish myself, not for fishing business, but for a voyage; though I knew not, neither did I so much as consider, whither I should steer—anywhere to get out of that place was my desire.

My first contrivance was to make a pretence to speak to this Moor, to get something for our subsistence on board; for I told him we must not presume to eat of our patron's bread. He said that was true; so he brought a large basket of rusk or biscuit, and three jars of fresh water, into the boat. I knew where my patron's case of bottles stood, which it was evident, by the make, were taken out of some English prize, and I conveyed them into the boat while the Moor was on shore, as if they had been there before for our master. I conveyed also a great lump of beeswax into the boat, which weighed about half a hundred-weight, with a parcel of twine or thread, a hatchet, a saw, and a hammer, all of which were of great use to us afterwards, especially the wax, to make candles. Another trick I tried upon him, which he innocently came into also: his name was Ismael, which they call Muley, or Moely; so I called to him—"Moely," said I, "our patron's guns are on board the boat; can you not get a little powder and shot? It may be we may kill some alcamies (a fowl like our curlews) for ourselves, for I know he keeps the gunner's stores in the ship." "Yes," says he, "I'll bring some;" and accordingly he brought a great leather pouch, which held a pound and a half of powder, or rather more; and another with shot, that had five or six pounds, with some bullets, and put all into the boat. At the same time I had found some powder of my master's in the great cabin, with which I filled one of the large bottles in the case, which was almost empty, pouring what was in it into another; and thus furnished with everything needful, we sailed out of the port to fish. The castle, which is at the entrance of the port, knew who we were, and took no notice of us; and we were not above a mile out of the port before we hauled in our sail and set us down to fish.

The wind blew from the N.N.E., which was contrary to my desire, for had it blown southerly I had been sure to have made the coast of Spain, and at least reached to the bay of Cadiz; but my resolutions were, blow which way it would, I would be gone from that horrid place where I was, and leave the rest to fate.

After we had fished some time and caught nothing—for when I had fish on my hook I would not pull them up, that he might not see them—I said to the Moor, "This will not do; our master will not be thus served; we must stand farther off." He, thinking no harm, agreed, and being in the head of the boat, set the sails; and, as I had the helm, I ran the boat out near a league farther, and then brought her to, as if I would fish; when, giving the boy the helm, I stepped forward to where the Moor was, and making as if I stooped for something behind him, I took him by surprise with my arm under his waist, and tossed him clear overboard into the sea. He rose immediately, for he swam like a cork, and called to me, begged to be taken in, told me he would go all over the world with me. He swam so strong after the boat that he would have reached me very quickly, there being but little wind; upon which I stepped into the cabin, and fetching one of the fowling-pieces, I presented it at him, and told him I had done him no hurt, and if he would be quiet I would do him none. "But," said I, "you swim well enough to reach to the shore, and the sea is calm; make the best of your way to shore, and I will do you no harm; but if you come near the boat I'll shoot you through the head, for I am resolved to have my liberty;" so he turned himself about, and swam for the shore, and I make no doubt but he reached it with ease, for he was an excellent swimmer.

I could have been content to have taken this Moor with me, and have drowned the boy, but there was no venturing to trust him. When he was gone, I turned to the boy, whom they called Xury, and said to him, "Xury, if you will be faithful to me, I'll make you a great man; but if you will not stroke your face to be true to me"—that is, swear by Mahomet and his father's beard—"I must throw you into the sea too." The boy smiled in my face, and spoke so innocently that I could not distrust him, and swore to be faithful to me, and go all over the world with me.

While I was in view of the Moor that was swimming, I stood out directly to sea with the boat, rather stretching to windward, that they might think me gone towards the Straits' mouth (as indeed any one that had been in their wits must have been supposed to do): for who would have supposed we were sailed on to the southward, to the truly Barbarian coast, where whole nations of negroes were sure to surround us with their canoes and destroy us; where we could not go on shore but we should be devoured by savage beasts, or more merciless savages of human kind.

But as soon as it grew dusk in the evening, I changed my course, and steered directly south and by east, bending my course a little towards the east, that I might keep in with the shore; and having a fair, fresh gale of wind, and a smooth, quiet sea, I made such sail that I believe by the next day, at three o'clock in the afternoon, when I first made the land, I could not be less than one hundred and fifty miles south of Sallee; quite beyond the Emperor of Morocco's dominions, or indeed of any other king thereabouts, for we saw no people.

Yet such was the fright I had taken of the Moors, and the dreadful apprehensions I had of falling into their hands, that I would not stop, or go on shore, or come to an anchor; the wind continuing fair till I had sailed in that manner five days; and then the wind shifting to the southward, I concluded also that if any of our vessels were in chase of me, they also would now give over; so I ventured to make to the coast, and came to an anchor in the mouth of a little river, I knew not what, nor where, neither what latitude, what country, what nation, or what river. I neither saw, nor desired to see any people; the principal thing I wanted was fresh water. We came into this creek in the evening, resolving to swim on shore as soon as it was dark, and discover the country; but as soon as it was quite dark, we heard such dreadful noises of the barking, roaring, and howling of wild creatures, of we knew not what kinds, that the poor boy was ready to die with fear, and begged of me not to go on shore till day. "Well, Xury," said I, "then I won't; but it may be that we may see men by day, who will be as bad to us as those lions." "Then we give them the shoot gun," says Xury, laughing, "make them run wey." Such English Xury spoke by conversing among us slaves. However, I was glad to see the boy so cheerful, and I gave him a dram (out of our patron's case of bottles) to cheer him up. After all, Xury's advice was good, and I took it; we dropped our little anchor, and lay still all night; I say still, for we slept none; for in two or three hours we saw vast great creatures (we knew not what to call them) of many sorts, come down to the sea-shore and run into the water, wallowing and washing themselves for the pleasure of cooling themselves; and they made such hideous howlings and yellings, that I never indeed heard the like.

Xury was dreadfully frighted, and indeed so was I too; but we were both more frighted when we heard one of these mighty creatures come swimming towards our boat; we could not see him, but we might hear him by his blowing to be a monstrous huge and furious beast. Xury said it was a lion, and it might be so for aught I know; but poor Xury cried to me to weigh the anchor and row away; "No," says I, "Xury; we can slip our cable, with the buoy to it, and go off to sea; they cannot follow us far." I had no sooner said so, but I perceived the creature (whatever it was) within two oars' length, which something surprised me; however, I immediately stepped to the cabin door, and taking up my gun, fired at him; upon which he immediately turned about and swam towards the shore again.

But it is impossible to describe the horrid noises, and hideous cries and howlings that were raised, as well upon the edge of the shore as higher within the country, upon the noise or report of the gun, a thing I have some reason to believe those creatures had never heard before: this convinced me that there was no going on shore for us in the night on that coast, and how to venture on shore in the day was another question too; for to have fallen into the hands of any of the savages had been as bad as to have fallen into the hands of the lions and tigers; at least we were equally apprehensive of the danger of it.

Be that as it would, we were obliged to go on shore somewhere or other for water, for we had not a pint left in the boat; when and where to get to it was the point. Xury said, if I would let him go on shore with one of the jars, he would find if there was any water, and bring some to me. I asked him why he would go? why I should not go, and he stay in the boat? The boy answered with so much affection as made me love him ever after. Says he, "If wild mans come, they eat me, you go wey." "Well, Xury," said I, "we will both go and if the wild mans come, we will kill them, they shall eat neither of us." So I gave Xury a piece of rusk bread to eat, and a dram out of our patron's case of bottles which I mentioned before; and we hauled the boat in as near the shore as we thought was proper, and so waded on shore, carrying nothing but our arms and two jars for water.

I did not care to go out of sight of the boat, fearing the coming of canoes with savages down the river; but the boy seeing a low place about a mile up the country, rambled to it, and by-and-by I saw him come running towards me. I thought he was pursued by some savage, or frighted with some wild beast, and I ran forward towards him to help him; but when I came nearer to him I saw something hanging over his shoulders, which was a creature that he had shot, like a hare, but different in colour, and longer legs; however, we were very glad of it, and it was very good meat; but the great joy that poor Xury came with, was to tell me he had found good water and seen no wild mans.

But we found afterwards that we need not take such pains for water, for a little higher up the creek where we were we found the water fresh when the tide was out, which flowed but a little way up; so we filled our jars, and feasted on the hare he had killed, and prepared to go on our way, having seen no footsteps of any human creature in that part of the country.

As I had been one voyage to this coast before, I knew very well that the islands of the Canaries, and the Cape de Verde Islands also, lay not far off from the coast. But as I had no instruments to take an observation to know what latitude we were in, and not exactly knowing, or at least remembering, what latitude they were in, I knew not where to look for them, or when to stand off to sea towards them; otherwise I might now easily have found some of these islands. But my hope was, that if I stood along this coast till I came to that part where the English traded, I should find some of their vessels upon their usual design of trade, that would relieve and take us in.

By the best of my calculation, that place where I now was must be that country which, lying between the Emperor of Morocco's dominions and the negroes, lies waste and uninhabited, except by wild beasts; the negroes having abandoned it and gone farther south for fear of the Moors, and the Moors not thinking it worth inhabiting by reason of its barrenness; and indeed, both forsaking it because of the prodigious number of tigers, lions, leopards, and other furious creatures which harbour there; so that the Moors use it for their hunting only, where they go like an army, two or three thousand men at a time; and indeed for near a hundred miles together upon this coast we saw nothing but a waste, uninhabited country by day, and heard nothing but howlings and roaring of wild beasts by night.

Once or twice in the daytime I thought I saw the Pico of Teneriffe, being the high top of the Mountain Teneriffe in the Canaries, and had a great mind to venture out, in hopes of reaching thither; but having tried twice, I was forced in again by contrary winds, the sea also going too high for my little vessel; so, I resolved to pursue my first design, and keep along the shore.

Several times I was obliged to land for fresh water, after we had left this place; and once in particular, being early in morning, we came to an anchor under a little point of land, which was pretty high; and the tide beginning to flow, we lay still to go farther in. Xury, whose eyes were more about him than it seems mine were, calls softly to me, and tells me that we had best go farther off the shore; "For," says he, "look, yonder lies a dreadful monster on the side of that hillock, fast asleep." I looked where he pointed, and saw a dreadful monster indeed, for it was a terrible, great lion that lay on the side of the shore, under the shade of a piece of the hill that hung as it were a little over him. "Xury," says I, "you shall on shore and kill him." Xury, looked frighted, and said, "Me kill! he eat me at one mouth!"—one mouthful he meant. However, I said no more to the boy, but bade him lie still, and I took our biggest gun, which was almost musket-bore, and loaded it with a good charge of powder, and with two slugs, and laid it down; then I loaded another gun with two bullets; and the third (for we had three pieces) I loaded with five smaller bullets. I took the best aim I could with the first piece to have shot him in the head, but he lay so with his leg raised a little above his nose, that the slugs hit his leg about the knee and broke the bone. He started up, growling at first, but finding his leg broken, fell down again; and then got upon three legs, and gave the most hideous roar that ever I heard. I was a little surprised that I had not hit him on the head; however, I took up the second piece immediately, and though he began to move off, fired again, and shot him in the head, and had the pleasure to see him drop and make but little noise, but lie struggling for life.

Then Xury took heart, and would have me let him go on shore. "Well, go," said I: so the boy jumped into the water and taking a little gun in one hand, swam to shore with the other hand, and coming close to the creature, put the muzzle of the piece to his ear, and shot him in the head again, which despatched him quite.

This was game indeed to us, but this was no food; and I was very sorry to lose three charges of powder and shot upon a creature that was good for nothing to us. However, Xury said he would have some of him; so he comes on board, and asked me to give him the hatchet. "For what, Xury?" said I. "Me cut off his head," said he. However, Xury could not cut off his head, but he cut off a foot, and brought it with him, and it was a monstrous great one.

I bethought myself, however, that, perhaps the skin of him might, one way or other, be of some value to us; and I resolved to take off his skin if I could. So Xury and I went to work with him; but Xury was much the better workman at it, for I knew very ill how to do it. Indeed, it took us both up the whole day, but at last we got off the hide of him, and spreading it on the top of our cabin, the sun effectually dried it in two days' time, and it afterwards served me to lie upon.

Chapter 3 - Wrecked On A Desert Island

After this stop, we made on to the southward continually for ten or twelve days, living very sparingly on our provisions, which began to abate very much, and going no oftener to the shore than we were obliged to for fresh water. My design in this was to make the river Gambia or Senegal, that is to say anywhere about the Cape de Verde, where I was in hopes to meet with some European ship; and if I did not, I knew not what course I had to take, but to seek for the islands, or perish there among the negroes. I knew that all the ships from Europe, which sailed either to the coast of Guinea or to Brazil, or to the East Indies, made this cape, or those islands; and, in a word, I put the whole of my fortune upon this single point, either that I must meet with some ship or must perish.

When I had pursued this resolution about ten days longer, as I have said, I began to see that the land was inhabited; and in two or three places, as we sailed by, we saw people stand upon the shore to look at us; we could also perceive they were quite black and naked. I was once inclined to have gone on shore to them; but Xury was my better counsellor, and said to me, "No go, no go." However, I hauled in nearer the shore that I might talk to them, and I found they ran along the shore by me a good way.

I observed they had no weapons in their hand, except one, who had a long slender stick, which Xury said was a lance, and that they could throw them a great way with good aim; so I kept at a distance, but talked with them by signs as well as I could; and particularly made signs for something to eat: they beckoned to me to stop my boat, and they would fetch me some meat.

Upon this I lowered the top of my sail and lay by, and two of them ran up into the country, and in less than half-an-hour came back, and brought with them two pieces of dried flesh and some corn, such as is the produce of their country; but we neither knew what the one or the other was; however, we were willing to accept it, but how to come at it was our next dispute, for I would not venture on shore to them, and they were as much afraid of us; but they took a safe way for us all, for they brought it to the shore and laid it down, and went and stood a great way off till we fetched it on board, and then came close to us again.

We made signs of thanks to them, for we had nothing to make them amends; but an opportunity offered that very instant to oblige them wonderfully; for while we were lying by the shore came two mighty creatures, one pursuing the other (as we took it) with great fury from the mountains towards the sea; whether it was the male pursuing the female, or whether they were in sport or in rage, we could not tell, any more than we could tell whether it was usual or strange, but I believe it was the latter; because, in the first place, those ravenous creatures seldom appear but in the night; and, in the second place, we found the people terribly frighted, especially the women.

The man that had the lance or dart did not fly from them, but the rest did; however, as the two creatures ran directly into the water, they did not offer to fall upon any of the negroes, but plunged themselves into the sea, and swam about, as if they had come for their diversion; at last one of them began to come nearer our boat than at first I expected; but I lay ready for him, for I had loaded my gun with all possible expedition, and bade Xury load both the others.

As soon as he came fairly within my reach, I fired, and shot him directly in the head; immediately he sank down into the water, but rose instantly, and plunged up and down, as if he were struggling for life, and so indeed he was; he immediately made to the shore; but between the wound, which was his mortal hurt, and the strangling of the water, he died just before he reached the shore.

It is impossible to express the astonishment of these poor creatures at the noise and fire of my gun: some of them were even ready to die for fear, and fell down as dead with the very terror; but when they saw the creature dead, and sunk in the water, and that I made signs to them to come to the shore, they took heart and came, and began to search for the creature. I found him by his blood staining the water; and by the help of a rope, which I slung round him, and gave the negroes to haul, they dragged him on shore, and found that it was a most curious leopard, spotted, and fine to an admirable degree; and the negroes held up their hands with admiration, to think what it was I had killed him with.

The other creature, frighted with the flash of fire and the noise of the gun, swam on shore, and ran up directly to the mountains from whence they came; nor could I, at that distance, know what it was. I found quickly the negroes wished to eat the flesh of this creature, so I was willing to have them take it as a favour from me; which, when I made signs to them that they might take him, they were very thankful for. Immediately they fell to work with him; and though they had no knife, yet, with a sharpened piece of wood, they took off his skin as readily, and much more readily, than we could have done with a knife.

They offered me some of the flesh, which I declined, pointing out that I would give it them; but made signs for the skin, which they gave me very freely, and brought me a great deal more of their provisions, which, though I did not understand, yet I accepted. I then made signs to them for some water, and held out one of my jars to them, turning it bottom upward, to show that it was empty, and that I wanted to have it filled. They called immediately to some of their friends, and there came two women, and brought a great vessel made of earth, and burnt, as I supposed, in the sun, this they set down to me, as before, and I sent Xury on shore with my jars, and filled them all three. The women were as naked as the men.

I was now furnished with roots and corn, such as it was, and water; and leaving my friendly negroes, I made forward for about eleven days more, without offering to go near the shore, till I saw the land run out a great length into the sea, at about the distance of four or five leagues before me; and the sea being very calm, I kept a large offing to make this point. At length, doubling the point, at about two leagues from the land, I saw plainly land on the other side, to seaward; then I concluded, as it was most certain indeed, that this was the Cape de Verde, and those the islands called, from thence, Cape de Verde Islands. However, they were at a great distance, and I could not well tell what I had best to do; for if I should be taken with a fresh of wind, I might neither reach one or other.

In this dilemma, as I was very pensive, I stepped into the cabin and sat down, Xury having the helm; when, on a sudden, the boy cried out, "Master, master, a ship with a sail!" and the foolish boy was frighted out of his wits, thinking it must needs be some of his master's ships sent to pursue us, but I knew we were far enough out of their reach. I jumped out of the cabin, and immediately saw, not only the ship, but that it was a Portuguese ship; and, as I thought, was bound to the coast of Guinea, for negroes. But, when I observed the course she steered, I was soon convinced they were bound some other way, and did not design to come any nearer to the shore; upon which I stretched out to sea as much as I could, resolving to speak with them if possible.

With all the sail I could make, I found I should not be able to come in their way, but that they would be gone by before I could make any signal to them: but after I had crowded to the utmost, and began to despair, they, it seems, saw by the help of their glasses that it was some European boat, which they supposed must belong to some ship that was lost; so they shortened sail to let me come up. I was encouraged with this, and as I had my patron's ancient on board, I made a waft of it to them, for a signal of distress, and fired a gun, both which they saw; for they told me they saw the smoke, though they did not hear the gun. Upon these signals they very kindly brought to, and lay by for me; and in about three hours; time I came up with them.

They asked me what I was, in Portuguese, and in Spanish, and in French, but I understood none of them; but at last a Scotch sailor, who was on board, called to me: and I answered him, and told him I was an Englishman, that I had made my escape out of slavery from the Moors, at Sallee; they then bade me come on board, and very kindly took me in, and all my goods.

It was an inexpressible joy to me, which any one will believe, that I was thus delivered, as I esteemed it, from such a miserable and almost hopeless condition as I was in; and I immediately offered all I had to the captain of the ship, as a return for my deliverance; but he generously told me he would take nothing from me, but that all I had should be delivered safe to me when I came to the Brazils. "For," says he, "I have saved your life on no other terms than I would be glad to be saved myself: and it may, one time or other, be my lot to be taken up in the same condition. Besides," said he, "when I carry you to the Brazils, so great a way from your own country, if I should take from you what you have, you will be starved there, and then I only take away that life I have given. No, no," says he: "Seignior Inglese" (Mr. Englishman), "I will carry you thither in charity, and those things will help to buy your subsistence there, and your passage home again."

As he was charitable in this proposal, so he was just in the performance to a tittle; for he ordered the seamen that none should touch anything that I had: then he took everything into his own possession, and gave me back an exact inventory of them, that I might have them, even to my three earthen jars.

As to my boat, it was a very good one; and that he saw, and told me he would buy it of me for his ship's use; and asked me what I would have for it? I told him he had been so generous to me in everything that I could not offer to make any price of the boat, but left it entirely to him: upon which he told me he would give me a note of hand to pay me eighty pieces of eight for it at Brazil; and when it came there, if any one offered to give more, he would make it up. He offered me also sixty pieces of eight more for my boy Xury, which I was loth to take; not that I was unwilling to let the captain have him, but I was very loth to sell the poor boy's liberty, who had assisted me so faithfully in procuring my own. However, when I let him know my reason, he owned it to be just, and offered me this medium, that he would give the boy an obligation to set him free in ten years, if he turned Christian: upon this, and Xury saying he was willing to go to him, I let the captain have him.

We had a very good voyage to the Brazils, and I arrived in the Bay de Todos los Santos, or All Saints' Bay, in about twenty-two days after. And now I was once more delivered from the most miserable of all conditions of life; and what to do next with myself I was to consider.

The generous treatment the captain gave me I can never enough remember: he would take nothing of me for my passage, gave me twenty ducats for the leopard's skin, and forty for the lion's skin, which I had in my boat, and caused everything I had in the ship to be punctually delivered to me; and what I was willing to sell he bought of me, such as the case of bottles, two of my guns, and a piece of the lump of beeswax—for I had made candles of the rest: in a word, I made about two hundred and twenty pieces of eight of all my cargo; and with this stock I went on shore in the Brazils.

I had not been long here before I was recommended to the house of a good honest man like himself, who had an ingenio, as they call it (that is, a plantation and a sugar-house). I lived with him some time, and acquainted myself by that means with the manner of planting and making of sugar; and seeing how well the planters lived, and how they got rich suddenly, I resolved, if I could get a licence to settle there, I would turn planter among them: resolving in the meantime to find out some way to get my money, which I had left in London, remitted to me. To this purpose, getting a kind of letter of naturalisation, I purchased as much land that was uncured as my money would reach, and formed a plan for my plantation and settlement; such a one as might be suitable to the stock which I proposed to myself to receive from England.

I had a neighbour, a Portuguese, of Lisbon, but born of English parents, whose name was Wells, and in much such circumstances as I was. I call him my neighbour, because his plantation lay next to mine, and we went on very sociably together. My stock was but low, as well as his; and we rather planted for food than anything else, for about two years. However, we began to increase, and our land began to come into order; so that the third year we planted some tobacco, and made each of us a large piece of ground ready for planting canes in the year to come. But we both wanted help; and now I found, more than before, I had done wrong in parting with my boy Xury.

But, alas! for me to do wrong that never did right, was no great wonder. I hail no remedy but to go on: I had got into an employment quite remote to my genius, and directly contrary to the life I delighted in, and for which I forsook my father's house, and broke through all his good advice. Nay, I was coming into the very middle station, or upper degree of low life, which my father advised me to before, and which, if I resolved to go on with, I might as well have stayed at home, and never have fatigued myself in the world as I had done; and I used often to say to myself, I could have done this as well in England, among my friends, as have gone five thousand miles off to do it among strangers and savages, in a wilderness, and at such a distance as never to hear from any part of the world that had the least knowledge of me.

In this manner I used to look upon my condition with the utmost regret. I had nobody to converse with, but now and then this neighbour; no work to be done, but by the labour of my hands; and I used to say, I lived just like a man cast away upon some desolate island, that had nobody there but himself. But how just has it been—and how should all men reflect, that when they compare their present conditions with others that are worse, Heaven may oblige them to make the exchange, and be convinced of their former felicity by their experience—I say, how just has it been, that the truly solitary life I reflected on, in an island of mere desolation, should be my lot, who had so often unjustly compared it with the life which I then led, in which, had I continued, I had in all probability been exceeding prosperous and rich.

I was in some degree settled in my measures for carrying on the plantation before my kind friend, the captain of the ship that took me up at sea, went back—for the ship remained there, in providing his lading and preparing for his voyage, nearly three months—when telling him what little stock I had left behind me in London, he gave me this friendly and sincere advice:—"Seignior Inglese," says he (for so he always called me), "if you will give me letters, and a procuration in form to me, with orders to the person who has your money in London to send your effects to Lisbon, to such persons as I shall direct, and in such goods as are proper for this country, I will bring you the produce of them, God willing, at my return; but, since human affairs are all subject to changes and disasters, I would have you give orders but for one hundred pounds sterling, which, you say, is half your stock, and let the hazard be run for the first; so that, if it come safe, you may order the rest the same way, and, if it miscarry, you may have the other half to have recourse to for your supply."

This was so wholesome advice, and looked so friendly, that I could not but be convinced it was the best course I could take; so I accordingly prepared letters to the gentlewoman with whom I had left my money, and a procuration to the Portuguese captain, as he desired.

I wrote the English captain's widow a full account of all my adventures—my slavery, escape, and how I had met with the Portuguese captain at sea, the humanity of his behaviour, and what condition I was now in, with all other necessary directions for my supply; and when this honest captain came to Lisbon, he found means, by some of the English merchants there, to send over, not the order only, but a full account of my story to a merchant in London, who represented it effectually to her; whereupon she not only delivered the money, but out of her own pocket sent the Portugal captain a very handsome present for his humanity and charity to me.

The merchant in London, vesting this hundred pounds in English goods, such as the captain had written for, sent them directly to him at Lisbon, and he brought them all safe to me to the Brazils; among which, without my direction (for I was too young in my business to think of them), he had taken care to have all sorts of tools, ironwork, and utensils necessary for my plantation, and which were of great use to me.

When this cargo arrived I thought my fortune made, for I was surprised with the joy of it; and my stood steward, the captain, had laid out the five pounds, which my friend had sent him for a present for himself, to purchase and bring me over a servant, under bond for six years' service, and would not accept of any consideration, except a little tobacco, which I would have him accept, being of my own produce.

Neither was this all; for my goods being all English manufacture, such as cloths, stuffs, baize, and things particularly valuable and desirable in the country, I found means to sell them to a very great advantage; so that I might say I had more than four times the value of my first cargo, and was now infinitely beyond my poor neighbour—I mean in the advancement of my plantation; for the first thing I did, I bought me a negro slave, and an European servant also—I mean another besides that which the captain brought me from Lisbon.

But as abused prosperity is oftentimes made the very means of our greatest adversity, so it was with me. I went on the next year with great success in my plantation: I raised fifty great rolls of tobacco on my own ground, more than I had disposed of for necessaries among my neighbours; and these fifty rolls, being each of above a hundredweight, were well cured, and laid by against the return of the fleet from Lisbon: and now increasing in business and wealth, my head began to be full of projects and undertakings beyond my reach; such as are, indeed, often the ruin of the best heads in business. Had I continued in the station I was now in, I had room for all the happy things to have yet befallen me for which my father so earnestly recommended a quiet, retired life, and of which he had so sensibly described the middle station of life to be full of; but other things attended me, and I was still to be the wilful agent of all my own miseries; and particularly, to increase my fault, and double the reflections upon myself, which in my future sorrows I should have leisure to make, all these miscarriages were procured by my apparent obstinate adhering to my foolish inclination of wandering abroad, and pursuing that inclination, in contradiction to the clearest views of doing myself good in a fair and plain pursuit of those prospects, and those measures of life, which nature and Providence concurred to present me with, and to make my duty.

As I had once done thus in my breaking away from my parents, so I could not be content now, but I must go and leave the happy view I had of being a rich and thriving man in my new plantation, only to pursue a rash and immoderate desire of rising faster than the nature of the thing admitted; and thus I cast myself down again into the deepest gulf of human misery that ever man fell into, or perhaps could be consistent with life and a state of health in the world.

To come, then, by the just degrees to the particulars of this part of my story. You may suppose, that having now lived almost four years in the Brazils, and beginning to thrive and prosper very well upon my plantation, I had not only learned the language, but had contracted acquaintance and friendship among my fellow-planters, as well as among the merchants at St. Salvador, which was our port; and that, in my discourses among them, I had frequently given them an account of my two voyages to the coast of Guinea: the manner of trading with the negroes there, and how easy it was to purchase upon the coast for trifles—such as beads, toys, knives, scissors, hatchets, bits of glass, and the like—not only gold-dust, Guinea grains, elephants' teeth, &c., but negroes, for the service of the Brazils, in great numbers.

They listened always very attentively to my discourses on these heads, but especially to that part which related to the buying of negroes, which was a trade at that time, not only not far entered into, but, as far as it was, had been carried on by assientos, or permission of the kings of Spain and Portugal, and engrossed in the public stock: so that few negroes were bought, and these excessively dear.

It happened, being in company with some merchants and planters of my acquaintance, and talking of those things very earnestly, three of them came to me next morning, and told me they had been musing very much upon what I had discoursed with them of the last night, and they came to make a secret proposal to me; and, after enjoining me to secrecy, they told me that they had a mind to fit out a ship to go to Guinea; that they had all plantations as well as I, and were straitened for nothing so much as servants; that as it was a trade that could not be carried on, because they could not publicly sell the negroes when they came home, so they desired to make but one voyage, to bring the negroes on shore privately, and divide them among their own plantations; and, in a word, the question was whether I would go their supercargo in the ship, to manage the trading part upon the coast of Guinea; and they offered me that I should have my equal share of the negroes, without providing any part of the stock.

This was a fair proposal, it must be confessed, had it been made to any one that had not had a settlement and a plantation of his own to look after, which was in a fair way of coming to be very considerable, and with a good stock upon it; but for me, that was thus entered and established, and had nothing to do but to go on as I had begun, for three or four years more, and to have sent for the other hundred pounds from England; and who in that time, and with that little addition, could scarce have failed of being worth three or four thousand pounds sterling, and that increasing too—for me to think of such a voyage was the most preposterous thing that ever man in such circumstances could be guilty of.

But I, that was born to be my own destroyer, could no more resist the offer than I could restrain my first rambling designs when my father's good counsel was lost upon me. In a word, I told them I would go with all my heart, if they would undertake to look after my plantation in my absence, and would dispose of it to such as I should direct, if I miscarried. This they all engaged to do, and entered into writings or covenants to do so; and I made a formal will, disposing of my plantation and effects in case of my death, making the captain of the ship that had saved my life, as before, my universal heir, but obliging him to dispose of my effects as I had directed in my will; one half of the produce being to himself, and the other to be shipped to England.

In short, I took all possible caution to preserve my effects and to keep up my plantation. Had I used half as much prudence to have looked into my own interest, and have made a judgment of what I ought to have done and not to have done, I had certainly never gone away from so prosperous an undertaking, leaving all the probable views of a thriving circumstance, and gone upon a voyage to sea, attended with all its common hazards, to say nothing of the reasons I had to expect particular misfortunes to myself. But I was hurried on, and obeyed blindly the dictates of my fancy rather than my reason; and, accordingly, the ship being fitted out, and the cargo furnished, and all things done, as by agreement, by my partners in the voyage, I went on board in an evil hour, the 1st September 1659, being the same day eight years that I went from my father and mother at Hull, in order to act the rebel to their authority, and the fool to my own interests.

Our ship was about one hundred and twenty tons burden, carried six guns and fourteen men, besides the master, his boy, and myself. We had on board no large cargo of goods, except of such toys as were fit for our trade with the negroes, such as beads, bits of glass, shells, and other trifles, especially little looking-glasses, knives, scissors, hatchets, and the like.

The same day I went on board we set sail, standing away to the northward upon our own coast, with design to stretch over for the African coast when we came about ten or twelve degrees of northern latitude, which, it seems, was the manner of course in those days. We had very good weather, only excessively hot, all the way upon our own coast, till we came to the height of Cape St. Augustino; from whence, keeping further off at sea, we lost sight of land, and steered as if we were bound for the isle Fernando de Noronha, holding our course N.E. by N., and leaving those isles on the east. In this course we passed the line in about twelve days' time, and were, by our last observation, in seven degrees twenty-two minutes northern latitude, when a violent tornado, or hurricane, took us quite out of our knowledge. It began from the south-east, came about to the north-west, and then settled in the north-east; from whence it blew in such a terrible manner, that for twelve days together we could do nothing but drive, and, scudding away before it, let it carry us whither fate and the fury of the winds directed; and, during these twelve days, I need not say that I expected every day to be swallowed up; nor, indeed, did any in the ship expect to save their lives.

In this distress we had, besides the terror of the storm, one of our men die of the calenture, and one man and the boy washed overboard. About the twelfth day, the weather abating a little, the master made an observation as well as he could, and found that he was in about eleven degrees north latitude, but that he was twenty-two degrees of longitude difference west from Cape St. Augustino; so that he found he was upon the coast of Guiana, or the north part of Brazil, beyond the river Amazon, toward that of the river Orinoco, commonly called the Great River; and began to consult with me what course he should take, for the ship was leaky, and very much disabled, and he was going directly back to the coast of Brazil.

I was positively against that; and looking over the charts of the sea-coast of America with him, we concluded there was no inhabited country for us to have recourse to till we came within the circle of the Caribbee Islands, and therefore resolved to stand away for Barbadoes; which, by keeping off at sea, to avoid the indraft of the Bay or Gulf of Mexico, we might easily perform, as we hoped, in about fifteen days' sail; whereas we could not possibly make our voyage to the coast of Africa without some assistance both to our ship and to ourselves.

With this design we changed our course, and steered away N.W. by W., in order to reach some of our English islands, where I hoped for relief. But our voyage was otherwise determined; for, being in the latitude of twelve degrees eighteen minutes, a second storm came upon us, which carried us away with the same impetuosity westward, and drove us so out of the way of all human commerce, that, had all our lives been saved as to the sea, we were rather in danger of being devoured by savages than ever returning to our own country.

In this distress, the wind still blowing very hard, one of our men early in the morning cried out, "Land!" and we had no sooner run out of the cabin to look out, in hopes of seeing whereabouts in the world we were, than the ship struck upon a sand, and in a moment her motion being so stopped, the sea broke over her in such a manner that we expected we should all have perished immediately; and we were immediately driven into our close quarters, to shelter us from the very foam and spray of the sea.

It is not easy for any one who has not been in the like condition to describe or conceive the consternation of men in such circumstances. We knew nothing where we were, or upon what land it was we were driven—whether an island or the main, whether inhabited or not inhabited. As the rage of the wind was still great, though rather less than at first, we could not so much as hope to have the ship hold many minutes without breaking into pieces, unless the winds, by a kind of miracle, should turn immediately about. In a word, we sat looking upon one another, and expecting death every moment, and every man, accordingly, preparing for another world; for there was little or nothing more for us to do in this. That which was our present comfort, and all the comfort we had, was that, contrary to our expectation, the ship did not break yet, and that the master said the wind began to abate.

Now, though we thought that the wind did a little abate, yet the ship having thus struck upon the sand, and sticking too fast for us to expect her getting off, we were in a dreadful condition indeed, and had nothing to do but to think of saving our lives as well as we could. We had a boat at our stern just before the storm, but she was first staved by dashing against the ship's rudder, and in the next place she broke away, and either sunk or was driven off to sea; so there was no hope from her. We had another boat on board, but how to get her off into the sea was a doubtful thing. However, there was no time to debate, for we fancied that the ship would break in pieces every minute, and some told us she was actually broken already.

In this distress the mate of our vessel laid hold of the boat, and with the help of the rest of the men got her slung over the ship's side; and getting all into her, let go, and committed ourselves, being eleven in number, to God's mercy and the wild sea; for though the storm was abated considerably, yet the sea ran dreadfully high upon the shore, and might be well called den wild zee, as the Dutch call the sea in a storm.

And now our case was very dismal indeed; for we all saw plainly that the sea went so high that the boat could not live, and that we should be inevitably drowned. As to making sail, we had none, nor if we had could we have done anything with it; so we worked at the oar towards the land, though with heavy hearts, like men going to execution; for we all knew that when the boat came near the shore she would be dashed in a thousand pieces by the breach of the sea. However, we committed our souls to God in the most earnest manner; and the wind driving us towards the shore, we hastened our destruction with our own hands, pulling as well as we could towards land.

What the shore was, whether rock or sand, whether steep or shoal, we knew not. The only hope that could rationally give us the least shadow of expectation was, if we might find some bay or gulf, or the mouth of some river, where by great chance we might have run our boat in, or got under the lee of the land, and perhaps made smooth water. But there was nothing like this appeared; but as we made nearer and nearer the shore, the land looked more frightful than the sea.

After we had rowed, or rather driven about a league and a half, as we reckoned it, a raging wave, mountain-like, came rolling astern of us, and plainly bade us expect the coup de grâce. It took us with such a fury, that it overset the boat at once; and separating us as well from the boat as from one another, gave us no time to say, "O God!" for we were all swallowed up in a moment.

Nothing can describe the confusion of thought which I felt when I sank into the water; for though I swam very well, yet I could not deliver myself from the waves so as to draw breath, till that wave having driven me, or rather carried me, a vast way on towards the shore, and having spent itself, went back, and left me upon the land almost dry, but half dead with the water I took in. I had so much presence of mind, as well as breath left, that seeing myself nearer the mainland than I expected, I got upon my feet, and endeavoured to make on towards the land as fast as I could before another wave should return and take me up again; but I soon found it was impossible to avoid it; for I saw the sea come after me as high as a great hill, and as furious as an enemy, which I had no means or strength to contend with: my business was to hold my breath, and raise myself upon the water if I could; and so, by swimming, to preserve my breathing, and pilot myself towards the shore, if possible, my greatest concern now being that the sea, as it would carry me a great way towards the shore when it came on, might not carry me back again with it when it gave back towards the sea.

The wave that came upon me again buried me at once twenty or thirty feet deep in its own body, and I could feel myself carried with a mighty force and swiftness towards the shore—a very great way; but I held my breath, and assisted myself to swim still forward with all my might. I was ready to burst with holding my breath, when, as I felt myself rising up, so, to my immediate relief, I found my head and hands shoot out above the surface of the water; and though it was not two seconds of time that I could keep myself so, yet it relieved me greatly, gave me breath, and new courage. I was covered again with water a good while, but not so long but I held it out; and finding the water had spent itself, and began to return, I struck forward against the return of the waves, and felt ground again with my feet.

I stood still a few moments to recover breath, and till the waters went from me, and then took to my heels and ran with what strength I had further towards the shore. But neither would this deliver me from the fury of the sea, which came pouring in after me again; and twice more I was lifted up by the waves and carried forward as before, the shore being very flat.

The last time of these two had well-nigh been fatal to me, for the sea having hurried me along as before, landed me, or rather dashed me, against a piece of rock, and that with such force, that it left me senseless, and indeed helpless, as to my own deliverance; for the blow taking my side and breast, beat the breath as it were quite out of my body; and had it returned again immediately, I must have been strangled in the water; but I recovered a little before the return of the waves, and seeing I should be covered again with the water, I resolved to hold fast by a piece of the rock, and so to hold my breath, if possible, till the wave went back.

Now, as the waves were not so high as at first, being nearer land, I held my hold till the wave abated, and then fetched another run, which brought me so near the shore that the next wave, though it went over me, yet did not so swallow me up as to carry me away; and the next run I took, I got to the mainland, where, to my great comfort, I clambered up the cliffs of the shore and sat me down upon the grass, free from danger and quite out of the reach of the water.

I was now landed and safe on shore, and began to look up and thank God that my life was saved, in a case wherein there was some minutes before scarce any room to hope. I believe it is impossible to express, to the life, what the ecstasies and transports of the soul are, when it is so saved, as I may say, out of the very grave: and I do not wonder now at the custom, when a malefactor, who has the halter about his neck, is tied up, and just going to be turned off, and has a reprieve brought to him—I say, I do not wonder that they bring a surgeon with it, to let him blood that very moment they tell him of it, that the surprise may not drive the animal spirits from the heart and overwhelm him.

"For sudden joys, like griefs, confound at first."

I walked about on the shore lifting up my hands, and my whole being, as I may say, wrapped up in a contemplation of my deliverance; making a thousand gestures and motions, which I cannot describe; reflecting upon all my comrades that were drowned, and that there should not be one soul saved but myself; for, as for them, I never saw them afterwards, or any sign of them, except three of their hats, one cap, and two shoes that were not fellows.

I cast my eye to the stranded vessel, when, the breach and froth of the sea being so big, I could hardly see it, it lay so far of; and considered, Lord! how was it possible I could get on shore?

After I had solaced my mind with the comfortable part of my condition, I began to look round me, to see what kind of place I was in, and what was next to be done; and I soon found my comforts abate, and that, in a word, I had a dreadful deliverance; for I was wet, had no clothes to shift me, nor anything either to eat or drink to comfort me; neither did I see any prospect before me but that of perishing with hunger or being devoured by wild beasts; and that which was particularly afflicting to me was, that I had no weapon, either to hunt and kill any creature for my sustenance, or to defend myself against any other creature that might desire to kill me for theirs.

In a word, I had nothing about me but a knife, a tobacco-pipe, and a little tobacco in a box. This was all my provisions; and this threw me into such terrible agonies of mind, that for a while I ran about like a madman. Night coming upon me, I began with a heavy heart to consider what would be my lot if there were any ravenous beasts in that country, as at night they always come abroad for their prey.

All the remedy that offered to my thoughts at that time was to get up into a thick bushy tree like a fir, but thorny, which grew near me, and where I resolved to sit all night, and consider the next day what death I should die, for as yet I saw no prospect of life. I walked about a furlong from the shore, to see if I could find any fresh water to drink, which I did, to my great joy; and having drank, and put a little tobacco into my mouth to prevent hunger, I went to the tree, and getting up into it, endeavoured to place myself so that if I should sleep I might not fall.

And having cut me a short stick, like a truncheon, for my defence, I took up my lodging; and having been excessively fatigued, I fell fast asleep, and slept as comfortably as, I believe, few could have done in my condition, and found myself more refreshed with it than, I think, I ever was on such an occasion.

Chapter 4 - First Weeks On The Island

When I waked it was broad day, the weather clear, and the storm abated, so that the sea did not rage and swell as before. But that which surprised me most was, that the ship was lifted off in the night from the sand where she lay by the swelling of the tide, and was driven up almost as far as the rock which I at first mentioned, where I had been so bruised by the wave dashing me against it. This being within about a mile from the shore where I was, and the ship seeming to stand upright still, I wished myself on board, that at least I might save some necessary things for my use.

When I came down from my apartment in the tree, I looked about me again, and the first thing I found was the boat, which lay, as the wind and the sea had tossed her up, upon the land, about two miles on my right hand. I walked as far as I could upon the shore to have got to her; but found a neck or inlet of water between me and the boat which was about half a mile broad; so I came back for the present, being more intent upon getting at the ship, where I hoped to find something for my present subsistence.

A little after noon I found the sea very calm, and the tide ebbed so far out that I could come within a quarter of a mile of the ship. And here I found a fresh renewing of my grief; for I saw evidently that if we had kept on board we had been all safe—that is to say, we had all got safe on shore, and I had not been so miserable as to be left entirely destitute of all comfort and company as I now was. This forced tears to my eyes again; but as there was little relief in that, I resolved, if possible, to get to the ship; so I pulled off my clothes—for the weather was hot to extremity—and took the water. But when I came to the ship my difficulty was still greater to know how to get on board; for, as she lay aground, and high out of the water, there was nothing within my reach to lay hold of. I swam round her twice, and the second time I spied a small piece of rope, which I wondered I did not see at first, hung down by the fore-chains so low, as that with great difficulty I got hold of it, and by the help of that rope I got up into the forecastle of the ship. Here I found that the ship was bulged, and had a great deal of water in her hold, but that she lay so on the side of a bank of hard sand, or, rather earth, that her stern lay lifted up upon the bank, and her head low, almost to the water. By this means all her quarter was free, and all that was in that part was dry; for you may be sure my first work was to search, and to see what was spoiled and what was free. And, first, I found that all the ship's provisions were dry and untouched by the water, and being very well disposed to eat, I went to the bread room and filled my pockets with biscuit, and ate it as I went about other things, for I had no time to lose. I also found some rum in the great cabin, of which I took a large dram, and which I had, indeed, need enough of to spirit me for what was before me. Now I wanted nothing but a boat to furnish myself with many things which I foresaw would be very necessary to me.

It was in vain to sit still and wish for what was not to be had; and this extremity roused my application. We had several spare yards, and two or three large spars of wood, and a spare topmast or two in the ship; I resolved to fall to work with these, and I flung as many of them overboard as I could manage for their weight, tying every one with a rope, that they might not drive away. When this was done I went down the ship's side, and pulling them to me, I tied four of them together at both ends as well as I could, in the form of a raft, and laying two or three short pieces of plank upon them crossways, I found I could walk upon it very well, but that it was not able to bear any great weight, the pieces being too light.

So I went to work, and with a carpenter's saw I cut a spare topmast into three lengths, and added them to my raft, with a great deal of labour and pains. But the hope of furnishing myself with necessaries encouraged me to go beyond what I should have been able to have done upon another occasion.

My raft was now strong enough to bear any reasonable weight. My next care was what to load it with, and how to preserve what I laid upon it from the surf of the sea; but I was not long considering this. I first laid all the planks or boards upon it that I could get, and having considered well what I most wanted, I got three of the seamen's chests, which I had broken open, and emptied, and lowered them down upon my raft; the first of these I filled with provisions—viz. bread, rice, three Dutch cheeses, five pieces of dried goat's flesh (which we lived much upon), and a little remainder of European corn, which had been laid by for some fowls which we brought to sea with us, but the fowls were killed. There had been some barley and wheat together; but, to my great disappointment, I found afterwards that the rats had eaten or spoiled it all. As for liquors, I found several, cases of bottles belonging to our skipper, in which were some cordial waters; and, in all, about five or six gallons of rack. These I stowed by themselves, there being no need to put them into the chest, nor any room for them. While I was doing this, I found the tide begin to flow, though very calm; and I had the mortification to see my coat, shirt, and waistcoat, which I had left on the shore, upon the sand, swim away. As for my breeches, which were only linen, and open-kneed, I swam on board in them and my stockings. However, this set me on rummaging for clothes, of which I found enough, but took no more than I wanted for present use, for I had others things which my eye was more upon—as, first, tools to work with on shore. And it was after long searching that I found out the carpenter's chest, which was, indeed, a very useful prize to me, and much more valuable than a shipload of gold would have been at that time. I got it down to my raft, whole as it was, without losing time to look into it, for I knew in general what it contained.

My next care was for some ammunition and arms. There were two very good fowling-pieces in the great cabin, and two pistols. These I secured first, with some powder-horns and a small bag of shot, and two old rusty swords. I knew there were three barrels of powder in the ship, but knew not where our gunner had stowed them; but with much search I found them, two of them dry and good, the third had taken water. Those two I got to my raft with the arms. And now I thought myself pretty well freighted, and began to think how I should get to shore with them, having neither sail, oar, nor rudder; and the least capful of wind would have overset all my navigation.

I had three encouragements—1st, a smooth, calm sea; 2ndly, the tide rising, and setting in to the shore; 3rdly, what little wind there was blew me towards the land. And thus, having found two or three broken oars belonging to the boat—and, besides the tools which were in the chest, I found two saws, an axe, and a hammer; with this cargo I put to sea. For a mile or thereabouts my raft went very well, only that I found it drive a little distant from the place where I had landed before; by which I perceived that there was some indraft of the water, and consequently I hoped to find some creek or river there, which I might make use of as a port to get to land with my cargo.

As I imagined, so it was. There appeared before me a little opening of the land, and I found a strong current of the tide set into it; so I guided my raft as well as I could, to keep in the middle of the stream.

But here I had like to have suffered a second shipwreck, which, if I had, I think verily would have broken my heart; for, knowing nothing of the coast, my raft ran aground at one end of it upon a shoal, and not being aground at the other end, it wanted but a little that all my cargo had slipped off towards the end that was afloat, and to fallen into the water. I did my utmost, by setting my back against the chests, to keep them in their places, but could not thrust off the raft with all my strength; neither durst I stir from the posture I was in; but holding up the chests with all my might, I stood in that manner near half-an-hour, in which time the rising of the water brought me a little more upon a level; and a little after, the water still-rising, my raft floated again, and I thrust her off with the oar I had into the channel, and then driving up higher, I at length found myself in the mouth of a little river, with land on both sides, and a strong current of tide running up. I looked on both sides for a proper place to get to shore, for I was not willing to be driven too high up the river: hoping in time to see some ships at sea, and therefore resolved to place myself as near the coast as I could.

At length I spied a little cove on the right shore of the creek, to which with great pain and difficulty I guided my raft, and at last got so near that, reaching ground with my oar, I could thrust her directly in. But here I had like to have dipped all my cargo into the sea again; for that shore lying pretty steep—that is to say sloping—there was no place to land, but where one end of my float, if it ran on shore, would lie so high, and the other sink lower, as before, that it would endanger my cargo again.

All that I could do was to wait till the tide was at the highest, keeping the raft with my oar like an anchor, to hold the side of it fast to the shore, near a flat piece of ground, which I expected the water would flow over; and so it did. As soon as I found water enough—for my raft drew about a foot of water—I thrust her upon that flat piece of ground, and there fastened or moored her, by sticking my two broken oars into the ground, one on one side near one end, and one on the other side near the other end; and thus I lay till the water ebbed away, and left my raft and all my cargo safe on shore.

My next work was to view the country, and seek a proper place for my habitation, and where to stow my goods to secure them from whatever might happen. Where I was, I yet knew not; whether on the continent or on an island; whether inhabited or not inhabited; whether in danger of wild beasts or not. There was a hill not above a mile from me, which rose up very steep and high, and which seemed to overtop some other hills, which lay as in a ridge from it northward.

I took out one of the fowling-pieces, and one of the pistols, and a horn of powder; and thus armed, I travelled for discovery up to the top of that hill, where, after I had with great labour and difficulty got to the top, I saw my fate, to my great affliction—viz. that I was in an island environed every way with the sea: no land to be seen except some rocks, which lay a great way off; and two small islands, less than this, which lay about three leagues to the west.

I found also that the island I was in was barren, and, as I saw good reason to believe, uninhabited except by wild beasts, of whom, however, I saw none. Yet I saw abundance of fowls, but knew not their kinds; neither when I killed them could I tell what was fit for food, and what not. At my coming back, I shot at a great bird which I saw sitting upon a tree on the side of a great wood. I believe it was the first gun that had been fired there since the creation of the world. I had no sooner fired, than from all parts of the wood there arose an innumerable number of fowls, of many sorts, making a confused screaming and crying, and every one according to his usual note, but not one of them of any kind that I knew. As for the creature I killed, I took it to be a kind of hawk, its colour and beak resembling it, but it had no talons or claws more than common. Its flesh was carrion, and fit for nothing.

Contented with this discovery, I came back to my raft, and fell to work to bring my cargo on shore, which took me up the rest of that day. What to do with myself at night I knew not, nor indeed where to rest, for I was afraid to lie down on the ground, not knowing but some wild beast might devour me, though, as I afterwards found, there was really no need for those fears. However, as well as I could, I barricaded myself round with the chest and boards that I had brought on shore, and made a kind of hut for that night's lodging. As for food, I yet saw not which way to supply myself, except that I had seen two or three creatures like hares run out of the wood where I shot the fowl.

I now began to consider that I might yet get a great many things out of the ship which would be useful to me, and particularly some of the rigging and sails, and such other things as might come to land; and I resolved to make another voyage on board the vessel, if possible. And as I knew that the first storm that blew must necessarily break her all in pieces, I resolved to set all other things apart till I had got everything out of the ship that I could get. Then I called a council—that is to say in my thoughts—whether I should take back the raft; but this appeared impracticable: so I resolved to go as before, when the tide was down; and I did so, only that I stripped before I went from my hut, having nothing on but my chequered shirt, a pair of linen drawers, and a pair of pumps on my feet.

I got on board the ship as before, and prepared a second raft; and, having had experience of the first, I neither made this so unwieldy, nor loaded it so hard, but yet I brought away several things very useful to me; as first, in the carpenters stores I found two or three bags full of nails and spikes, a great screw-jack, a dozen or two of hatchets, and, above all, that most useful thing called a grindstone. All these I secured, together with several things belonging to the gunner, particularly two or three iron crows, and two barrels of musket bullets, seven muskets, another fowling-piece, with some small quantity of powder more; a large bagful of small shot, and a great roll of sheet-lead; but this last was so heavy, I could not hoist it up to get it over the ship's side.

Besides these things, I took all the men's clothes that I could find, and a spare fore-topsail, a hammock, and some bedding; and with this I loaded my second raft, and brought them all safe on shore, to my very great comfort.

I was under some apprehension, during my absence from the land, that at least my provisions might be devoured on shore: but when I came back I found no sign of any visitor; only there sat a creature like a wild cat upon one of the chests, which, when I came towards it, ran away a little distance, and then stood still. She sat very composed and unconcerned, and looked full in my face, as if she had a mind to be acquainted with me. I presented my gun at her, but, as she did not understand it, she was perfectly unconcerned at it, nor did she offer to stir away; upon which I tossed her a bit of biscuit, though by the way, I was not very free of it, for my store was not great: however, I spared her a bit, I say, and she went to it, smelled at it, and ate it, and looked (as if pleased) for more; but I thanked her, and could spare no more: so she marched off.

Having got my second cargo on shore—though I was fain to open the barrels of powder, and bring them by parcels, for they were too heavy, being large casks—I went to work to make me a little tent with the sail and some poles which I cut for that purpose: and into this tent I brought everything that I knew would spoil either with rain or sun; and I piled all the empty chests and casks up in a circle round the tent, to fortify it from any sudden attempt, either from man or beast.

When I had done this, I blocked up the door of the tent with some boards within, and an empty chest set up on end without; and spreading one of the beds upon the ground, laying my two pistols just at my head, and my gun at length by me, I went to bed for the first time, and slept very quietly all night, for I was very weary and heavy; for the night before I had slept little, and had laboured very hard all day to fetch all those things from the ship, and to get them on shore.

I had the biggest magazine of all kinds now that ever was laid up, I believe, for one man: but I was not satisfied still, for while the ship sat upright in that posture, I thought I ought to get everything out of her that I could; so every day at low water I went on board, and brought away something or other; but particularly the third time I went I brought away as much of the rigging as I could, as also all the small ropes and rope-twine I could get, with a piece of spare canvas, which was to mend the sails upon occasion, and the barrel of wet gunpowder. In a word, I brought away all the sails, first and last; only that I was fain to cut them in pieces, and bring as much at a time as I could, for they were no more useful to be sails, but as mere canvas only.

But that which comforted me more still, was, that last of all, after I had made five or six such voyages as these, and thought I had nothing more to expect from the ship that was worth my meddling with—I say, after all this, I found a great hogshead of bread, three large runlets of rum, or spirits, a box of sugar, and a barrel of fine flour; this was surprising to me, because I had given over expecting any more provisions, except what was spoiled by the water. I soon emptied the hogshead of the bread, and wrapped it up, parcel by parcel, in pieces of the sails, which I cut out; and, in a word, I got all this safe on shore also.

The next day I made another voyage, and now, having plundered the ship of what was portable and fit to hand out, I began with the cables. Cutting the great cable into pieces, such as I could move, I got two cables and a hawser on shore, with all the ironwork I could get; and having cut down the spritsail-yard, and the mizzen-yard, and everything I could, to make a large raft, I loaded it with all these heavy goods, and came away. But my good luck began now to leave me; for this raft was so unwieldy, and so overladen, that, after I had entered the little cove where I had landed the rest of my goods, not being able to guide it so handily as I did the other, it overset, and threw me and all my cargo into the water. As for myself, it was no great harm, for I was near the shore; but as to my cargo, it was a great part of it lost, especially the iron, which I expected would have been of great use to me; however, when the tide was out, I got most of the pieces of the cable ashore, and some of the iron, though with infinite labour; for I was fain to dip for it into the water, a work which fatigued me very much. After this, I went every day on board, and brought away what I could get.

I had been now thirteen days on shore, and had been eleven times on board the ship, in which time I had brought away all that one pair of hands could well be supposed capable to bring; though I believe verily, had the calm weather held, I should have brought away the whole ship, piece by piece.

But preparing the twelfth time to go on board, I found the wind began to rise: however, at low water I went on board, and though I thought I had rummaged the cabin so effectually that nothing more could be found, yet I discovered a locker with drawers in it, in one of which I found two or three razors, and one pair of large scissors, with some ten or a dozen of good knives and forks: in another I found about thirty-six pounds value in money—some European coin, some Brazil, some pieces of eight, some gold, and some silver.

I smiled to myself at the sight of this money: “O drug!” said I, aloud, “what art thou good for? Thou art not worth to me—no, not the taking off the ground; one of those knives is worth all this heap; I have no manner of use for thee—e’en remain where thou art, and go to the bottom as a creature whose life is not worth saying.” However, upon second thoughts I took it away; and wrapping all this in a piece of canvas, I began to think of making another raft; but while I was preparing this, I found the sky overcast, and the wind began to rise, and in a quarter of an hour it blew a fresh gale from the shore.

It presently occurred to me that it was in vain to pretend to make a raft with the wind offshore; and that it was my business to be gone before the tide of flood began, otherwise I might not be able to reach the shore at all. Accordingly, I let myself down into the water, and swam across the channel, which lay between the ship and the sands, and even that with difficulty enough, partly with the weight of the things I had about me, and partly the roughness of the water; for the wind rose very hastily, and before it was quite high water it blew a storm.

But I had got home to my little tent, where I lay, with all my wealth about me, very secure. It blew very hard all night, and in the morning, when I looked out, behold, no more ship was to be seen! I was a little surprised, but recovered myself with the satisfactory reflection that I had lost no time, nor abated any diligence, to get everything out of her that could be useful to me; and that, indeed, there was little left in her that I was able to bring away, if I had had more time. I now gave over any more thoughts of the ship, or of anything out of her, except what might drive on shore from her wreck; as, indeed, divers pieces of her afterwards did; but those things were of small use to me.

My thoughts were now wholly employed about securing myself against either savages, if any should appear, or wild beasts, if any were in the island; and I had many thoughts of the method how to do this, and what kind of dwelling to make—whether I should make me a cave in the earth, or a tent upon the earth; and, in short, I resolved upon both; the manner and description of which, it may not be improper to give an account of.

I soon found the place I was in was not fit for my settlement, because it was upon a low, moorish ground, near the sea, and I believed it would not be wholesome, and more particularly because there was no fresh water near it; so I resolved to find a more healthy and more convenient spot of ground.

I consulted several things in my situation, which I found would be proper for me: 1st, health and fresh water, I just now mentioned; 2ndly, shelter from the heat of the sun; 3rdly, security from ravenous creatures, whether man or beast; 4thly, a view to the sea, that if God sent any ship in sight, I might not lose any advantage for my deliverance, of which I was not willing to banish all my expectation yet.

In search of a place proper for this, I found a little plain on the side of a rising hill, whose front towards this little plain was steep as a house-side, so that nothing could come down upon me from the top. On the one side of the rock there was a hollow place, worn a little way in, like the entrance or door of a cave but there was not really any cave or way into the rock at all.

On the flat of the green, just before this hollow place, I resolved to pitch my tent. This plain was not above a hundred yards broad, and about twice as long, and lay like a green before my door; and, at the end of it, descended irregularly every way down into the low ground by the seaside. It was on the N.N.W. side of the hill; so that it was sheltered from the heat every day, till it came to a W. and by S. sun, or thereabouts, which, in those countries, is near the setting.

Before I set up my tent I drew a half-circle before the hollow place, which took in about ten yards in its semi-diameter from the rock, and twenty yards in its diameter from its beginning and ending.

In this half-circle I pitched two rows of strong stakes, driving them into the ground till they stood very firm like piles, the biggest end being out of the ground above five feet and a half, and sharpened on the top. The two rows did not stand above six inches from one another.

Then I took the pieces of cable which I had cut in the ship, and laid them in rows, one upon another, within the circle, between these two rows of stakes, up to the top, placing other stakes in the inside, leaning against them, about two feet and a half high, like a spur to a post; and this fence was so strong, that neither man nor beast could get into it or over it. This cost me a great deal of time and labour, especially to cut the piles in the woods, bring them to the place, and drive them into the earth.

The entrance into this place I made to be, not by a door, but by a short ladder to go over the top; which ladder, when I was in, I lifted over after me; and so I was completely fenced in and fortified, as I thought, from all the world, and consequently slept secure in the night, which otherwise I could not have done; though, as it appeared afterwards, there was no need of all this caution from the enemies that I apprehended danger from.

Into this fence or fortress, with infinite labour, I carried all my riches, all my provisions, ammunition, and stores, of which you have the account above; and I made a large tent, which to preserve me from the rains that in one part of the year are very violent there, I made double—one smaller tent within, and one larger tent above it; and covered the uppermost with a large tarpaulin, which I had saved among the sails.

And now I lay no more for a while in the bed which I had brought on shore, but in a hammock, which was indeed a very good one, and belonged to the mate of the ship.

Into this tent I brought all my provisions, and everything that would spoil by the wet; and having thus enclosed all my goods, I made up the entrance, which till now I had left open, and so passed and repassed, as I said, by a short ladder.

When I had done this, I began to work my way into the rock, and bringing all the earth and stones that I dug down out through my tent, I laid them up within my fence, in the nature of a terrace, so that it raised the ground within about a foot and a half; and thus I made me a cave, just behind my tent, which served me like a cellar to my house.

It cost me much labour and many days before all these things were brought to perfection; and therefore I must go back to some other things which took up some of my thoughts. At the same time it happened, after I had laid my scheme for the setting up my tent, and making the cave, that a storm of rain falling from a thick, dark cloud, a sudden flash of lightning happened, and after that a great clap of thunder, as is naturally the effect of it. I was not so much surprised with the lightning as I was with the thought which darted into my mind as swift as the lightning itself—Oh, my powder! My very heart sank within me when I thought that, at one blast, all my powder might be destroyed; on which, not my defence only, but the providing my food, as I thought, entirely depended. I was nothing near so anxious about my own danger, though, had the powder took fire, I should never have known who had hurt me.

Such impression did this make upon me, that after the storm was over I laid aside all my works, my building and fortifying, and applied myself to make bags and boxes, to separate the powder, and to keep it a little and a little in a parcel, in the hope that, whatever might come, it might not all take fire at once; and to keep it so apart that it should not be possible to make one part fire another. I finished this work in about a fortnight; and I think my powder, which in all was about two hundred and forty pounds weight, was divided in not less than a hundred parcels. As to the barrel that had been wet, I did not apprehend any danger from that; so I placed it in my new cave, which, in my fancy, I called my kitchen; and the rest I hid up and down in holes among the rocks, so that no wet might come to it, marking very carefully where I laid it.

In the interval of time while this was doing, I went out once at least every day with my gun, as well to divert myself as to see if I could kill anything fit for food; and, as near as I could, to acquaint myself with what the island produced. The first time I went out, I presently discovered that there were goats in the island, which was a great satisfaction to me; but then it was attended with this misfortune to me—viz. that they were so shy, so subtle, and so swift of foot, that it was the most difficult thing in the world to come at them; but I was not discouraged at this, not doubting but I might now and then shoot one, as it soon happened; for after I had found their haunts a little, I laid wait in this manner for them: I observed if they saw me in the valleys, though they were upon the rocks, they would run away, as in a terrible fright; but if they were feeding in the valleys, and I was upon the rocks, they took no notice of me; from whence I concluded that, by the position of their optics, their sight was so directed downward that they did not readily see objects that were above them; so afterwards I took this method—I always climbed the rocks first, to get above them, and then had frequently a fair mark.

The first shot I made among these creatures, I killed a she-goat, which had a little kid by her, which she gave suck to, which grieved me heartily; for when the old one fell, the kid stood stock still by her, till I came and took her up; and not only so, but when I carried the old one with me, upon my shoulders, the kid followed me quite to my enclosure; upon which I laid down the dam, and took the kid in my arms, and carried it over my pale, in hopes to have bred it up tame; but it would not eat; so I was forced to kill it and eat it myself. These two supplied me with flesh a great while, for I ate sparingly, and saved my provisions, my bread especially, as much as possibly I could.

Having now fixed my habitation, I found it absolutely necessary to provide a place to make a fire in, and fuel to burn: and what I did for that, and also how I enlarged my cave, and what conveniences I made, I shall give a full account of in its place; but I must now give some little account of myself, and of my thoughts about living, which, it may well be supposed, were not a few.

I had a dismal prospect of my condition; for as I was not cast away upon that island without being driven, as is said, by a violent storm, quite out of the course of our intended voyage, and a great way, viz. some hundreds of leagues, out of the ordinary course of the trade of mankind, I had great reason to consider it as a determination of Heaven, that in this desolate place, and in this desolate manner, I should end my life. The tears would run plentifully down my face when I made these reflections; and sometimes I would expostulate with myself why Providence should thus completely ruin His creatures, and render them so absolutely miserable; so without help, abandoned, so entirely depressed, that it could hardly be rational to be thankful for such a life.

But something always returned swift upon me to check these thoughts, and to reprove me; and particularly one day, walking with my gun in my hand by the seaside, I was very pensive upon the subject of my present condition, when reason, as it were, expostulated with me the other way, thus: "Well, you are in a desolate condition, it is true; but, pray remember, where are the rest of you? Did not you come, eleven of you in the boat? Where are the ten? Why were they not saved, and you lost? Why were you singled out? Is it better to be here or there?" And then I pointed to the sea. All evils are to be considered with the good that is in them, and with what worse attends them.

Then it occurred to me again, how well I was furnished for my subsistence, and what would have been my case if it had not happened (which was a hundred thousand to one) that the ship floated from the place where she first struck, and was driven so near to the shore that I had time to get all these things out of her; what would have been my case, if I had been forced to have lived in the condition in which I at first came on shore, without necessaries of life, or necessaries to supply and procure them? "Particularly," said I, aloud (though to myself), "what should I have done without a gun, without ammunition, without any tools to make anything, or to work with, without clothes, bedding, a tent, or any manner of covering?" and that now I had all these to sufficient quantity, and was in a fair way to provide myself in such a manner as to live without my gun, when my ammunition was spent: so that I had a tolerable view of subsisting, without any want, as long as I lived; for I considered from the beginning how I would provide for the accidents that might happen, and for the time that was to come, even not only after my ammunition should be spent, but even after my health and strength should decay.

I confess I had not entertained any notion of my ammunition being destroyed at one blast—I mean my powder being blown up by lightning; and this made the thoughts of it so surprising to me, when it lightened and thundered, as I observed just now.

And now being about to enter into a melancholy relation of a scene of silent life, such, perhaps, as was never heard of in the world before, I shall take it from its beginning, and continue it in its order. It was by my account the 30th of September, when, in the manner as above said, I first set foot upon this horrid island; when the sun, being to us in its autumnal equinox, was almost over my head; for I reckoned myself, by observation, to be in the latitude of nine degrees twenty-two minutes north of the line.

After I had been there about ten or twelve days, it came into my thoughts that I should lose my reckoning of time for want of books, and pen and ink, and should even forget the Sabbath days; but to prevent this, I cut with my knife upon a large post, in capital letters—and making it into a great cross, I set it up on the shore where I first landed—"I came on shore here on the 30th September 1659."

Upon the sides of this square post I cut every day a notch with my knife, and every seventh notch was as long again as the rest, and every first day of the month as long again as that long one; and thus I kept my calendar, or weekly, monthly, and yearly reckoning of time.

In the next place, we are to observe that among the many things which I brought out of the ship, in the several voyages which, as above mentioned, I made to it, I got several things of less value, but not at all less useful to me, which I omitted setting down before; as, in particular, pens, ink, and paper, several parcels in the captain's, mate's, gunner's and carpenter's keeping; three or four compasses, some mathematical instruments, dials, perspectives, charts, and books of navigation, all which I huddled together, whether I might want them or no; also, I found three very good Bibles, which came to me in my cargo from England, and which I had packed up among my things; some Portuguese books also; and among them two or three Popish prayer-books, and several other books, all which I carefully secured.

And I must not forget that we had in the ship a dog and two cats, of whose eminent history I may have occasion to say something in its place; for I carried both the cats with me; and as for the dog, he jumped out of the ship of himself, and swam on shore to me the day after I went on shore with my first cargo, and was a trusty servant to me many years; I wanted nothing that he could fetch me, nor any company that he could make up to me; I only wanted to have him talk to me, but that would not do. As I observed before, I found pens, ink, and paper, and I husbanded them to the utmost; and I shall show that while my ink lasted, I kept things very exact, but after that was gone I could not, for I could not make any ink by any means that I could devise.

And this put me in mind that I wanted many things notwithstanding all that I had amassed together; and of these, ink was one; as also a spade, pickaxe, and shovel, to dig or remove the earth; needles, pins, and thread; as for linen, I soon learned to want that without much difficulty.

This want of tools made every work I did go on heavily; and it was near a whole year before I had entirely finished my little pale, or surrounded my habitation. The piles, or stakes, which were as heavy as I could well lift, were a long time in cutting and preparing in the woods, and more, by far, in bringing home; so that I spent sometimes two days in cutting and bringing home one of those posts, and a third day in driving it into the ground; for which purpose I got a heavy piece of wood at first, but at last bethought myself of one of the iron crows; which, however, though I found it, made driving those posts or piles very laborious and tedious work.

But what need I have been concerned at the tediousness of anything I had to do, seeing I had time enough to do it in? nor had I any other employment, if that had been over, at least that I could foresee, except the ranging the island to seek for food, which I did, more or less, every day.

I now began to consider seriously my condition, and the circumstances I was reduced to; and I drew up the state of my affairs in writing, not so much to leave them to any that were to come after me—for I was likely to have but few heirs—as to deliver my thoughts from daily poring over them, and afflicting my mind; and as my reason began now to master my despondency, I began to comfort myself as well as I could, and to set the good against the evil, that I might have something to distinguish my case from worse; and I stated very impartially, like debtor and creditor, the comforts I enjoyed against the miseries I suffered, thus:—

Evil	Good
I am cast upon a horrible, desolate island, void of all hope of recovery.	But I am alive; and not drowned, as all my ship's company were.
I am singled out and separated, as it were, from all the world, to be miserable.	But I am singled out, too, from all the ship's crew, to be spared from death; and He that miraculously saved me from death can deliver me from this condition.
I am divided from mankind—a solitaire; one banished from human society.	But I am not starved, and perishing on a barren place, affording no sustenance.
I have no clothes to cover me.	But I am in a hot climate, where, if I had clothes, I could hardly wear them.
I am without any defence, or means to resist any violence of man or beast.	But I am cast on an island where I see no wild beasts to hurt me, as I saw on the coast of Africa; and what if I had been shipwrecked there?
I have no soul to speak to or relieve me.	But God wonderfully sent the ship in near enough to the shore, that I have got out as many necessary things as will either supply my wants or enable me to supply myself, even as long as I live.

Upon the whole, here was an undoubted testimony that there was scarce any condition in the world so miserable but there was something negative or something positive to be thankful for in it; and let this stand as a direction from the experience of the most miserable of all conditions in this world: that we may always find in it something to comfort ourselves from, and to set, in the description of good and evil, on the credit side of the account.

Having now brought my mind a little to relish my condition, and given over looking out to sea, to see if I could spy a ship—I say, giving over these things, I began to apply myself to arrange my way of living, and to make things as easy to me as I could.

I have already described my habitation, which was a tent under the side of a rock, surrounded with a strong pale of posts and cables: but I might now rather call it a wall, for I raised a kind of wall up against it of turfs, about two feet thick on the outside; and after some time (I think it was a year and a half) I raised rafters from it, leaning to the rock, and thatched or covered it with boughs of trees, and such things as I could get, to keep out the rain; which I found at some times of the year very violent.

I have already observed how I brought all my goods into this pale, and into the cave which I had made behind me. But I must observe, too, that at first this was a confused heap of goods, which, as they lay in no order, so they took up all my place; I had no room to turn myself: so I set myself to enlarge my cave, and work farther into the earth; for it was a loose sandy rock, which yielded easily to the labour I bestowed on it: and so when I found I was pretty safe as to beasts of prey, I worked sideways, to the right hand, into the rock; and then, turning to the right again, worked quite out, and made me a door to come out on the outside of my pale or fortification. This gave me not only egress and regress, as it was a back way to my tent and to my storehouse, but gave me room to store my goods.

And now I began to apply myself to make such necessary things as I found I most wanted, particularly a chair and a table; for without these I was not able to enjoy the few comforts I had in the world; I could not write or eat, or do several things, with so much pleasure without a table: so I went to work. And here I must needs observe, that as reason is the substance and origin of the mathematics, so by stating and squaring everything by reason, and by making the most rational judgment of things, every man may be, in time, master of every mechanic art. I had never handled a tool in my life; and yet, in time, by labour, application, and contrivance, I found at last that I wanted nothing but I could have made it, especially if I had had tools.

However, I made abundance of things, even without tools; and some with no more tools than an adze and a hatchet, which perhaps were never made that way before, and that with infinite labour. For example, if I wanted a board, I had no other way but to cut down a tree, set it on an edge before me, and hew it flat on either side with my axe, till I brought it to be thin as a plank, and then dub it smooth with my adze. It is true, by this method I could make but one board out of a whole tree; but this I had no remedy for but patience, any more than I had for the prodigious deal of time and labour which it took me up to make a plank or board: but my time or labour was little worth, and so it was as well employed one way as another.

However, I made me a table and a chair, as I observed above, in the first place; and this I did out of the short pieces of boards that I brought on my raft from the ship. But when I had wrought out some boards as above, I made large shelves, of the breadth of a foot and a half, one over another all along one side of my cave, to lay all my tools, nails and ironwork on; and, in a word, to separate everything at large into their places, that I might come easily at them. I knocked pieces into the wall of the rock to hang my guns and all things that would hang up; so that, had my cave been to be seen, it looked like a general magazine of all necessary things; and had everything so ready at my hand, that it was a great pleasure to me to see all my goods in such order, and especially to find my stock of all necessaries so great.

And now it was that I began to keep a journal of every day's employment; for, indeed, at first I was in too much hurry, and not only hurry as to labour, but in too much discomposure of mind; and my journal would have been full of many dull things; for example, I must have said thus: "30th.—After I had got to shore, and escaped drowning, instead of being thankful to God for my deliverance, having first vomited, with the great quantity of salt water which had got into my stomach, and recovering myself a little, I ran about the shore wringing my hands and beating my head and face, exclaiming at my misery, and crying out, 'I was undone, undone!' till, tired and faint, I was forced to lie down on the ground to repose, but durst not sleep for fear of being devoured."

Some days after this, and after I had been on board the ship, and got all that I could out of her, yet I could not forbear getting up to the top of a little mountain and looking out to sea, in hopes of seeing a ship; then fancy at a vast distance I spied a sail, please myself with the hopes of it, and then after looking steadily, till I was almost blind, lose it quite, and sit down and weep like a child, and thus increase my misery by my folly.

But having gotten over these things in some measure, and having settled my household staff and habitation, made me a table and a chair, and all as handsome about me as I could, I began to keep my journal; of which I shall here give you the copy (though in it will be told all these particulars over again) as long as it lasted; for having no more ink, I was forced to leave it off.

Chapter 5 - Builds A House - The Journal

September 30, 1659.—I, poor miserable Robinson Crusoe, being shipwrecked during a dreadful storm in the offing, came on shore on this dismal, unfortunate island, which I called "The Island of Despair"; all the rest of the ship's company being drowned, and myself almost dead.

All the rest of the day I spent in afflicting myself at the dismal circumstances I was brought to—viz. I had neither food, house, clothes, weapon, nor place to fly to; and in despair of any relief, saw nothing but death before me—either that I should be devoured by wild beasts, murdered by savages, or starved to death for want of food. At the approach of night I slept in a tree, for fear of wild creatures; but slept soundly, though it rained all night.

October 1.—In the morning I saw, to my great surprise, the ship had floated with the high tide, and was driven on shore again much nearer the island; which, as it was some comfort, on one hand—for, seeing her set upright, and not broken to pieces, I hoped, if the wind abated, I might get on board, and get some food and necessaries out of her for my relief—so, on the other hand, it renewed my grief at the loss of my comrades, who, I imagined, if we had all stayed on board, might have saved the ship, or, at least, that they would not have been all drowned as they were; and that, had the men been saved, we might perhaps have built us a boat out of the ruins of the ship to have carried us to some other part of the world. I spent great part of this day in perplexing myself on these things; but at length, seeing the ship almost dry, I went upon the sand as near as I could, and then swam on board. This day also it continued raining, though with no wind at all.

From the 1st of October to the 24th.—All these days entirely spent in many several voyages to get all I could out of the ship, which I brought on shore every tide of flood upon rafts. Much rain also in the days, though with some intervals of fair weather; but it seems this was the rainy season.

Oct. 20.—I overset my raft, and all the goods I had got upon it; but, being in shoal water, and the things being chiefly heavy, I recovered many of them when the tide was out.

Oct. 25.—It rained all night and all day, with some gusts of wind; during which time the ship broke in pieces, the wind blowing a little harder than before, and was no more to be seen, except the wreck of her, and that only at low water. I spent this day in covering and securing the goods which I had saved, that the rain might not spoil them.

Oct. 26.—I walked about the shore almost all day, to find out a place to fix my habitation, greatly concerned to secure myself from any attack in the night, either from wild beasts or men. Towards night, I fixed upon a proper place, under a rock, and marked out a semicircle for my encampment; which I resolved to strengthen with a work, wall, or fortification, made of double piles, lined within with cables, and without with turf.

From the 26th to the 30th I worked very hard in carrying all my goods to my new habitation, though some part of the time it rained exceedingly hard.

The 31st, in the morning, I went out into the island with my gun, to seek for some food, and discover the country; when I killed a she-goat, and her kid followed me home, which I afterwards killed also, because it would not feed.

November 1.—I set up my tent under a rock, and lay there for the first night; making it as large as I could, with stakes driven in to swing my hammock upon.

Nov. 2.—I set up all my chests and boards, and the pieces of timber which made my rafts, and with them formed a fence round me, a little within the place I had marked out for my fortification.

Nov. 3.—I went out with my gun, and killed two fowls like ducks, which were very good food. In the afternoon went to work to make me a table.

Nov. 4.—This morning I began to order my times of work, of going out with my gun, time of sleep, and time of diversion—viz. every morning I walked out with my gun for two or three hours, if it did not rain; then employed myself to work till about eleven o'clock; then eat what I had to live on; and from twelve to two I lay down to sleep, the weather being excessively hot; and then, in the evening, to work again. The working part of this day and of the next were wholly employed in making my table, for I was yet but a very sorry workman, though time and necessity made me a complete natural mechanic soon after, as I believe they would do any one else.

Nov. 5.—This day went abroad with my gun and my dog, and killed a wild cat; her skin pretty soft, but her flesh good for nothing; every creature that I killed I took of the skins and preserved them. Coming back by the sea-shore, I saw many sorts of sea-fowls, which I did not understand; but was surprised, and almost frightened, with two or three seals, which, while I was gazing at, not well knowing what they were, got into the sea, and escaped me for that time.

Nov. 6.—After my morning walk I went to work with my table again, and finished it, though not to my liking; nor was it long before I learned to mend it.

Nov. 7.—Now it began to be settled fair weather. The 7th, 8th, 9th, 10th, and part of the 12th (for the 11th was Sunday) I took wholly up to make me a chair, and with much ado brought it to a tolerable shape, but never to please me; and even in the making I pulled it in pieces several times.

Note.—I soon neglected my keeping Sundays; for, omitting my mark for them on my post, I forgot which was which.

Nov. 13.—This day it rained, which refreshed me exceedingly, and cooled the earth; but it was accompanied with terrible thunder and lightning, which frightened me dreadfully, for fear of my powder. As soon as it was over, I resolved to separate my stock of powder into as many little parcels as possible, that it might not be in danger.

Nov. 14, 15, 16.—These three days I spent in making little square chests, or boxes, which might hold about a pound, or two pounds at most, of powder; and so, putting the powder in, I stowed it in places as secure and remote from one another as possible. On one of these three days I killed a large bird that was good to eat, but I knew not what to call it.

Nov. 17.—This day I began to dig behind my tent into the rock, to make room for my further conveniency.

ENTERTAINMENT Solo Robinson Crusoe Chapter 5

Note.—Three things I wanted exceedingly for this work—viz. a pickaxe, a shovel, and a wheelbarrow or basket; so I desisted from my work, and began to consider how to supply that want, and make me some tools. As for the pickaxe, I made use of the iron crows, which were proper enough, though heavy; but the next thing was a shovel or spade; this was so absolutely necessary, that, indeed, I could do nothing effectually without it; but what kind of one to make I knew not.

Nov. 18.—The next day, in searching the woods, I found a tree of that wood, or like it, which in the Brazils they call the iron-tree, for its exceeding hardness. Of this, with great labour, and almost spoiling my axe, I cut a piece, and brought it home, too, with difficulty enough, for it was exceeding heavy. The excessive hardness of the wood, and my having no other way, made me a long while upon this machine, for I worked it effectually by little and little into the form of a shovel or spade; the handle exactly shaped like ours in England, only that the board part having no iron shod upon it at bottom, it would not last me so long; however, it served well enough for the uses which I had occasion to put it to; but never was a shovel, I believe, made after that fashion, or so long in making.

I was still deficient, for I wanted a basket or a wheelbarrow. A basket I could not make by any means, having no such things as twigs that would bend to make wicker-ware—at least, none yet found out; and as to a wheelbarrow, I fancied I could make all but the wheel; but that I had no notion of; neither did I know how to go about it; besides, I had no possible way to make the iron gudgeons for the spindle or axis of the wheel to run in; so I gave it over, and so, for carrying away the earth which I dug out of the cave, I made me a thing like a hod which the labourers carry mortar in when they serve the bricklayers. This was not so difficult to me as the making the shovel: and yet this and the shovel, and the attempt which I made in vain to make a wheelbarrow, took me up no less than four days—I mean always excepting my morning walk with my gun, which I seldom failed, and very seldom failed also bringing home something fit to eat.

Nov. 23.—My other work having now stood still, because of my making these tools, when they were finished I went on, and working every day, as my strength and time allowed, I spent eighteen days entirely in widening and deepening my cave, that it might hold my goods commodiously.

Note.—During all this time I worked to make this room or cave spacious enough to accommodate me as a warehouse or magazine, a kitchen, a dining-room, and a cellar. As for my lodging, I kept to the tent; except that sometimes, in the wet season of the year, it rained so hard that I could not keep myself dry, which caused me afterwards to cover all my place within my pale with long poles, in the form of rafters, leaning against the rock, and load them with flags and large leaves of trees, like a thatch.

December 10.—I began now to think my cave or vault finished, when on a sudden (it seems I had made it too large) a great quantity of earth fell down from the top on one side; so much that, in short, it frighted me, and not without reason, too, for if I had been under it, I had never wanted a gravedigger. I had now a great deal of work to do over again, for I had the loose earth to carry out; and, which was of more importance, I had the ceiling to prop up, so that I might be sure no more would come down.

Dec. 11.—This day I went to work with it accordingly, and got two shores or posts pitched upright to the top, with two pieces of boards across over each post; this I finished the next day; and setting more posts up with boards, in about a week more I had the roof secured, and the posts, standing in rows, served me for partitions to part off the house.

Dec. 17.—From this day to the 20th I placed shelves, and knocked up nails on the posts, to hang everything up that could be hung up; and now I began to be in some order within doors.

Dec. 20.—Now I carried everything into the cave, and began to furnish my house, and set up some pieces of boards like a dresser, to order my victuals upon; but boards began to be very scarce with me; also, I made me another table.

Dec. 24.—Much rain all night and all day. No stirring out.

Dec. 25.—Rain all day.

Dec. 26.—No rain, and the earth much cooler than before, and pleasanter.

Dec. 27.—Killed a young goat, and lamed another, so that I caught it and led it home in a string; when I had it at home, I bound and splintered up its leg, which was broke.

N.B.—I took such care of it that it lived, and the leg grew well and as strong as ever; but, by my nursing it so long, it grew tame, and fed upon the little green at my door, and would not go away. This was the first time that I entertained a thought of breeding up some tame creatures, that I might have food when my powder and shot was all spent.

Dec. 28, 29, 30.—Great heats and no breeze, so that there was no stirring abroad except in the evening for food; this time I spent in putting all my things in order within doors.

January 1.—Very hot still: but I went abroad early and late with my gun, and lay still in the middle of the day. This evening, going farther into the valleys which lay towards the centre of the island, I found there were plenty of goats, though exceedingly shy, and hard to come at; however, I resolved to try if I could not bring my dog to hunt them down.

Jan. 2.—Accordingly, the next day I went out with my dog, and set him upon the goats, but I was mistaken, for they all faced about upon the dog, and he knew his danger too well, for he would not come near them.

Jan. 3.—I began my fence or wall; which, being still jealous of my being attacked by somebody, I resolved to make very thick and strong.

N.B.—This wall being described before, I purposely omit what was said in the journal; it is sufficient to observe, that I was no less time than from the 2nd of January to the 14th of April working, finishing, and perfecting this wall, though it was no more than about twenty-four yards in length, being a half-circle from one place in the rock to another place, about eight yards from it, the door of the cave being in the centre behind it.

All this time I worked very hard, the rains hindering me many days, nay, sometimes weeks together; but I thought I should never be perfectly secure till this wall was finished; and it is scarce credible what inexpressible labour everything was done with, especially the bringing piles out of the woods and driving them into the ground; for I made them much bigger than I needed to have done.

When this wall was finished, and the outside double fenced, with a turf wall raised up close to it, I perceived myself that if any people were to come on shore there, they would not perceive anything like a habitation; and it was very well I did so, as may be observed hereafter, upon a very remarkable occasion.

During this time I made my rounds in the woods for game every day when the rain permitted me, and made frequent discoveries in these walks of something or other to my advantage; particularly, I found a kind of wild pigeons, which build, not as wood-pigeons in a tree, but rather as house-pigeons, in the holes of the rocks; and taking some young ones, I endeavoured to breed them up tame, and did so; but when they grew older they flew away, which perhaps was at first for want of feeding them, for I had nothing to give them; however, I frequently found their nests, and got their young ones, which were very good meat. And now, in the managing my household affairs, I found myself wanting in many things, which I thought at first it was impossible for me to make; as, indeed, with some of them it was: for instance, I could never make a cask to be hooped. I had a small runlet or two, as I observed before; but I could never arrive at the capacity of making one by them, though I spent many weeks about it; I could neither put in the heads, or join the staves so true to one another as to make them hold water; so I gave that also over. In the next place, I was at a great loss for candles; so that as soon as ever it was dark, which was generally by seven o'clock, I was obliged to go to bed. I remembered the lump of beeswax with which I made candles in my African adventure; but I had none of that now; the only remedy I had was, that when I had killed a goat I saved the tallow, and with a little dish made of clay, which I baked in the sun, to which I added a wick of some oakum, I made me a lamp; and this gave me light, though not a clear, steady light, like a candle. In the middle of all my labours it happened that, rummaging my things, I found a little bag which, as I hinted before, had been filled with corn for the feeding of poultry—not for this voyage, but before, as I suppose, when the ship came from Lisbon.

The little remainder of corn that had been in the bag was all devoured by the rats, and I saw nothing in the bag but husks and dust; and being willing to have the bag for some other use (I think it was to put powder in, when I divided it for fear of the lightning, or some such use), I shook the husks of corn out of it on one side of my fortification, under the rock.

It was a little before the great rains just now mentioned that I threw this stuff away, taking no notice, and not so much as remembering that I had thrown anything there, when, about a month after, or thereabouts, I saw some few stalks of something green shooting out of the ground, which I fancied might be some plant I had not seen; but I was surprised, and perfectly astonished, when, after a little longer time, I saw about ten or twelve ears come out, which were perfect green barley, of the same kind as our European—nay, as our English barley.

It is impossible to express the astonishment and confusion of my thoughts on this occasion. I had hitherto acted upon no religious foundation at all; indeed, I had very few notions of religion in my head, nor had entertained any sense of anything that had befallen me otherwise than as chance, or, as we lightly say, what pleases God, without so much as inquiring into the end of Providence in these things, or His order in governing events for the world. But after I saw barley grow there, in a climate which I knew was not proper for corn, and especially that I knew not how it came there, it startled me strangely, and I began to suggest that God had miraculously caused His grain to grow without any help of seed sown, and that it was so directed purely for my sustenance on that wild, miserable place.

This touched my heart a little, and brought tears out of my eyes, and I began to bless myself that such a prodigy of nature should happen upon my account; and this was the more strange to me, because I saw near it still, all along by the side of the rock, some other straggling stalks, which proved to be stalks of rice, and which I knew, because I had seen it grow in Africa when I was ashore there.

I not only thought these the pure productions of Providence for my support, but not doubting that there was more in the place, I went all over that part of the island, where I had been before, peering in every corner, and under every rock, to see for more of it, but I could not find any. At last it occurred to my thoughts that I shook a bag of chickens' meat out in that place; and then the wonder began to cease; and I must confess my religious thankfulness to God's providence began to abate, too, upon the discovering that all this was nothing but what was common; though I ought to have been as thankful for so strange and unforeseen a providence as if it had been miraculous; for it was really the work of Providence to me, that should order or appoint that ten or twelve grains of corn should remain unspoiled, when the rats had destroyed all the rest, as if it had been dropped from heaven; as also, that I should throw it out in that particular place, where, it being in the shade of a high rock, it sprang up immediately; whereas, if I had thrown it anywhere else at that time, it had been burnt up and destroyed.

I carefully saved the ears of this corn, you may be sure, in their season, which was about the end of June; and, laying up every corn, I resolved to sow them all again, hoping in time to have some quantity sufficient to supply me with bread. But it was not till the fourth year that I could allow myself the least grain of this corn to eat, and even then but sparingly, as I shall say afterwards, in its order; for I lost all that I sowed the first season by not observing the proper time; for I sowed it just before the dry season, so that it never came up at all, at least not as it would have done; of which in its place.

Besides this barley, there were, as above, twenty or thirty stalks of rice, which I preserved with the same care and for the same use, or to the same purpose—to make me bread, or rather food; for I found ways to cook it without baking, though I did that also after some time.

But to return to my Journal.

I worked excessive hard these three or four months to get my wall done; and the 14th of April I closed it up, contriving to go into it, not by a door but over the wall, by a ladder, that there might be no sign on the outside of my habitation.

April 16.—I finished the ladder; so I went up the ladder to the top, and then pulled it up after me, and let it down in the inside. This was a complete enclosure to me; for within I had room enough, and nothing could come at me from without, unless it could first mount my wall.

The very next day after this wall was finished I had almost had all my labour overthrown at once, and myself killed. The case was thus: As I was busy in the inside, behind my tent, just at the entrance into my cave, I was terribly frighted with a most dreadful, surprising thing indeed; for all on a sudden I found the earth come crumbling down from the roof of my cave, and from the edge of the hill over my head, and two of the posts I had set up in the cave cracked in a frightful manner. I was heartily scared; but thought nothing of what was really the cause, only thinking that the top of my cave was fallen in, as some of it had done before: and for fear I should be buried in it I ran forward to my ladder, and not thinking myself safe there neither, I got over my wall for fear of the pieces of the hill, which I expected might roll down upon me.

I had no sooner stepped down upon the firm ground, than I plainly saw it was a terrible earthquake, for the ground I stood on shook three times at about eight minutes' distance, with three such shocks as would have overturned the strongest building that could be supposed to have stood on the earth; and a great piece of the top of a rock which stood about half a mile from me next the sea fell down with such a terrible noise as I never heard in all my life. I perceived also the very sea was put into violent motion by it; and I believe the shocks were stronger under the water than on the island.

I was so much amazed with the thing itself, having never felt the like, nor discoursed with any one that had, that I was like one dead or stupefied; and the motion of the earth made my stomach sick, like one that was tossed at sea; but the noise of the falling of the rock awakened me, as it were, and rousing me from the stupefied condition I was in, filled me with horror; and I thought of nothing then but the hill falling upon my tent and all my household goods, and burying all at once; and this sunk my very soul within me a second time.

After the third shock was over, and I felt no more for some time, I began to take courage; and yet I had not heart enough to go over my wall again, for fear of being buried alive, but sat still upon the ground greatly cast down and disconsolate, not knowing what to do. All this while I had not the least serious religious thought; nothing but the common "Lord have mercy upon me!" and when it was over that went away too.

While I sat thus, I found the air overcast and grow cloudy, as if it would rain. Soon after that the wind arose by little and little, so that in less than half-an-hour it blew a most dreadful hurricane; the sea was all on a sudden covered over with foam and froth; the shore was covered with the breach of the water, the trees were torn up by the roots, and a terrible storm it was. This held about three hours, and then began to abate; and in two hours more it was quite calm, and began to rain very hard.

All this while I sat upon the ground very much terrified and dejected; when on a sudden it came into my thoughts, that these winds and rain being the consequences of the earthquake, the earthquake itself was spent and over, and I might venture into my cave again. With this thought my spirits began to revive; and the rain also helping to persuade me, I went in and sat down in my tent. But the rain was so violent that my tent was ready to be beaten down with it; and I was forced to go into my cave, though very much afraid and uneasy, for fear it should fall on my head. This violent rain forced me to a new work—viz. to cut a hole through my new fortification, like a sink, to let the water go out, which would else have flooded my cave.

After I had been in my cave for some time, and found still no more shocks of the earthquake follow, I began to be more composed. And now, to support my spirits, which indeed wanted it very much, I went to my little store, and took a small sup of rum; which, however, I did then and always very sparingly, knowing I could have no more when that was gone. It continued raining all that night and great part of the next day, so that I could not stir abroad; but my mind being more composed, I began to think of what I had best do; concluding that if the island was subject to these earthquakes, there would be no living for me in a cave, but I must consider of building a little hut in an open place which I might surround with a wall, as I had done here, and so make myself secure from wild beasts or men; for I concluded, if I stayed where I was, I should certainly one time or other be buried alive.

With these thoughts, I resolved to remove my tent from the place where it stood, which was just under the hanging precipice of the hill; and which, if it should be shaken again, would certainly fall upon my tent; and I spent the two next days, being the 19th and 20th of April, in contriving where and how to remove my habitation. The fear of being swallowed up alive made me that I never slept in quiet; and yet the apprehension of lying abroad without any fence was almost equal to it; but still, when I looked about, and saw how everything was put in order, how pleasantly concealed I was, and how safe from danger, it made me very loath to remove.

In the meantime, it occurred to me that it would require a vast deal of time for me to do this, and that I must be contented to venture where I was, till I had formed a camp for myself, and had secured it so as to remove to it. So with this resolution I composed myself for a time, and resolved that I would go to work with all speed to build me a wall with piles and cables, &c., in a circle, as before, and set my tent up in it when it was finished; but that I would venture to stay where I was till it was finished, and fit to remove. This was the 21st.

April 22.—The next morning I begin to consider of means to put this resolve into execution; but I was at a great loss about my tools. I had three large axes, and abundance of hatchets (for we carried the hatchets for traffic with the Indians); but with much chopping and cutting knotty hard wood, they were all full of notches, and dull; and though I had a grindstone, I could not turn it and grind my tools too. This cost me as much thought as a statesman would have bestowed upon a grand point of politics, or a judge upon the life and death of a man. At length I contrived a wheel with a string, to turn it with my foot, that I might have both my hands at liberty. Note.—I had never seen any such thing in England, or at least, not to take notice how it was done, though since I have observed, it is very common there; besides that, my grindstone was very large and heavy. This machine cost me a full week's work to bring it to perfection.

April 28, 29.—These two whole days I took up in grinding my tools, my machine for turning my grindstone performing very well.

April 30.—Having perceived my bread had been low a great while, now I took a survey of it, and reduced myself to one biscuit cake a day, which made my heart very heavy.

May 1.—In the morning, looking towards the sea side, the tide being low, I saw something lie on the shore bigger than ordinary, and it looked like a cask; when I came to it, I found a small barrel, and two or three pieces of the wreck of the ship, which were driven on shore by the late hurricane; and looking towards the wreck itself, I thought it seemed to lie higher out of the water than it used to do.

I examined the barrel which was driven on shore, and soon found it was a barrel of gunpowder; but it had taken water, and the powder was caked as hard as a stone; however, I rolled it farther on shore for the present, and went on upon the sands, as near as I could to the wreck of the ship, to look for more.

Chapter 6 - Ill And Conscience-Stricken

When I came down to the ship I found it strangely removed. The forecastle, which lay before buried in sand, was heaved up at least six feet, and the stern, which was broke in pieces and parted from the rest by the force of the sea, soon after I had left rummaging her, was tossed as it were up, and cast on one side; and the sand was thrown so high on that side next her stern, that whereas there was a great place of water before, so that I could not come within a quarter of a mile of the wreck without swimming I could now walk quite up to her when the tide was out. I was surprised with this at first, but soon concluded it must be done by the earthquake; and as by this violence the ship was more broke open than formerly, so many things came daily on shore, which the sea had loosened, and which the winds and water rolled by degrees to the land.

This wholly diverted my thoughts from the design of removing my habitation, and I busied myself mightily, that day especially, in searching whether I could make any way into the ship; but I found nothing was to be expected of that kind, for all the inside of the ship was choked up with sand. However, as I had learned not to despair of anything, I resolved to pull everything to pieces that I could of the ship, concluding that everything I could get from her would be of some use or other to me.

May 3.—I began with my saw, and cut a piece of a beam through, which I thought held some of the upper part or quarter-deck together, and when I had cut it through, I cleared away the sand as well as I could from the side which lay highest; but the tide coming in, I was obliged to give over for that time.

May 4.—I went a-fishing, but caught not one fish that I durst eat of, till I was weary of my sport; when, just going to leave off, I caught a young dolphin. I had made me a long line of some rope-yarn, but I had no hooks; yet I frequently caught fish enough, as much as I cared to eat; all which I dried in the sun, and ate them dry.

May 5.—Worked on the wreck; cut another beam asunder, and brought three great fir planks off from the decks, which I tied together, and made to float on shore when the tide of flood came on.

May 6.—Worked on the wreck; got several iron bolts out of her and other pieces of ironwork. Worked very hard, and came home very much tired, and had thoughts of giving it over.

May 7.—Went to the wreck again, not with an intent to work, but found the weight of the wreck had broke itself down, the beams being cut; that several pieces of the ship seemed to lie loose, and the inside of the hold lay so open that I could see into it; but it was almost full of water and sand.

May 8.—Went to the wreck, and carried an iron crow to wrench up the deck, which lay now quite clear of the water or sand. I wrenched open two planks, and brought them on shore also with the tide. I left the iron crow in the wreck for next day.

May 9.—Went to the wreck, and with the crow made way into the body of the wreck, and felt several casks, and loosened them with the crow, but could not break them up. I felt also a roll of English lead, and could stir it, but it was too heavy to remove.

May 10–14.—Went every day to the wreck; and got a great many pieces of timber, and boards, or plank, and two or three hundredweight of iron.

May 15.—I carried two hatchets, to try if I could not cut a piece off the roll of lead by placing the edge of one hatchet and driving it with the other; but as it lay about a foot and a half in the water, I could not make any blow to drive the hatchet.

May 16.—It had blown hard in the night, and the wreck appeared more broken by the force of the water; but I stayed so long in the woods, to get pigeons for food, that the tide prevented my going to the wreck that day.

May 17.—I saw some pieces of the wreck blown on shore, at a great distance, near two miles off me, but resolved to see what they were, and found it was a piece of the head, but too heavy for me to bring away.

May 24.—Every day, to this day, I worked on the wreck; and with hard labour I loosened some things so much with the crow, that the first flowing tide several casks floated out, and two of the seamen's chests; but the wind blowing from the shore, nothing came to land that day but pieces of timber, and a hogshead, which had some Brazil pork in it; but the salt water and the sand had spoiled it. I continued this work every day to the 15th of June, except the time necessary to get food, which I always appointed, during this part of my employment, to be when the tide was up, that I might be ready when it was ebbed out; and by this time I had got timber and plank and ironwork enough to have built a good boat, if I had known how; and also I got, at several times and in several pieces, near one hundredweight of the sheet lead.

June 16.—Going down to the seaside, I found a large tortoise or turtle. This was the first I had seen, which, it seems, was only my misfortune, not any defect of the place, or scarcity; for had I happened to be on the other side of the island, I might have had hundreds of them every day, as I found afterwards; but perhaps had paid dear enough for them.

June 17.—I spent in cooking the turtle. I found in her three-score eggs; and her flesh was to me, at that time, the most savoury and pleasant that ever I tasted in my life, having had no flesh, but of goats and fowls, since I landed in this horrid place.

June 18.—Rained all day, and I stayed within. I thought at this time the rain felt cold, and I was something chilly; which I knew was not usual in that latitude.

June 19.—Very ill, and shivering, as if the weather had been cold.

June 20.—No rest all night; violent pains in my head, and feverish.

June 21.—Very ill; frighted almost to death with the apprehensions of my sad condition—to be sick, and no help. Prayed to God, for the first time since the storm off Hull, but scarce knew what I said, or why, my thoughts being all confused.

June 22.—A little better; but under dreadful apprehensions of sickness.

June 23.—Very bad again; cold and shivering, and then a violent headache.

June 24.—Much better.

June 25.—An ague very violent; the fit held me seven hours; cold fit and hot, with faint sweats after it.

June 26.—Better; and having no victuals to eat, took my gun, but found myself very weak. However, I killed a she-goat, and with much difficulty got it home, and broiled some of it, and ate, I would fain have stewed it, and made some broth, but had no pot.

June 27.—The ague again so violent that I lay a-bed all day, and neither ate nor drank. I was ready to perish for thirst; but so weak, I had not strength to stand up, or to get myself any water to drink. Prayed to God again, but was light-headed; and when I was not, I was so ignorant that I knew not what to say; only I lay and cried, "Lord, look upon me! Lord, pity me! Lord, have mercy upon me!" I suppose I did nothing else for two or three hours; till, the fit wearing off, I fell asleep, and did not wake till far in the night. When I awoke, I found myself much refreshed, but weak, and exceeding thirsty. However, as I had no water in my habitation, I was forced to lie till morning, and went to sleep again. In this second sleep I had this terrible dream: I thought that I was sitting on the ground, on the outside of my wall, where I sat when the storm blew after the earthquake, and that I saw a man descend from a great black cloud, in a bright flame of fire, and light upon the ground. He was all over as bright as a flame, so that I could but just bear to look towards him; his countenance was most inexpressibly dreadful, impossible for words to describe. When he stepped upon the ground with his feet, I thought the earth trembled, just as it had done before in the earthquake, and all the air looked, to my apprehension, as if it had been filled with flashes of fire. He was no sooner landed upon the earth, but he moved forward towards me, with a long spear or weapon in his hand, to kill me; and when he came to a rising ground, at some distance, he spoke to me—or I heard a voice so terrible that it is impossible to express the terror of it. All that I can say I understood was this: "Seeing all these things have not brought thee to repentance, now thou shalt die;" at which words, I thought he lifted up the spear that was in his hand to kill me.

No one that shall ever read this account will expect that I should be able to describe the horrors of my soul at this terrible vision. I mean, that even while it was a dream, I even dreamed of those horrors. Nor is it any more possible to describe the impression that remained upon my mind when I awaked, and found it was but a dream.

I had, alas! no divine knowledge. What I had received by the good instruction of my father was then worn out by an uninterrupted series, for eight years, of seafaring wickedness, and a constant conversation with none but such as were, like myself, wicked and profane to the last degree. I do not remember that I had, in all that time, one thought that so much as tended either to looking upwards towards God, or inwards towards a reflection upon my own ways; but a certain stupidity of soul, without desire of good, or conscience of evil, had entirely overwhelmed me; and I was all that the most hardened, unthinking, wicked creature among our common sailors can be supposed to be; not having the least sense, either of the fear of God in danger, or of thankfulness to God in deliverance.

In the relating what is already past of my story, this will be the more easily believed when I shall add, that through all the variety of miseries that had to this day befallen me, I never had so much as one thought of it being the hand of God, or that it was a just punishment for my sin—my rebellious behaviour against my father—or my present sins, which were great—or so much as a punishment for the general course of my wicked life. When I was on the desperate expedition on the desert shores of Africa, I never had so much as one thought of what would become of me, or one wish to God to direct me whither I should go, or to keep me from the danger which apparently surrounded me, as well from voracious creatures as cruel savages.

But I was merely thoughtless of a God or a Providence, acted like a mere brute, from the principles of nature, and by the dictates of common sense only, and, indeed, hardly that. When I was delivered and taken up at sea by the Portugal captain, well used, and dealt justly and honourably with, as well as charitably, I had not the least thankfulness in my thoughts. When, again, I was shipwrecked, ruined, and in danger of drowning on this island, I was as far from remorse, or looking on it as a judgment. I only said to myself often, that I was an unfortunate dog, and born to be always miserable.

It is true, when I got on shore first here, and found all my ship's crew drowned and myself spared, I was surprised with a kind of ecstasy, and some transports of soul, which, had the grace of God assisted, might have come up to true thankfulness; but it ended where it began, in a mere common flight of joy, or, as I may say, being glad I was alive, without the least reflection upon the distinguished goodness of the hand which had preserved me, and had singled me out to be preserved when all the rest were destroyed, or an inquiry why Providence had been thus merciful unto me. Even just the same common sort of joy which seamen generally have, after they are got safe ashore from a shipwreck, which they drown all in the next bowl of punch, and forget almost as soon as it is over; and all the rest of my life was like it.

Even when I was afterwards, on due consideration, made sensible of my condition, how I was cast on this dreadful place, out of the reach of human kind, out of all hope of relief, or prospect of redemption, as soon as I saw but a prospect of living and that I should not starve and perish for hunger, all the sense of my affliction wore off; and I began to be very easy, applied myself to the works proper for my preservation and supply, and was far enough from being afflicted at my condition, as a judgment from heaven, or as the hand of God against me: these were thoughts which very seldom entered my head.

The growing up of the corn, as is hinted in my Journal, had at first some little influence upon me, and began to affect me with seriousness, as long as I thought it had something miraculous in it; but as soon as ever that part of the thought was removed, all the impression that was raised from it wore off also, as I have noted already. Even the earthquake, though nothing could be more terrible in its nature, or more immediately directing to the invisible Power which alone directs such things, yet no sooner was the first fright over, but the impression it had made went off also. I had no more sense of God or His judgments—much less of the present affliction of my circumstances being from His hand—than if I had been in the most prosperous condition of life. But now, when I began to be sick, and a leisurely view of the miseries of death came to place itself before me; when my spirits began to sink under the burden of a strong distemper, and nature was exhausted with the violence of the fever; conscience, that had slept so long, began to awake, and I began to reproach myself with my past life, in which I had so evidently, by uncommon wickedness, provoked the justice of God to lay me under uncommon strokes, and to deal with me in so vindictive a manner. These reflections oppressed me for the second or third day of my distemper; and in the violence, as well of the fever as of the dreadful reproaches of my conscience, extorted some words from me like praying to God, though I cannot say they were either a prayer attended with desires or with hopes: it was rather the voice of mere fright and distress. My thoughts were confused, the convictions great upon my mind, and the horror of dying in such a miserable condition raised vapours into my head with the mere apprehensions; and in these hurries of my soul I knew not what my tongue might express.

But it was rather exclamation, such as, "Lord, what a miserable creature am I! If I should be sick, I shall certainly die for want of help; and what will become of me!" Then the tears burst out of my eyes, and I could say no more for a good while. In this interval the good advice of my father came to my mind, and presently his prediction, which I mentioned at the beginning of this story—viz. that if I did take this foolish step, God would not bless me, and I would have leisure hereafter to reflect upon having neglected his counsel when there might be none to assist in my recovery. "Now," said I, aloud, "my dear father's words are come to pass; God's justice has overtaken me, and I have none to help or hear me.

I rejected the voice of Providence, which had mercifully put me in a posture or station of life wherein I might have been happy and easy; but I would neither see it myself nor learn to know the blessing of it from my parents. I left them to mourn over my folly, and now I am left to mourn under the consequences of it. I abused their help and assistance, who would have lifted me in the world, and would have made everything easy to me; and now I have difficulties to struggle with, too great for even nature itself to support, and no assistance, no help, no comfort, no advice." Then I cried out, "Lord, be my help, for I am in great distress." This was the first prayer, if I may call it so, that I had made for many years.

But to return to my Journal.

June 28.—Having been somewhat refreshed with the sleep I had had, and the fit being entirely off, I got up; and though the fright and terror of my dream was very great, yet I considered that the fit of the ague would return again the next day, and now was my time to get something to refresh and support myself when I should be ill; and the first thing I did, I filled a large square case-bottle with water, and set it upon my table, in reach of my bed; and to take off the chill or aguish disposition of the water, I put about a quarter of a pint of rum into it, and mixed them together.

Then I got me a piece of the goat's flesh and broiled it on the coals, but could eat very little. I walked about, but was very weak, and withal very sad and heavy-hearted under a sense of my miserable condition, dreading, the return of my distemper the next day. At night I made my supper of three of the turtle's eggs, which I roasted in the ashes, and ate, as we call it, in the shell, and this was the first bit of meat I had ever asked God's blessing to, that I could remember, in my whole life.

After I had eaten I tried to walk, but found myself so weak that I could hardly carry a gun, for I never went out without that; so I went but a little way, and sat down upon the ground, looking out upon the sea, which was just before me, and very calm and smooth. As I sat here some such thoughts as these occurred to me: What is this earth and sea, of which I have seen so much? Whence is it produced? And what am I, and all the other creatures wild and tame, human and brutal? Whence are we? Sure we are all made by some secret Power, who formed the earth and sea, the air and sky. And who is that? Then it followed most naturally, it is God that has made all. Well, but then it came on strangely, if God has made all these things, He guides and governs them all, and all things that concern them; for the Power that could make all things must certainly have power to guide and direct them. If so, nothing can happen in the great circuit of His works, either without His knowledge or appointment.

And if nothing happens without His knowledge, He knows that I am here, and am in this dreadful condition; and if nothing happens without His appointment, He has appointed all this to befall me. Nothing occurred to my thought to contradict any of these conclusions, and therefore it rested upon me with the greater force, that it must needs be that God had appointed all this to befall me; that I was brought into this miserable circumstance by His direction, He having the sole power, not of me only, but of everything that happened in the world.

Immediately it followed: Why has God done this to me? What have I done to be thus used? My conscience presently checked me in that inquiry, as if I had blasphemed, and methought it spoke to me like a voice: "Wretch! dost thou ask what thou hast done? Look back upon a dreadful misspent life, and ask thyself what thou hast not done? Ask, why is it that thou wert not long ago destroyed? Why wert thou not drowned in Yarmouth Roads; killed in the fight when the ship was taken by the Sallee man-of-war; devoured by the wild beasts on the coast of Africa; or drowned here, when all the crew perished but thyself? Dost thou ask, what have I done?"

I was struck dumb with these reflections, as one astonished, and had not a word to say—no, not to answer to myself, but rose up pensive and sad, walked back to my retreat, and went up over my wall, as if I had been going to bed; but my thoughts were sadly disturbed, and I had no inclination to sleep; so I sat down in my chair, and lighted my lamp, for it began to be dark. Now, as the apprehension of the return of my distemper terrified me very much, it occurred to my thought that the Brazilians take no physic but their tobacco for almost all distempers, and I had a piece of a roll of tobacco in one of the chests, which was quite cured, and some also that was green, and not quite cured.

I went, directed by Heaven no doubt; for in this chest I found a cure both for soul and body. I opened the chest, and found what I looked for, the tobacco; and as the few books I had saved lay there too, I took out one of the Bibles which I mentioned before, and which to this time I had not found leisure or inclination to look into. I say, I took it out, and brought both that and the tobacco with me to the table. What use to make of the tobacco I knew not, in my distemper, or whether it was good for it or no: but I tried several experiments with it, as if I was resolved it should hit one way or other. I first took a piece of leaf, and chewed it in my mouth, which, indeed, at first almost stupefied my brain, the tobacco being green and strong, and that I had not been much used to. Then I took some and steeped it an hour or two in some rum, and resolved to take a dose of it when I lay down; and lastly, I burnt some upon a pan of coals, and held my nose close over the smoke of it as long as I could bear it, as well for the heat as almost for suffocation. In the interval of this operation I took up the Bible and began to read; but my head was too much disturbed with the tobacco to bear reading, at least at that time; only, having opened the book casually, the first words that occurred to me were these, "Call on Me in the day of trouble, and I will deliver thee, and thou shalt glorify Me." These words were very apt to my case, and made some impression upon my thoughts at the time of reading them, though not so much as they did afterwards; for, as for being delivered, the word had no sound, as I may say, to me; the thing was so remote, so impossible in my apprehension of things, that I began to say, as the children of Israel did when they were promised flesh to eat, "Can God spread a table in the wilderness?" so I began to say, "Can God Himself deliver me from this place?"

And as it was not for many years that any hopes appeared, this prevailed very often upon my thoughts; but, however, the words made a great impression upon me, and I mused upon them very often. It grew now late, and the tobacco had, as I said, dozed my head so much that I inclined to sleep; so I left my lamp burning in the cave, lest I should want anything in the night, and went to bed. But before I lay down, I did what I never had done in all my life—I kneeled down, and prayed to God to fulfil the promise to me, that if I called upon Him in the day of trouble, He would deliver me. After my broken and imperfect prayer was over, I drank the rum in which I had steeped the tobacco, which was so strong and rank of the tobacco that I could scarcely get it down; immediately upon this I went to bed.

I found presently it flew up into my head violently; but I fell into a sound sleep, and waked no more till, by the sun, it must necessarily be near three o'clock in the afternoon the next day—nay, to this hour I am partly of opinion that I slept all the next day and night, and till almost three the day after; for otherwise I know not how I should lose a day out of my reckoning in the days of the week, as it appeared some years after I had done; for if I had lost it by crossing and recrossing the line, I should have lost more than one day; but certainly I lost a day in my account, and never knew which way. Be that, however, one way or the other, when I awaked I found myself exceedingly refreshed, and my spirits lively and cheerful; when I got up I was stronger than I was the day before, and my stomach better, for I was hungry; and, in short, I had no fit the next day, but continued much altered for the better. This was the 29th.

The 30th was my well day, of course, and I went abroad with my gun, but did not care to travel too far. I killed a sea-fowl or two, something like a brandgoose, and brought them home, but was not very forward to eat them; so I ate some more of the turtle's eggs, which were very good. This evening I renewed the medicine, which I had supposed did me good the day before—the tobacco steeped in rum; only I did not take so much as before, nor did I chew any of the leaf, or hold my head over the smoke; however, I was not so well the next day, which was the first of July, as I hoped I should have been; for I had a little spice of the cold fit, but it was not much.

July 2.—I renewed the medicine all the three ways; and dosed myself with it as at first, and doubled the quantity which I drank.

July 3.—I missed the fit for good and all, though I did not recover my full strength for some weeks after. While I was thus gathering strength, my thoughts ran exceedingly upon this Scripture, "I will deliver thee"; and the impossibility of my deliverance lay much upon my mind, in bar of my ever expecting it; but as I was discouraging myself with such thoughts, it occurred to my mind that I pored so much upon my deliverance from the main affliction, that I disregarded the deliverance I had received, and I was as it were made to ask myself such questions as these—viz.

Have I not been delivered, and wonderfully too, from sickness—from the most distressed condition that could be, and that was so frightful to me? and what notice had I taken of it? Had I done my part? God had delivered me, but I had not glorified Him—that is to say, I had not owned and been thankful for that as a deliverance; and how could I expect greater deliverance? This touched my heart very much; and immediately I knelt down and gave God thanks aloud for my recovery from my sickness.

July 4.—In the morning I took the Bible; and beginning at the New Testament, I began seriously to read it, and imposed upon myself to read a while every morning and every night; not tying myself to the number of chapters, but long as my thoughts should engage me. It was not long after I set seriously to this work till I found my heart more deeply and sincerely affected with the wickedness of my past life. The impression of my dream revived; and the words, "All these things have not brought thee to repentance," ran seriously through my thoughts. I was earnestly begging of God to give me repentance, when it happened providentially, the very day, that, reading the Scripture, I came to these words: "He is exalted a Prince and a Saviour, to give repentance and to give remission."

I threw down the book; and with my heart as well as my hands lifted up to heaven, in a kind of ecstasy of joy, I cried out aloud, "Jesus, thou son of David! Jesus, thou exalted Prince and Saviour! give me repentance!" This was the first time I could say, in the true sense of the words, that I prayed in all my life; for now I prayed with a sense of my condition, and a true Scripture view of hope, founded on the encouragement of the Word of God; and from this time, I may say, I began to hope that God would hear me.

Now I began to construe the words mentioned above, "Call on Me, and I will deliver thee," in a different sense from what I had ever done before; for then I had no notion of anything being called deliverance, but my being delivered from the captivity I was in; for though I was indeed at large in the place, yet the island was certainly a prison to me, and that in the worse sense in the world. But now I learned to take it in another sense: now I looked back upon my past life with such horror, and my sins appeared so dreadful, that my soul sought nothing of God but deliverance from the load of guilt that bore down all my comfort.

As for my solitary life, it was nothing. I did not so much as pray to be delivered from it or think of it; it was all of no consideration in comparison to this. And I add this part here, to hint to whoever shall read it, that whenever they come to a true sense of things, they will find deliverance from sin a much greater blessing than deliverance from affliction.

But, leaving this part, I return to my Journal.

My condition began now to be, though not less miserable as to my way of living, yet much easier to my mind: and my thoughts being directed, by a constant reading the Scripture and praying to God, to things of a higher nature, I had a great deal of comfort within, which till now I knew nothing of; also, my health and strength returned, I bestirred myself to furnish myself with everything that I wanted, and make my way of living as regular as I could.

From the 4th of July to the 14th I was chiefly employed in walking about with my gun in my hand, a little and a little at a time, as a man that was gathering up his strength after a fit of sickness; for it is hardly to be imagined how low I was, and to what weakness I was reduced. The application which I made use of was perfectly new, and perhaps which had never cured an ague before; neither can I recommend it to any to practise, by this experiment: and though it did carry off the fit, yet it rather contributed to weakening me; for I had frequent convulsions in my nerves and limbs for some time. I learned from it also this, in particular, that being abroad in the rainy season was the most pernicious thing to my health that could be, especially in those rains which came attended with storms and hurricanes of wind; for as the rain which came in the dry season was almost always accompanied with such storms, so I found that rain was much more dangerous than the rain which fell in September and October.

Chapter 7 - Agricultural Experience

I had now been in this unhappy island above ten months. All possibility of deliverance from this condition seemed to be entirely taken from me; and I firmly believe that no human shape had ever set foot upon that place. Having now secured my habitation, as I thought, fully to my mind, I had a great desire to make a more perfect discovery of the island, and to see what other productions I might find, which I yet knew nothing of.

It was on the 15th of July that I began to take a more particular survey of the island itself. I went up the creek first, where, as I hinted, I brought my rafts on shore. I found after I came about two miles up, that the tide did not flow any higher, and that it was no more than a little brook of running water, very fresh and good; but this being the dry season, there was hardly any water in some parts of it—at least not enough to run in any stream, so as it could be perceived. On the banks of this brook I found many pleasant savannahs or meadows, plain, smooth, and covered with grass; and on the rising parts of them, next to the higher grounds, where the water, as might be supposed, never overflowed, I found a great deal of tobacco, green, and growing to a great and very strong stalk. There were divers other plants, which I had no notion of or understanding about, that might, perhaps, have virtues of their own, which I could not find out. I searched for the cassava root, which the Indians, in all that climate, make their bread of, but I could find none. I saw large plants of aloes, but did not understand them. I saw several sugar-canes, but wild, and, for want of cultivation, imperfect.

I contented myself with these discoveries for this time, and came back, musing with myself what course I might take to know the virtue and goodness of any of the fruits or plants which I should discover, but could bring it to no conclusion; for, in short, I had made so little observation while I was in the Brazils, that I knew little of the plants in the field; at least, very little that might serve to any purpose now in my distress.

The next day, the sixteenth, I went up the same way again; and after going something further than I had gone the day before, I found the brook and the savannahs cease, and the country become more woody than before. In this part I found different fruits, and particularly I found melons upon the ground, in great abundance, and grapes upon the trees. The vines had spread, indeed, over the trees, and the clusters of grapes were just now in their prime, very ripe and rich. This was a surprising discovery, and I was exceeding glad of them; but I was warned by my experience to eat sparingly of them; remembering that when I was ashore in Barbary, the eating of grapes killed several of our Englishmen, who were slaves there, by throwing them into fluxes and fevers. But I found an excellent use for these grapes; and that was, to cure or dry them in the sun, and keep them as dried grapes or raisins are kept, which I thought would be, as indeed they were, wholesome and agreeable to eat when no grapes could be had.

I spent all that evening there, and went not back to my habitation; which, by the way, was the first night, as I might say, I had lain from home. In the night, I took my first contrivance, and got up in a tree, where I slept well; and the next morning proceeded upon my discovery; travelling nearly four miles, as I might judge by the length of the valley, keeping still due north, with a ridge of hills on the south and north side of me. At the end of this march I came to an opening where the country seemed to descend to the west; and a little spring of fresh water, which issued out of the side of the hill by me, ran the other way, that is, due east; and the country appeared so fresh, so green, so flourishing, everything being in a constant verdure or flourish of spring that it looked like a planted garden. I descended a little on the side of that delicious vale, surveying it with a secret kind of pleasure, though mixed with my other afflicting thoughts, to think that this was all my own; that I was king and lord of all this country indefensibly, and had a right of possession; and if I could convey it, I might have it in inheritance as completely as any lord of a manor in England. I saw here abundance of cocoa trees, orange, and lemon, and citron trees; but all wild, and very few bearing any fruit, at least not then. However, the green limes that I gathered were not only pleasant to eat, but very wholesome; and I mixed their juice afterwards with water, which made it very wholesome, and very cool and refreshing. I found now I had business enough to gather and carry home; and I resolved to lay up a store as well of grapes as limes and lemons, to furnish myself for the wet season, which I knew was approaching. In order to do this, I gathered a great heap of grapes in one place, a lesser heap in another place, and a great parcel of limes and lemons in another place; and taking a few of each with me, I travelled homewards; resolving to come again, and bring a bag or sack, or what I could make, to carry the rest home.

Accordingly, having spent three days in this journey, I came home (so I must now call my tent and my cave); but before I got thither the grapes were spoiled; the richness of the fruit and the weight of the juice having broken them and bruised them, they were good for little or nothing; as to the limes, they were good, but I could bring but a few.

The next day, being the nineteenth, I went back, having made me two small bags to bring home my harvest; but I was surprised, when coming to my heap of grapes, which were so rich and fine when I gathered them, to find them all spread about, trod to pieces, and dragged about, some here, some there, and abundance eaten and devoured. By this I concluded there were some wild creatures thereabouts, which had done this; but what they were I knew not. However, as I found there was no laying them up on heaps, and no carrying them away in a sack, but that one way they would be destroyed, and the other way they would be crushed with their own weight, I took another course; for I gathered a large quantity of the grapes, and hung upon the out-branches of the trees, that they might cure and dry in the sun; and as for the limes and lemons, I carried as many back as I could well stand under.

When I came home from this journey, I contemplated with great pleasure the fruitfulness of that valley, and the pleasantness of the situation; the security from storms on that side of the water, and the wood: and concluded that I had pitched upon a place to fix my abode which was by far the worst part of the country. Upon the whole, I began to consider of removing my habitation, and looking out for a place equally safe as where now I was situate, if possible, in that pleasant, fruitful part of the island.

This thought ran long in my head, and I was exceeding fond of it for some time, the pleasantness of the place tempting me; but when I came to a nearer view of it, I considered that I was now by the seaside, where it was at least possible that something might happen to my advantage, and, by the same ill fate that brought me hither might bring some other unhappy wretches to the same place; and though it was scarce probable that any such thing should ever happen, yet to enclose myself among the hills and woods in the centre of the island was to anticipate my bondage, and to render such an affair not only improbable, but impossible; and that therefore I ought not by any means to remove. However, I was so enamoured of this place, that I spent much of my time there for the whole of the remaining part of the month of July; and though upon second thoughts, I resolved not to remove, yet I built me a little kind of a bower, and surrounded it at a distance with a strong fence, being a double hedge, as high as I could reach, well staked and filled between with brushwood; and here I lay very secure, sometimes two or three nights together; always going over it with a ladder; so that I fancied now I had my country house and my sea-coast house; and this work took me up to the beginning of August.

I had but newly finished my fence, and began to enjoy my labour, when the rains came on, and made me stick close to my first habitation; for though I had made me a tent like the other, with a piece of a sail, and spread it very well, yet I had not the shelter of a hill to keep me from storms, nor a cave behind me to retreat into when the rains were extraordinary.

About the beginning of August, as I said, I had finished my bower, and began to enjoy myself. The 3rd of August, I found the grapes I had hung up perfectly dried, and, indeed, were excellent good raisins of the sun; so I began to take them down from the trees, and it was very happy that I did so, for the rains which followed would have spoiled them, and I had lost the best part of my winter food; for I had above two hundred large bunches of them. No sooner had I taken them all down, and carried the most of them home to my cave, than it began to rain; and from hence, which was the 14th of August, it rained, more or less, every day till the middle of October; and sometimes so violently, that I could not stir out of my cave for several days.

In this season I was much surprised with the increase of my family; I had been concerned for the loss of one of my cats, who ran away from me, or, as I thought, had been dead, and I heard no more tidings of her till, to my astonishment, she came home about the end of August with three kittens. This was the more strange to me because, though I had killed a wild cat, as I called it, with my gun, yet I thought it was quite a different kind from our European cats; but the young cats were the same kind of house-breed as the old one; and both my cats being females, I thought it very strange. But from these three cats I afterwards came to be so pestered with cats that I was forced to kill them like vermin or wild beasts, and to drive them from my house as much as possible.

From the 14th of August to the 26th, incessant rain, so that I could not stir, and was now very careful not to be much wet. In this confinement, I began to be straitened for food: but venturing out twice, I one day killed a goat; and the last day, which was the 26th, found a very large tortoise, which was a treat to me, and my food was regulated thus: I ate a bunch of raisins for my breakfast; a piece of the goat's flesh, or of the turtle, for my dinner, broiled—for, to my great misfortune, I had no vessel to boil or stew anything; and two or three of the turtle's eggs for my supper.

During this confinement in my cover by the rain, I worked daily two or three hours at enlarging my cave, and by degrees worked it on towards one side, till I came to the outside of the hill, and made a door or way out, which came beyond my fence or wall; and so I came in and out this way. But I was not perfectly easy at lying so open; for, as I had managed myself before, I was in a perfect enclosure; whereas now I thought I lay exposed, and open for anything to come in upon me; and yet I could not perceive that there was any living thing to fear, the biggest creature that I had yet seen upon the island being a goat.

Sept. 30.—I was now come to the unhappy anniversary of my landing. I cast up the notches on my post, and found I had been on shore three hundred and sixty-five days. I kept this day as a solemn fast, setting it apart for religious exercise, prostrating myself on the ground with the most serious humiliation, confessing my sins to God, acknowledging His righteous judgments upon me, and praying to Him to have mercy on me through Jesus Christ; and not having tasted the least refreshment for twelve hours, even till the going down of the sun, I then ate a biscuit-cake and a bunch of grapes, and went to bed, finishing the day as I began it. I had all this time observed no Sabbath day; for as at first I had no sense of religion upon my mind, I had, after some time, omitted to distinguish the weeks, by making a longer notch than ordinary for the Sabbath day, and so did not really know what any of the days were; but now, having cast up the days as above, I found I had been there a year; so I divided it into weeks, and set apart every seventh day for a Sabbath; though I found at the end of my account I had lost a day or two in my reckoning.

A little after this, my ink began to fail me, and so I contented myself to use it more sparingly, and to write down only the most remarkable events of my life, without continuing a daily memorandum of other things. The rainy season and the dry season began now to appear regular to me, and I learned to divide them so as to provide for them accordingly; but I bought all my experience before I had it, and this I am going to relate was one of the most discouraging experiments that I made.

I have mentioned that I had saved the few ears of barley and rice, which I had so surprisingly found spring up, as I thought, of themselves, and I believe there were about thirty stalks of rice, and about twenty of barley; and now I thought it a proper time to sow it, after the rains, the sun being in its southern position, going from me. Accordingly, I dug up a piece of ground as well as I could with my wooden spade, and dividing it into two parts, I sowed my grain; but as I was sowing, it casually occurred to my thoughts that I would not sow it all at first, because I did not know when was the proper time for it, so I sowed about two-thirds of the seed, leaving about a handful of each. It was a great comfort to me afterwards that I did so, for not one grain of what I sowed this time came to anything: for the dry months following, the earth having had no rain after the seed was sown, it had no moisture to assist its growth, and never came up at all till the wet season had come again, and then it grew as if it had been but newly sown.

Finding my first seed did not grow, which I easily imagined was by the drought, I sought for a moister piece of ground to make another trial in, and I dug up a piece of ground near my new bower, and sowed the rest of my seed in February, a little before the vernal equinox; and this having the rainy months of March and April to water it, sprung up very pleasantly, and yielded a very good crop; but having part of the seed left only, and not daring to sow all that I had, I had but a small quantity at last, my whole crop not amounting to above half a peck of each kind. But by this experiment I was made master of my business, and knew exactly when the proper season was to sow, and that I might expect two seed-times and two harvests every year.

While this corn was growing I made a little discovery, which was of use to me afterwards. As soon as the rains were over, and the weather began to settle, which was about the month of November, I made a visit up the country to my bower, where, though I had not been some months, yet I found all things just as I left them. The circle or double hedge that I had made was not only firm and entire, but the stakes which I had cut out of some trees that grew thereabouts were all shot out and grown with long branches, as much as a willow-tree usually shoots the first year after lopping its head. I could not tell what tree to call it that these stakes were cut from.

I was surprised, and yet very well pleased, to see the young trees grow; and I pruned them, and led them up to grow as much alike as I could; and it is scarce credible how beautiful a figure they grew into in three years; so that though the hedge made a circle of about twenty-five yards in diameter, yet the trees, for such I might now call them, soon covered it, and it was a complete shade, sufficient to lodge under all the dry season. This made me resolve to cut some more stakes, and make me a hedge like this, in a semi-circle round my wall (I mean that of my first dwelling), which I did; and placing the trees or stakes in a double row, at about eight yards distance from my first fence, they grew presently, and were at first a fine cover to my habitation, and afterwards served for a defence also, as I shall observe in its order.

I found now that the seasons of the year might generally be divided, not into summer and winter, as in Europe, but into the rainy seasons and the dry seasons, which were generally thus:—The half of February, the whole of March, and the half of April—rainy, the sun being then on or near the equinox.

The half of April, the whole of May, June, and July, and the half of August—dry, the sun being then to the north of the line.

The half of August, the whole of September, and the half of October—rainy, the sun being then come back.

The half of October, the whole of November, December, and January, and the half of February—dry, the sun being then to the south of the line.

The rainy seasons sometimes held longer or shorter as the winds happened to blow, but this was the general observation I made. After I had found by experience the ill consequences of being abroad in the rain, I took care to furnish myself with provisions beforehand, that I might not be obliged to go out, and I sat within doors as much as possible during the wet months. This time I found much employment, and very suitable also to the time, for I found great occasion for many things which I had no way to furnish myself with but by hard labour and constant application; particularly I tried many ways to make myself a basket, but all the twigs I could get for the purpose proved so brittle that they would do nothing.

It proved of excellent advantage to me now, that when I was a boy, I used to take great delight in standing at a basket-maker's, in the town where my father lived, to see them make their wicker-ware; and being, as boys usually are, very officious to help, and a great observer of the manner in which they worked those things, and sometimes lending a hand, I had by these means full knowledge of the methods of it, and I wanted nothing but the materials, when it came into my mind that the twigs of that tree from whence I cut my stakes that grew might possibly be as tough as the sallows, willows, and osiers in England, and I resolved to try. Accordingly, the next day I went to my country house, as I called it, and cutting some of the smaller twigs, I found them to my purpose as much as I could desire; whereupon I came the next time prepared with a hatchet to cut down a quantity, which I soon found, for there was great plenty of them.

These I set up to dry within my circle or hedge, and when they were fit for use I carried them to my cave; and here, during the next season, I employed myself in making, as well as I could, a great many baskets, both to carry earth or to carry or lay up anything, as I had occasion; and though I did not finish them very handsomely, yet I made them sufficiently serviceable for my purpose; thus, afterwards, I took care never to be without them; and as my wicker-ware decayed, I made more, especially strong, deep baskets to place my corn in, instead of sacks, when I should come to have any quantity of it.

Having mastered this difficulty, and employed a world of time about it, I bestirred myself to see, if possible, how to supply two wants. I had no vessels to hold anything that was liquid, except two runlets, which were almost full of rum, and some glass bottles—some of the common size, and others which were case bottles, square, for the holding of water, spirits, &c. I had not so much as a pot to boil anything, except a great kettle, which I saved out of the ship, and which was too big for such as I desired it—viz. to make broth, and stew a bit of meat by itself. The second thing I fain would have had was a tobacco-pipe, but it was impossible to me to make one; however, I found a contrivance for that, too, at last. I employed myself in planting my second rows of stakes or piles, and in this wicker-working all the summer or dry season, when another business took me up more time than it could be imagined I could spare.

Chapter 8 - Surveys His Position

I mentioned before that I had a great mind to see the whole island, and that I had travelled up the brook, and so on to where I built my bower, and where I had an opening quite to the sea, on the other side of the island. I now resolved to travel quite across to the sea-shore on that side; so, taking my gun, a hatchet, and my dog, and a larger quantity of powder and shot than usual, with two biscuit-cakes and a great bunch of raisins in my pouch for my store, I began my journey. When I had passed the vale where my bower stood, as above, I came within view of the sea to the west, and it being a very clear day, I fairly descried land—whether an island or a continent I could not tell; but it lay very high, extending from the W. to the W.S.W. at a very great distance; by my guess it could not be less than fifteen or twenty leagues off.

I could not tell what part of the world this might be, otherwise than that I knew it must be part of America, and, as I concluded by all my observations, must be near the Spanish dominions, and perhaps was all inhabited by savages, where, if I had landed, I had been in a worse condition than I was now; and therefore I acquiesced in the dispositions of Providence, which I began now to own and to believe ordered everything for the best; I say I quieted my mind with this, and left off afflicting myself with fruitless wishes of being there.

Besides, after some thought upon this affair, I considered that if this land was the Spanish coast, I should certainly, one time or other, see some vessel pass or repass one way or other; but if not, then it was the savage coast between the Spanish country and Brazils, where are found the worst of savages; for they are cannibals or men-eaters, and fail not to murder and devour all the human bodies that fall into their hands.

With these considerations, I walked very leisurely forward. I found that side of the island where I now was much pleasanter than mine—the open or savannah fields sweet, adorned with flowers and grass, and full of very fine woods. I saw abundance of parrots, and fain I would have caught one, if possible, to have kept it to be tame, and taught it to speak to me. I did, after some painstaking, catch a young parrot, for I knocked it down with a stick, and having recovered it, I brought it home; but it was some years before I could make him speak; however, at last I taught him to call me by name very familiarly. But the accident that followed, though it be a trifle, will be very diverting in its place.

I was exceedingly diverted with this journey. I found in the low grounds hares (as I thought them to be) and foxes; but they differed greatly from all the other kinds I had met with, nor could I satisfy myself to eat them, though I killed several. But I had no need to be venturous, for I had no want of food, and of that which was very good too, especially these three sorts, viz. goats, pigeons, and turtle, or tortoise, which added to my grapes, Leadenhall market could not have furnished a table better than I, in proportion to the company; and though my case was deplorable enough, yet I had great cause for thankfulness that I was not driven to any extremities for food, but had rather plenty, even to dainties.

I never travelled in this journey above two miles outright in a day, or thereabouts; but I took so many turns and re-turns to see what discoveries I could make, that I came weary enough to the place where I resolved to sit down all night; and then I either reposed myself in a tree, or surrounded myself with a row of stakes set upright in the ground, either from one tree to another, or so as no wild creature could come at me without waking me.

As soon as I came to the sea-shore, I was surprised to see that I had taken up my lot on the worst side of the island, for here, indeed, the shore was covered with innumerable turtles, whereas on the other side I had found but three in a year and a half. Here was also an infinite number of fowls of many kinds, some which I had seen, and some which I had not seen before, and many of them very good meat, but such as I knew not the names of, except those called penguins.

I could have shot as many as I pleased, but was very sparing of my powder and shot, and therefore had more mind to kill a she-goat if I could, which I could better feed on; and though there were many goats here, more than on my side the island, yet it was with much more difficulty that I could come near them, the country being flat and even, and they saw me much sooner than when I was on the hills.

I confess this side of the country was much pleasanter than mine; but yet I had not the least inclination to remove, for as I was fixed in my habitation it became natural to me, and I seemed all the while I was here to be as it were upon a journey, and from home. However, I travelled along the shore of the sea towards the east, I suppose about twelve miles, and then setting up a great pole upon the shore for a mark, I concluded I would go home again, and that the next journey I took should be on the other side of the island east from my dwelling, and so round till I came to my post again.

I took another way to come back than that I went, thinking I could easily keep all the island so much in my view that I could not miss finding my first dwelling by viewing the country; but I found myself mistaken, for being come about two or three miles, I found myself descended into a very large valley, but so surrounded with hills, and those hills covered with wood, that I could not see which was my way by any direction but that of the sun, nor even then, unless I knew very well the position of the sun at that time of the day. It happened, to my further misfortune, that the weather proved hazy for three or four days while I was in the valley, and not being able to see the sun, I wandered about very uncomfortably, and at last was obliged to find the seaside, look for my post, and come back the same way I went: and then, by easy journeys, I turned homeward, the weather being exceeding hot, and my gun, ammunition, hatchet, and other things very heavy.

ENTERTAINMENT Solo Robinson Crusoe Chapter 8

In this journey my dog surprised a young kid, and seized upon it; and I, running in to take hold of it, caught it, and saved it alive from the dog. I had a great mind to bring it home if I could, for I had often been musing whether it might not be possible to get a kid or two, and so raise a breed of tame goats, which might supply me when my powder and shot should be all spent. I made a collar for this little creature, and with a string, which I made of some rope-yam, which I always carried about me, I led him along, though with some difficulty, till I came to my bower, and there I enclosed him and left him, for I was very impatient to be at home, from whence I had been absent above a month.

I cannot express what a satisfaction it was to me to come into my old hutch, and lie down in my hammock-bed. This little wandering journey, without settled place of abode, had been so unpleasant to me, that my own house, as I called it to myself, was a perfect settlement to me compared to that; and it rendered everything about me so comfortable, that I resolved I would never go a great way from it again while it should be my lot to stay on the island.

I reposed myself here a week, to rest and regale myself after my long journey; during which most of the time was taken up in the weighty affair of making a cage for my Poll, who began now to be a mere domestic, and to be well acquainted with me. Then I began to think of the poor kid which I had penned in within my little circle, and resolved to go and fetch it home, or give it some food; accordingly I went, and found it where I left it, for indeed it could not get out, but was almost starved for want of food.

I went and cut boughs of trees, and branches of such shrubs as I could find, and threw it over, and having fed it, I tied it as I did before, to lead it away; but it was so tame with being hungry, that I had no need to have tied it, for it followed me like a dog: and as I continually fed it, the creature became so loving, so gentle, and so fond, that it became from that time one of my domestics also, and would never leave me afterwards.

The rainy season of the autumnal equinox was now come, and I kept the 30th of September in the same solemn manner as before, being the anniversary of my landing on the island, having now been there two years, and no more prospect of being delivered than the first day I came there, I spent the whole day in humble and thankful acknowledgments of the many wonderful mercies which my solitary condition was attended with, and without which it might have been infinitely more miserable.

I gave humble and hearty thanks that God had been pleased to discover to me that it was possible I might be more happy in this solitary condition than I should have been in the liberty of society, and in all the pleasures of the world; that He could fully make up to me the deficiencies of my solitary state, and the want of human society, by His presence and the communications of His grace to my soul; supporting, comforting, and encouraging me to depend upon His providence here, and hope for His eternal presence hereafter.

It was now that I began sensibly to feel how much more happy this life I now led was, with all its miserable circumstances, than the wicked, cursed, abominable life I led all the past part of my days; and now I changed both my sorrows and my joys; my very desires altered, my affections changed their gusts, and my delights were perfectly new from what they were at my first coming, or, indeed, for the two years past.

Before, as I walked about, either on my hunting or for viewing the country, the anguish of my soul at my condition would break out upon me on a sudden, and my very heart would die within me, to think of the woods, the mountains, the deserts I was in, and how I was a prisoner, locked up with the eternal bars and bolts of the ocean, in an uninhabited wilderness, without redemption. In the midst of the greatest composure of my mind, this would break out upon me like a storm, and make me wring my hands and weep like a child. Sometimes it would take me in the middle of my work, and I would immediately sit down and sigh, and look upon the ground for an hour or two together; and this was still worse to me, for if I could burst out into tears, or vent myself by words, it would go off, and the grief, having exhausted itself, would abate.

But now I began to exercise myself with new thoughts: I daily read the word of God, and applied all the comforts of it to my present state. One morning, being very sad, I opened the Bible upon these words, "I will never, never leave thee, nor forsake thee." Immediately it occurred that these words were to me; why else should they be directed in such a manner, just at the moment when I was mourning over my condition, as one forsaken of God and man? "Well, then," said I, "if God does not forsake me, of what ill consequence can it be, or what matters it, though the world should all forsake me, seeing on the other hand, if I had all the world, and should lose the favour and blessing of God, there would be no comparison in the loss?"

From this moment I began to conclude in my mind that it was possible for me to be more happy in this forsaken, solitary condition than it was probable I should ever have been in any other particular state in the world; and with this thought I was going to give thanks to God for bringing me to this place. I know not what it was, but something shocked my mind at that thought, and I durst not speak the words. "How canst thou become such a hypocrite," said I, even audibly, "to pretend to be thankful for a condition which, however thou mayest endeavour to be contented with, thou wouldst rather pray heartily to be delivered from?"

So I stopped there; but though I could not say I thanked God for being there, yet I sincerely gave thanks to God for opening my eyes, by whatever afflicting providences, to see the former condition of my life, and to mourn for my wickedness, and repent. I never opened the Bible, or shut it, but my very soul within me blessed God for directing my friend in England, without any order of mine, to pack it up among my goods, and for assisting me afterwards to save it out of the wreck of the ship.

Thus, and in this disposition of mind, I began my third year; and though I have not given the reader the trouble of so particular an account of my works this year as the first, yet in general it may be observed that I was very seldom idle, but having regularly divided my time according to the several daily employments that were before me, such as: first, my duty to God, and the reading the Scriptures, which I constantly set apart some time for thrice every day; secondly, the going abroad with my gun for food, which generally took me up three hours in every morning, when it did not rain; thirdly, the ordering, cutting, preserving, and cooking what I had killed or caught for my supply; these took up great part of the day. Also, it is to be considered, that in the middle of the day, when the sun was in the zenith, the violence of the heat was too great to stir out; so that about four hours in the evening was all the time I could be supposed to work in, with this exception, that sometimes I changed my hours of hunting and working, and went to work in the morning, and abroad with my gun in the afternoon.

To this short time allowed for labour I desire may be added the exceeding laboriousness of my work; the many hours which, for want of tools, want of help, and want of skill, everything I did took up out of my time. For example, I was full two and forty days in making a board for a long shelf, which I wanted in my cave; whereas, two sawyers, with their tools and a saw-pit, would have cut six of them out of the same tree in half a day.

My case was this: it was to be a large tree which was to be cut down, because my board was to be a broad one. This tree I was three days in cutting down, and two more cutting off the boughs, and reducing it to a log or piece of timber. With inexpressible hacking and hewing I reduced both the sides of it into chips till it began to be light enough to move; then I turned it, and made one side of it smooth and flat as a board from end to end; then, turning that side downward, cut the other side til I brought the plank to be about three inches thick, and smooth on both sides. Any one may judge the labour of my hands in such a piece of work; but labour and patience carried me through that, and many other things. I only observe this in particular, to show the reason why so much of my time went away with so little work—viz. that what might be a little to be done with help and tools, was a vast labour and required a prodigious time to do alone, and by hand. But notwithstanding this, with patience and labour I got through everything that my circumstances made necessary to me to do, as will appear by what follows.

I was now, in the months of November and December, expecting my crop of barley and rice. The ground I had manured and dug up for them was not great; for, as I observed, my seed of each was not above the quantity of half a peck, for I had lost one whole crop by sowing in the dry season. But now my crop promised very well, when on a sudden I found I was in danger of losing it all again by enemies of several sorts, which it was scarcely possible to keep from it; as, first, the goats, and wild creatures which I called hares, who, tasting the sweetness of the blade, lay in it night and day, as soon as it came up, and eat it so close, that it could get no time to shoot up into stalk.

This I saw no remedy for but by making an enclosure about it with a hedge; which I did with a great deal of toil, and the more, because it required speed. However, as my arable land was but small, suited to my crop, I got it totally well fenced in about three weeks' time; and shooting some of the creatures in the daytime, I set my dog to guard it in the night, tying him up to a stake at the gate, where he would stand and bark all night long; so in a little time the enemies forsook the place, and the corn grew very strong and well, and began to ripen apace.

But as the beasts ruined me before, while my corn was in the blade, so the birds were as likely to ruin me now, when it was in the ear; for, going along by the place to see how it throve, I saw my little crop surrounded with fowls, of I know not how many sorts, who stood, as it were, watching till I should be gone. I immediately let fly among them, for I always had my gun with me. I had no sooner shot, but there rose up a little cloud of fowls, which I had not seen at all, from among the corn itself.

This touched me sensibly, for I foresaw that in a few days they would devour all my hopes; that I should be starved, and never be able to raise a crop at all; and what to do I could not tell; however, I resolved not to lose my corn, if possible, though I should watch it night and day. In the first place, I went among it to see what damage was already done, and found they had spoiled a good deal of it; but that as it was yet too green for them, the loss was not so great but that the remainder was likely to be a good crop if it could be saved.

I stayed by it to load my gun, and then coming away, I could easily see the thieves sitting upon all the trees about me, as if they only waited till I was gone away, and the event proved it to be so; for as I walked off, as if I was gone, I was no sooner out of their sight than they dropped down one by one into the corn again. I was so provoked, that I could not have patience to stay till more came on, knowing that every grain that they ate now was, as it might be said, a peck-loaf to me in the consequence; but coming up to the hedge, I fired again, and killed three of them. This was what I wished for; so I took them up, and served them as we serve notorious thieves in England—hanged them in chains, for a terror to others. It is impossible to imagine that this should have such an effect as it had, for the fowls would not only not come at the corn, but, in short, they forsook all that part of the island, and I could never see a bird near the place as long as my scarecrows hung there. This I was very glad of, you may be sure, and about the latter end of December, which was our second harvest of the year, I reaped my corn.

I was sadly put to it for a scythe or sickle to cut it down, and all I could do was to make one, as well as I could, out of one of the broadswords, or cutlasses, which I saved among the arms out of the ship. However, as my first crop was but small, I had no great difficulty to cut it down; in short, I reaped it in my way, for I cut nothing off but the ears, and carried it away in a great basket which I had made, and so rubbed it out with my hands; and at the end of all my harvesting, I found that out of my half-peck of seed I had near two bushels of rice, and about two bushels and a half of barley; that is to say, by my guess, for I had no measure at that time.

However, this was a great encouragement to me, and I foresaw that, in time, it would please God to supply me with bread. And yet here I was perplexed again, for I neither knew how to grind or make meal of my corn, or indeed how to clean it and part it; nor, if made into meal, how to make bread of it; and if how to make it, yet I knew not how to bake it. These things being added to my desire of having a good quantity for store, and to secure a constant supply, I resolved not to taste any of this crop but to preserve it all for seed against the next season; and in the meantime to employ all my study and hours of working to accomplish this great work of providing myself with corn and bread.

It might be truly said, that now I worked for my bread. I believe few people have thought much upon the strange multitude of little things necessary in the providing, producing, curing, dressing, making, and finishing this one article of bread.

I, that was reduced to a mere state of nature, found this to my daily discouragement; and was made more sensible of it every hour, even after I had got the first handful of seed-corn, which, as I have said, came up unexpectedly, and indeed to a surprise.

First, I had no plough to turn up the earth—no spade or shovel to dig it. Well, this I conquered by making me a wooden spade, as I observed before; but this did my work but in a wooden manner; and though it cost me a great many days to make it, yet, for want of iron, it not only wore out soon, but made my work the harder, and made it be performed much worse. However, this I bore with, and was content to work it out with patience, and bear with the badness of the performance. When the corn was sown, I had no harrow, but was forced to go over it myself, and drag a great heavy bough of a tree over it, to scratch it, as it may be called, rather than rake or harrow it.

When it was growing, and grown, I have observed already how many things I wanted to fence it, secure it, mow or reap it, cure and carry it home, thrash, part it from the chaff, and save it. Then I wanted a mill to grind it, sieves to dress it, yeast and salt to make it into bread, and an oven to bake it; but all these things I did without, as shall be observed; and yet the corn was an inestimable comfort and advantage to me too. All this, as I said, made everything laborious and tedious to me; but that there was no help for. Neither was my time so much loss to me, because, as I had divided it, a certain part of it was every day appointed to these works; and as I had resolved to use none of the corn for bread till I had a greater quantity by me, I had the next six months to apply myself wholly, by labour and invention, to furnish myself with utensils proper for the performing all the operations necessary for making the corn, when I had it, fit for my use.

Chapter 9 - A Boat

But first I was to prepare more land, for I had now seed enough to sow above an acre of ground. Before I did this, I had a week's work at least to make me a spade, which, when it was done, was but a sorry one indeed, and very heavy, and required double labour to work with it. However, I got through that, and sowed my seed in two large flat pieces of ground, as near my house as I could find them to my mind, and fenced them in with a good hedge, the stakes of which were all cut off that wood which I had set before, and knew it would grow; so that, in a year's time, I knew I should have a quick or living hedge, that would want but little repair. This work did not take me up less than three months, because a great part of that time was the wet season, when I could not go abroad. Within-doors, that is when it rained and I could not go out, I found employment in the following occupations—always observing, that all the while I was at work I diverted myself with talking to my parrot, and teaching him to speak; and I quickly taught him to know his own name, and at last to speak it out pretty loud, "Poll," which was the first word I ever heard spoken in the island by any mouth but my own.

This, therefore, was not my work, but an assistance to my work; for now, as I said, I had a great employment upon my hands, as follows: I had long studied to make, by some means or other, some earthen vessels, which, indeed, I wanted sorely, but knew not where to come at them. However, considering the heat of the climate, I did not doubt but if I could find out any clay, I might make some pots that might, being dried in the sun, be hard enough and strong enough to bear handling, and to hold anything that was dry, and required to be kept so; and as this was necessary in the preparing corn, meal, &c., which was the thing I was doing, I resolved to make some as large as I could, and fit only to stand like jars, to hold what should be put into them.

It would make the reader pity me, or rather laugh at me, to tell how many awkward ways I took to raise this paste; what odd, misshapen, ugly things I made; how many of them fell in and how many fell out, the clay not being stiff enough to bear its own weight; how many cracked by the over-violent heat of the sun, being set out too hastily; and how many fell in pieces with only removing, as well before as after they were dried; and, in a word, how, after having laboured hard to find the clay—to dig it, to temper it, to bring it home, and work it—I could not make above two large earthen ugly things (I cannot call them jars) in about two months' labour.

However, as the sun baked these two very dry and hard, I lifted them very gently up, and set them down again in two great wicker baskets, which I had made on purpose for them, that they might not break; and as between the pot and the basket there was a little room to spare, I stuffed it full of the rice and barley straw; and these two pots being to stand always dry I thought would hold my dry corn, and perhaps the meal, when the corn was bruised.

Though I miscarried so much in my design for large pots, yet I made several smaller things with better success; such as little round pots, flat dishes, pitchers, and pipkins, and any things my hand turned to; and the heat of the sun baked them quite hard.

But all this would not answer my end, which was to get an earthen pot to hold what was liquid, and bear the fire, which none of these could do. It happened after some time, making a pretty large fire for cooking my meat, when I went to put it out after I had done with it, I found a broken piece of one of my earthenware vessels in the fire, burnt as hard as a stone, and red as a tile. I was agreeably surprised to see it, and said to myself, that certainly they might be made to burn whole, if they would burn broken.

This set me to study how to order my fire, so as to make it burn some pots. I had no notion of a kiln, such as the potters burn in, or of glazing them with lead, though I had some lead to do it with; but I placed three large pipkins and two or three pots in a pile, one upon another, and placed my firewood all round it, with a great heap of embers under them. I plied the fire with fresh fuel round the outside and upon the top, till I saw the pots in the inside red-hot quite through, and observed that they did not crack at all. When I saw them clear red, I let them stand in that heat about five or six hours, till I found one of them, though it did not crack, did melt or run; for the sand which was mixed with the clay melted by the violence of the heat, and would have run into glass if I had gone on; so I slacked my fire gradually till the pots began to abate of the red colour; and watching them all night, that I might not let the fire abate too fast, in the morning I had three very good (I will not say handsome) pipkins, and two other earthen pots, as hard burnt as could be desired, and one of them perfectly glazed with the running of the sand.

After this experiment, I need not say that I wanted no sort of earthenware for my use; but I must needs say as to the shapes of them, they were very indifferent, as any one may suppose, when I had no way of making them but as the children make dirt pies, or as a woman would make pies that never learned to raise paste.

No joy at a thing of so mean a nature was ever equal to mine, when I found I had made an earthen pot that would bear the fire; and I had hardly patience to stay till they were cold before I set one on the fire again with some water in it to boil me some meat, which it did admirably well; and with a piece of a kid I made some very good broth, though I wanted oatmeal, and several other ingredients requisite to make it as good as I would have had it been.

My next concern was to get me a stone mortar to stamp or beat some corn in; for as to the mill, there was no thought of arriving at that perfection of art with one pair of hands. To supply this want, I was at a great loss; for, of all the trades in the world, I was as perfectly unqualified for a stone-cutter as for any whatever; neither had I any tools to go about it with. I spent many a day to find out a great stone big enough to cut hollow, and make fit for a mortar, and could find none at all, except what was in the solid rock, and which I had no way to dig or cut out; nor indeed were the rocks in the island of hardness sufficient, but were all of a sandy, crumbling stone, which neither would bear the weight of a heavy pestle, nor would break the corn without filling it with sand.

So, after a great deal of time lost in searching for a stone, I gave it over, and resolved to look out for a great block of hard wood, which I found, indeed, much easier; and getting one as big as I had strength to stir, I rounded it, and formed it on the outside with my axe and hatchet, and then with the help of fire and infinite labour, made a hollow place in it, as the Indians in Brazil make their canoes. After this, I made a great heavy pestle or beater of the wood called the iron-wood; and this I prepared and laid by against I had my next crop of corn, which I proposed to myself to grind, or rather pound into meal to make bread.

Robinson Crusoe
Chapter 9

My next difficulty was to make a sieve or searce, to dress my meal, and to part it from the bran and the husk; without which I did not see it possible I could have any bread. This was a most difficult thing even to think on, for to be sure I had nothing like the necessary thing to make it—I mean fine thin canvas or stuff to searce the meal through. And here I was at a full stop for many months; nor did I really know what to do. Linen I had none left but what was mere rags; I had goat's hair, but neither knew how to weave it or spin it; and had I known how, here were no tools to work it with. All the remedy that I found for this was, that at last I did remember I had, among the seamen's clothes which were saved out of the ship, some neckcloths of calico or muslin; and with some pieces of these I made three small sieves proper enough for the work; and thus I made shift for some years: how I did afterwards, I shall show in its place.

The baking part was the next thing to be considered, and how I should make bread when I came to have corn; for first, I had no yeast. As to that part, there was no supplying the want, so I did not concern myself much about it. But for an oven I was indeed in great pain. At length I found out an experiment for that also, which was this: I made some earthen-vessels very broad but not deep, that is to say, about two feet diameter, and not above nine inches deep. These I burned in the fire, as I had done the other, and laid them by; and when I wanted to bake, I made a great fire upon my hearth, which I had paved with some square tiles of my own baking and burning also; but I should not call them square.

When the firewood was burned pretty much into embers or live coals, I drew them forward upon this hearth, so as to cover it all over, and there I let them lie till the hearth was very hot. Then sweeping away all the embers, I set down my loaf or loaves, and whelming down the earthen pot upon them, drew the embers all round the outside of the pot, to keep in and add to the heat; and thus as well as in the best oven in the world, I baked my barley-loaves, and became in little time a good pastrycook into the bargain; for I made myself several cakes and puddings of the rice; but I made no pies, neither had I anything to put into them supposing I had, except the flesh either of fowls or goats.

It need not be wondered at if all these things took me up most part of the third year of my abode here; for it is to be observed that in the intervals of these things I had my new harvest and husbandry to manage; for I reaped my corn in its season, and carried it home as well as I could, and laid it up in the ear, in my large baskets, till I had time to rub it out, for I had no floor to thrash it on, or instrument to thrash it with.

And now, indeed, my stock of corn increasing, I really wanted to build my barns bigger; I wanted a place to lay it up in, for the increase of the corn now yielded me so much, that I had of the barley about twenty bushels, and of the rice as much or more; insomuch that now I resolved to begin to use it freely; for my bread had been quite gone a great while; also I resolved to see what quantity would be sufficient for me a whole year, and to sow but once a year.

Upon the whole, I found that the forty bushels of barley and rice were much more than I could consume in a year; so I resolved to sow just the same quantity every year that I sowed the last, in hopes that such a quantity would fully provide me with bread, &c.

All the while these things were doing, you may be sure my thoughts ran many times upon the prospect of land which I had seen from the other side of the island; and I was not without secret wishes that I were on shore there, fancying that, seeing the mainland, and an inhabited country, I might find some way or other to convey myself further, and perhaps at last find some means of escape.

But all this while I made no allowance for the dangers of such an undertaking, and how I might fall into the hands of savages, and perhaps such as I might have reason to think far worse than the lions and tigers of Africa: that if I once came in their power, I should run a hazard of more than a thousand to one of being killed, and perhaps of being eaten; for I had heard that the people of the Caribbean coast were cannibals or man-eaters, and I knew by the latitude that I could not be far from that shore. Then, supposing they were not cannibals, yet they might kill me, as many Europeans who had fallen into their hands had been served, even when they had been ten or twenty together—much more I, that was but one, and could make little or no defence; all these things, I say, which I ought to have considered well; and did come into my thoughts afterwards, yet gave me no apprehensions at first, and my head ran mightily upon the thought of getting over to the shore.

Now I wished for my boy Xury, and the long-boat with shoulder-of-mutton sail, with which I sailed above a thousand miles on the coast of Africa; but this was in vain: then I thought I would go and look at our ship's boat, which, as I have said, was blown up upon the shore a great way, in the storm, when we were first cast away. She lay almost where she did at first, but not quite; and was turned, by the force of the waves and the winds, almost bottom upward, against a high ridge of beachy, rough sand, but no water about her. If I had had hands to have refitted her, and to have launched her into the water, the boat would have done well enough, and I might have gone back into the Brazils with her easily enough; but I might have foreseen that I could no more turn her and set her upright upon her bottom than I could remove the island; however, I went to the woods, and cut levers and rollers, and brought them to the boat resolving to try what I could do; suggesting to myself that if I could but turn her down, I might repair the damage she had received, and she would be a very good boat, and I might go to sea in her very easily.

I spared no pains, indeed, in this piece of fruitless toil, and spent, I think, three or four weeks about it; at last finding it impossible to heave it up with my little strength, I fell to digging away the sand, to undermine it, and so to make it fall down, setting pieces of wood to thrust and guide it right in the fall.

But when I had done this, I was unable to stir it up again, or to get under it, much less to move it forward towards the water; so I was forced to give it over; and yet, though I gave over the hopes of the boat, my desire to venture over for the main increased, rather than decreased, as the means for it seemed impossible.

This at length put me upon thinking whether it was not possible to make myself a canoe, or periagua, such as the natives of those climates make, even without tools, or, as I might say, without hands, of the trunk of a great tree. This I not only thought possible, but easy, and pleased myself extremely with the thoughts of making it, and with my having much more convenience for it than any of the negroes or Indians; but not at all considering the particular inconveniences which I lay under more than the Indians did—viz. want of hands to move it, when it was made, into the water—a difficulty much harder for me to surmount than all the consequences of want of tools could be to them; for what was it to me, if when I had chosen a vast tree in the woods, and with much trouble cut it down, if I had been able with my tools to hew and dub the outside into the proper shape of a boat, and burn or cut out the inside to make it hollow, so as to make a boat of it—if, after all this, I must leave it just there where I found it, and not be able to launch it into the water?

One would have thought I could not have had the least reflection upon my mind of my circumstances while I was making this boat, but I should have immediately thought how I should get it into the sea; but my thoughts were so intent upon my voyage over the sea in it, that I never once considered how I should get it off the land: and it was really, in its own nature, more easy for me to guide it over forty-five miles of sea than about forty-five fathoms of land, where it lay, to set it afloat in the water.

I went to work upon this boat the most like a fool that ever man did who had any of his senses awake. I pleased myself with the design, without determining whether I was ever able to undertake it; not but that the difficulty of launching my boat came often into my head; but I put a stop to my inquiries into it by this foolish answer which I gave myself—"Let me first make it; I warrant I will find some way or other to get it along when it is done."

This was a most preposterous method; but the eagerness of my fancy prevailed, and to work I went. I felled a cedar-tree, and I question much whether Solomon ever had such a one for the building of the Temple of Jerusalem; it was five feet ten inches diameter at the lower part next the stump, and four feet eleven inches diameter at the end of twenty-two feet; after which it lessened for a while, and then parted into branches. It was not without infinite labour that I felled this tree; I was twenty days hacking and hewing at it at the bottom; I was fourteen more getting the branches and limbs and the vast spreading head cut off, which I hacked and hewed through with axe and hatchet, and inexpressible labour; after this, it cost me a month to shape it and dub it to a proportion, and to something like the bottom of a boat, that it might swim upright as it ought to do.

It cost me near three months more to clear the inside, and work it out so as to make an exact boat of it; this I did, indeed, without fire, by mere mallet and chisel, and by the dint of hard labour, till I had brought it to be a very handsome periagua, and big enough to have carried six-and-twenty men, and consequently big enough to have carried me and all my cargo.

When I had gone through this work I was extremely delighted with it. The boat was really much bigger than ever I saw a canoe or periagua, that was made of one tree, in my life. Many a weary stroke it had cost, you may be sure; and had I gotten it into the water, I make no question, but I should have begun the maddest voyage, and the most unlikely to be performed, that ever was undertaken.

But all my devices to get it into the water failed me; though they cost me infinite labour too. It lay about one hundred yards from the water, and not more; but the first inconvenience was, it was up hill towards the creek. Well, to take away this discouragement, I resolved to dig into the surface of the earth, and so make a declivity: this I began, and it cost me a prodigious deal of pains (but who grudge pains who have their deliverance in view?); but when this was worked through, and this difficulty managed, it was still much the same, for I could no more stir the canoe than I could the other boat. Then I measured the distance of ground, and resolved to cut a dock or canal, to bring the water up to the canoe, seeing I could not bring the canoe down to the water. Well, I began this work; and when I began to enter upon it, and calculate how deep it was to be dug, how broad, how the stuff was to be thrown out, I found that, by the number of hands I had, being none but my own, it must have been ten or twelve years before I could have gone through with it; for the shore lay so high, that at the upper end it must have been at least twenty feet deep; so at length, though with great reluctancy, I gave this attempt over also.

This grieved me heartily; and now I saw, though too late, the folly of beginning a work before we count the cost, and before we judge rightly of our own strength to go through with it.

In the middle of this work I finished my fourth year in this place, and kept my anniversary with the same devotion, and with as much comfort as ever before; for, by a constant study and serious application to the Word of God, and by the assistance of His grace, I gained a different knowledge from what I had before. I entertained different notions of things. I looked now upon the world as a thing remote, which I had nothing to do with, no expectations from, and, indeed, no desires about: in a word, I had nothing indeed to do with it, nor was ever likely to have, so I thought it looked, as we may perhaps look upon it hereafter—viz. as a place I had lived in, but was come out of it; and well might I say, as Father Abraham to Dives, "Between me and thee is a great gulf fixed."

In the first place, I was removed from all the wickedness of the world here; I had neither the lusts of the flesh, the lusts of the eye, nor the pride of life. I had nothing to covet, for I had all that I was now capable of enjoying; I was lord of the whole manor; or, if I pleased, I might call myself king or emperor over the whole country which I had possession of: there were no rivals; I had no competitor, none to dispute sovereignty or command with me: I might have raised ship-loadings of corn, but I had no use for it; so I let as little grow as I thought enough for my occasion. I had tortoise or turtle enough, but now and then one was as much as I could put to any use: I had timber enough to have built a fleet of ships; and I had grapes enough to have made wine, or to have cured into raisins, to have loaded that fleet when it had been built.

But all I could make use of was all that was valuable: I had enough to eat and supply my wants, and what was all the rest to me? If I killed more flesh than I could eat, the dog must eat it, or vermin; if I sowed more corn than I could eat, it must be spoiled; the trees that I cut down were lying to rot on the ground; I could make no more use of them but for fuel, and that I had no occasion for but to dress my food.

In a word, the nature and experience of things dictated to me, upon just reflection, that all the good things of this world are no farther good to us than they are for our use; and that, whatever we may heap up to give others, we enjoy just as much as we can use, and no more. The most covetous, griping miser in the world would have been cured of the vice of covetousness if he had been in my case; for I possessed infinitely more than I knew what to do with. I had no room for desire, except it was of things which I had not, and they were but trifles, though, indeed, of great use to me. I had, as I hinted before, a parcel of money, as well gold as silver, about thirty-six pounds sterling.

Alas! there the sorry, useless stuff lay; I had no more manner of business for it; and often thought with myself that I would have given a handful of it for a gross of tobacco-pipes; or for a hand-mill to grind my corn; nay, I would have given it all for a sixpenny-worth of turnip and carrot seed out of England, or for a handful of peas and beans, and a bottle of ink. As it was, I had not the least advantage by it or benefit from it; but there it lay in a drawer, and grew mouldy with the damp of the cave in the wet seasons; and if I had had the drawer full of diamonds, it had been the same case—they had been of no manner of value to me, because of no use.

I had now brought my state of life to be much easier in itself than it was at first, and much easier to my mind, as well as to my body. I frequently sat down to meat with thankfulness, and admired the hand of God's providence, which had thus spread my table in the wilderness. I learned to look more upon the bright side of my condition, and less upon the dark side, and to consider what I enjoyed rather than what I wanted; and this gave me sometimes such secret comforts, that I cannot express them; and which I take notice of here, to put those discontented people in mind of it, who cannot enjoy comfortably what God has given them, because they see and covet something that He has not given them. All our discontents about what we want appeared to me to spring from the want of thankfulness for what we have.

Another reflection was of great use to me, and doubtless would be so to any one that should fall into such distress as mine was; and this was, to compare my present condition with what I at first expected it would be; nay, with what it would certainly have been, if the good providence of God had not wonderfully ordered the ship to be cast up nearer to the shore, where I not only could come at her, but could bring what I got out of her to the shore, for my relief and comfort; without which, I had wanted for tools to work, weapons for defence, and gunpowder and shot for getting my food.

I spent whole hours, I may say whole days, in representing to myself, in the most lively colours, how I must have acted if I had got nothing out of the ship. How I could not have so much as got any food, except fish and turtles; and that, as it was long before I found any of them, I must have perished first; that I should have lived, if I had not perished, like a mere savage; that if I had killed a goat or a fowl, by any contrivance, I had no way to flay or open it, or part the flesh from the skin and the bowels, or to cut it up; but must gnaw it with my teeth, and pull it with my claws, like a beast.

These reflections made me very sensible of the goodness of Providence to me, and very thankful for my present condition, with all its hardships and misfortunes; and this part also I cannot but recommend to the reflection of those who are apt, in their misery, to say, "Is any affliction like mine?" Let them consider how much worse the cases of some people are, and their case might have been, if Providence had thought fit.

I had another reflection, which assisted me also to comfort my mind with hopes; and this was comparing my present situation with what I had deserved, and had therefore reason to expect from the hand of Providence. I had lived a dreadful life, perfectly destitute of the knowledge and fear of God. I had been well instructed by father and mother; neither had they been wanting to me in their early endeavours to infuse a religious awe of God into my mind, a sense of my duty, and what the nature and end of my being required of me. But, alas! falling early into the seafaring life, which of all lives is the most destitute of the fear of God, though His terrors are always before them; I say, falling early into the seafaring life, and into seafaring company, all that little sense of religion which I had entertained was laughed out of me by my messmates; by a hardened despising of dangers, and the views of death, which grew habitual to me by my long absence from all manner of opportunities to converse with anything but what was like myself, or to hear anything that was good or tended towards it.

So void was I of everything that was good, or the least sense of what I was, or was to be, that, in the greatest deliverances I enjoyed—such as my escape from Sallee; my being taken up by the Portuguese master of the ship; my being planted so well in the Brazils; my receiving the cargo from England, and the like—I never had once the words "Thank God!" so much as on my mind, or in my mouth; nor in the greatest distress had I so much as a thought to pray to Him, or so much as to say, "Lord, have mercy upon me!" no, nor to mention the name of God, unless it was to swear by, and blaspheme it.

I had terrible reflections upon my mind for many months, as I have already observed, on account of my wicked and hardened life past; and when I looked about me, and considered what particular providences had attended me since my coming into this place, and how God had dealt bountifully with me—had not only punished me less than my iniquity had deserved, but had so plentifully provided for me—this gave me great hopes that my repentance was accepted, and that God had yet mercy in store for me.

With these reflections I worked my mind up, not only to a resignation to the will of God in the present disposition of my circumstances, but even to a sincere thankfulness for my condition; and that I, who was yet a living man, ought not to complain, seeing I had not the due punishment of my sins; that I enjoyed so many mercies which I had no reason to have expected in that place; that I ought never more to repine at my condition, but to rejoice, and to give daily thanks for that daily bread, which nothing but a crowd of wonders could have brought; that I ought to consider I had been fed even by a miracle, even as great as that of feeding Elijah by ravens, nay, by a long series of miracles; and that I could hardly have named a place in the uninhabitable part of the world where I could have been cast more to my advantage; a place where, as I had no society, which was my affliction on one hand, so I found no ravenous beasts, no furious wolves or tigers, to threaten my life; no venomous creatures, or poisons, which I might feed on to my hurt; no savages to murder and devour me.

In a word, as my life was a life of sorrow one way, so it was a life of mercy another; and I wanted nothing to make it a life of comfort but to be able to make my sense of God's goodness to me, and care over me in this condition, be my daily consolation; and after I did make a just improvement on these things, I went away, and was no more sad. I had now been here so long that many things which I had brought on shore for my help were either quite gone, or very much wasted and near spent.

My ink, as I observed, had been gone some time, all but a very little, which I eked out with water, a little and a little, till it was so pale, it scarce left any appearance of black upon the paper. As long as it lasted I made use of it to minute down the days of the month on which any remarkable thing happened to me; and first, by casting up times past, I remembered that there was a strange concurrence of days in the various providences which befell me, and which, if I had been superstitiously inclined to observe days as fatal or fortunate, I might have had reason to have looked upon with a great deal of curiosity.

First, I had observed that the same day that I broke away from my father and friends and ran away to Hull, in order to go to sea, the same day afterwards I was taken by the Sallee man-of-war, and made a slave; the same day of the year that I escaped out of the wreck of that ship in Yarmouth Roads, that same day-year afterwards I made my escape from Sallee in a boat; the same day of the year I was born on—viz. the 30th of September, that same day I had my life so miraculously saved twenty-six years after, when I was cast on shore in this island; so that my wicked life and my solitary life began both on a day.

The next thing to my ink being wasted was that of my bread—I mean the biscuit which I brought out of the ship; this I had husbanded to the last degree, allowing myself but one cake of bread a-day for above a year; and yet I was quite without bread for near a year before I got any corn of my own, and great reason I had to be thankful that I had any at all, the getting it being, as has been already observed, next to miraculous.

My clothes, too, began to decay; as to linen, I had had none a good while, except some chequered shirts which I found in the chests of the other seamen, and which I carefully preserved; because many times I could bear no other clothes on but a shirt; and it was a very great help to me that I had, among all the men's clothes of the ship, almost three dozen of shirts. There were also, indeed, several thick watch-coats of the seamen's which were left, but they were too hot to wear; and though it is true that the weather was so violently hot that there was no need of clothes, yet I could not go quite naked—no, though I had been inclined to it, which I was not—nor could I abide the thought of it, though I was alone.

The reason why I could not go naked was, I could not bear the heat of the sun so well when quite naked as with some clothes on; nay, the very heat frequently blistered my skin: whereas, with a shirt on, the air itself made some motion, and whistling under the shirt, was twofold cooler than without it. No more could I ever bring myself to go out in the heat of the sun without a cap or a hat; the heat of the sun, beating with such violence as it does in that place, would give me the headache presently, by darting so directly on my head, without a cap or hat on, so that I could not bear it; whereas, if I put on my hat it would presently go away.

Upon these views I began to consider about putting the few rags I had, which I called clothes, into some order; I had worn out all the waistcoats I had, and my business was now to try if I could not make jackets out of the great watch-coats which I had by me, and with such other materials as I had; so I set to work, tailoring, or rather, indeed, botching, for I made most piteous work of it. However, I made shift to make two or three new waistcoats, which I hoped would serve me a great while: as for breeches or drawers, I made but a very sorry shift indeed till afterwards.

I have mentioned that I saved the skins of all the creatures that I killed, I mean four-footed ones, and I had them hung up, stretched out with sticks in the sun, by which means some of them were so dry and hard that they were fit for little, but others were very useful. The first thing I made of these was a great cap for my head, with the hair on the outside, to shoot off the rain; and this I performed so well, that after I made me a suit of clothes wholly of these skins—that is to say, a waistcoat, and breeches open at the knees, and both loose, for they were rather wanting to keep me cool than to keep me warm. I must not omit to acknowledge that they were wretchedly made; for if I was a bad carpenter, I was a worse tailor. However, they were such as I made very good shift with, and when I was out, if it happened to rain, the hair of my waistcoat and cap being outermost, I was kept very dry.

After this, I spent a great deal of time and pains to make an umbrella; I was, indeed, in great want of one, and had a great mind to make one; I had seen them made in the Brazils, where they are very useful in the great heats there, and I felt the heats every jot as great here, and greater too, being nearer the equinox; besides, as I was obliged to be much abroad, it was a most useful thing to me, as well for the rains as the heats. I took a world of pains with it, and was a great while before I could make anything likely to hold: nay, after I had thought I had hit the way, I spoiled two or three before I made one to my mind: but at last I made one that answered indifferently well: the main difficulty I found was to make it let down. I could make it spread, but if it did not let down too, and draw in, it was not portable for me any way but just over my head, which would not do. However, at last, as I said, I made one to answer, and covered it with skins, the hair upwards, so that it cast off the rain like a pent-house, and kept off the sun so effectually, that I could walk out in the hottest of the weather with greater advantage than I could before in the coolest, and when I had no need of it could close it, and carry it under my arm.

Thus I lived mighty comfortably, my mind being entirely composed by resigning myself to the will of God, and throwing myself wholly upon the disposal of His providence. This made my life better than sociable, for when I began to regret the want of conversation I would ask myself, whether thus conversing mutually with my own thoughts, and (as I hope I may say) with even God Himself, by ejaculations, was not better than the utmost enjoyment of human society in the world?

Chapter 10 - Tames Goats

I cannot say that after this, for five years, any extraordinary thing happened to me, but I lived on in the same course, in the same posture and place, as before; the chief things I was employed in, besides my yearly labour of planting my barley and rice, and curing my raisins, of both which I always kept up just enough to have sufficient stock of one year's provisions beforehand; I say, besides this yearly labour, and my daily pursuit of going out with my gun, I had one labour, to make a canoe, which at last I finished: so that, by digging a canal to it of six feet wide and four feet deep, I brought it into the creek, almost half a mile.

As for the first, which was so vastly big, for I made it without considering beforehand, as I ought to have done, how I should be able to launch it, so, never being able to bring it into the water, or bring the water to it, I was obliged to let it lie where it was as a memorandum to teach me to be wiser the next time: indeed, the next time, though I could not get a tree proper for it, and was in a place where I could not get the water to it at any less distance than, as I have said, near half a mile, yet, as I saw it was practicable at last, I never gave it over; and though I was near two years about it, yet I never grudged my labour, in hopes of having a boat to go off to sea at last.

However, though my little periagua was finished, yet the size of it was not at all answerable to the design which I had in view when I made the first; I mean of venturing over to the terra firma, where it was above forty miles broad; accordingly, the smallness of my boat assisted to put an end to that design, and now I thought no more of it. As I had a boat, my next design was to make a cruise round the island; for as I had been on the other side in one place, crossing, as I have already described it, over the land, so the discoveries I made in that little journey made me very eager to see other parts of the coast; and now I had a boat, I thought of nothing but sailing round the island.

For this purpose, that I might do everything with discretion and consideration, I fitted up a little mast in my boat, and made a sail too out of some of the pieces of the ship's sails which lay in store, and of which I had a great stock by me. Having fitted my mast and sail, and tried the boat, I found she would sail very well; then I made little lockers or boxes at each end of my boat, to put provisions, necessaries, ammunition, &c., into, to be kept dry, either from rain or the spray of the sea; and a little, long, hollow place I cut in the inside of the boat, where I could lay my gun, making a flap to hang down over it to keep it dry.

I fixed my umbrella also in the step at the stern, like a mast, to stand over my head, and keep the heat of the sun off me, like an awning; and thus I every now and then took a little voyage upon the sea, but never went far out, nor far from the little creek. At last, being eager to view the circumference of my little kingdom, I resolved upon my cruise; and accordingly I victualled my ship for the voyage, putting in two dozen of loaves (cakes I should call them) of barley-bread, an earthen pot full of parched rice (a food I ate a good deal of), a little bottle of rum, half a goat, and powder and shot for killing more, and two large watch-coats, of those which, as I mentioned before, I had saved out of the seamen's chests; these I took, one to lie upon, and the other to cover me in the night.

It was the 6th of November, in the sixth year of my reign—or my captivity, which you please—that I set out on this voyage, and I found it much longer than I expected; for though the island itself was not very large, yet when I came to the east side of it, I found a great ledge of rocks lie out about two leagues into the sea, some above water, some under it; and beyond that a shoal of sand, lying dry half a league more, so that I was obliged to go a great way out to sea to double the point.

When I first discovered them, I was going to give over my enterprise, and come back again, not knowing how far it might oblige me to go out to sea; and above all, doubting how I should get back again: so I came to an anchor; for I had made a kind of an anchor with a piece of a broken grappling which I got out of the ship.

Having secured my boat, I took my gun and went on shore, climbing up a hill, which seemed to overlook that point where I saw the full extent of it, and resolved to venture.

In my viewing the sea from that hill where I stood, I perceived a strong, and indeed a most furious current, which ran to the east, and even came close to the point; and I took the more notice of it because I saw there might be some danger that when I came into it I might be carried out to sea by the strength of it, and not be able to make the island again; and indeed, had I not got first upon this hill, I believe it would have been so; for there was the same current on the other side the island, only that it set off at a further distance, and I saw there was a strong eddy under the shore; so I had nothing to do but to get out of the first current, and I should presently be in an eddy.

I lay here, however, two days, because the wind blowing pretty fresh at ESE., and that being just contrary to the current, made a great breach of the sea upon the point: so that it was not safe for me to keep too close to the shore for the breach, nor to go too far off, because of the stream.

The third day, in the morning, the wind having abated overnight, the sea was calm, and I ventured: but I am a warning to all rash and ignorant pilots; for no sooner was I come to the point, when I was not even my boat's length from the shore, but I found myself in a great depth of water, and a current like the sluice of a mill; it carried my boat along with it with such violence that all I could do could not keep her so much as on the edge of it; but I found it hurried me farther and farther out from the eddy, which was on my left hand. There was no wind stirring to help me, and all I could do with my paddles signified nothing: and now I began to give myself over for lost; for as the current was on both sides of the island, I knew in a few leagues distance they must join again, and then I was irrecoverably gone; nor did I see any possibility of avoiding it; so that I had no prospect before me but of perishing, not by the sea, for that was calm enough, but of starving from hunger. I had, indeed, found a tortoise on the shore, as big almost as I could lift, and had tossed it into the boat; and I had a great jar of fresh water, that is to say, one of my earthen pots; but what was all this to being driven into the vast ocean, where, to be sure, there was no shore, no mainland or island, for a thousand leagues at least?

And now I saw how easy it was for the providence of God to make even the most miserable condition of mankind worse. Now I looked back upon my desolate, solitary island as the most pleasant place in the world and all the happiness my heart could wish for was to be but there again. I stretched out my hands to it, with eager wishes—"O happy desert!" said I, "I shall never see thee more. O miserable creature! whither am going?" Then I reproached myself with my unthankful temper, and that I had repined at my solitary condition; and now what would I give to be on shore there again! Thus, we never see the true state of our condition till it is illustrated to us by its contraries, nor know how to value what we enjoy, but by the want of it. It is scarcely possible to imagine the consternation I was now in, being driven from my beloved island (for so it appeared to me now to be) into the wide ocean, almost two leagues, and in the utmost despair of ever recovering it again. However, I worked hard till, indeed, my strength was almost exhausted, and kept my boat as much to the northward, that is, towards the side of the current which the eddy lay on, as possibly I could; when about noon, as the sun passed the meridian, I thought I felt a little breeze of wind in my face, springing up from SSE. This cheered my heart a little, and especially when, in about half-an-hour more, it blew a pretty gentle gale. By this time I had got at a frightful distance from the island, and had the least cloudy or hazy weather intervened, I had been undone another way, too; for I had no compass on board, and should never have known how to have steered towards the island, if I had but once lost sight of it; but the weather continuing clear, I applied myself to get up my mast again, and spread my sail, standing away to the north as much as possible, to get out of the current.

Just as I had set my mast and sail, and the boat began to stretch away, I saw even by the clearness of the water some alteration of the current was near; for where the current was so strong the water was foul; but perceiving the water clear, I found the current abate; and presently I found to the east, at about half a mile, a breach of the sea upon some rocks: these rocks I found caused the current to part again, and as the main stress of it ran away more southerly, leaving the rocks to the north-east, so the other returned by the repulse of the rocks, and made a strong eddy, which ran back again to the north-west, with a very sharp stream.

They who know what it is to have a reprieve brought to them upon the ladder, or to be rescued from thieves just going to murder them, or who have been in such extremities, may guess what my present surprise of joy was, and how gladly I put my boat into the stream of this eddy; and the wind also freshening, how gladly I spread my sail to it, running cheerfully before the wind, and with a strong tide or eddy underfoot.

This eddy carried me about a league on my way back again, directly towards the island, but about two leagues more to the northward than the current which carried me away at first; so that when I came near the island, I found myself open to the northern shore of it, that is to say, the other end of the island, opposite to that which I went out from.

When I had made something more than a league of way by the help of this current or eddy, I found it was spent, and served me no further. However, I found that being between two great currents—viz. that on the south side, which had hurried me away, and that on the north, which lay about a league on the other side; I say, between these two, in the wake of the island, I found the water at least still, and running no way; and having still a breeze of wind fair for me, I kept on steering directly for the island, though not making such fresh way as I did before.

About four o'clock in the evening, being then within a league of the island, I found the point of the rocks which occasioned this disaster stretching out, as is described before, to the southward, and casting off the current more southerly, had, of course, made another eddy to the north; and this I found very strong, but not directly setting the way my course lay, which was due west, but almost full north. However, having a fresh gale, I stretched across this eddy, slanting north-west; and in about an hour came within about a mile of the shore, where, it being smooth water, I soon got to land.

When I was on shore, God I fell on my knees and gave God thanks for my deliverance, resolving to lay aside all thoughts of my deliverance by my boat; and refreshing myself with such things as I had, I brought my boat close to the shore, in a little cove that I had spied under some trees, and laid me down to sleep, being quite spent with the labour and fatigue of the voyage.

I was now at a great loss which way to get home with my boat! I had run so much hazard, and knew too much of the case, to think of attempting it by the way I went out; and what might be at the other side (I mean the west side) I knew not, nor had I any mind to run any more ventures; so I resolved on the next morning to make my way westward along the shore, and to see if there was no creek where I might lay up my frigate in safety, so as to have her again if I wanted her. In about three miles or thereabouts, coasting the shore, I came to a very good inlet or bay, about a mile over, which narrowed till it came to a very little rivulet or brook, where I found a very convenient harbour for my boat, and where she lay as if she had been in a little dock made on purpose for her. Here I put in, and having stowed my boat very safe, I went on shore to look about me, and see where I was.

I soon found I had but a little passed by the place where I had been before, when I travelled on foot to that shore; so taking nothing out of my boat but my gun and umbrella, for it was exceedingly hot, I began my march. The way was comfortable enough after such a voyage as I had been upon, and I reached my old bower in the evening, where I found everything standing as I left it; for I always kept it in good order, being, as I said before, my country house.

I got over the fence, and laid me down in the shade to rest my limbs, for I was very weary, and fell asleep; but judge you, if you can, that read my story, what a surprise I must be in when I was awaked out of my sleep by a voice calling me by my name several times, "Robin, Robin, Robin Crusoe: poor Robin Crusoe! Where are you, Robin Crusoe? Where are you? Where have you been?"

I was so dead asleep at first, being fatigued with rowing, or part of the day, and with walking the latter part, that I did not wake thoroughly; but dozing thought I dreamed that somebody spoke to me; but as the voice continued to repeat, "Robin Crusoe, Robin Crusoe," at last I began to wake more perfectly, and was at first dreadfully frightened, and started up in the utmost consternation; but no sooner were my eyes open, but I saw my Poll sitting on the top of the hedge; and immediately knew that it was he that spoke to me; for just in such bemoaning language I had used to talk to him and teach him; and he had learned it so perfectly that he would sit upon my finger, and lay his bill close to my face and cry, "Poor Robin Crusoe! Where are you? Where have you been? How came you here?" and such things as I had taught him.

However, even though I knew it was the parrot, and that indeed it could be nobody else, it was a good while before I could compose myself. First, I was amazed how the creature got thither; and then, how he should just keep about the place, and nowhere else; but as I was well satisfied it could be nobody but honest Poll, I got over it; and holding out my hand, and calling him by his name, "Poll," the sociable creature came to me, and sat upon my thumb, as he used to do, and continued talking to me, "Poor Robin Crusoe! and how did I come here? and where had I been?" just as if he had been overjoyed to see me again; and so I carried him home along with me.

I had now had enough of rambling to sea for some time, and had enough to do for many days to sit still and reflect upon the danger I had been in. I would have been very glad to have had my boat again on my side of the island; but I knew not how it was practicable to get it about. As to the east side of the island, which I had gone round, I knew well enough there was no venturing that way; my very heart would shrink, and my very blood run chill, but to think of it; and as to the other side of the island, I did not know how it might be there; but supposing the current ran with the same force against the shore at the east as it passed by it on the other, I might run the same risk of being driven down the stream, and carried by the island, as I had been before of being carried away from it: so with these thoughts, I contented myself to be without any boat, though it had been the product of so many months' labour to make it, and of so many more to get it into the sea.

In this government of my temper I remained near a year; and lived a very sedate, retired life, as you may well suppose; and my thoughts being very much composed as to my condition, and fully comforted in resigning myself to the dispositions of Providence, I thought I lived really very happily in all things except that of society.

I improved myself in this time in all the mechanic exercises which my necessities put me upon applying myself to; and I believe I should, upon occasion, have made a very good carpenter, especially considering how few tools I had.

Besides this, I arrived at an unexpected perfection in my earthenware, and contrived well enough to make them with a wheel, which I found infinitely easier and better; because I made things round and shaped, which before were filthy things indeed to look on. But I think I was never more vain of my own performance, or more joyful for anything I found out, than for my being able to make a tobacco-pipe; and though it was a very ugly, clumsy thing when it was done, and only burned red, like other earthenware, yet as it was hard and firm, and would draw the smoke, I was exceedingly comforted with it, for I had been always used to smoke; and there were pipes in the ship, but I forgot them at first, not thinking there was tobacco in the island; and afterwards, when I searched the ship again, I could not come at any pipes.

In my wicker-ware also I improved much, and made abundance of necessary baskets, as well as my invention showed me; though not very handsome, yet they were such as were very handy and convenient for laying things up in, or fetching things home. For example, if I killed a goat abroad, I could hang it up in a tree, flay it, dress it, and cut it in pieces, and bring it home in a basket; and the like by a turtle; I could cut it up, take out the eggs and a piece or two of the flesh, which was enough for me, and bring them home in a basket, and leave the rest behind me. Also, large deep baskets were the receivers of my corn, which I always rubbed out as soon as it was dry and cured, and kept it in great baskets.

I began now to perceive my powder abated considerably; this was a want which it was impossible for me to supply, and I began seriously to consider what I must do when I should have no more powder; that is to say, how I should kill any goats. I had, as is observed in the third year of my being here, kept a young kid, and bred her up tame, and I was in hopes of getting a he-goat; but I could not by any means bring it to pass, till my kid grew an old goat; and as I could never find in my heart to kill her, she died at last of mere age.

But being now in the eleventh year of my residence, and, as I have said, my ammunition growing low, I set myself to study some art to trap and snare the goats, to see whether I could not catch some of them alive; and particularly I wanted a she-goat great with young. For this purpose I made snares to hamper them; and I do believe they were more than once taken in them; but my tackle was not good, for I had no wire, and I always found them broken and my bait devoured.

At length I resolved to try a pitfall; so I dug several large pits in the earth, in places where I had observed the goats used to feed, and over those pits I placed hurdles of my own making too, with a great weight upon them; and several times I put ears of barley and dry rice without setting the trap; and I could easily perceive that the goats had gone in and eaten up the corn, for I could see the marks of their feet. At length I set three traps in one night, and going the next morning I found them, all standing, and yet the bait eaten and gone; this was very discouraging. However, I altered my traps; and not to trouble you with particulars, going one morning to see my traps, I found in one of them a large old he-goat; and in one of the others three kids, a male and two females.

As to the old one, I knew not what to do with him; he was so fierce I durst not go into the pit to him; that is to say, to bring him away alive, which was what I wanted. I could have killed him, but that was not my business, nor would it answer my end; so I even let him out, and he ran away as if he had been frightened out of his wits. But I did not then know what I afterwards learned, that hunger will tame a lion. If I had let him stay three or four days without food, and then have carried him some water to drink and then a little corn, he would have been as tame as one of the kids; for they are mighty sagacious, tractable creatures, where they are well used.

However, for the present I let him go, knowing no better at that time: then I went to the three kids, and taking them one by one, I tied them with strings together, and with some difficulty brought them all home.

It was a good while before they would feed; but throwing them some sweet corn, it tempted them, and they began to be tame. And now I found that if I expected to supply myself with goats' flesh, when I had no powder or shot left, breeding some up tame was my only way, when, perhaps, I might have them about my house like a flock of sheep. But then it occurred to me that I must keep the tame from the wild, or else they would always run wild when they grew up; and the only way for this was to have some enclosed piece of ground, well fenced either with hedge or pale, to keep them in so effectually, that those within might not break out, or those without break in.

This was a great undertaking for one pair of hands yet, as I saw there was an absolute necessity for doing it, my first work was to find out a proper piece of ground, where there was likely to be herbage for them to eat, water for them to drink, and cover to keep them from the sun.

Those who understand such enclosures will think I had very little contrivance when I pitched upon a place very proper for all these (being a plain, open piece of meadow land, or savannah, as our people call it in the western colonies), which had two or three little drills of fresh water in it, and at one end was very woody—I say, they will smile at my forecast, when I shall tell them I began by enclosing this piece of ground in such a manner that, my hedge or pale must have been at least two miles about. Nor was the madness of it so great as to the compass, for if it was ten miles about, I was like to have time enough to do it in; but I did not consider that my goats would be as wild in so much compass as if they had had the whole island, and I should have so much room to chase them in that I should never catch them.

My hedge was begun and carried on, I believe, about fifty yards when this thought occurred to me; so I presently stopped short, and, for the beginning, I resolved to enclose a piece of about one hundred and fifty yards in length, and one hundred yards in breadth, which, as it would maintain as many as I should have in any reasonable time, so, as my stock increased, I could add more ground to my enclosure.

This was acting with some prudence, and I went to work with courage. I was about three months hedging in the first piece; and, till I had done it, I tethered the three kids in the best part of it, and used them to feed as near me as possible, to make them familiar; and very often I would go and carry them some ears of barley, or a handful of rice, and feed them out of my hand; so that after my enclosure was finished and I let them loose, they would follow me up and down, bleating after me for a handful of corn.

This answered my end, and in about a year and a half I had a flock of about twelve goats, kids and all; and in two years more I had three-and-forty, besides several that I took and killed for my food. After that, I enclosed five several pieces of ground to feed them in, with little pens to drive them to take them as I wanted, and gates out of one piece of ground into another.

But this was not all; for now I not only had goat's flesh to feed on when I pleased, but milk too—a thing which, indeed, in the beginning, I did not so much as think of, and which, when it came into my thoughts, was really an agreeable surprise, for now I set up my dairy, and had sometimes a gallon or two of milk in a day. And as Nature, who gives supplies of food to every creature, dictates even naturally how to make use of it, so I, that had never milked a cow, much less a goat, or seen butter or cheese made only when I was a boy, after a great many essays and miscarriages, made both butter and cheese at last, also salt (though I found it partly made to my hand by the heat of the sun upon some of the rocks of the sea), and never wanted it afterwards.

How mercifully can our Creator treat His creatures, even in those conditions in which they seemed to be overwhelmed in destruction! How can He sweeten the bitterest providences, and give us cause to praise Him for dungeons and prisons! What a table was here spread for me in the wilderness, where I saw nothing at first but to perish for hunger!

Chapter 11 - Finds Print Of Man's Foot On The Sand

It would have made a Stoic smile to have seen me and my little family sit down to dinner. There was my majesty the prince and lord of the whole island; I had the lives of all my subjects at my absolute command; I could hang, draw, give liberty, and take it away, and no rebels among all my subjects. Then, to see how like a king I dined, too, all alone, attended by my servants! Poll, as if he had been my favourite, was the only person permitted to talk to me. My dog, who was now grown old and crazy, and had found no species to multiply his kind upon, sat always at my right hand; and two cats, one on one side of the table and one on the other, expecting now and then a bit from my hand, as a mark of especial favour.

But these were not the two cats which I brought on shore at first, for they were both of them dead, and had been interred near my habitation by my own hand; but one of them having multiplied by I know not what kind of creature, these were two which I had preserved tame; whereas the rest ran wild in the woods, and became indeed troublesome to me at last, for they would often come into my house, and plunder me too, till at last I was obliged to shoot them, and did kill a great many; at length they left me. With this attendance and in this plentiful manner I lived; neither could I be said to want anything but society; and of that, some time after this, I was likely to have too much.

I was something impatient, as I have observed, to have the use of my boat, though very loath to run any more hazards; and therefore sometimes I sat contriving ways to get her about the island, and at other times I sat myself down contented enough without her. But I had a strange uneasiness in my mind to go down to the point of the island where, as I have said in my last ramble, I went up the hill to see how the shore lay, and how the current set, that I might see what I had to do: this inclination increased upon me every day, and at length I resolved to travel thither by land, following the edge of the shore. I did so; but had any one in England met such a man as I was, it must either have frightened him, or raised a great deal of laughter; and as I frequently stood still to look at myself, I could not but smile at the notion of my travelling through Yorkshire with such an equipage, and in such a dress. Be pleased to take a sketch of my figure, as follows.

I had a great high shapeless cap, made of a goat's skin, with a flap hanging down behind, as well to keep the sun from me as to shoot the rain off from running into my neck, nothing being so hurtful in these climates as the rain upon the flesh under the clothes.

I had a short jacket of goat's skin, the skirts coming down to about the middle of the thighs, and a pair of open-kneed breeches of the same; the breeches were made of the skin of an old he-goat, whose hair hung down such a length on either side that, like pantaloons, it reached to the middle of my legs; stockings and shoes I had none, but had made me a pair of somethings, I scarce knew what to call them, like buskins, to flap over my legs, and lace on either side like spatterdashes, but of a most barbarous shape, as indeed were all the rest of my clothes.

I had on a broad belt of goat's skin dried, which I drew together with two thongs of the same instead of buckles, and in a kind of a frog on either side of this, instead of a sword and dagger, hung a little saw and a hatchet, one on one side and one on the other. I had another belt not so broad, and fastened in the same manner, which hung over my shoulder, and at the end of it, under my left arm, hung two pouches, both made of goat's skin too, in one of which hung my powder, in the other my shot. At my back I carried my basket, and on my shoulder my gun, and over my head a great clumsy, ugly, goat's-skin umbrella, but which, after all, was the most necessary thing I had about me next to my gun.

As for my face, the colour of it was really not so mulatto-like as one might expect from a man not at all careful of it, and living within nine or ten degrees of the equinox. My beard I had once suffered to grow till it was about a quarter of a yard long; but as I had both scissors and razors sufficient, I had cut it pretty short, except what grew on my upper lip, which I had trimmed into a large pair of Mahometan whiskers, such as I had seen worn by some Turks at Sallee, for the Moors did not wear such, though the Turks did; of these moustachios, or whiskers, I will not say they were long enough to hang my hat upon them, but they were of a length and shape monstrous enough, and such as in England would have passed for frightful.

But all this is by-the-bye; for as to my figure, I had so few to observe me that it was of no manner of consequence, so I say no more of that. In this kind of dress I went my new journey, and was out five or six days. I travelled first along the sea-shore, directly to the place where I first brought my boat to an anchor to get upon the rocks; and having no boat now to take care of, I went over the land a nearer way to the same height that I was upon before, when, looking forward to the points of the rocks which lay out, and which I was obliged to double with my boat, as is said above, I was surprised to see the sea all smooth and quiet—no rippling, no motion, no current, any more there than in other places.

I was at a strange loss to understand this, and resolved to spend some time in the observing it, to see if nothing from the sets of the tide had occasioned it; but I was presently convinced how it was—viz. that the tide of ebb setting from the west, and joining with the current of waters from some great river on the shore, must be the occasion of this current, and that, according as the wind blew more forcibly from the west or from the north, this current came nearer or went farther from the shore; for, waiting thereabouts till evening, I went up to the rock again, and then the tide of ebb being made, I plainly saw the current again as before, only that it ran farther off, being near half a league from the shore, whereas in my case it set close upon the shore, and hurried me and my canoe along with it, which at another time it would not have done.

This observation convinced me that I had nothing to do but to observe the ebbing and the flowing of the tide, and I might very easily bring my boat about the island again; but when I began to think of putting it in practice, I had such terror upon my spirits at the remembrance of the danger I had been in, that I could not think of it again with any patience, but, on the contrary, I took up another resolution, which was more safe, though more laborious—and this was, that I would build, or rather make, me another periagua or canoe, and so have one for one side of the island, and one for the other.

You are to understand that now I had, as I may call it, two plantations in the island—one my little fortification or tent, with the wall about it, under the rock, with the cave behind me, which by this time I had enlarged into several apartments or caves, one within another. One of these, which was the driest and largest, and had a door out beyond my wall or fortification—that is to say, beyond where my wall joined to the rock—was all filled up with the large earthen pots of which I have given an account, and with fourteen or fifteen great baskets, which would hold five or six bushels each, where I laid up my stores of provisions, especially my corn, some in the ear, cut off short from the straw, and the other rubbed out with my hand.

As for my wall, made, as before, with long stakes or piles, those piles grew all like trees, and were by this time grown so big, and spread so very much, that there was not the least appearance, to any one's view, of any habitation behind them.

Near this dwelling of mine, but a little farther within the land, and upon lower ground, lay my two pieces of corn land, which I kept duly cultivated and sowed, and which duly yielded me their harvest in its season; and whenever I had occasion for more corn, I had more land adjoining as fit as that.

Besides this, I had my country seat, and I had now a tolerable plantation there also; for, first, I had my little bower, as I called it, which I kept in repair—that is to say, I kept the hedge which encircled it in constantly fitted up to its usual height, the ladder standing always in the inside. I kept the trees, which at first were no more than stakes, but were now grown very firm and tall, always cut, so that they might spread and grow thick and wild, and make the more agreeable shade, which they did effectually to my mind. In the middle of this I had my tent always standing, being a piece of a sail spread over poles, set up for that purpose, and which never wanted any repair or renewing; and under this I had made me a squab or couch with the skins of the creatures I had killed, and with other soft things, and a blanket laid on them, such as belonged to our sea-bedding, which I had saved; and a great watch-coat to cover me. And here, whenever I had occasion to be absent from my chief seat, I took up my country habitation.

Adjoining to this I had my enclosures for my cattle, that is to say my goats, and I had taken an inconceivable deal of pains to fence and enclose this ground. I was so anxious to see it kept entire, lest the goats should break through, that I never left off till, with infinite labour, I had stuck the outside of the hedge so full of small stakes, and so near to one another, that it was rather a pale than a hedge, and there was scarce room to put a hand through between them; which afterwards, when those stakes grew, as they all did in the next rainy season, made the enclosure strong like a wall, indeed stronger than any wall.

This will testify for me that I was not idle, and that I spared no pains to bring to pass whatever appeared necessary for my comfortable support, for I considered the keeping up a breed of tame creatures thus at my hand would be a living magazine of flesh, milk, butter, and cheese for me as long as I lived in the place, if it were to be forty years; and that keeping them in my reach depended entirely upon my perfecting my enclosures to such a degree that I might be sure of keeping them together; which by this method, indeed, I so effectually secured, that when these little stakes began to grow, I had planted them so very thick that I was forced to pull some of them up again.

In this place also I had my grapes growing, which I principally depended on for my winter store of raisins, and which I never failed to preserve very carefully, as the best and most agreeable dainty of my whole diet; and indeed they were not only agreeable, but medicinal, wholesome, nourishing, and refreshing to the last degree.

As this was also about half-way between my other habitation and the place where I had laid up my boat, I generally stayed and lay here in my way thither, for I used frequently to visit my boat; and I kept all things about or belonging to her in very good order. Sometimes I went out in her to divert myself, but no more hazardous voyages would I go, scarcely ever above a stone's cast or two from the shore, I was so apprehensive of being hurried out of my knowledge again by the currents or winds, or any other accident. But now I come to a new scene of my life.

It happened one day, about noon, going towards my boat, I was exceedingly surprised with the print of a man's naked foot on the shore, which was very plain to be seen on the sand. I stood like one thunderstruck, or as if I had seen an apparition. I listened, I looked round me, but I could hear nothing, nor see anything; I went up to a rising ground to look farther; I went up the shore and down the shore, but it was all one; I could see no other impression but that one. I went to it again to see if there were any more, and to observe if it might not be my fancy; but there was no room for that, for there was exactly the print of a foot—toes, heel, and every part of a foot. How it came thither I knew not, nor could I in the least imagine; but after innumerable fluttering thoughts, like a man perfectly confused and out of myself, I came home to my fortification, not feeling, as we say, the ground I went on, but terrified to the last degree, looking behind me at every two or three steps, mistaking every bush and tree, and fancying every stump at a distance to be a man. Nor is it possible to describe how many various shapes my affrighted imagination represented things to me in, how many wild ideas were found every moment in my fancy, and what strange, unaccountable whimsies came into my thoughts by the way.

When I came to my castle (for so I think I called it ever after this), I fled into it like one pursued. Whether I went over by the ladder, as first contrived, or went in at the hole in the rock, which I had called a door, I cannot remember; no, nor could I remember the next morning, for never frightened hare fled to cover, or fox to earth, with more terror of mind than I to this retreat.

I slept none that night; the farther I was from the occasion of my fright, the greater my apprehensions were, which is something contrary to the nature of such things, and especially to the usual practice of all creatures in fear; but I was so embarrassed with my own frightful ideas of the thing, that I formed nothing but dismal imaginations to myself, even though I was now a great way off. Sometimes I fancied it must be the devil, and reason joined in with me in this supposition, for how should any other thing in human shape come into the place? Where was the vessel that brought them? What marks were there of any other footstep? And how was it possible a man should come there?

But then, to think that Satan should take human shape upon him in such a place, where there could be no manner of occasion for it, but to leave the print of his foot behind him, and that even for no purpose too, for he could not be sure I should see it—this was an amusement the other way. I considered that the devil might have found out abundance of other ways to have terrified me than this of the single print of a foot; that as I lived quite on the other side of the island, he would never have been so simple as to leave a mark in a place where it was ten thousand to one whether I should ever see it or not, and in the sand too, which the first surge of the sea, upon a high wind, would have defaced entirely. All this seemed inconsistent with the thing itself and with all the notions we usually entertain of the subtlety of the devil.

Abundance of such things as these assisted to argue me out of all apprehensions of its being the devil; and I presently concluded then that it must be some more dangerous creature—viz. that it must be some of the savages of the mainland opposite who had wandered out to sea in their canoes, and either driven by the currents or by contrary winds, had made the island, and had been on shore, but were gone away again to sea; being as loath, perhaps, to have stayed in this desolate island as I would have been to have had them.

While these reflections were rolling in my mind, I was very thankful in my thoughts that I was so happy as not to be thereabouts at that time, or that they did not see my boat, by which they would have concluded that some inhabitants had been in the place, and perhaps have searched farther for me. Then terrible thoughts racked my imagination about their having found out my boat, and that there were people here; and that, if so, I should certainly have them come again in greater numbers and devour me; that if it should happen that they should not find me, yet they would find my enclosure, destroy all my corn, and carry away all my flock of tame goats, and I should perish at last for mere want.

Thus my fear banished all my religious hope, all that former confidence in God, which was founded upon such wonderful experience as I had had of His goodness; as if He that had fed me by miracle hitherto could not preserve, by His power, the provision which He had made for me by His goodness. I reproached myself with my laziness, that would not sow any more corn one year than would just serve me till the next season, as if no accident could intervene to prevent my enjoying the crop that was upon the ground; and this I thought so just a reproof, that I resolved for the future to have two or three years' corn beforehand; so that, whatever might come, I might not perish for want of bread.

How strange a chequer-work of Providence is the life of man! and by what secret different springs are the affections hurried about, as different circumstances present! To-day we love what to-morrow we hate; to-day we seek what to-morrow we shun; to-day we desire what to-morrow we fear, nay, even tremble at the apprehensions of. This was exemplified in me, at this time, in the most lively manner imaginable; for I, whose only affliction was that I seemed banished from human society, that I was alone, circumscribed by the boundless ocean, cut off from mankind, and condemned to what I call silent life; that I was as one whom Heaven thought not worthy to be numbered among the living, or to appear among the rest of His creatures; that to have seen one of my own species would have seemed to me a raising me from death to life, and the greatest blessing that Heaven itself, next to the supreme blessing of salvation, could bestow; I say, that I should now tremble at the very apprehensions of seeing a man, and was ready to sink into the ground at but the shadow or silent appearance of a man having set his foot in the island.

Such is the uneven state of human life; and it afforded me a great many curious speculations afterwards, when I had a little recovered my first surprise. I considered that this was the station of life the infinitely wise and good providence of God had determined for me; that as I could not foresee what the ends of Divine wisdom might be in all this, so I was not to dispute His sovereignty; who, as I was His creature, had an undoubted right, by creation, to govern and dispose of me absolutely as He thought fit; and who, as I was a creature that had offended Him, had likewise a judicial right to condemn me to what punishment He thought fit; and that it was my part to submit to bear His indignation, because I had sinned against Him. I then reflected, that as God, who was not only righteous but omnipotent, had thought fit thus to punish and afflict me, so He was able to deliver me: that if He did not think fit to do so, it was my unquestioned duty to resign myself absolutely and entirely to His will; and, on the other hand, it was my duty also to hope in Him, pray to Him, and quietly to attend to the dictates and directions of His daily providence.

These thoughts took me up many hours, days, nay, I may say weeks and months: and one particular effect of my cogitations on this occasion I cannot omit. One morning early, lying in my bed, and filled with thoughts about my danger from the appearances of savages, I found it discomposed me very much; upon which these words of the Scripture came into my thoughts, "Call upon Me in the day of trouble, and I will deliver thee, and thou shalt glorify Me." Upon this, rising cheerfully out of my bed, my heart was not only comforted, but I was guided and encouraged to pray earnestly to God for deliverance: when I had done praying I took up my Bible, and opening it to read, the first words that presented to me were, "Wait on the Lord, and be of good cheer, and He shall strengthen thy heart; wait, I say, on the Lord." It is impossible to express the comfort this gave me. In answer, I thankfully laid down the book, and was no more sad, at least on that occasion.

In the middle of these cogitations, apprehensions, and reflections, it came into my thoughts one day that all this might be a mere chimera of my own, and that this foot might be the print of my own foot, when I came on shore from my boat: this cheered me up a little, too, and I began to persuade myself it was all a delusion; that it was nothing else but my own foot; and why might I not come that way from the boat, as well as I was going that way to the boat? Again, I considered also that I could by no means tell for certain where I had trod, and where I had not; and that if, at last, this was only the print of my own foot, I had played the part of those fools who try to make stories of spectres and apparitions, and then are frightened at them more than anybody.

Now I began to take courage, and to peep abroad again, for I had not stirred out of my castle for three days and nights, so that I began to starve for provisions; for I had little or nothing within doors but some barley-cakes and water; then I knew that my goats wanted to be milked too, which usually was my evening diversion: and the poor creatures were in great pain and inconvenience for want of it; and, indeed, it almost spoiled some of them, and almost dried up their milk. Encouraging myself, therefore, with the belief that this was nothing but the print of one of my own feet, and that I might be truly said to start at my own shadow, I began to go abroad again, and went to my country house to milk my flock: but to see with what fear I went forward, how often I looked behind me, how I was ready every now and then to lay down my basket and run for my life, it would have made any one have thought I was haunted with an evil conscience, or that I had been lately most terribly frightened; and so, indeed, I had.

However, I went down thus two or three days, and having seen nothing, I began to be a little bolder, and to think there was really nothing in it but my own imagination; but I could not persuade myself fully of this till I should go down to the shore again, and see this print of a foot, and measure it by my own, and see if there was any similitude or fitness, that I might be assured it was my own foot: but when I came to the place, first, it appeared evidently to me, that when I laid up my boat I could not possibly be on shore anywhere thereabouts; secondly, when I came to measure the mark with my own foot, I found my foot not so large by a great deal. Both these things filled my head with new imaginations, and gave me the vapours again to the highest degree, so that I shook with cold like one in an ague; and I went home again, filled with the belief that some man or men had been on shore there; or, in short, that the island was inhabited, and I might be surprised before I was aware; and what course to take for my security I knew not.

Oh, what ridiculous resolutions men take when possessed with fear! It deprives them of the use of those means which reason offers for their relief. The first thing I proposed to myself was, to throw down my enclosures, and turn all my tame cattle wild into the woods, lest the enemy should find them, and then frequent the island in prospect of the same or the like booty: then the simple thing of digging up my two corn-fields, lest they should find such a grain there, and still be prompted to frequent the island: then to demolish my bower and tent, that they might not see any vestiges of habitation, and be prompted to look farther, in order to find out the persons inhabiting.

These were the subject of the first night's cogitations after I was come home again, while the apprehensions which had so overrun my mind were fresh upon me, and my head was full of vapours. Thus, fear of danger is ten thousand times more terrifying than danger itself, when apparent to the eyes; and we find the burden of anxiety greater, by much, than the evil which we are anxious about: and what was worse than all this, I had not that relief in this trouble that from the resignation I used to practise I hoped to have. I looked, I thought, like Saul, who complained not only that the Philistines were upon him, but that God had forsaken him; for I did not now take due ways to compose my mind, by crying to God in my distress, and resting upon His providence, as I had done before, for my defence and deliverance; which, if I had done, I had at least been more cheerfully supported under this new surprise, and perhaps carried through it with more resolution.

This confusion of my thoughts kept me awake all night; but in the morning I fell asleep; and having, by the amusement of my mind, been as it were tired, and my spirits exhausted, I slept very soundly, and waked much better composed than I had ever been before. And now I began to think sedately; and, upon debate with myself, I concluded that this island (which was so exceedingly pleasant, fruitful, and no farther from the mainland than as I had seen) was not so entirely abandoned as I might imagine; that although there were no stated inhabitants who lived on the spot, yet that there might sometimes come boats off from the shore, who, either with design, or perhaps never but when they were driven by cross winds, might come to this place; that I had lived there fifteen years now and had not met with the least shadow or figure of any people yet; and that, if at any time they should be driven here, it was probable they went away again as soon as ever they could, seeing they had never thought fit to fix here upon any occasion; that the most I could suggest any danger from was from any casual accidental landing of straggling people from the main, who, as it was likely, if they were driven hither, were here against their wills, so they made no stay here, but went off again with all possible speed; seldom staying one night on shore, lest they should not have the help of the tides and daylight back again; and that, therefore, I had nothing to do but to consider of some safe retreat, in case I should see any savages land upon the spot.

Now, I began sorely to repent that I had dug my cave so large as to bring a door through again, which door, as I said, came out beyond where my fortification joined to the rock: upon maturely considering this, therefore, I resolved to draw me a second fortification, in the manner of a semicircle, at a distance from my wall, just where I had planted a double row of trees about twelve years before, of which I made mention: these trees having been planted so thick before, they wanted but few piles to be driven between them, that they might be thicker and stronger, and my wall would be soon finished. So that I had now a double wall; and my outer wall was thickened with pieces of timber, old cables, and everything I could think of, to make it strong; having in it seven little holes, about as big as I might put my arm out at.

In the inside of this I thickened my wall to about ten feet thick with continually bringing earth out of my cave, and laying it at the foot of the wall, and walking upon it; and through the seven holes I contrived to plant the muskets, of which I took notice that I had got seven on shore out of the ship; these I planted like my cannon, and fitted them into frames, that held them like a carriage, so that I could fire all the seven guns in two minutes' time; this wall I was many a weary month in finishing, and yet never thought myself safe till it was done.

When this was done I stuck all the ground without my wall, for a great length every way, as full with stakes or sticks of the osier-like wood, which I found so apt to grow, as they could well stand; insomuch that I believe I might set in near twenty thousand of them, leaving a pretty large space between them and my wall, that I might have room to see an enemy, and they might have no shelter from the young trees, if they attempted to approach my outer wall.

Thus in two years' time I had a thick grove; and in five or six years' time I had a wood before my dwelling, growing so monstrously thick and strong that it was indeed perfectly impassable: and no men, of what kind soever, could ever imagine that there was anything beyond it, much less a habitation. As for the way which I proposed to myself to go in and out (for I left no avenue), it was by setting two ladders, one to a part of the rock which was low, and then broke in, and left room to place another ladder upon that; so when the two ladders were taken down no man living could come down to me without doing himself mischief; and if they had come down, they were still on the outside of my outer wall.

Thus I took all the measures human prudence could suggest for my own preservation; and it will be seen at length that they were not altogether without just reason; though I foresaw nothing at that time more than my mere fear suggested to me.

Chapter 12 - A Cave Retreat

While this was doing, I was not altogether careless of my other affairs; for I had a great concern upon me for my little herd of goats: they were not only a ready supply to me on every occasion, and began to be sufficient for me, without the expense of powder and shot, but also without the fatigue of hunting after the wild ones; and I was loath to lose the advantage of them, and to have them all to nurse up over again.

For this purpose, after long consideration, I could think of but two ways to preserve them: one was, to find another convenient place to dig a cave underground, and to drive them into it every night; and the other was to enclose two or three little bits of land, remote from one another, and as much concealed as I could, where I might keep about half-a-dozen young goats in each place; so that if any disaster happened to the flock in general, I might be able to raise them again with little trouble and time: and this though it would require a good deal of time and labour, I thought was the most rational design.

Accordingly, I spent some time to find out the most retired parts of the island; and I pitched upon one, which was as private, indeed, as my heart could wish: it was a little damp piece of ground in the middle of the hollow and thick woods, where, as is observed, I almost lost myself once before, endeavouring to come back that way from the eastern part of the island. Here I found a clear piece of land, near three acres, so surrounded with woods that it was almost an enclosure by nature; at least, it did not want near so much labour to make it so as the other piece of ground I had worked so hard at.

I immediately went to work with this piece of ground; and in less than a month's time I had so fenced it round that my flock, or herd, call it which you please, which were not so wild now as at first they might be supposed to be, were well enough secured in it: so, without any further delay, I removed ten young she-goats and two he-goats to this piece, and when they were there I continued to perfect the fence till I had made it as secure as the other; which, however, I did at more leisure, and it took me up more time by a great deal.

All this labour I was at the expense of, purely from my apprehensions on account of the print of a man's foot; for as yet I had never seen any human creature come near the island; and I had now lived two years under this uneasiness, which, indeed, made my life much less comfortable than it was before, as may be well imagined by any who know what it is to live in the constant snare of the fear of man. And this I must observe, with grief, too, that the discomposure of my mind had great impression also upon the religious part of my thoughts; for the dread and terror of falling into the hands of savages and cannibals lay so upon my spirits, that I seldom found myself in a due temper for application to my Maker; at least, not with the sedate calmness and resignation of soul which I was wont to do: I rather prayed to God as under great affliction and pressure of mind, surrounded with danger, and in expectation every night of being murdered and devoured before morning; and I must testify, from my experience, that a temper of peace, thankfulness, love, and affection, is much the more proper frame for prayer than that of terror and discomposure: and that under the dread of mischief impending, a man is no more fit for a comforting performance of the duty of praying to God than he is for a repentance on a sick-bed; for these discomposures affect the mind, as the others do the body; and the discomposure of the mind must necessarily be as great a disability as that of the body, and much greater; praying to God being properly an act of the mind, not of the body.

But to go on. After I had thus secured one part of my little living stock, I went about the whole island, searching for another private place to make such another deposit; when, wandering more to the west point of the island than I had ever done yet, and looking out to sea, I thought I saw a boat upon the sea, at a great distance. I had found a perspective glass or two in one of the seamen's chests, which I saved out of our ship, but I had it not about me; and this was so remote that I could not tell what to make of it, though I looked at it till my eyes were not able to hold to look any longer; whether it was a boat or not I do not know, but as I descended from the hill I could see no more of it, so I gave it over; only I resolved to go no more out without a perspective glass in my pocket.

When I was come down the hill to the end of the island, where, indeed, I had never been before, I was presently convinced that the seeing the print of a man's foot was not such a strange thing in the island as I imagined: and but that it was a special providence that I was cast upon the side of the island where the savages never came, I should easily have known that nothing was more frequent than for the canoes from the main, when they happened to be a little too far out at sea, to shoot over to that side of the island for harbour: likewise, as they often met and fought in their canoes, the victors, having taken any prisoners, would bring them over to this shore, where, according to their dreadful customs, being all cannibals, they would kill and eat them; of which hereafter.

When I was come down the hill to the shore, as I said above, being the SW. point of the island, I was perfectly confounded and amazed; nor is it possible for me to express the horror of my mind at seeing the shore spread with skulls, hands, feet, and other bones of human bodies; and particularly I observed a place where there had been a fire made, and a circle dug in the earth, like a cockpit, where I supposed the savage wretches had sat down to their human feastings upon the bodies of their fellow-creatures.

I was so astonished with the sight of these things, that I entertained no notions of any danger to myself from it for a long while: all my apprehensions were buried in the thoughts of such a pitch of inhuman, hellish brutality, and the horror of the degeneracy of human nature, which, though I had heard of it often, yet I never had so near a view of before; in short, I turned away my face from the horrid spectacle; my stomach grew sick, and I was just at the point of fainting, when nature discharged the disorder from my stomach; and having vomited with uncommon violence, I was a little relieved, but could not bear to stay in the place a moment; so I got up the hill again with all the speed I could, and walked on towards my own habitation.

When I came a little out of that part of the island I stood still awhile, as amazed, and then, recovering myself, I looked up with the utmost affection of my soul, and, with a flood of tears in my eyes, gave God thanks, that had cast my first lot in a part of the world where I was distinguished from such dreadful creatures as these; and that, though I had esteemed my present condition very miserable, had yet given me so many comforts in it that I had still more to give thanks for than to complain of: and this, above all, that I had, even in this miserable condition, been comforted with the knowledge of Himself, and the hope of His blessing: which was a felicity more than sufficiently equivalent to all the misery which I had suffered, or could suffer.

In this frame of thankfulness I went home to my castle, and began to be much easier now, as to the safety of my circumstances, than ever I was before: for I observed that these wretches never came to this island in search of what they could get; perhaps not seeking, not wanting, or not expecting anything here; and having often, no doubt, been up the covered, woody part of it without finding anything to their purpose. I knew I had been here now almost eighteen years, and never saw the least footsteps of human creature there before; and I might be eighteen years more as entirely concealed as I was now, if I did not discover myself to them, which I had no manner of occasion to do; it being my only business to keep myself entirely concealed where I was, unless I found a better sort of creatures than cannibals to make myself known to.

Yet I entertained such an abhorrence of the savage wretches that I have been speaking of, and of the wretched, inhuman custom of their devouring and eating one another up, that I continued pensive and sad, and kept close within my own circle for almost two years after this: when I say my own circle, I mean by it my three plantations—viz. my castle, my country seat (which I called my bower), and my enclosure in the woods: nor did I look after this for any other use than an enclosure for my goats; for the aversion which nature gave me to these hellish wretches was such, that I was as fearful of seeing them as of seeing the devil himself. I did not so much as go to look after my boat all this time, but began rather to think of making another; for I could not think of ever making any more attempts to bring the other boat round the island to me, lest I should meet with some of these creatures at sea; in which case, if I had happened to have fallen into their hands, I knew what would have been my lot.

Time, however, and the satisfaction I had that I was in no danger of being discovered by these people, began to wear off my uneasiness about them; and I began to live just in the same composed manner as before, only with this difference, that I used more caution, and kept my eyes more about me than I did before, lest I should happen to be seen by any of them; and particularly, I was more cautious of firing my gun, lest any of them, being on the island, should happen to hear it.

It was, therefore, a very good providence to me that I had furnished myself with a tame breed of goats, and that I had no need to hunt any more about the woods, or shoot at them; and if I did catch any of them after this, it was by traps and snares, as I had done before; so that for two years after this I believe I never fired my gun once off, though I never went out without it; and what was more, as I had saved three pistols out of the ship, I always carried them out with me, or at least two of them, sticking them in my goat-skin belt. I also furbished up one of the great cutlasses that I had out of the ship, and made me a belt to hang it on also; so that I was now a most formidable fellow to look at when I went abroad, if you add to the former description of myself the particular of two pistols, and a broadsword hanging at my side in a belt, but without a scabbard.

Things going on thus, as I have said, for some time, I seemed, excepting these cautions, to be reduced to my former calm, sedate way of living. All these things tended to show me more and more how far my condition was from being miserable, compared to some others; nay, to many other particulars of life which it might have pleased God to have made my lot. It put me upon reflecting how little repining there would be among mankind at any condition of life if people would rather compare their condition with those that were worse, in order to be thankful, than be always comparing them with those which are better, to assist their murmurings and complainings.

As in my present condition there were not really many things which I wanted, so indeed I thought that the frights I had been in about these savage wretches, and the concern I had been in for my own preservation, had taken off the edge of my invention, for my own conveniences; and I had dropped a good design, which I had once bent my thoughts upon, and that was to try if I could not make some of my barley into malt, and then try to brew myself some beer. This was really a whimsical thought, and I reproved myself often for the simplicity of it: for I presently saw there would be the want of several things necessary to the making my beer that it would be impossible for me to supply; as, first, casks to preserve it in, which was a thing that, as I have observed already, I could never compass: no, though I spent not only many days, but weeks, nay months, in attempting it, but to no purpose.

In the next place, I had no hops to make it keep, no yeast to make it work, no copper or kettle to make it boil; and yet with all these things wanting, I verily believe, had not the frights and terrors I was in about the savages intervened, I had undertaken it, and perhaps brought it to pass too; for I seldom gave anything over without accomplishing it, when once I had it in my head to began it. But my invention now ran quite another way; for night and day I could think of nothing but how I might destroy some of the monsters in their cruel, bloody entertainment, and if possible save the victim they should bring hither to destroy.

It would take up a larger volume than this whole work is intended to be to set down all the contrivances I hatched, or rather brooded upon, in my thoughts, for the destroying these creatures, or at least frightening them so as to prevent their coming hither any more: but all this was abortive; nothing could be possible to take effect, unless I was to be there to do it myself: and what could one man do among them, when perhaps there might be twenty or thirty of them together with their darts, or their bows and arrows, with which they could shoot as true to a mark as I could with my gun?

Sometimes I thought if digging a hole under the place where they made their fire, and putting in five or six pounds of gunpowder, which, when they kindled their fire, would consequently take fire, and blow up all that was near it: but as, in the first place, I should be unwilling to waste so much powder upon them, my store being now within the quantity of one barrel, so neither could I be sure of its going off at any certain time, when it might surprise them; and, at best, that it would do little more than just blow the fire about their ears and fright them, but not sufficient to make them forsake the place: so I laid it aside; and then proposed that I would place myself in ambush in some convenient place, with my three guns all double-loaded, and in the middle of their bloody ceremony let fly at them, when I should be sure to kill or wound perhaps two or three at every shot; and then falling in upon them with my three pistols and my sword, I made no doubt but that, if there were twenty, I should kill them all.

This fancy pleased my thoughts for some weeks, and I was so full of it that I often dreamed of it, and, sometimes, that I was just going to let fly at them in my sleep. I went so far with it in my imagination that I employed myself several days to find out proper places to put myself in ambuscade, as I said, to watch for them, and I went frequently to the place itself, which was now grown more familiar to me; but while my mind was thus filled with thoughts of revenge and a bloody putting twenty or thirty of them to the sword, as I may call it, the horror I had at the place, and at the signals of the barbarous wretches devouring one another, abetted my malice.

Well, at length I found a place in the side of the hill where I was satisfied I might securely wait till I saw any of their boats coming; and might then, even before they would be ready to come on shore, convey myself unseen into some thickets of trees, in one of which there was a hollow large enough to conceal me entirely; and there I might sit and observe all their bloody doings, and take my full aim at their heads, when they were so close together as that it would be next to impossible that I should miss my shot, or that I could fail wounding three or four of them at the first shot. In this place, then, I resolved to fulfil my design; and accordingly I prepared two muskets and my ordinary fowling-piece. The two muskets I loaded with a brace of slugs each, and four or five smaller bullets, about the size of pistol bullets; and the fowling-piece I loaded with near a handful of swan-shot of the largest size; I also loaded my pistols with about four bullets each; and, in this posture, well provided with ammunition for a second and third charge, I prepared myself for my expedition.

After I had thus laid the scheme of my design, and in my imagination put it in practice, I continually made my tour every morning to the top of the hill, which was from my castle, as I called it, about three miles or more, to see if I could observe any boats upon the sea, coming near the island, or standing over towards it; but I began to tire of this hard duty, after I had for two or three months constantly kept my watch, but came always back without any discovery; there having not, in all that time, been the least appearance, not only on or near the shore, but on the whole ocean, so far as my eye or glass could reach every way.

As long as I kept my daily tour to the hill, to look out, so long also I kept up the vigour of my design, and my spirits seemed to be all the while in a suitable frame for so outrageous an execution as the killing twenty or thirty naked savages, for an offence which I had not at all entered into any discussion of in my thoughts, any farther than my passions were at first fired by the horror I conceived at the unnatural custom of the people of that country, who, it seems, had been suffered by Providence, in His wise disposition of the world, to have no other guide than that of their own abominable and vitiated passions; and consequently were left, and perhaps had been so for some ages, to act such horrid things, and receive such dreadful customs, as nothing but nature, entirely abandoned by Heaven, and actuated by some hellish degeneracy, could have run them into.

But now, when, as I have said, I began to be weary of the fruitless excursion which I had made so long and so far every morning in vain, so my opinion of the action itself began to alter; and I began, with cooler and calmer thoughts, to consider what I was going to engage in; what authority or call I had to pretend to be judge and executioner upon these men as criminals, whom Heaven had thought fit for so many ages to suffer unpunished to go on, and to be as it were the executioners of His judgments one upon another; how far these people were offenders against me, and what right I had to engage in the quarrel of that blood which they shed promiscuously upon one another.

I debated this very often with myself thus: "How do I know what God Himself judges in this particular case? It is certain these people do not commit this as a crime; it is not against their own consciences reproving, or their light reproaching them; they do not know it to be an offence, and then commit it in defiance of divine justice, as we do in almost all the sins we commit. They think it no more a crime to kill a captive taken in war than we do to kill an ox; or to eat human flesh than we do to eat mutton."

When I considered this a little, it followed necessarily that I was certainly in the wrong; that these people were not murderers, in the sense that I had before condemned them in my thoughts, any more than those Christians were murderers who often put to death the prisoners taken in battle; or more frequently, upon many occasions, put whole troops of men to the sword, without giving quarter, though they threw down their arms and submitted. In the next place, it occurred to me that although the usage they gave one another was thus brutish and inhuman, yet it was really nothing to me: these people had done me no injury: that if they attempted, or I saw it necessary, for my immediate preservation, to fall upon them, something might be said for it: but that I was yet out of their power, and they really had no knowledge of me, and consequently no design upon me; and therefore it could not be just for me to fall upon them; that this would justify the conduct of the Spaniards in all their barbarities practised in America, where they destroyed millions of these people; who, however they were idolators and barbarians, and had several bloody and barbarous rites in their customs, such as sacrificing human bodies to their idols, were yet, as to the Spaniards, very innocent people; and that the rooting them out of the country is spoken of with the utmost abhorrence and detestation by even the Spaniards themselves at this time, and by all other Christian nations of Europe, as a mere butchery, a bloody and unnatural piece of cruelty, unjustifiable either to God or man; and for which the very name of a Spaniard is reckoned to be frightful and terrible, to all people of humanity or of Christian compassion; as if the kingdom of Spain were particularly eminent for the produce of a race of men who were without principles of tenderness, or the common bowels of pity to the miserable, which is reckoned to be a mark of generous temper in the mind.

These considerations really put me to a pause, and to a kind of a full stop; and I began by little and little to be off my design, and to conclude I had taken wrong measures in my resolution to attack the savages; and that it was not my business to meddle with them, unless they first attacked me; and this it was my business, if possible, to prevent: but that, if I were discovered and attacked by them, I knew my duty. On the other hand, I argued with myself that this really was the way not to deliver myself, but entirely to ruin and destroy myself; for unless I was sure to kill every one that not only should be on shore at that time, but that should ever come on shore afterwards, if but one of them escaped to tell their country-people what had happened, they would come over again by thousands to revenge the death of their fellows, and I should only bring upon myself a certain destruction, which, at present, I had no manner of occasion for.

Upon the whole, I concluded that I ought, neither in principle nor in policy, one way or other, to concern myself in this affair: that my business was, by all possible means to conceal myself from them, and not to leave the least sign for them to guess by that there were any living creatures upon the island—I mean of human shape. Religion joined in with this prudential resolution; and I was convinced now, many ways, that I was perfectly out of my duty when I was laying all my bloody schemes for the destruction of innocent creatures—I mean innocent as to me.

As to the crimes they were guilty of towards one another, I had nothing to do with them; they were national, and I ought to leave them to the justice of God, who is the Governor of nations, and knows how, by national punishments, to make a just retribution for national offences, and to bring public judgments upon those who offend in a public manner, by such ways as best please Him. This appeared so clear to me now, that nothing was a greater satisfaction to me than that I had not been suffered to do a thing which I now saw so much reason to believe would have been no less a sin than that of wilful murder if I had committed it; and I gave most humble thanks on my knees to God, that He had thus delivered me from blood-guiltiness; beseeching Him to grant me the protection of His providence, that I might not fall into the hands of the barbarians, or that I might not lay my hands upon them, unless I had a more clear call from Heaven to do it, in defence of my own life.

In this disposition I continued for near a year after this; and so far was I from desiring an occasion for falling upon these wretches, that in all that time I never once went up the hill to see whether there were any of them in sight, or to know whether any of them had been on shore there or not, that I might not be tempted to renew any of my contrivances against them, or be provoked by any advantage that might present itself to fall upon them; only this I did: I went and removed my boat, which I had on the other side of the island, and carried it down to the east end of the whole island, where I ran it into a little cove, which I found under some high rocks, and where I knew, by reason of the currents, the savages durst not, at least would not, come with their boats upon any account whatever. With my boat I carried away everything that I had left there belonging to her, though not necessary for the bare going thither—viz. a mast and sail which I had made for her, and a thing like an anchor, but which, indeed, could not be called either anchor or grapnel; however, it was the best I could make of its kind: all these I removed, that there might not be the least shadow for discovery, or appearance of any boat, or of any human habitation upon the island. Besides this, I kept myself, as I said, more retired than ever, and seldom went from my cell except upon my constant employment, to milk my she-goats, and manage my little flock in the wood, which, as it was quite on the other part of the island, was out of danger; for certain, it is that these savage people, who sometimes haunted this island, never came with any thoughts of finding anything here, and consequently never wandered off from the coast, and I doubt not but they might have been several times on shore after my apprehensions of them had made me cautious, as well as before.

Indeed, I looked back with some horror upon the thoughts of what my condition would have been if I had chopped upon them and been discovered before that; when, naked and unarmed, except with one gun, and that loaded often only with small shot, I walked everywhere, peeping and peering about the island, to see what I could get; what a surprise should I have been in if, when I discovered the print of a man's foot, I had, instead of that, seen fifteen or twenty savages, and found them pursuing me, and by the swiftness of their running no possibility of my escaping them!

The thoughts of this sometimes sank my very soul within me, and distressed my mind so much that I could not soon recover it, to think what I should have done, and how I should not only have been unable to resist them, but even should not have had presence of mind enough to do what I might have done; much less what now, after so much consideration and preparation, I might be able to do. Indeed, after serious thinking of these things, I would be melancholy, and sometimes it would last a great while; but I resolved it all at last into thankfulness to that Providence which had delivered me from so many unseen dangers, and had kept me from those mischiefs which I could have no way been the agent in delivering myself from, because I had not the least notion of any such thing depending, or the least supposition of its being possible.

This renewed a contemplation which often had come into my thoughts in former times, when first I began to see the merciful dispositions of Heaven, in the dangers we run through in this life; how wonderfully we are delivered when we know nothing of it; how, when we are in a quandary as we call it, a doubt or hesitation whether to go this way or that way, a secret hint shall direct us this way, when we intended to go that way: nay, when sense, our own inclination, and perhaps business has called us to go the other way, yet a strange impression upon the mind, from we know not what springs, and by we know not what power, shall overrule us to go this way; and it shall afterwards appear that had we gone that way, which we should have gone, and even to our imagination ought to have gone, we should have been ruined and lost. Upon these and many like reflections I afterwards made it a certain rule with me, that whenever I found those secret hints or pressings of mind to doing or not doing anything that presented, or going this way or that way, I never failed to obey the secret dictate; though I knew no other reason for it than such a pressure or such a hint hung upon my mind. I could give many examples of the success of this conduct in the course of my life, but more especially in the latter part of my inhabiting this unhappy island; besides many occasions which it is very likely I might have taken notice of, if I had seen with the same eyes then that I see with now.

But it is never too late to be wise; and I cannot but advise all considering men, whose lives are attended with such extraordinary incidents as mine, or even though not so extraordinary, not to slight such secret intimations of Providence, let them come from what invisible intelligence they will. That I shall not discuss, and perhaps cannot account for; but certainly they are a proof of the converse of spirits, and a secret communication between those embodied and those unembodied, and such a proof as can never be withstood; of which I shall have occasion to give some remarkable instances in the remainder of my solitary residence in this dismal place.

I believe the reader of this will not think it strange if I confess that these anxieties, these constant dangers I lived in, and the concern that was now upon me, put an end to all invention, and to all the contrivances that I had laid for my future accommodations and conveniences. I had the care of my safety more now upon my hands than that of my food. I cared not to drive a nail, or chop a stick of wood now, for fear the noise I might make should be heard: much less would I fire a gun for the same reason: and above all I was intolerably uneasy at making any fire, lest the smoke, which is visible at a great distance in the day, should betray me. For this reason, I removed that part of my business which required fire, such as burning of pots and pipes, &c., into my new apartment in the woods; where, after I had been some time, I found, to my unspeakable consolation, a mere natural cave in the earth, which went in a vast way, and where, I daresay, no savage, had he been at the mouth of it, would be so hardy as to venture in; nor, indeed, would any man else, but one who, like me, wanted nothing so much as a safe retreat.

The mouth of this hollow was at the bottom of a great rock, where, by mere accident (I would say, if I did not see abundant reason to ascribe all such things now to Providence), I was cutting down some thick branches of trees to make charcoal; and before I go on I must observe the reason of my making this charcoal, which was this—I was afraid of making a smoke about my habitation, as I said before; and yet I could not live there without baking my bread, cooking my meat, &c.; so I contrived to burn some wood here, as I had seen done in England, under turf, till it became chark or dry coal: and then putting the fire out, I preserved the coal to carry home, and perform the other services for which fire was wanting, without danger of smoke. But this is by-the-bye.

While I was cutting down some wood here, I perceived that, behind a very thick branch of low brushwood or underwood, there was a kind of hollow place: I was curious to look in it; and getting with difficulty into the mouth of it, I found it was pretty large, that is to say, sufficient for me to stand upright in it, and perhaps another with me: but I must confess to you that I made more haste out than I did in, when looking farther into the place, and which was perfectly dark, I saw two broad shining eyes of some creature, whether devil or man I knew not, which twinkled like two stars; the dim light from the cave's mouth shining directly in, and making the reflection. However, after some pause I recovered myself, and began to call myself a thousand fools, and to think that he that was afraid to see the devil was not fit to live twenty years in an island all alone; and that I might well think there was nothing in this cave that was more frightful than myself.

Upon this, plucking up my courage, I took up a firebrand, and in I rushed again, with the stick flaming in my hand: I had not gone three steps in before I was almost as frightened as before; for I heard a very loud sigh, like that of a man in some pain, and it was followed by a broken noise, as of words half expressed, and then a deep sigh again. I stepped back, and was indeed struck with such a surprise that it put me into a cold sweat, and if I had had a hat on my head, I will not answer for it that my hair might not have lifted it off. But still plucking up my spirits as well as I could, and encouraging myself a little with considering that the power and presence of God was everywhere, and was able to protect me, I stepped forward again, and by the light of the firebrand, holding it up a little over my head, I saw lying on the ground a monstrous, frightful old he-goat, just making his will, as we say, and gasping for life, and, dying, indeed, of mere old age. I stirred him a little to see if I could get him out, and he essayed to get up, but was not able to raise himself; and I thought with myself he might even lie there—for if he had frightened me, so he would certainly fright any of the savages, if any of them should be so hardy as to come in there while he had any life in him.

I was now recovered from my surprise, and began to look round me, when I found the cave was but very small—that is to say, it might be about twelve feet over, but in no manner of shape, neither round nor square, no hands having ever been employed in making it but those of mere Nature. I observed also that there was a place at the farther side of it that went in further, but was so low that it required me to creep upon my hands and knees to go into it, and whither it went I knew not; so, having no candle, I gave it over for that time, but resolved to go again the next day provided with candles and a tinder-box, which I had made of the lock of one of the muskets, with some wildfire in the pan.

Accordingly, the next day I came provided with six large candles of my own making (for I made very good candles now of goat's tallow, but was hard set for candle-wick, using sometimes rags or rope-yarn, and sometimes the dried rind of a weed like nettles); and going into this low place I was obliged to creep upon all-fours as I have said, almost ten yards—which, by the way, I thought was a venture bold enough, considering that I knew not how far it might go, nor what was beyond it. When I had got through the strait, I found the roof rose higher up, I believe near twenty feet; but never was such a glorious sight seen in the island, I daresay, as it was to look round the sides and roof of this vault or cave—the wall reflected a hundred thousand lights to me from my two candles. What it was in the rock—whether diamonds or any other precious stones, or gold which I rather supposed it to be—I knew not.

The place I was in was a most delightful cavity, or grotto, though perfectly dark; the floor was dry and level, and had a sort of a small loose gravel upon it, so that there was no nauseous or venomous creature to be seen, neither was there any damp or wet on the sides or roof. The only difficulty in it was the entrance—which, however, as it was a place of security, and such a retreat as I wanted; I thought was a convenience; so that I was really rejoiced at the discovery, and resolved, without any delay, to bring some of those things which I was most anxious about to this place: particularly, I resolved to bring hither my magazine of powder, and all my spare arms—viz. two fowling-pieces—for I had three in all—and three muskets—for of them I had eight in all; so I kept in my castle only five, which stood ready mounted like pieces of cannon on my outmost fence, and were ready also to take out upon any expedition.

Upon this occasion of removing my ammunition I happened to open the barrel of powder which I took up out of the sea, and which had been wet, and I found that the water had penetrated about three or four inches into the powder on every side, which caking and growing hard, had preserved the inside like a kernel in the shell, so that I had near sixty pounds of very good powder in the centre of the cask. This was a very agreeable discovery to me at that time; so I carried all away thither, never keeping above two or three pounds of powder with me in my castle, for fear of a surprise of any kind; I also carried thither all the lead I had left for bullets.

I fancied myself now like one of the ancient giants who were said to live in caves and holes in the rocks, where none could come at them; for I persuaded myself, while I was here, that if five hundred savages were to hunt me, they could never find me out—or if they did, they would not venture to attack me here. The old goat whom I found expiring died in the mouth of the cave the next day after I made this discovery; and I found it much easier to dig a great hole there, and throw him in and cover him with earth, than to drag him out; so I interred him there, to prevent offence to my nose.

Chapter 13 - Wreck Of A Spanish Ship

I was now in the twenty-third year of my residence in this island, and was so naturalised to the place and the manner of living, that, could I but have enjoyed the certainty that no savages would come to the place to disturb me, I could have been content to have capitulated for spending the rest of my time there, even to the last moment, till I had laid me down and died, like the old goat in the cave. I had also arrived to some little diversions and amusements, which made the time pass a great deal more pleasantly with me than it did before—first, I had taught my Poll, as I noted before, to speak; and he did it so familiarly, and talked so articulately and plain, that it was very pleasant to me; and he lived with me no less than six-and-twenty years. How long he might have lived afterwards I know not, though I know they have a notion in the Brazils that they live a hundred years. My dog was a pleasant and loving companion to me for no less than sixteen years of my time, and then died of mere old age. As for my cats, they multiplied, as I have observed, to that degree that I was obliged to shoot several of them at first, to keep them from devouring me and all I had; but at length, when the two old ones I brought with me were gone, and after some time continually driving them from me, and letting them have no provision with me, they all ran wild into the woods, except two or three favourites, which I kept tame, and whose young, when they had any, I always drowned; and these were part of my family. Besides these I always kept two or three household kids about me, whom I taught to feed out of my hand; and I had two more parrots, which talked pretty well, and would all call "Robin Crusoe," but none like my first; nor, indeed, did I take the pains with any of them that I had done with him.

I had also several tame sea-fowls, whose name I knew not, that I caught upon the shore, and cut their wings; and the little stakes which I had planted before my castle-wall being now grown up to a good thick grove, these fowls all lived among these low trees, and bred there, which was very agreeable to me; so that, as I said above, I began to be very well contented with the life I led, if I could have been secured from the dread of the savages. But it was otherwise directed; and it may not be amiss for all people who shall meet with my story to make this just observation from it: How frequently, in the course of our lives, the evil which in itself we seek most to shun, and which, when we are fallen into, is the most dreadful to us, is oftentimes the very means or door of our deliverance, by which alone we can be raised again from the affliction we are fallen into. I could give many examples of this in the course of my unaccountable life; but in nothing was it more particularly remarkable than in the circumstances of my last years of solitary residence in this island.

It was now the month of December, as I said above, in my twenty-third year; and this, being the southern solstice (for winter I cannot call it), was the particular time of my harvest, and required me to be pretty much abroad in the fields, when, going out early in the morning, even before it was thorough daylight, I was surprised with seeing a light of some fire upon the shore, at a distance from me of about two miles, toward that part of the island where I had observed some savages had been, as before, and not on the other side; but, to my great affliction, it was on my side of the island.

I was indeed terribly surprised at the sight, and stopped short within my grove, not daring to go out, lest I might be surprised; and yet I had no more peace within, from the apprehensions I had that if these savages, in rambling over the island, should find my corn standing or cut, or any of my works or improvements, they would immediately conclude that there were people in the place, and would then never rest till they had found me out. In this extremity I went back directly to my castle, pulled up the ladder after me, and made all things without look as wild and natural as I could.

Then I prepared myself within, putting myself in a posture of defence. I loaded all my cannon, as I called them—that is to say, my muskets, which were mounted upon my new fortification—and all my pistols, and resolved to defend myself to the last gasp—not forgetting seriously to commend myself to the Divine protection, and earnestly to pray to God to deliver me out of the hands of the barbarians. I continued in this posture about two hours, and began to be impatient for intelligence abroad, for I had no spies to send out. After sitting a while longer, and musing what I should do in this case, I was not able to bear sitting in ignorance longer; so setting up my ladder to the side of the hill, where there was a flat place, as I observed before, and then pulling the ladder after me, I set it up again and mounted the top of the hill, and pulling out my perspective glass, which I had taken on purpose, I laid me down flat on my belly on the ground, and began to look for the place. I presently found there were no less than nine naked savages sitting round a small fire they had made, not to warm them, for they had no need of that, the weather being extremely hot, but, as I supposed, to dress some of their barbarous diet of human flesh which they had brought with them, whether alive or dead I could not tell.

They had two canoes with them, which they had hauled up upon the shore; and as it was then ebb of tide, they seemed to me to wait for the return of the flood to go away again. It is not easy to imagine what confusion this sight put me into, especially seeing them come on my side of the island, and so near to me; but when I considered their coming must be always with the current of the ebb, I began afterwards to be more sedate in my mind, being satisfied that I might go abroad with safety all the time of the flood of tide, if they were not on shore before; and having made this observation, I went abroad about my harvest work with the more composure.

As I expected, so it proved; for as soon as the tide made to the westward I saw them all take boat and row (or paddle as we call it) away. I should have observed, that for an hour or more before they went off they were dancing, and I could easily discern their postures and gestures by my glass. I could not perceive, by my nicest observation, but that they were stark naked, and had not the least covering upon them; but whether they were men or women I could not distinguish.

As soon as I saw them shipped and gone, I took two guns upon my shoulders, and two pistols in my girdle, and my great sword by my side without a scabbard, and with all the speed I was able to make went away to the hill where I had discovered the first appearance of all; and as soon as I got thither, which was not in less than two hours (for I could not go quickly, being so loaded with arms as I was), I perceived there had been three canoes more of the savages at that place; and looking out farther, I saw they were all at sea together, making over for the main. This was a dreadful sight to me, especially as, going down to the shore, I could see the marks of horror which the dismal work they had been about had left behind it—viz. the blood, the bones, and part of the flesh of human bodies eaten and devoured by those wretches with merriment and sport.

I was so filled with indignation at the sight, that I now began to premeditate the destruction of the next that I saw there, let them be whom or how many soever. It seemed evident to me that the visits which they made thus to this island were not very frequent, for it was above fifteen months before any more of them came on shore there again—that is to say, I neither saw them nor any footsteps or signals of them in all that time; for as to the rainy seasons, then they are sure not to come abroad, at least not so far. Yet all this while I lived uncomfortably, by reason of the constant apprehensions of their coming upon me by surprise: from whence I observe, that the expectation of evil is more bitter than the suffering, especially if there is no room to shake off that expectation or those apprehensions.

During all this time I was in a murdering humour, and spent most of my hours, which should have been better employed, in contriving how to circumvent and fall upon them the very next time I should see them—especially if they should be divided, as they were the last time, into two parties; nor did I consider at all that if I killed one party—suppose ten or a dozen—I was still the next day, or week, or month, to kill another, and so another, even ad infinitum, till I should be, at length, no less a murderer than they were in being man-eaters—and perhaps much more so. I spent my days now in great perplexity and anxiety of mind, expecting that I should one day or other fall into the hands of these merciless creatures; and if I did at any time venture abroad, it was not without looking around me with the greatest care and caution imaginable.

And now I found, to my great comfort, how happy it was that I had provided a tame flock or herd of goats, for I durst not upon any account fire my gun, especially near that side of the island where they usually came, lest I should alarm the savages; and if they had fled from me now, I was sure to have them come again with perhaps two or three hundred canoes with them in a few days, and then I knew what to expect. However, I wore out a year and three months more before I ever saw any more of the savages, and then I found them again, as I shall soon observe. It is true they might have been there once or twice; but either they made no stay, or at least I did not see them; but in the month of May, as near as I could calculate, and in my four-and-twentieth year, I had a very strange encounter with them; of which in its place.

The perturbation of my mind during this fifteen or sixteen months' interval was very great; I slept unquietly, dreamed always frightful dreams, and often started out of my sleep in the night. In the day great troubles overwhelmed my mind; and in the night I dreamed often of killing the savages and of the reasons why I might justify doing it.

But to waive all this for a while. It was in the middle of May, on the sixteenth day, I think, as well as my poor wooden calendar would reckon, for I marked all upon the post still; I say, it was on the sixteenth of May that it blew a very great storm of wind all day, with a great deal of lightning and thunder, and; a very foul night it was after it. I knew not what was the particular occasion of it, but as I was reading in the Bible, and taken up with very serious thoughts about my present condition, I was surprised with the noise of a gun, as I thought, fired at sea. This was, to be sure, a surprise quite of a different nature from any I had met with before; for the notions this put into my thoughts were quite of another kind. I started up in the greatest haste imaginable; and, in a trice, clapped my ladder to the middle place of the rock, and pulled it after me; and mounting it the second time, got to the top of the hill the very moment that a flash of fire bid me listen for a second gun, which, accordingly, in about half a minute I heard; and by the sound, knew that it was from that part of the sea where I was driven down the current in my boat.

I immediately considered that this must be some ship in distress, and that they had some comrade, or some other ship in company, and fired these for signals of distress, and to obtain help. I had the presence of mind at that minute to think, that though I could not help them, it might be that they might help me; so I brought together all the dry wood I could get at hand, and making a good handsome pile, I set it on fire upon the hill. The wood was dry, and blazed freely; and, though the wind blew very hard, yet it burned fairly out; so that I was certain, if there was any such thing as a ship, they must needs see it. And no doubt they did; for as soon as ever my fire blazed up, I heard another gun, and after that several others, all from the same quarter. I plied my fire all night long, till daybreak: and when it was broad day, and the air cleared up, I saw something at a great distance at sea, full east of the island, whether a sail or a hull I could not distinguish—no, not with my glass: the distance was so great, and the weather still something hazy also; at least, it was so out at sea.

I looked frequently at it all that day, and soon perceived that it did not move; so I presently concluded that it was a ship at anchor; and being eager, you may be sure, to be satisfied, I took my gun in my hand, and ran towards the south side of the island to the rocks where I had formerly been carried away by the current; and getting up there, the weather by this time being perfectly clear, I could plainly see, to my great sorrow, the wreck of a ship, cast away in the night upon those concealed rocks which I found when I was out in my boat; and which rocks, as they checked the violence of the stream, and made a kind of counter-stream, or eddy, were the occasion of my recovering from the most desperate, hopeless condition that ever I had been in in all my life.

Thus, what is one man's safety is another man's destruction; for it seems these men, whoever they were, being out of their knowledge, and the rocks being wholly under water, had been driven upon them in the night, the wind blowing hard at ENE. Had they seen the island, as I must necessarily suppose they did not, they must, as I thought, have endeavoured to have saved themselves on shore by the help of their boat; but their firing off guns for help, especially when they saw, as I imagined, my fire, filled me with many thoughts. First, I imagined that upon seeing my light they might have put themselves into their boat, and endeavoured to make the shore: but that the sea running very high, they might have been cast away. Other times I imagined that they might have lost their boat before, as might be the case many ways; particularly by the breaking of the sea upon their ship, which many times obliged men to stave, or take in pieces, their boat, and sometimes to throw it overboard with their own hands. Other times I imagined they had some other ship or ships in company, who, upon the signals of distress they made, had taken them up, and carried them off. Other times I fancied they were all gone off to sea in their boat, and being hurried away by the current that I had been formerly in, were carried out into the great ocean, where there was nothing but misery and perishing: and that, perhaps, they might by this time think of starving, and of being in a condition to eat one another.

As all these were but conjectures at best, so, in the condition I was in, I could do no more than look on upon the misery of the poor men, and pity them; which had still this good effect upon my side, that it gave me more and more cause to give thanks to God, who had so happily and comfortably provided for me in my desolate condition; and that of two ships' companies, who were now cast away upon this part of the world, not one life should be spared but mine. I learned here again to observe, that it is very rare that the providence of God casts us into any condition so low, or any misery so great, but we may see something or other to be thankful for, and may see others in worse circumstances than our own. Such certainly was the case of these men, of whom I could not so much as see room to suppose any were saved; nothing could make it rational so much as to wish or expect that they did not all perish there, except the possibility only of their being taken up by another ship in company; and this was but mere possibility indeed, for I saw not the least sign or appearance of any such thing.

I cannot explain, by any possible energy of words, what a strange longing I felt in my soul upon this sight, breaking out sometimes thus: "Oh that there had been but one or two, nay, or but one soul saved out of this ship, to have escaped to me, that I might but have had one companion, one fellow-creature, to have spoken to me and to have conversed with!" In all the time of my solitary life I never felt so earnest, so strong a desire after the society of my fellow-creatures, or so deep a regret at the want of it.

There are some secret springs in the affections which, when they are set a-going by some object in view, or, though not in view, yet rendered present to the mind by the power of imagination, that motion carries out the soul, by its impetuosity, to such violent, eager embracings of the object, that the absence of it is insupportable. Such were these earnest wishings that but one man had been saved. I believe I repeated the words, "Oh that it had been but one!" a thousand times; and my desires were so moved by it, that when I spoke the words my hands would clinch together, and my fingers would press the palms of my hands, so that if I had had any soft thing in my hand I should have crushed it involuntarily; and the teeth in my head would strike together, and set against one another so strong, that for some time I could not part them again. Let the naturalists explain these things, and the reason and manner of them. All I can do is to describe the fact, which was even surprising to me when I found it, though I knew not from whence it proceeded; it was doubtless the effect of ardent wishes, and of strong ideas formed in my mind, realising the comfort which the conversation of one of my fellow-Christians would have been to me. But it was not to be; either their fate or mine, or both, forbade it; for, till the last year of my being on this island, I never knew whether any were saved out of that ship or no; and had only the affliction, some days after, to see the corpse of a drowned boy come on shore at the end of the island which was next the shipwreck. He had no clothes on but a seaman's waistcoat, a pair of open-kneed linen drawers, and a blue linen shirt; but nothing to direct me so much as to guess what nation he was of. He had nothing in his pockets but two pieces of eight and a tobacco pipe—the last was to me of ten times more value than the first.

It was now calm, and I had a great mind to venture out in my boat to this wreck, not doubting but I might find something on board that might be useful to me. But that did not altogether press me so much as the possibility that there might be yet some living creature on board, whose life I might not only save, but might, by saving that life, comfort my own to the last degree; and this thought clung so to my heart that I could not be quiet night or day, but I must venture out in my boat on board this wreck; and committing the rest to God's providence, I thought the impression was so strong upon my mind that it could not be resisted—that it must come from some invisible direction, and that I should be wanting to myself if I did not go.

Under the power of this impression, I hastened back to my castle, prepared everything for my voyage, took a quantity of bread, a great pot of fresh water, a compass to steer by, a bottle of rum (for I had still a great deal of that left), and a basket of raisins; and thus, loading myself with everything necessary. I went down to my boat, got the water out of her, got her afloat, loaded all my cargo in her, and then went home again for more. My second cargo was a great bag of rice, the umbrella to set up over my head for a shade, another large pot of water, and about two dozen of small loaves, or barley cakes, more than before, with a bottle of goat's milk and a cheese; all which with great labour and sweat I carried to my boat; and praying to God to direct my voyage, I put out, and rowing or paddling the canoe along the shore, came at last to the utmost point of the island on the north-east side.

And now I was to launch out into the ocean, and either to venture or not to venture. I looked on the rapid currents which ran constantly on both sides of the island at a distance, and which were very terrible to me from the remembrance of the hazard I had been in before, and my heart began to fail me; for I foresaw that if I was driven into either of those currents, I should be carried a great way out to sea, and perhaps out of my reach or sight of the island again; and that then, as my boat was but small, if any little gale of wind should rise, I should be inevitably lost.

These thoughts so oppressed my mind that I began to give over my enterprise; and having hauled my boat into a little creek on the shore, I stepped out, and sat down upon a rising bit of ground, very pensive and anxious, between fear and desire, about my voyage; when, as I was musing, I could perceive that the tide was turned, and the flood come on; upon which my going was impracticable for so many hours. Upon this, presently it occurred to me that I should go up to the highest piece of ground I could find, and observe, if I could, how the sets of the tide or currents lay when the flood came in, that I might judge whether, if I was driven one way out, I might not expect to be driven another way home, with the same rapidity of the currents. This thought was no sooner in my head than I cast my eye upon a little hill which sufficiently overlooked the sea both ways, and from whence I had a clear view of the currents or sets of the tide, and which way I was to guide myself in my return. Here I found, that as the current of ebb set out close by the south point of the island, so the current of the flood set in close by the shore of the north side; and that I had nothing to do but to keep to the north side of the island in my return, and I should do well enough.

Encouraged by this observation, I resolved the next morning to set out with the first of the tide; and reposing myself for the night in my canoe, under the watch-coat I mentioned, I launched out. I first made a little out to sea, full north, till I began to feel the benefit of the current, which set eastward, and which carried me at a great rate; and yet did not so hurry me as the current on the south side had done before, so as to take from me all government of the boat; but having a strong steerage with my paddle, I went at a great rate directly for the wreck, and in less than two hours I came up to it. It was a dismal sight to look at; the ship, which by its building was Spanish, stuck fast, jammed in between two rocks. All the stern and quarter of her were beaten to pieces by the sea; and as her forecastle, which stuck in the rocks, had run on with great violence, her mainmast and foremast were brought by the board—that is to say, broken short off; but her bowsprit was sound, and the head and bow appeared firm. When I came close to her, a dog appeared upon her, who, seeing me coming, yelped and cried; and as soon as I called him, jumped into the sea to come to me. I took him into the boat, but found him almost dead with hunger and thirst. I gave him a cake of my bread, and he devoured it like a ravenous wolf that had been starving a fortnight in the snow; I then gave the poor creature some fresh water, with which, if I would have let him, he would have burst himself. After this I went on board; but the first sight I met with was two men drowned in the cook-room, or forecastle of the ship, with their arms fast about one another. I concluded, as is indeed probable, that when the ship struck, it being in a storm, the sea broke so high and so continually over her, that the men were not able to bear it, and were strangled with the constant rushing in of the water, as much as if they had been under water.

Besides the dog, there was nothing left in the ship that had life; nor any goods, that I could see, but what were spoiled by the water. There were some casks of liquor, whether wine or brandy I knew not, which lay lower in the hold, and which, the water being ebbed out, I could see; but they were too big to meddle with. I saw several chests, which I believe belonged to some of the seamen; and I got two of them into the boat, without examining what was in them. Had the stern of the ship been fixed, and the forepart broken off, I am persuaded I might have made a good voyage; for by what I found in those two chests I had room to suppose the ship had a great deal of wealth on board; and, if I may guess from the course she steered, she must have been bound from Buenos Ayres, or the Rio de la Plata, in the south part of America, beyond the Brazils to the Havannah, in the Gulf of Mexico, and so perhaps to Spain. She had, no doubt, a great treasure in her, but of no use, at that time, to anybody; and what became of the crew I then knew not.

I found, besides these chests, a little cask full of liquor, of about twenty gallons, which I got into my boat with much difficulty. There were several muskets in the cabin, and a great powder-horn, with about four pounds of powder in it; as for the muskets, I had no occasion for them, so I left them, but took the powder-horn. I took a fire-shovel and tongs, which I wanted extremely, as also two little brass kettles, a copper pot to make chocolate, and a gridiron; and with this cargo, and the dog, I came away, the tide beginning to make home again—and the same evening, about an hour within night, I reached the island again, weary and fatigued to the last degree. I reposed that night in the boat and in the morning I resolved to harbour what I had got in my new cave, and not carry it home to my castle. After refreshing myself, I got all my cargo on shore, and began to examine the particulars. The cask of liquor I found to be a kind of rum, but not such as we had at the Brazils; and, in a word, not at all good; but when I came to open the chests, I found several things of great use to me—for example, I found in one a fine case of bottles, of an extraordinary kind, and filled with cordial waters, fine and very good; the bottles held about three pints each, and were tipped with silver. I found two pots of very good succades, or sweetmeats, so fastened also on the top that the salt-water had not hurt them; and two more of the same, which the water had spoiled. I found some very good shirts, which were very welcome to me; and about a dozen and a half of white linen handkerchiefs and coloured neckcloths; the former were also very welcome, being exceedingly refreshing to wipe my face in a hot day. Besides this, when I came to the till in the chest, I found there three great bags of pieces of eight, which held about eleven hundred pieces in all; and in one of them, wrapped up in a paper, six doubloons of gold, and some small bars or wedges of gold; I suppose they might all weigh near a pound.

In the other chest were some clothes, but of little value; but, by the circumstances, it must have belonged to the gunner's mate; though there was no powder in it, except two pounds of fine glazed powder, in three flasks, kept, I suppose, for charging their fowling-pieces on occasion. Upon the whole, I got very little by this voyage that was of any use to me; for, as to the money, I had no manner of occasion for it; it was to me as the dirt under my feet, and I would have given it all for three or four pair of English shoes and stockings, which were things I greatly wanted, but had had none on my feet for many years. I had, indeed, got two pair of shoes now, which I took off the feet of two drowned men whom I saw in the wreck, and I found two pair more in one of the chests, which were very welcome to me; but they were not like our English shoes, either for ease or service, being rather what we call pumps than shoes. I found in this seaman's chest about fifty pieces of eight, in rials, but no gold: I supposed this belonged to a poorer man than the other, which seemed to belong to some officer. Well, however, I lugged this money home to my cave, and laid it up, as I had done that before which I had brought from our own ship; but it was a great pity, as I said, that the other part of this ship had not come to my share: for I am satisfied I might have loaded my canoe several times over with money; and, thought I, if I ever escape to England, it might lie here safe enough till I come again and fetch it.

Chapter 14 - A Dream Realised

Having now brought all my things on shore and secured them, I went back to my boat, and rowed or paddled her along the shore to her old harbour, where I laid her up, and made the best of my way to my old habitation, where I found everything safe and quiet. I began now to repose myself, live after my old fashion, and take care of my family affairs; and for a while I lived easy enough, only that I was more vigilant than I used to be, looked out oftener, and did not go abroad so much; and if at any time I did stir with any freedom, it was always to the east part of the island, where I was pretty well satisfied the savages never came, and where I could go without so many precautions, and such a load of arms and ammunition as I always carried with me if I went the other way.

I lived in this condition near two years more; but my unlucky head, that was always to let me know it was born to make my body miserable, was all these two years filled with projects and designs how, if it were possible, I might get away from this island: for sometimes I was for making another voyage to the wreck, though my reason told me that there was nothing left there worth the hazard of my voyage; sometimes for a ramble one way, sometimes another—and I believe verily, if I had had the boat that I went from Sallee in, I should have ventured to sea, bound anywhere, I knew not whither.

I have been, in all my circumstances, a memento to those who are touched with the general plague of mankind, whence, for aught I know, one half of their miseries flow: I mean that of not being satisfied with the station wherein God and Nature hath placed them—for, not to look back upon my primitive condition, and the excellent advice of my father, the opposition to which was, as I may call it, my original sin, my subsequent mistakes of the same kind had been the means of my coming into this miserable condition; for had that Providence which so happily seated me at the Brazils as a planter blessed me with confined desires, and I could have been contented to have gone on gradually, I might have been by this time—I mean in the time of my being in this island—one of the most considerable planters in the Brazils—nay, I am persuaded, that by the improvements I had made in that little time I lived there, and the increase I should probably have made if I had remained, I might have been worth a hundred thousand moidores—and what business had I to leave a settled fortune, a well-stocked plantation, improving and increasing, to turn supercargo to Guinea to fetch negroes, when patience and time would have so increased our stock at home, that we could have bought them at our own door from those whose business it was to fetch them? and though it had cost us something more, yet the difference of that price was by no means worth saving at so great a hazard.

But as this is usually the fate of young heads, so reflection upon the folly of it is as commonly the exercise of more years, or of the dear-bought experience of time—so it was with me now; and yet so deep had the mistake taken root in my temper, that I could not satisfy myself in my station, but was continually poring upon the means and possibility of my escape from this place; and that I may, with greater pleasure to the reader, bring on the remaining part of my story, it may not be improper to give some account of my first conceptions on the subject of this foolish scheme for my escape, and how, and upon what foundation, I acted.

I am now to be supposed retired into my castle, after my late voyage to the wreck, my frigate laid up and secured under water, as usual, and my condition restored to what it was before: I had more wealth, indeed, than I had before, but was not at all the richer; for I had no more use for it than the Indians of Peru had before the Spaniards came there.

It was one of the nights in the rainy season in March, the four-and-twentieth year of my first setting foot in this island of solitude, I was lying in my bed or hammock, awake, very well in health, had no pain, no distemper, no uneasiness of body, nor any uneasiness of mind more than ordinary, but could by no means close my eyes, that is, so as to sleep; no, not a wink all night long, otherwise than as follows:

It is impossible to set down the innumerable crowd of thoughts that whirled through that great thoroughfare of the brain, the memory, in this night's time. I ran over the whole history of my life in miniature, or by abridgment, as I may call it, to my coming to this island, and also of that part of my life since I came to this island. In my reflections upon the state of my case since I came on shore on this island, I was comparing the happy posture of my affairs in the first years of my habitation here, with the life of anxiety, fear, and care which I had lived in ever since I had seen the print of a foot in the sand. Not that I did not believe the savages had frequented the island even all the while, and might have been several hundreds of them at times on shore there; but I had never known it, and was incapable of any apprehensions about it; my satisfaction was perfect, though my danger was the same, and I was as happy in not knowing my danger as if I had never really been exposed to it.

This furnished my thoughts with many very profitable reflections, and particularly this one: How infinitely good that Providence is, which has provided, in its government of mankind, such narrow bounds to his sight and knowledge of things; and though he walks in the midst of so many thousand dangers, the sight of which, if discovered to him, would distract his mind and sink his spirits, he is kept serene and calm, by having the events of things hid from his eyes, and knowing nothing of the dangers which surround him.

After these thoughts had for some time entertained me, I came to reflect seriously upon the real danger I had been in for so many years in this very island, and how I had walked about in the greatest security, and with all possible tranquillity, even when perhaps nothing but the brow of a hill, a great tree, or the casual approach of night, had been between me and the worst kind of destruction—viz. that of falling into the hands of cannibals and savages, who would have seized on me with the same view as I would on a goat or turtle; and have thought it no more crime to kill and devour me than I did of a pigeon or a curlew. I would unjustly slander myself if I should say I was not sincerely thankful to my great Preserver, to whose singular protection I acknowledged, with great humanity, all these unknown deliverances were due, and without which I must inevitably have fallen into their merciless hands.

When these thoughts were over, my head was for some time taken up in considering the nature of these wretched creatures, I mean the savages, and how it came to pass in the world that the wise Governor of all things should give up any of His creatures to such inhumanity—nay, to something so much below even brutality itself—as to devour its own kind: but as this ended in some (at that time) fruitless speculations, it occurred to me to inquire what part of the world these wretches lived in? how far off the coast was from whence they came? what they ventured over so far from home for? what kind of boats they had? and why I might not order myself and my business so that I might be able to go over thither, as they were to come to me?

I never so much as troubled myself to consider what I should do with myself when I went thither; what would become of me if I fell into the hands of these savages; or how I should escape them if they attacked me; no, nor so much as how it was possible for me to reach the coast, and not to be attacked by some or other of them, without any possibility of delivering myself; and if I should not fall into their hands, what I should do for provision, or whither I should bend my course; none of these thoughts, I say, so much as came in my way; but my mind was wholly bent upon the notion of my passing over in my boat to the mainland. I looked upon my present condition as the most miserable that could possibly be; that I was not able to throw myself into anything but death, that could be called worse; and if I reached the shore of the main I might perhaps meet with relief, or I might coast along, as I did on the African shore, till I came to some inhabited country, and where I might find some relief; and after all, perhaps I might fall in with some Christian ship that might take me in: and if the worst came to the worst, I could but die, which would put an end to all these miseries at once. Pray note, all this was the fruit of a disturbed mind, an impatient temper, made desperate, as it were, by the long continuance of my troubles, and the disappointments I had met in the wreck I had been on board of, and where I had been so near obtaining what I so earnestly longed for—somebody to speak to, and to learn some knowledge from them of the place where I was, and of the probable means of my deliverance. I was agitated wholly by these thoughts; all my calm of mind, in my resignation to Providence, and waiting the issue of the dispositions of Heaven, seemed to be suspended; and I had as it were no power to turn my thoughts to anything but to the project of a voyage to the main, which came upon me with such force, and such an impetuosity of desire, that it was not to be resisted.

When this had agitated my thoughts for two hours or more, with such violence that it set my very blood into a ferment, and my pulse beat as if I had been in a fever, merely with the extraordinary fervour of my mind about it, Nature—as if I had been fatigued and exhausted with the very thoughts of it—threw me into a sound sleep. One would have thought I should have dreamed of it, but I did not, nor of anything relating to it, but I dreamed that as I was going out in the morning as usual from my castle, I saw upon the shore two canoes and eleven savages coming to land, and that they brought with them another savage whom they were going to kill in order to eat him; when, on a sudden, the savage that they were going to kill jumped away, and ran for his life; and I thought in my sleep that he came running into my little thick grove before my fortification, to hide himself; and that I seeing him alone, and not perceiving that the others sought him that way, showed myself to him, and smiling upon him, encouraged him: that he kneeled down to me, seeming to pray me to assist him; upon which I showed him my ladder, made him go up, and carried him into my cave, and he became my servant; and that as soon as I had got this man, I said to myself, "Now I may certainly venture to the mainland, for this fellow will serve me as a pilot, and will tell me what to do, and whither to go for provisions, and whither not to go for fear of being devoured; what places to venture into, and what to shun." I waked with this thought; and was under such inexpressible impressions of joy at the prospect of my escape in my dream, that the disappointments which I felt upon coming to myself, and finding that it was no more than a dream, were equally extravagant the other way, and threw me into a very great dejection of spirits.

Upon this, however, I made this conclusion: that my only way to go about to attempt an escape was, to endeavour to get a savage into my possession: and, if possible, it should be one of their prisoners, whom they had condemned to be eaten, and should bring hither to kill. But these thoughts still were attended with this difficulty: that it was impossible to effect this without attacking a whole caravan of them, and killing them all; and this was not only a very desperate attempt, and might miscarry, but, on the other hand, I had greatly scrupled the lawfulness of it to myself; and my heart trembled at the thoughts of shedding so much blood, though it was for my deliverance. I need not repeat the arguments which occurred to me against this, they being the same mentioned before; but though I had other reasons to offer now—viz. that those men were enemies to my life, and would devour me if they could; that it was self-preservation, in the highest degree, to deliver myself from this death of a life, and was acting in my own defence as much as if they were actually assaulting me, and the like; I say though these things argued for it, yet the thoughts of shedding human blood for my deliverance were very terrible to me, and such as I could by no means reconcile myself to for a great while. However, at last, after many secret disputes with myself, and after great perplexities about it (for all these arguments, one way and another, struggled in my head a long time), the eager prevailing desire of deliverance at length mastered all the rest; and I resolved, if possible, to get one of these savages into my hands, cost what it would. My next thing was to contrive how to do it, and this, indeed, was very difficult to resolve on; but as I could pitch upon no probable means for it, so I resolved to put myself upon the watch, to see them when they came on shore, and leave the rest to the event; taking such measures as the opportunity should present, let what would be.

With these resolutions in my thoughts, I set myself upon the scout as often as possible, and indeed so often that I was heartily tired of it; for it was above a year and a half that I waited; and for great part of that time went out to the west end, and to the south-west corner of the island almost every day, to look for canoes, but none appeared. This was very discouraging, and began to trouble me much, though I cannot say that it did in this case (as it had done some time before) wear off the edge of my desire to the thing; but the longer it seemed to be delayed, the more eager I was for it: in a word, I was not at first so careful to shun the sight of these savages, and avoid being seen by them, as I was now eager to be upon them. Besides, I fancied myself able to manage one, nay, two or three savages, if I had them, so as to make them entirely slaves to me, to do whatever I should direct them, and to prevent their being able at any time to do me any hurt. It was a great while that I pleased myself with this affair; but nothing still presented itself; all my fancies and schemes came to nothing, for no savages came near me for a great while.

About a year and a half after I entertained these notions (and by long musing had, as it were, resolved them all into nothing, for want of an occasion to put them into execution), I was surprised one morning by seeing no less than five canoes all on shore together on my side the island, and the people who belonged to them all landed and out of my sight. The number of them broke all my measures; for seeing so many, and knowing that they always came four or six, or sometimes more in a boat, I could not tell what to think of it, or how to take my measures to attack twenty or thirty men single-handed; so lay still in my castle, perplexed and discomforted. However, I put myself into the same position for an attack that I had formerly provided, and was just ready for action, if anything had presented.

Having waited a good while, listening to hear if they made any noise, at length, being very impatient, I set my guns at the foot of my ladder, and clambered up to the top of the hill, by my two stages, as usual; standing so, however, that my head did not appear above the hill, so that they could not perceive me by any means. Here I observed, by the help of my perspective glass, that they were no less than thirty in number; that they had a fire kindled, and that they had meat dressed. How they had cooked it I knew not, or what it was; but they were all dancing, in I know not how many barbarous gestures and figures, their own way, round the fire.

While I was thus looking on them, I perceived, by my perspective, two miserable wretches dragged from the boats, where, it seems, they were laid by, and were now brought out for the slaughter. I perceived one of them immediately fall; being knocked down, I suppose, with a club or wooden sword, for that was their way; and two or three others were at work immediately, cutting him open for their cookery, while the other victim was left standing by himself, till they should be ready for him. In that very moment this poor wretch, seeing himself a little at liberty and unbound, Nature inspired him with hopes of life, and he started away from them, and ran with incredible swiftness along the sands, directly towards me; I mean towards that part of the coast where my habitation was.

I was dreadfully frightened, I must acknowledge, when I perceived him run my way; and especially when, as I thought, I saw him pursued by the whole body: and now I expected that part of my dream was coming to pass, and that he would certainly take shelter in my grove; but I could not depend, by any means, upon my dream, that the other savages would not pursue him thither and find him there. However, I kept my station, and my spirits began to recover when I found that there was not above three men that followed him; and still more was I encouraged, when I found that he outstripped them exceedingly in running, and gained ground on them; so that, if he could but hold out for half-an-hour, I saw easily he would fairly get away from them all.

There was between them and my castle the creek, which I mentioned often in the first part of my story, where I landed my cargoes out of the ship; and this I saw plainly he must necessarily swim over, or the poor wretch would be taken there; but when the savage escaping came thither, he made nothing of it, though the tide was then up; but plunging in, swam through in about thirty strokes, or thereabouts, landed, and ran with exceeding strength and swiftness. When the three persons came to the creek, I found that two of them could swim, but the third could not, and that, standing on the other side, he looked at the others, but went no farther, and soon after went softly back again; which, as it happened, was very well for him in the end. I observed that the two who swam were yet more than twice as strong swimming over the creek as the fellow was that fled from them. It came very warmly upon my thoughts, and indeed irresistibly, that now was the time to get me a servant, and, perhaps, a companion or assistant; and that I was plainly called by Providence to save this poor creature's life. I immediately ran down the ladders with all possible expedition, fetched my two guns, for they were both at the foot of the ladders, as I observed before, and getting up again with the same haste to the top of the hill, I crossed towards the sea; and having a very short cut, and all down hill, placed myself in the way between the pursuers and the pursued, hallowing aloud to him that fled, who, looking back, was at first perhaps as much frightened at me as at them; but I beckoned with my hand to him to come back; and, in the meantime, I slowly advanced towards the two that followed; then rushing at once upon the foremost, I knocked him down with the stock of my piece.

I was loath to fire, because I would not have the rest hear; though, at that distance, it would not have been easily heard, and being out of sight of the smoke, too, they would not have known what to make of it. Having knocked this fellow down, the other who pursued him stopped, as if he had been frightened, and I advanced towards him: but as I came nearer, I perceived presently he had a bow and arrow, and was fitting it to shoot at me: so I was then obliged to shoot at him first, which I did, and killed him at the first shot. The poor savage who fled, but had stopped, though he saw both his enemies fallen and killed, as he thought, yet was so frightened with the fire and noise of my piece that he stood stock still, and neither came forward nor went backward, though he seemed rather inclined still to fly than to come on. I hallooed again to him, and made signs to come forward, which he easily understood, and came a little way; then stopped again, and then a little farther, and stopped again; and I could then perceive that he stood trembling, as if he had been taken prisoner, and had just been to be killed, as his two enemies were. I beckoned to him again to come to me, and gave him all the signs of encouragement that I could think of; and he came nearer and nearer, kneeling down every ten or twelve steps, in token of acknowledgment for saving his life. I smiled at him, and looked pleasantly, and beckoned to him to come still nearer; at length he came close to me; and then he kneeled down again, kissed the ground, and laid his head upon the ground, and taking me by the foot, set my foot upon his head; this, it seems, was in token of swearing to be my slave for ever. I took him up and made much of him, and encouraged him all I could.

But there was more work to do yet; for I perceived the savage whom I had knocked down was not killed, but stunned with the blow, and began to come to himself: so I pointed to him, and showed him the savage, that he was not dead; upon this he spoke some words to me, and though I could not understand them, yet I thought they were pleasant to hear; for they were the first sound of a man's voice that I had heard, my own excepted, for above twenty-five years. But there was no time for such reflections now; the savage who was knocked down recovered himself so far as to sit up upon the ground, and I perceived that my savage began to be afraid; but when I saw that, I presented my other piece at the man, as if I would shoot him: upon this my savage, for so I call him now, made a motion to me to lend him my sword, which hung naked in a belt by my side, which I did. He no sooner had it, but he runs to his enemy, and at one blow cut off his head so cleverly, no executioner in Germany could have done it sooner or better; which I thought very strange for one who, I had reason to believe, never saw a sword in his life before, except their own wooden swords: however, it seems, as I learned afterwards, they make their wooden swords so sharp, so heavy, and the wood is so hard, that they will even cut off heads with them, ay, and arms, and that at one blow, too. When he had done this, he comes laughing to me in sign of triumph, and brought me the sword again, and with abundance of gestures which I did not understand, laid it down, with the head of the savage that he had killed, just before me. But that which astonished him most was to know how I killed the other Indian so far off; so, pointing to him, he made signs to me to let him go to him; and I bade him go, as well as I could.

When he came to him, he stood like one amazed, looking at him, turning him first on one side, then on the other; looked at the wound the bullet had made, which it seems was just in his breast, where it had made a hole, and no great quantity of blood had followed; but he had bled inwardly, for he was quite dead. He took up his bow and arrows, and came back; so I turned to go away, and beckoned him to follow me, making signs to him that more might come after them. Upon this he made signs to me that he should bury them with sand, that they might not be seen by the rest, if they followed; and so I made signs to him again to do so. He fell to work; and in an instant he had scraped a hole in the sand with his hands big enough to bury the first in, and then dragged him into it, and covered him; and did so by the other also; I believe he had him buried them both in a quarter of an hour. Then, calling away, I carried him, not to my castle, but quite away to my cave, on the farther part of the island: so I did not let my dream come to pass in that part, that he came into my grove for shelter. Here I gave him bread and a bunch of raisins to eat, and a draught of water, which I found he was indeed in great distress for, from his running: and having refreshed him, I made signs for him to go and lie down to sleep, showing him a place where I had laid some rice-straw, and a blanket upon it, which I used to sleep upon myself sometimes; so the poor creature lay down, and went to sleep.

He was a comely, handsome fellow, perfectly well made, with straight, strong limbs, not too large; tall, and well-shaped; and, as I reckon, about twenty-six years of age. He had a very good countenance, not a fierce and surly aspect, but seemed to have something very manly in his face; and yet he had all the sweetness and softness of a European in his countenance, too, especially when he smiled. His hair was long and black, not curled like wool; his forehead very high and large; and a great vivacity and sparkling sharpness in his eyes. The colour of his skin was not quite black, but very tawny; and yet not an ugly, yellow, nauseous tawny, as the Brazilians and Virginians, and other natives of America are, but of a bright kind of a dun olive-colour, that had in it something very agreeable, though not very easy to describe. His face was round and plump; his nose small, not flat, like the negroes; a very good mouth, thin lips, and his fine teeth well set, and as white as ivory.

After he had slumbered, rather than slept, about half-an-hour, he awoke again, and came out of the cave to me, for I had been milking my goats which I had in the enclosure just by: when he espied me he came running to me, laying himself down again upon the ground, with all the possible signs of an humble, thankful disposition, making a great many antic gestures to show it. At last he lays his head flat upon the ground, close to my foot, and sets my other foot upon his head, as he had done before; and after this made all the signs to me of subjection, servitude, and submission imaginable, to let me know how he would serve me so long as he lived. I understood him in many things, and let him know I was very well pleased with him. In a little time I began to speak to him; and teach him to speak to me; and first, I let him know his name should be Friday, which was the day I saved his life; I called him so for the memory of the time. I likewise taught him to say Master; and then let him know that was to be my name; I likewise taught him to say Yes and No and to know the meaning of them.

I gave him some milk in an earthen pot, and let him see me drink it before him, and sop my bread in it; and gave him a cake of bread to do the like, which he quickly complied with, and made signs that it was very good for him. I kept there with him all that night; but as soon as it was day I beckoned to him to come with me, and let him know I would give him some clothes; at which he seemed very glad, for he was stark naked. As we went by the place where he had buried the two men, he pointed exactly to the place, and showed me the marks that he had made to find them again, making signs to me that we should dig them up again and eat them. At this I appeared very angry, expressed my abhorrence of it, made as if I would vomit at the thoughts of it, and beckoned with my hand to him to come away, which he did immediately, with great submission.

I then led him up to the top of the hill, to see if his enemies were gone; and pulling out my glass I looked, and saw plainly the place where they had been, but no appearance of them or their canoes; so that it was plain they were gone, and had left their two comrades behind them, without any search after them.

But I was not content with this discovery; but having now more courage, and consequently more curiosity, I took my man Friday with me, giving him the sword in his hand, with the bow and arrows at his back, which I found he could use very dexterously, making him carry one gun for me, and I two for myself; and away we marched to the place where these creatures had been; for I had a mind now to get some further intelligence of them. When I came to the place my very blood ran chill in my veins, and my heart sunk within me, at the horror of the spectacle; indeed, it was a dreadful sight, at least it was so to me, though Friday made nothing of it. The place was covered with human bones, the ground dyed with their blood, and great pieces of flesh left here and there, half-eaten, mangled, and scorched; and, in short, all the tokens of the triumphant feast they had been making there, after a victory over their enemies.

I saw three skulls, five hands, and the bones of three or four legs and feet, and abundance of other parts of the bodies; and Friday, by his signs, made me understand that they brought over four prisoners to feast upon; that three of them were eaten up, and that he, pointing to himself, was the fourth; that there had been a great battle between them and their next king, of whose subjects, it seems, he had been one, and that they had taken a great number of prisoners; all which were carried to several places by those who had taken them in the fight, in order to feast upon them, as was done here by these wretches upon those they brought hither.

I caused Friday to gather all the skulls, bones, flesh, and whatever remained, and lay them together in a heap, and make a great fire upon it, and burn them all to ashes. I found Friday had still a hankering stomach after some of the flesh, and was still a cannibal in his nature; but I showed so much abhorrence at the very thoughts of it, and at the least appearance of it, that he durst not discover it: for I had, by some means, let him know that I would kill him if he offered it.

When he had done this, we came back to our castle; and there I fell to work for my man Friday; and first of all, I gave him a pair of linen drawers, which I had out of the poor gunner's chest I mentioned, which I found in the wreck, and which, with a little alteration, fitted him very well; and then I made him a jerkin of goat's skin, as well as my skill would allow (for I was now grown a tolerably good tailor); and I gave him a cap which I made of hare's skin, very convenient, and fashionable enough; and thus he was clothed, for the present, tolerably well, and was mighty well pleased to see himself almost as well clothed as his master. It is true he went awkwardly in these clothes at first: wearing the drawers was very awkward to him, and the sleeves of the waistcoat galled his shoulders and the inside of his arms; but a little easing them where he complained they hurt him, and using himself to them, he took to them at length very well.

The next day, after I came home to my hutch with him, I began to consider where I should lodge him: and that I might do well for him and yet be perfectly easy myself, I made a little tent for him in the vacant place between my two fortifications, in the inside of the last, and in the outside of the first. As there was a door or entrance there into my cave, I made a formal framed door-case, and a door to it, of boards, and set it up in the passage, a little within the entrance; and, causing the door to open in the inside, I barred it up in the night, taking in my ladders, too; so that Friday could no way come at me in the inside of my innermost wall, without making so much noise in getting over that it must needs awaken me; for my first wall had now a complete roof over it of long poles, covering all my tent, and leaning up to the side of the hill; which was again laid across with smaller sticks, instead of laths, and then thatched over a great thickness with the rice-straw, which was strong, like reeds; and at the hole or place which was left to go in or out by the ladder I had placed a kind of trap-door, which, if it had been attempted on the outside, would not have opened at all, but would have fallen down and made a great noise—as to weapons, I took them all into my side every night. But I needed none of all this precaution; for never man had a more faithful, loving, sincere servant than Friday was to me: without passions, sullenness, or designs, perfectly obliged and engaged; his very affections were tied to me, like those of a child to a father; and I daresay he would have sacrificed his life to save mine upon any occasion whatsoever—the many testimonies he gave me of this put it out of doubt, and soon convinced me that I needed to use no precautions for my safety on his account.

This frequently gave me occasion to observe, and that with wonder, that however it had pleased God in His providence, and in the government of the works of His hands, to take from so great a part of the world of His creatures the best uses to which their faculties and the powers of their souls are adapted, yet that He has bestowed upon them the same powers, the same reason, the same affections, the same sentiments of kindness and obligation, the same passions and resentments of wrongs, the same sense of gratitude, sincerity, fidelity, and all the capacities of doing good and receiving good that He has given to us; and that when He pleases to offer them occasions of exerting these, they are as ready, nay, more ready, to apply them to the right uses for which they were bestowed than we are. This made me very melancholy sometimes, in reflecting, as the several occasions presented, how mean a use we make of all these, even though we have these powers enlightened by the great lamp of instruction, the Spirit of God, and by the knowledge of His word added to our understanding; and why it has pleased God to hide the like saving knowledge from so many millions of souls, who, if I might judge by this poor savage, would make a much better use of it than we did.

From hence I sometimes was led too far, to invade the sovereignty of Providence, and, as it were, arraign the justice of so arbitrary a disposition of things, that should hide that sight from some, and reveal it to others, and yet expect a like duty from both; but I shut it up, and checked my thoughts with this conclusion: first, that we did not know by what light and law these should be condemned; but that as God was necessarily, and by the nature of His being, infinitely holy and just, so it could not be, but if these creatures were all sentenced to absence from Himself, it was on account of sinning against that light which, as the Scripture says, was a law to themselves, and by such rules as their consciences would acknowledge to be just, though the foundation was not discovered to us; and secondly, that still as we all are the clay in the hand of the potter, no vessel could say to him, "Why hast thou formed me thus?"

But to return to my new companion. I was greatly delighted with him, and made it my business to teach him everything that was proper to make him useful, handy, and helpful; but especially to make him speak, and understand me when I spoke; and he was the aptest scholar that ever was; and particularly was so merry, so constantly diligent, and so pleased when he could but understand me, or make me understand him, that it was very pleasant for me to talk to him. Now my life began to be so easy that I began to say to myself that could I but have been safe from more savages, I cared not if I was never to remove from the place where I lived.

Chapter 15 - Friday's Education

After I had been two or three days returned to my castle, I thought that, in order to bring Friday off from his horrid way of feeding, and from the relish of a cannibal's stomach, I ought to let him taste other flesh; so I took him out with me one morning to the woods. I went, indeed, intending to kill a kid out of my own flock; and bring it home and dress it; but as I was going I saw a she-goat lying down in the shade, and two young kids sitting by her. I catched hold of Friday. "Hold," said I, "stand still;" and made signs to him not to stir: immediately I presented my piece, shot, and killed one of the kids. The poor creature, who had at a distance, indeed, seen me kill the savage, his enemy, but did not know, nor could imagine how it was done, was sensibly surprised, trembled, and shook, and looked so amazed that I thought he would have sunk down. He did not see the kid I shot at, or perceive I had killed it, but ripped up his waistcoat to feel whether he was not wounded; and, as I found presently, thought I was resolved to kill him: for he came and kneeled down to me, and embracing my knees, said a great many things I did not understand; but I could easily see the meaning was to pray me not to kill him.

I soon found a way to convince him that I would do him no harm; and taking him up by the hand, laughed at him, and pointing to the kid which I had killed, beckoned to him to run and fetch it, which he did: and while he was wondering, and looking to see how the creature was killed, I loaded my gun again. By-and-by I saw a great fowl, like a hawk, sitting upon a tree within shot; so, to let Friday understand a little what I would do, I called him to me again, pointed at the fowl, which was indeed a parrot, though I thought it had been a hawk; I say, pointing to the parrot, and to my gun, and to the ground under the parrot, to let him see I would make it fall, I made him understand that I would shoot and kill that bird; accordingly, I fired, and bade him look, and immediately he saw the parrot fall. He stood like one frightened again, notwithstanding all I had said to him; and I found he was the more amazed, because he did not see me put anything into the gun, but thought that there must be some wonderful fund of death and destruction in that thing, able to kill man, beast, bird, or anything near or far off; and the astonishment this created in him was such as could not wear off for a long time; and I believe, if I would have let him, he would have worshipped me and my gun. As for the gun itself, he would not so much as touch it for several days after; but he would speak to it and talk to it, as if it had answered him, when he was by himself; which, as I afterwards learned of him, was to desire it not to kill him.

Well, after his astonishment was a little over at this, I pointed to him to run and fetch the bird I had shot, which he did, but stayed some time; for the parrot, not being quite dead, had fluttered away a good distance from the place where she fell: however, he found her, took her up, and brought her to me; and as I had perceived his ignorance about the gun before, I took this advantage to charge the gun again, and not to let him see me do it, that I might be ready for any other mark that might present; but nothing more offered at that time: so I brought home the kid, and the same evening I took the skin off, and cut it out as well as I could; and having a pot fit for that purpose, I boiled or stewed some of the flesh, and made some very good broth. After I had begun to eat some I gave some to my man, who seemed very glad of it, and liked it very well; but that which was strangest to him was to see me eat salt with it. He made a sign to me that the salt was not good to eat; and putting a little into his own mouth, he seemed to nauseate it, and would spit and sputter at it, washing his mouth with fresh water after it: on the other hand, I took some meat into my mouth without salt, and I pretended to spit and sputter for want of salt, as much as he had done at the salt; but it would not do; he would never care for salt with meat or in his broth; at least, not for a great while, and then but a very little.

Having thus fed him with boiled meat and broth, I was resolved to feast him the next day by roasting a piece of the kid: this I did by hanging it before the fire on a string, as I had seen many people do in England, setting two poles up, one on each side of the fire, and one across the top, and tying the string to the cross stick, letting the meat turn continually. This Friday admired very much; but when he came to taste the flesh, he took so many ways to tell me how well he liked it, that I could not but understand him: and at last he told me, as well as he could, he would never eat man's flesh any more, which I was very glad to hear.

The next day I set him to work beating some corn out, and sifting it in the manner I used to do, as I observed before; and he soon understood how to do it as well as I, especially after he had seen what the meaning of it was, and that it was to make bread of; for after that I let him see me make my bread, and bake it too; and in a little time Friday was able to do all the work for me as well as I could do it myself.

I began now to consider, that having two mouths to feed instead of one, I must provide more ground for my harvest, and plant a larger quantity of corn than I used to do; so I marked out a larger piece of land, and began the fence in the same manner as before, in which Friday worked not only very willingly and very hard, but did it very cheerfully: and I told him what it was for; that it was for corn to make more bread, because he was now with me, and that I might have enough for him and myself too. He appeared very sensible of that part, and let me know that he thought I had much more labour upon me on his account than I had for myself; and that he would work the harder for me if I would tell him what to do.

This was the pleasantest year of all the life I led in this place. Friday began to talk pretty well, and understand the names of almost everything I had occasion to call for, and of every place I had to send him to, and talked a great deal to me; so that, in short, I began now to have some use for my tongue again, which, indeed, I had very little occasion for before. Besides the pleasure of talking to him, I had a singular satisfaction in the fellow himself: his simple, unfeigned honesty appeared to me more and more every day, and I began really to love the creature; and on his side I believe he loved me more than it was possible for him ever to love anything before.

I had a mind once to try if he had any inclination for his own country again; and having taught him English so well that he could answer me almost any question, I asked him whether the nation that he belonged to never conquered in battle? At which he smiled, and said—"Yes, yes, we always fight the better;" that is, he meant always get the better in fight; and so we began the following discourse:—

Master.—You always fight the better; how came you to be taken prisoner, then, Friday?

Friday.—My nation beat much for all that.

Master.—How beat? If your nation beat them, how came you to be taken?

Friday.—They more many than my nation, in the place where me was; they take one, two, three, and me: my nation over-beat them in the yonder place, where me no was; there my nation take one, two, great thousand.

Master.—But why did not your side recover you from the hands of your enemies, then?

Friday.—They run, one, two, three, and me, and make go in the canoe; my nation have no canoe that time.

Master.—Well, Friday, and what does your nation do with the men they take? Do they carry them away and eat them, as these did?

Friday.—Yes, my nation eat mans too; eat all up.

Master.—Where do they carry them?

Friday.—Go to other place, where they think.

Master.—Do they come hither?

Friday.—Yes, yes, they come hither; come other else place.

Master.—Have you been here with them?

Friday.—Yes, I have been here (points to the NW. side of the island, which, it seems, was their side).

By this I understood that my man Friday had formerly been among the savages who used to come on shore on the farther part of the island, on the same man-eating occasions he was now brought for; and some time after, when I took the courage to carry him to that side, being the same I formerly mentioned, he presently knew the place, and told me he was there once, when they ate up twenty men, two women, and one child; he could not tell twenty in English, but he numbered them by laying so many stones in a row, and pointing to me to tell them over.

I have told this passage, because it introduces what follows: that after this discourse I had with him, I asked him how far it was from our island to the shore, and whether the canoes were not often lost. He told me there was no danger, no canoes ever lost: but that after a little way out to sea, there was a current and wind, always one way in the morning, the other in the afternoon. This I understood to be no more than the sets of the tide, as going out or coming in; but I afterwards understood it was occasioned by the great draft and reflux of the mighty river Orinoco, in the mouth or gulf of which river, as I found afterwards, our island lay; and that this land, which I perceived to be W. and NW., was the great island Trinidad, on the north point of the mouth of the river. I asked Friday a thousand questions about the country, the inhabitants, the sea, the coast, and what nations were near; he told me all he knew with the greatest openness imaginable. I asked him the names of the several nations of his sort of people, but could get no other name than Caribs; from whence I easily understood that these were the Caribbees, which our maps place on the part of America which reaches from the mouth of the river Orinoco to Guiana, and onwards to St. Martha. He told me that up a great way beyond the moon, that was beyond the setting of the moon, which must be west from their country, there dwelt white bearded men, like me, and pointed to my great whiskers, which I mentioned before; and that they had killed much mans, that was his word: by all which I understood he meant the Spaniards, whose cruelties in America had been spread over the whole country, and were remembered by all the nations from father to son.

Crusoe
Chapter 15

I inquired if he could tell me how I might go from this island, and get among those white men. He told me, "Yes, yes, you may go in two canoe." I could not understand what he meant, or make him describe to me what he meant by two canoe, till at last, with great difficulty, I found he meant it must be in a large boat, as big as two canoes. This part of Friday's discourse I began to relish very well; and from this time I entertained some hopes that, one time or other, I might find an opportunity to make my escape from this place, and that this poor savage might be a means to help me.

During the long time that Friday had now been with me, and that he began to speak to me, and understand me, I was not wanting to lay a foundation of religious knowledge in his mind; particularly I asked him one time, who made him. The creature did not understand me at all, but thought I had asked who was his father—but I took it up by another handle, and asked him who made the sea, the ground we walked on, and the hills and woods. He told me, "It was one Benamuckee, that lived beyond all;" he could describe nothing of this great person, but that he was very old, "much older," he said, "than the sea or land, than the moon or the stars." I asked him then, if this old person had made all things, why did not all things worship him? He looked very grave, and, with a perfect look of innocence, said, "All things say O to him." I asked him if the people who die in his country went away anywhere? He said, "Yes; they all went to Benamuckee." Then I asked him whether those they eat up went thither too. He said, "Yes."

From these things, I began to instruct him in the knowledge of the true God; I told him that the great Maker of all things lived up there, pointing up towards heaven; that He governed the world by the same power and providence by which He made it; that He was omnipotent, and could do everything for us, give everything to us, take everything from us; and thus, by degrees, I opened his eyes. He listened with great attention, and received with pleasure the notion of Jesus Christ being sent to redeem us; and of the manner of making our prayers to God, and His being able to hear us, even in heaven. He told me one day, that if our God could hear us, up beyond the sun, he must needs be a greater God than their Benamuckee, who lived but a little way off, and yet could not hear till they went up to the great mountains where he dwelt to speak to them.

I asked him if ever he went thither to speak to him. He said, "No; they never went that were young men; none went thither but the old men," whom he called their Oowokakee; that is, as I made him explain to me, their religious, or clergy; and that they went to say O (so he called saying prayers), and then came back and told them what Benamuckee said. By this I observed, that there is priestcraft even among the most blinded, ignorant pagans in the world; and the policy of making a secret of religion, in order to preserve the veneration of the people to the clergy, not only to be found in the Roman, but, perhaps, among all religions in the world, even among the most brutish and barbarous savages.

I endeavoured to clear up this fraud to my man Friday; and told him that the pretence of their old men going up to the mountains to say O to their god Benamuckee was a cheat; and their bringing word from thence what he said was much more so; that if they met with any answer, or spake with any one there, it must be with an evil spirit; and then I entered into a long discourse with him about the devil, the origin of him, his rebellion against God, his enmity to man, the reason of it, his setting himself up in the dark parts of the world to be worshipped instead of God, and as God, and the many stratagems he made use of to delude mankind to their ruin; how he had a secret access to our passions and to our affections, and to adapt his snares to our inclinations, so as to cause us even to be our own tempters, and run upon our destruction by our own choice.

I found it was not so easy to imprint right notions in his mind about the devil as it was about the being of a God. Nature assisted all my arguments to evidence to him even the necessity of a great First Cause, an overruling, governing Power, a secret directing Providence, and of the equity and justice of paying homage to Him that made us, and the like; but there appeared nothing of this kind in the notion of an evil spirit, of his origin, his being, his nature, and above all, of his inclination to do evil, and to draw us in to do so too; and the poor creature puzzled me once in such a manner, by a question merely natural and innocent, that I scarce knew what to say to him. I had been talking a great deal to him of the power of God, His omnipotence, His aversion to sin, His being a consuming fire to the workers of iniquity; how, as He had made us all, He could destroy us and all the world in a moment; and he listened with great seriousness to me all the while.

After this I had been telling him how the devil was God's enemy in the hearts of men, and used all his malice and skill to defeat the good designs of Providence, and to ruin the kingdom of Christ in the world, and the like. "Well," says Friday, "but you say God is so strong, so great; is He not much strong, much might as the devil?" "Yes, yes," says I, "Friday; God is stronger than the devil—God is above the devil, and therefore we pray to God to tread him down under our feet, and enable us to resist his temptations and quench his fiery darts." "But," says he again, "if God much stronger, much might as the wicked devil, why God no kill the devil, so make him no more do wicked?" I was strangely surprised at this question; and, after all, though I was now an old man, yet I was but a young doctor, and ill qualified for a casuist or a solver of difficulties; and at first I could not tell what to say; so I pretended not to hear him, and asked him what he said; but he was too earnest for an answer to forget his question, so that he repeated it in the very same broken words as above. By this time I had recovered myself a little, and I said, "God will at last punish him severely; he is reserved for the judgment, and is to be cast into the bottomless pit, to dwell with everlasting fire." This did not satisfy Friday; but he returns upon me, repeating my words, "'Reserve at last!' me no understand—but why not kill the devil now; not kill great ago?" "You may as well ask me," said I, "why God does not kill you or me, when we do wicked things here that offend Him—we are preserved to repent and be pardoned." He mused some time on this.

"Well, well," says he, mighty affectionately, "that well—so you, I, devil, all wicked, all preserve, repent, God pardon all." Here I was run down again by him to the last degree; and it was a testimony to me, how the mere notions of nature, though they will guide reasonable creatures to the knowledge of a God, and of a worship or homage due to the supreme being of God, as the consequence of our nature, yet nothing but divine revelation can form the knowledge of Jesus Christ, and of redemption purchased for us; of a Mediator of the new covenant, and of an Intercessor at the footstool of God's throne; I say, nothing but a revelation from Heaven can form these in the soul; and that, therefore, the gospel of our Lord and Saviour Jesus Christ, I mean the Word of God, and the Spirit of God, promised for the guide and sanctifier of His people, are the absolutely necessary instructors of the souls of men in the saving knowledge of God and the means of salvation.

I therefore diverted the present discourse between me and my man, rising up hastily, as upon some sudden occasion of going out; then sending him for something a good way off, I seriously prayed to God that He would enable me to instruct savingly this poor savage; assisting, by His Spirit, the heart of the poor ignorant creature to receive the light of the knowledge of God in Christ, reconciling him to Himself, and would guide me so to speak to him from the Word of God that his conscience might be convinced, his eyes opened, and his soul saved. When he came again to me, I entered into a long discourse with him upon the subject of the redemption of man by the Saviour of the world, and of the doctrine of the gospel preached from Heaven, viz. of repentance towards God, and faith in our blessed Lord Jesus. I then explained to him as well as I could why our blessed Redeemer took not on Him the nature of angels but the seed of Abraham; and how, for that reason, the fallen angels had no share in the redemption; that He came only to the lost sheep of the house of Israel, and the like.

I had, God knows, more sincerity than knowledge in all the methods I took for this poor creature's instruction, and must acknowledge, what I believe all that act upon the same principle will find, that in laying things open to him, I really informed and instructed myself in many things that either I did not know or had not fully considered before, but which occurred naturally to my mind upon searching into them, for the information of this poor savage; and I had more affection in my inquiry after things upon this occasion than ever I felt before: so that, whether this poor wild wretch was better for me or no, I had great reason to be thankful that ever he came to me; my grief sat lighter, upon me; my habitation grew comfortable to me beyond measure: and when I reflected that in this solitary life which I have been confined to, I had not only been moved to look up to heaven myself, and to seek the Hand that had brought me here, but was now to be made an instrument, under Providence, to save the life, and, for aught I knew, the soul of a poor savage, and bring him to the true knowledge of religion and of the Christian doctrine, that he might know Christ Jesus, in whom is life eternal; I say, when I reflected upon all these things, a secret joy ran through every part of My soul, and I frequently rejoiced that ever I was brought to this place, which I had so often thought the most dreadful of all afflictions that could possibly have befallen me.

I continued in this thankful frame all the remainder of my time; and the conversation which employed the hours between Friday and me was such as made the three years which we lived there together perfectly and completely happy, if any such thing as complete happiness can be formed in a sublunary state. This savage was now a good Christian, a much better than I; though I have reason to hope, and bless God for it, that we were equally penitent, and comforted, restored penitents. We had here the Word of God to read, and no farther off from His Spirit to instruct than if we had been in England. I always applied myself, in reading the Scripture, to let him know, as well as I could, the meaning of what I read; and he again, by his serious inquiries and questionings, made me, as I said before, a much better scholar in the Scripture knowledge than I should ever have been by my own mere private reading. Another thing I cannot refrain from observing here also, from experience in this retired part of my life, viz. how infinite and inexpressible a blessing it is that the knowledge of God, and of the doctrine of salvation by Christ Jesus, is so plainly laid down in the Word of God, so easy to be received and understood, that, as the bare reading the Scripture made me capable of understanding enough of my duty to carry me directly on to the great work of sincere repentance for my sins, and laying hold of a Saviour for life and salvation, to a stated reformation in practice, and obedience to all God's commands, and this without any teacher or instructor, I mean human; so the same plain instruction sufficiently served to the enlightening this savage creature, and bringing him to be such a Christian as I have known few equal to him in my life.

As to all the disputes, wrangling, strife, and contention which have happened in the world about religion, whether niceties in doctrines or schemes of church government, they were all perfectly useless to us, and, for aught I can yet see, they have been so to the rest of the world. We had the sure guide to heaven, viz. the Word of God; and we had, blessed be God, comfortable views of the Spirit of God teaching and instructing by His word, leading us into all truth, and making us both willing and obedient to the instruction of His word. And I cannot see the least use that the greatest knowledge of the disputed points of religion, which have made such confusion in the world, would have been to us, if we could have obtained it. But I must go on with the historical part of things, and take every part in its order.

After Friday and I became more intimately acquainted, and that he could understand almost all I said to him, and speak pretty fluently, though in broken English, to me, I acquainted him with my own history, or at least so much of it as related to my coming to this place: how I had lived there, and how long; I let him into the mystery, for such it was to him, of gunpowder and bullet, and taught him how to shoot. I gave him a knife, which he was wonderfully delighted with; and I made him a belt, with a frog hanging to it, such as in England we wear hangers in; and in the frog, instead of a hanger, I gave him a hatchet, which was not only as good a weapon in some cases, but much more useful upon other occasions.

I described to him the country of Europe, particularly England, which I came from; how we lived, how we worshipped God, how we behaved to one another, and how we traded in ships to all parts of the world. I gave him an account of the wreck which I had been on board of, and showed him, as near as I could, the place where she lay; but she was all beaten in pieces before, and gone. I showed him the ruins of our boat, which we lost when we escaped, and which I could not stir with my whole strength then; but was now fallen almost all to pieces. Upon seeing this boat, Friday stood, musing a great while, and said nothing.

I asked him what it was he studied upon. At last says he, "Me see such boat like come to place at my nation." I did not understand him a good while; but at last, when I had examined further into it, I understood by him that a boat, such as that had been, came on shore upon the country where he lived: that is, as he explained it, was driven thither by stress of weather. I presently imagined that some European ship must have been cast away upon their coast, and the boat might get loose and drive ashore; but was so dull that I never once thought of men making their escape from a wreck thither, much less whence they might come: so I only inquired after a description of the boat.

Friday described the boat to me well enough; but brought me better to understand him when he added with some warmth, "We save the white mans from drown." Then I presently asked if there were any white mans, as he called them, in the boat. "Yes," he said; "the boat full of white mans." I asked him how many. He told upon his fingers seventeen. I asked him then what became of them. He told me, "They live, they dwell at my nation."

This put new thoughts into my head; for I presently imagined that these might be the men belonging to the ship that was cast away in the sight of my island, as I now called it; and who, after the ship was struck on the rock, and they saw her inevitably lost, had saved themselves in their boat, and were landed upon that wild shore among the savages. Upon this I inquired of him more critically what was become of them. He assured me they lived still there; that they had been there about four years; that the savages left them alone, and gave them victuals to live on. I asked him how it came to pass they did not kill them and eat them. He said, "No, they make brother with them;" that is, as I understood him, a truce; and then he added, "They no eat mans but when make the war fight;" that is to say, they never eat any men but such as come to fight with them and are taken in battle.

It was after this some considerable time, that being upon the top of the hill at the east side of the island, from whence, as I have said, I had, in a clear day, discovered the main or continent of America, Friday, the weather being very serene, looks very earnestly towards the mainland, and, in a kind of surprise, falls a jumping and dancing, and calls out to me, for I was at some distance from him. I asked him what was the matter. "Oh, joy!" says he; "Oh, glad! there see my country, there my nation!" I observed an extraordinary sense of pleasure appeared in his face, and his eyes sparkled, and his countenance discovered a strange eagerness, as if he had a mind to be in his own country again.

This observation of mine put a great many thoughts into me, which made me at first not so easy about my new man Friday as I was before; and I made no doubt but that, if Friday could get back to his own nation again, he would not only forget all his religion but all his obligation to me, and would be forward enough to give his countrymen an account of me, and come back, perhaps with a hundred or two of them, and make a feast upon me, at which he might be as merry as he used to be with those of his enemies when they were taken in war. But I wronged the poor honest creature very much, for which I was very sorry afterwards. However, as my jealousy increased, and held some weeks, I was a little more circumspect, and not so familiar and kind to him as before: in which I was certainly wrong too; the honest, grateful creature having no thought about it but what consisted with the best principles, both as a religious Christian and as a grateful friend, as appeared afterwards to my full satisfaction.

While my jealousy of him lasted, you may be sure I was every day pumping him to see if he would discover any of the new thoughts which I suspected were in him; but I found everything he said was so honest and so innocent, that I could find nothing to nourish my suspicion; and in spite of all my uneasiness, he made me at last entirely his own again; nor did he in the least perceive that I was uneasy, and therefore I could not suspect him of deceit.

One day, walking up the same hill, but the weather being hazy at sea, so that we could not see the continent, I called to him, and said, "Friday, do not you wish yourself in your own country, your own nation?" "Yes," he said, "I be much O glad to be at my own nation." "What would you do there?" said I. "Would you turn wild again, eat men's flesh again, and be a savage as you were before?" He looked full of concern, and shaking his head, said, "No, no, Friday tell them to live good; tell them to pray God; tell them to eat corn-bread, cattle flesh, milk; no eat man again." "Why, then," said I to him, "they will kill you." He looked grave at that, and then said, "No, no, they no kill me, they willing love learn." He meant by this, they would be willing to learn. He added, they learned much of the bearded mans that came in the boat. Then I asked him if he would go back to them. He smiled at that, and told me that he could not swim so far. I told him I would make a canoe for him. He told me he would go if I would go with him.

"I go!" says I; "why, they will eat me if I come there." "No, no," says he, "me make they no eat you; me make they much love you." He meant, he would tell them how I had killed his enemies, and saved his life, and so he would make them love me. Then he told me, as well as he could, how kind they were to seventeen white men, or bearded men, as he called them who came on shore there in distress.

From this time, I confess, I had a mind to venture over, and see if I could possibly join with those bearded men, who I made no doubt were Spaniards and Portuguese; not doubting but, if I could, we might find some method to escape from thence, being upon the continent, and a good company together, better than I could from an island forty miles off the shore, alone and without help. So, after some days, I took Friday to work again by way of discourse, and told him I would give him a boat to go back to his own nation; and, accordingly, I carried him to my frigate, which lay on the other side of the island, and having cleared it of water (for I always kept it sunk in water), I brought it out, showed it him, and we both went into it. I found he was a most dexterous fellow at managing it, and would make it go almost as swift again as I could.

So when he was in, I said to him, "Well, now, Friday, shall we go to your nation?" He looked very dull at my saying so; which it seems was because he thought the boat was too small to go so far. I then told him I had a bigger; so the next day I went to the place where the first boat lay which I had made, but which I could not get into the water. He said that was big enough; but then, as I had taken no care of it, and it had lain two or three and twenty years there, the sun had so split and dried it, that it was rotten. Friday told me such a boat would do very well, and would carry "much enough vittle, drink, bread;" this was his way of talking.

Chapter 16 - Rescue Of Prisoners From Cannibals

Upon the whole, I was by this time so fixed upon my design of going over with him to the continent that I told him we would go and make one as big as that, and he should go home in it. He answered not one word, but looked very grave and sad. I asked him what was the matter with him. He asked me again, "Why you angry mad with Friday?—what me done?" I asked him what he meant. I told him I was not angry with him at all. "No angry!" says he, repeating the words several times; "why send Friday home away to my nation?" "Why," says I, "Friday, did not you say you wished you were there?" "Yes, yes," says he, "wish we both there; no wish Friday there, no master there." In a word, he would not think of going there without me. "I go there, Friday?" says I; "what shall I do there?" He turned very quick upon me at this. "You do great deal much good," says he; "you teach wild mans be good, sober, tame mans; you tell them know God, pray God, and live new life." "Alas, Friday!" says I, "thou knowest not what thou sayest; I am but an ignorant man myself." "Yes, yes," says he, "you teachee me good, you teachee them good." "No, no, Friday," says I, "you shall go without me; leave me here to live by myself, as I did before." He looked confused again at that word; and running to one of the hatchets which he used to wear, he takes it up hastily, and gives it to me. "What must I do with this?" says I to him. "You take kill Friday," says he. "What must kill you for?" said I again. He returns very quick—"What you send Friday away for? Take kill Friday, no send Friday away." This he spoke so earnestly that I saw tears stand in his eyes. In a word, I so plainly discovered the utmost affection in him to me, and a firm resolution in him, that I told him then and often after, that I would never send him away from me if he was willing to stay with me.

Upon the whole, as I found by all his discourse a settled affection to me, and that nothing could part him from me, so I found all the foundation of his desire to go to his own country was laid in his ardent affection to the people, and his hopes of my doing them good; a thing which, as I had no notion of myself, so I had not the least thought or intention, or desire of undertaking it. But still I found a strong inclination to attempting my escape, founded on the supposition gathered from the discourse, that there were seventeen bearded men there; and therefore, without any more delay, I went to work with Friday to find out a great tree proper to fell, and make a large periagua, or canoe, to undertake the voyage. There were trees enough in the island to have built a little fleet, not of periaguas or canoes, but even of good, large vessels; but the main thing I looked at was, to get one so near the water that we might launch it when it was made, to avoid the mistake I committed at first. At last Friday pitched upon a tree; for I found he knew much better than I what kind of wood was fittest for it; nor can I tell to this day what wood to call the tree we cut down, except that it was very like the tree we call fustic, or between that and the Nicaragua wood, for it was much of the same colour and smell. Friday wished to burn the hollow or cavity of this tree out, to make it for a boat, but I showed him how to cut it with tools; which, after I had showed him how to use, he did very handily; and in about a month's hard labour we finished it and made it very handsome; especially when, with our axes, which I showed him how to handle, we cut and hewed the outside into the true shape of a boat. After this, however, it cost us near a fortnight's time to get her along, as it were inch by inch, upon great rollers into the water; but when she was in, she would have carried twenty men with great ease.

When she was in the water, though she was so big, it amazed me to see with what dexterity and how swift my man Friday could manage her, turn her, and paddle her along. So I asked him if he would, and if we might venture over in her. "Yes," he said, "we venture over in her very well, though great blow wind." However I had a further design that he knew nothing of, and that was, to make a mast and a sail, and to fit her with an anchor and cable. As to a mast, that was easy enough to get; so I pitched upon a straight young cedar-tree, which I found near the place, and which there were great plenty of in the island, and I set Friday to work to cut it down, and gave him directions how to shape and order it. But as to the sail, that was my particular care. I knew I had old sails, or rather pieces of old sails, enough; but as I had had them now six-and-twenty years by me, and had not been very careful to preserve them, not imagining that I should ever have this kind of use for them, I did not doubt but they were all rotten; and, indeed, most of them were so. However, I found two pieces which appeared pretty good, and with these I went to work; and with a great deal of pains, and awkward stitching, you may be sure, for want of needles, I at length made a three-cornered ugly thing, like what we call in England a shoulder-of-mutton sail, to go with a boom at bottom, and a little short sprit at the top, such as usually our ships' long-boats sail with, and such as I best knew how to manage, as it was such a one as I had to the boat in which I made my escape from Barbary, as related in the first part of my story.

I was near two months performing this last work, viz. rigging and fitting my masts and sails; for I finished them very complete, making a small stay, and a sail, or foresail, to it, to assist if we should turn to windward; and, what was more than all, I fixed a rudder to the stern of her to steer with. I was but a bungling shipwright, yet as I knew the usefulness and even necessity of such a thing, I applied myself with so much pains to do it, that at last I brought it to pass; though, considering the many dull contrivances I had for it that failed, I think it cost me almost as much labour as making the boat.

After all this was done, I had my man Friday to teach as to what belonged to the navigation of my boat; though he knew very well how to paddle a canoe, he knew nothing of what belonged to a sail and a rudder; and was the most amazed when he saw me work the boat to and again in the sea by the rudder, and how the sail jibed, and filled this way or that way as the course we sailed changed; I say when he saw this he stood like one astonished and amazed. However, with a little use, I made all these things familiar to him, and he became an expert sailor, except that of the compass I could make him understand very little. On the other hand, as there was very little cloudy weather, and seldom or never any fogs in those parts, there was the less occasion for a compass, seeing the stars were always to be seen by night, and the shore by day, except in the rainy seasons, and then nobody cared to stir abroad either by land or sea.

I was now entered on the seven-and-twentieth year of my captivity in this place; though the three last years that I had this creature with me ought rather to be left out of the account, my habitation being quite of another kind than in all the rest of the time. I kept the anniversary of my landing here with the same thankfulness to God for His mercies as at first: and if I had such cause of acknowledgment at first, I had much more so now, having such additional testimonies of the care of Providence over me, and the great hopes I had of being effectually and speedily delivered; for I had an invincible impression upon my thoughts that my deliverance was at hand, and that I should not be another year in this place. I went on, however, with my husbandry; digging, planting, and fencing as usual. I gathered and cured my grapes, and did every necessary thing as before.

The rainy season was in the meantime upon me, when I kept more within doors than at other times. We had stowed our new vessel as secure as we could, bringing her up into the creek, where, as I said in the beginning, I landed my rafts from the ship; and hauling her up to the shore at high-water mark, I made my man Friday dig a little dock, just big enough to hold her, and just deep enough to give her water enough to float in; and then, when the tide was out, we made a strong dam across the end of it, to keep the water out; and so she lay, dry as to the tide from the sea: and to keep the rain off we laid a great many boughs of trees, so thick that she was as well thatched as a house; and thus we waited for the months of November and December, in which I designed to make my adventure.

When the settled season began to come in, as the thought of my design returned with the fair weather, I was preparing daily for the voyage. And the first thing I did was to lay by a certain quantity of provisions, being the stores for our voyage; and intended in a week or a fortnight's time to open the dock, and launch out our boat. I was busy one morning upon something of this kind, when I called to Friday, and bid him to go to the sea-shore and see if he could find a turtle or a tortoise, a thing which we generally got once a week, for the sake of the eggs as well as the flesh. Friday had not been long gone when he came running back, and flew over my outer wall or fence, like one that felt not the ground or the steps he set his foot on; and before I had time to speak to him he cries out to me, "O master! O master! O sorrow! O bad!"—"What's the matter, Friday?" says I. "O yonder there," says he, "one, two, three canoes; one, two, three!" By this way of speaking I concluded there were six; but on inquiry I found there were but three. "Well, Friday," says I, "do not be frightened." So I heartened him up as well as I could. However, I saw the poor fellow was most terribly scared, for nothing ran in his head but that they were come to look for him, and would cut him in pieces and eat him; and the poor fellow trembled so that I scarcely knew what to do with him. I comforted him as well as I could, and told him I was in as much danger as he, and that they would eat me as well as him. "But," says I, "Friday, we must resolve to fight them. Can you fight, Friday?" "Me shoot," says he, "but there come many great number." "No matter for that," said I again; "our guns will fright them that we do not kill." So I asked him whether, if I resolved to defend him, he would defend me, and stand by me, and do just as I bid him. He said, "Me die when you bid die, master."

So I went and fetched a good dram of rum and gave him; for I had been so good a husband of my rum that I had a great deal left. When we had drunk it, I made him take the two fowling-pieces, which we always carried, and loaded them with large swan-shot, as big as small pistol-bullets. Then I took four muskets, and loaded them with two slugs and five small bullets each; and my two pistols I loaded with a brace of bullets each. I hung my great sword, as usual, naked by my side, and gave Friday his hatchet. When I had thus prepared myself, I took my perspective glass, and went up to the side of the hill, to see what I could discover; and I found quickly by my glass that there were one-and-twenty savages, three prisoners, and three canoes; and that their whole business seemed to be the triumphant banquet upon these three human bodies: a barbarous feast, indeed! but nothing more than, as I had observed, was usual with them. I observed also that they had landed, not where they had done when Friday made his escape, but nearer to my creek, where the shore was low, and where a thick wood came almost close down to the sea. This, with the abhorrence of the inhuman errand these wretches came about, filled me with such indignation that I came down again to Friday, and told him I was resolved to go down to them and kill them all; and asked him if he would stand by me. He had now got over his fright, and his spirits being a little raised with the dram I had given him, he was very cheerful, and told me, as before, he would die when I bid die.

In this fit of fury I divided the arms which I had charged, as before, between us; I gave Friday one pistol to stick in his girdle, and three guns upon his shoulder, and I took one pistol and the other three guns myself; and in this posture we marched out. I took a small bottle of rum in my pocket, and gave Friday a large bag with more powder and bullets; and as to orders, I charged him to keep close behind me, and not to stir, or shoot, or do anything till I bid him, and in the meantime not to speak a word. In this posture I fetched a compass to my right hand of near a mile, as well to get over the creek as to get into the wood, so that I could come within shot of them before I should be discovered, which I had seen by my glass it was easy to do.

While I was making this march, my former thoughts returning, I began to abate my resolution: I do not mean that I entertained any fear of their number, for as they were naked, unarmed wretches, it is certain I was superior to them—nay, though I had been alone. But it occurred to my thoughts, what call, what occasion, much less what necessity I was in to go and dip my hands in blood, to attack people who had neither done or intended me any wrong? who, as to me, were innocent, and whose barbarous customs were their own disaster, being in them a token, indeed, of God's having left them, with the other nations of that part of the world, to such stupidity, and to such inhuman courses, but did not call me to take upon me to be a judge of their actions, much less an executioner of His justice—that whenever He thought fit He would take the cause into His own hands, and by national vengeance punish them as a people for national crimes, but that, in the meantime, it was none of my business—that it was true Friday might justify it, because he was a declared enemy and in a state of war with those very particular people, and it was lawful for him to attack them—but I could not say the same with regard to myself. These things were so warmly pressed upon my thoughts all the way as I went, that I resolved I would only go and place myself near them that I might observe their barbarous feast, and that I would act then as God should direct; but that unless something offered that was more a call to me than yet I knew of, I would not meddle with them.

With this resolution I entered the wood, and, with all possible wariness and silence, Friday following close at my heels, I marched till I came to the skirts of the wood on the side which was next to them, only that one corner of the wood lay between me and them. Here I called softly to Friday, and showing him a great tree which was just at the corner of the wood, I bade him go to the tree, and bring me word if he could see there plainly what they were doing. He did so, and came immediately back to me, and told me they might be plainly viewed there—that they were all about their fire, eating the flesh of one of their prisoners, and that another lay bound upon the sand a little from them, whom he said they would kill next; and this fired the very soul within me. He told me it was not one of their nation, but one of the bearded men he had told me of, that came to their country in the boat. I was filled with horror at the very naming of the white bearded man; and going to the tree, I saw plainly by my glass a white man, who lay upon the beach of the sea with his hands and his feet tied with flags, or things like rushes, and that he was an European, and had clothes on.

There was another tree and a little thicket beyond it, about fifty yards nearer to them than the place where I was, which, by going a little way about, I saw I might come at undiscovered, and that then I should be within half a shot of them; so I withheld my passion, though I was indeed enraged to the highest degree; and going back about twenty paces, I got behind some bushes, which held all the way till I came to the other tree, and then came to a little rising ground, which gave me a full view of them at the distance of about eighty yards.

I had now not a moment to lose, for nineteen of the dreadful wretches sat upon the ground, all close huddled together, and had just sent the other two to butcher the poor Christian, and bring him perhaps limb by limb to their fire, and they were stooping down to untie the bands at his feet. I turned to Friday. "Now, Friday," said I, "do as I bid thee." Friday said he would. "Then, Friday," says I, "do exactly as you see me do; fail in nothing." So I set down one of the muskets and the fowling-piece upon the ground, and Friday did the like by his, and with the other musket I took my aim at the savages, bidding him to do the like; then asking him if he was ready, he said, "Yes." "Then fire at them," said I; and at the same moment I fired also.

Friday took his aim so much better than I, that on the side that he shot he killed two of them, and wounded three more; and on my side I killed one, and wounded two. They were, you may be sure, in a dreadful consternation: and all of them that were not hurt jumped upon their feet, but did not immediately know which way to run, or which way to look, for they knew not from whence their destruction came. Friday kept his eyes close upon me, that, as I had bid him, he might observe what I did; so, as soon as the first shot was made, I threw down the piece, and took up the fowling-piece, and Friday did the like; he saw me cock and present; he did the same again. "Are you ready, Friday?" said I. "Yes," says he. "Let fly, then," says I, "in the name of God!" and with that I fired again among the amazed wretches, and so did Friday; and as our pieces were now loaded with what I call swan-shot, or small pistol-bullets, we found only two drop; but so many were wounded that they ran about yelling and screaming like mad creatures, all bloody, and most of them miserably wounded; whereof three more fell quickly after, though not quite dead.

"Now, Friday," says I, laying down the discharged pieces, and taking up the musket which was yet loaded, "follow me," which he did with a great deal of courage; upon which I rushed out of the wood and showed myself, and Friday close at my foot. As soon as I perceived they saw me, I shouted as loud as I could, and bade Friday do so too, and running as fast as I could, which, by the way, was not very fast, being loaded with arms as I was, I made directly towards the poor victim, who was, as I said, lying upon the beach or shore, between the place where they sat and the sea. The two butchers who were just going to work with him had left him at the surprise of our first fire, and fled in a terrible fright to the seaside, and had jumped into a canoe, and three more of the rest made the same way. I turned to Friday, and bade him step forwards and fire at them; he understood me immediately, and running about forty yards, to be nearer them, he shot at them; and I thought he had killed them all, for I saw them all fall of a heap into the boat, though I saw two of them up again quickly; however, he killed two of them, and wounded the third, so that he lay down in the bottom of the boat as if he had been dead.

While my man Friday fired at them, I pulled out my knife and cut the flags that bound the poor victim; and loosing his hands and feet, I lifted him up, and asked him in the Portuguese tongue what he was. He answered in Latin, Christianus; but was so weak and faint that he could scarce stand or speak. I took my bottle out of my pocket and gave it him, making signs that he should drink, which he did; and I gave him a piece of bread, which he ate. Then I asked him what countryman he was: and he said, Espagniole; and being a little recovered, let me know, by all the signs he could possibly make, how much he was in my debt for his deliverance. "Seignior," said I, with as much Spanish as I could make up, "we will talk afterwards, but we must fight now: if you have any strength left, take this pistol and sword, and lay about you." He took them very thankfully; and no sooner had he the arms in his hands, but, as if they had put new vigour into him, he flew upon his murderers like a fury, and had cut two of them in pieces in an instant; for the truth is, as the whole was a surprise to them, so the poor creatures were so much frightened with the noise of our pieces that they fell down for mere amazement and fear, and had no more power to attempt their own escape than their flesh had to resist our shot; and that was the case of those five that Friday shot at in the boat; for as three of them fell with the hurt they received, so the other two fell with the fright.

I kept my piece in my hand still without firing, being willing to keep my charge ready, because I had given the Spaniard my pistol and sword: so I called to Friday, and bade him run up to the tree from whence we first fired, and fetch the arms which lay there that had been discharged, which he did with great swiftness; and then giving him my musket, I sat down myself to load all the rest again, and bade them come to me when they wanted. While I was loading these pieces, there happened a fierce engagement between the Spaniard and one of the savages, who made at him with one of their great wooden swords, the weapon that was to have killed him before, if I had not prevented it. The Spaniard, who was as bold and brave as could be imagined, though weak, had fought the Indian a good while, and had cut two great wounds on his head; but the savage being a stout, lusty fellow, closing in with him, had thrown him down, being faint, and was wringing my sword out of his hand; when the Spaniard, though undermost, wisely quitting the sword, drew the pistol from his girdle, shot the savage through the body, and killed him upon the spot, before I, who was running to help him, could come near him.

Friday, being now left to his liberty, pursued the flying wretches, with no weapon in his hand but his hatchet: and with that he despatched those three who as I said before, were wounded at first, and fallen, and all the rest he could come up with: and the Spaniard coming to me for a gun, I gave him one of the fowling-pieces, with which he pursued two of the savages, and wounded them both; but as he was not able to run, they both got from him into the wood, where Friday pursued them, and killed one of them, but the other was too nimble for him; and though he was wounded, yet had plunged himself into the sea, and swam with all his might off to those two who were left in the canoe; which three in the canoe, with one wounded, that we knew not whether he died or no, were all that escaped our hands of one-and-twenty. The account of the whole is as follows: Three killed at our first shot from the tree; two killed at the next shot; two killed by Friday in the boat; two killed by Friday of those at first wounded; one killed by Friday in the wood; three killed by the Spaniard; four killed, being found dropped here and there, of the wounds, or killed by Friday in his chase of them; four escaped in the boat, whereof one wounded, if not dead—twenty-one in all.

Those that were in the canoe worked hard to get out of gun-shot, and though Friday made two or three shots at them, I did not find that he hit any of them. Friday would fain have had me take one of their canoes, and pursue them; and indeed I was very anxious about their escape, lest, carrying the news home to their people, they should come back perhaps with two or three hundred of the canoes and devour us by mere multitude; so I consented to pursue them by sea, and running to one of their canoes, I jumped in and bade Friday follow me: but when I was in the canoe I was surprised to find another poor creature lie there, bound hand and foot, as the Spaniard was, for the slaughter, and almost dead with fear, not knowing what was the matter; for he had not been able to look up over the side of the boat, he was tied so hard neck and heels, and had been tied so long that he had really but little life in him.

I immediately cut the twisted flags or rushes which they had bound him with, and would have helped him up; but he could not stand or speak, but groaned most piteously, believing, it seems, still, that he was only unbound in order to be killed. When Friday came to him I bade him speak to him, and tell him of his deliverance; and pulling out my bottle, made him give the poor wretch a dram, which, with the news of his being delivered, revived him, and he sat up in the boat.

But when Friday came to hear him speak, and look in his face, it would have moved any one to tears to have seen how Friday kissed him, embraced him, hugged him, cried, laughed, hallooed, jumped about, danced, sang; then cried again, wrung his hands, beat his own face and head; and then sang and jumped about again like a distracted creature. It was a good while before I could make him speak to me or tell me what was the matter; but when he came a little to himself he told me that it was his father.

It is not easy for me to express how it moved me to see what ecstasy and filial affection had worked in this poor savage at the sight of his father, and of his being delivered from death; nor indeed can I describe half the extravagances of his affection after this: for he went into the boat and out of the boat a great many times: when he went in to him he would sit down by him, open his breast, and hold his father's head close to his bosom for many minutes together, to nourish it; then he took his arms and ankles, which were numbed and stiff with the binding, and chafed and rubbed them with his hands; and I, perceiving what the case was, gave him some rum out of my bottle to rub them with, which did them a great deal of good. This affair put an end to our pursuit of the canoe with the other savages, who were now almost out of sight; and it was happy for us that we did not, for it blew so hard within two hours after, and before they could be got a quarter of their way, and continued blowing so hard all night, and that from the north-west, which was against them, that I could not suppose their boat could live, or that they ever reached their own coast.

But to return to Friday; he was so busy about his father that I could not find in my heart to take him off for some time; but after I thought he could leave him a little, I called him to me, and he came jumping and laughing, and pleased to the highest extreme: then I asked him if he had given his father any bread. He shook his head, and said, "None; ugly dog eat all up self." I then gave him a cake of bread out of a little pouch I carried on purpose; I also gave him a dram for himself; but he would not taste it, but carried it to his father. I had in my pocket two or three bunches of raisins, so I gave him a handful of them for his father. He had no sooner given his father these raisins but I saw him come out of the boat, and run away as if he had been bewitched, for he was the swiftest fellow on his feet that ever I saw: I say, he ran at such a rate that he was out of sight, as it were, in an instant; and though I called, and hallooed out too after him, it was all one—away he went; and in a quarter of an hour I saw him come back again, though not so fast as he went; and as he came nearer I found his pace slacker, because he had something in his hand. When he came up to me I found he had been quite home for an earthen jug or pot, to bring his father some fresh water, and that he had got two more cakes or loaves of bread: the bread he gave me, but the water he carried to his father; however, as I was very thirsty too, I took a little of it. The water revived his father more than all the rum or spirits I had given him, for he was fainting with thirst.

When his father had drunk, I called to him to know if there was any water left. He said, "Yes"; and I bade him give it to the poor Spaniard, who was in as much want of it as his father; and I sent one of the cakes that Friday brought to the Spaniard too, who was indeed very weak, and was reposing himself upon a green place under the shade of a tree; and whose limbs were also very stiff, and very much swelled with the rude bandage he had been tied with. When I saw that upon Friday's coming to him with the water he sat up and drank, and took the bread and began to eat, I went to him and gave him a handful of raisins. He looked up in my face with all the tokens of gratitude and thankfulness that could appear in any countenance; but was so weak, notwithstanding he had so exerted himself in the fight, that he could not stand up upon his feet—he tried to do it two or three times, but was really not able, his ankles were so swelled and so painful to him; so I bade him sit still, and caused Friday to rub his ankles, and bathe them with rum, as he had done his father's.

I observed the poor affectionate creature, every two minutes, or perhaps less, all the while he was here, turn his head about to see if his father was in the same place and posture as he left him sitting; and at last he found he was not to be seen; at which he started up, and, without speaking a word, flew with that swiftness to him that one could scarce perceive his feet to touch the ground as he went; but when he came, he only found he had laid himself down to ease his limbs, so Friday came back to me presently; and then I spoke to the Spaniard to let Friday help him up if he could, and lead him to the boat, and then he should carry him to our dwelling, where I would take care of him.

But Friday, a lusty, strong fellow, took the Spaniard upon his back, and carried him away to the boat, and set him down softly upon the side or gunnel of the canoe, with his feet in the inside of it; and then lifting him quite in, he set him close to his father; and presently stepping out again, launched the boat off, and paddled it along the shore faster than I could walk, though the wind blew pretty hard too; so he brought them both safe into our creek, and leaving them in the boat, ran away to fetch the other canoe. As he passed me I spoke to him, and asked him whither he went. He told me, "Go fetch more boat;" so away he went like the wind, for sure never man or horse ran like him; and he had the other canoe in the creek almost as soon as I got to it by land; so he wafted me over, and then went to help our new guests out of the boat, which he did; but they were neither of them able to walk; so that poor Friday knew not what to do.

To remedy this, I went to work in my thought, and calling to Friday to bid them sit down on the bank while he came to me, I soon made a kind of hand-barrow to lay them on, and Friday and I carried them both up together upon it between us.

But when we got them to the outside of our wall, or fortification, we were at a worse loss than before, for it was impossible to get them over, and I was resolved not to break it down; so I set to work again, and Friday and I, in about two hours' time, made a very handsome tent, covered with old sails, and above that with boughs of trees, being in the space without our outward fence and between that and the grove of young wood which I had planted; and here we made them two beds of such things as I had—viz. of good rice-straw, with blankets laid upon it to lie on, and another to cover them, on each bed.

My island was now peopled, and I thought myself very rich in subjects; and it was a merry reflection, which I frequently made, how like a king I looked. First of all, the whole country was my own property, so that I had an undoubted right of dominion. Secondly, my people were perfectly subjected—I was absolutely lord and lawgiver—they all owed their lives to me, and were ready to lay down their lives, if there had been occasion for it, for me. It was remarkable, too, I had but three subjects, and they were of three different religions—my man Friday was a Protestant, his father was a Pagan and a cannibal, and the Spaniard was a Papist. However, I allowed liberty of conscience throughout my dominions. But this is by the way.

As soon as I had secured my two weak, rescued prisoners, and given them shelter, and a place to rest them upon, I began to think of making some provision for them; and the first thing I did, I ordered Friday to take a yearling goat, betwixt a kid and a goat, out of my particular flock, to be killed; when I cut off the hinder-quarter, and chopping it into small pieces, I set Friday to work to boiling and stewing, and made them a very good dish, I assure you, of flesh and broth; and as I cooked it without doors, for I made no fire within my inner wall, so I carried it all into the new tent, and having set a table there for them, I sat down, and ate my own dinner also with them, and, as well as I could, cheered them and encouraged them. Friday was my interpreter, especially to his father, and, indeed, to the Spaniard too; for the Spaniard spoke the language of the savages pretty well.

After we had dined, or rather supped, I ordered Friday to take one of the canoes, and go and fetch our muskets and other firearms, which, for want of time, we had left upon the place of battle; and the next day I ordered him to go and bury the dead bodies of the savages, which lay open to the sun, and would presently be offensive. I also ordered him to bury the horrid remains of their barbarous feast, which I could not think of doing myself; nay, I could not bear to see them if I went that way; all which he punctually performed, and effaced the very appearance of the savages being there; so that when I went again, I could scarce know where it was, otherwise than by the corner of the wood pointing to the place.

I then began to enter into a little conversation with my two new subjects; and, first, I set Friday to inquire of his father what he thought of the escape of the savages in that canoe, and whether we might expect a return of them, with a power too great for us to resist. His first opinion was, that the savages in the boat never could live out the storm which blew that night they went off, but must of necessity be drowned, or driven south to those other shores, where they were as sure to be devoured as they were to be drowned if they were cast away; but, as to what they would do if they came safe on shore, he said he knew not; but it was his opinion that they were so dreadfully frightened with the manner of their being attacked, the noise, and the fire, that he believed they would tell the people they were all killed by thunder and lightning, not by the hand of man; and that the two which appeared—viz. Friday and I—were two heavenly spirits, or furies, come down to destroy them, and not men with weapons.

This, he said, he knew; because he heard them all cry out so, in their language, one to another; for it was impossible for them to conceive that a man could dart fire, and speak thunder, and kill at a distance, without lifting up the hand, as was done now: and this old savage was in the right; for, as I understood since, by other hands, the savages never attempted to go over to the island afterwards, they were so terrified with the accounts given by those four men (for it seems they did escape the sea), that they believed whoever went to that enchanted island would be destroyed with fire from the gods. This, however, I knew not; and therefore was under continual apprehensions for a good while, and kept always upon my guard, with all my army: for, as there were now four of us, I would have ventured upon a hundred of them, fairly in the open field, at any time.

Chapter 17 - Visit Of Mutineers

In a little time, however, no more canoes appearing, the fear of their coming wore off; and I began to take my former thoughts of a voyage to the main into consideration; being likewise assured by Friday's father that I might depend upon good usage from their nation, on his account, if I would go. But my thoughts were a little suspended when I had a serious discourse with the Spaniard, and when I understood that there were sixteen more of his countrymen and Portuguese, who having been cast away and made their escape to that side, lived there at peace, indeed, with the savages, but were very sore put to it for necessaries, and, indeed, for life.

I asked him all the particulars of their voyage, and found they were a Spanish ship, bound from the Rio de la Plata to the Havanna, being directed to leave their loading there, which was chiefly hides and silver, and to bring back what European goods they could meet with there; that they had five Portuguese seamen on board, whom they took out of another wreck; that five of their own men were drowned when first the ship was lost, and that these escaped through infinite dangers and hazards, and arrived, almost starved, on the cannibal coast, where they expected to have been devoured every moment. He told me they had some arms with them, but they were perfectly useless, for that they had neither powder nor ball, the washing of the sea having spoiled all their powder but a little, which they used at their first landing to provide themselves with some food.

I asked him what he thought would become of them there, and if they had formed any design of making their escape. He said they had many consultations about it; but that having neither vessel nor tools to build one, nor provisions of any kind, their councils always ended in tears and despair. I asked him how he thought they would receive a proposal from me, which might tend towards an escape; and whether, if they were all here, it might not be done. I told him with freedom, I feared mostly their treachery and ill-usage of me, if I put my life in their hands; for that gratitude was no inherent virtue in the nature of man, nor did men always square their dealings by the obligations they had received so much as they did by the advantages they expected.

I told him it would be very hard that I should be made the instrument of their deliverance, and that they should afterwards make me their prisoner in New Spain, where an Englishman was certain to be made a sacrifice, what necessity or what accident soever brought him thither; and that I had rather be delivered up to the savages, and be devoured alive, than fall into the merciless claws of the priests, and be carried into the Inquisition. I added that, otherwise, I was persuaded, if they were all here, we might, with so many hands, build a barque large enough to carry us all away, either to the Brazils southward, or to the islands or Spanish coast northward; but that if, in requital, they should, when I had put weapons into their hands, carry me by force among their own people, I might be ill-used for my kindness to them, and make my case worse than it was before.

He answered, with a great deal of candour and ingenuousness, that their condition was so miserable, and that they were so sensible of it, that he believed they would abhor the thought of using any man unkindly that should contribute to their deliverance; and that, if I pleased, he would go to them with the old man, and discourse with them about it, and return again and bring me their answer; that he would make conditions with them upon their solemn oath, that they should be absolutely under my direction as their commander and captain; and they should swear upon the holy sacraments and gospel to be true to me, and go to such Christian country as I should agree to, and no other; and to be directed wholly and absolutely by my orders till they were landed safely in such country as I intended, and that he would bring a contract from them, under their hands, for that purpose.

Then he told me he would first swear to me himself that he would never stir from me as long as he lived till I gave him orders; and that he would take my side to the last drop of his blood, if there should happen the least breach of faith among his countrymen. He told me they were all of them very civil, honest men, and they were under the greatest distress imaginable, having neither weapons nor clothes, nor any food, but at the mercy and discretion of the savages; out of all hopes of ever returning to their own country; and that he was sure, if I would undertake their relief, they would live and die by me.

Upon these assurances, I resolved to venture to relieve them, if possible, and to send the old savage and this Spaniard over to them to treat. But when we had got all things in readiness to go, the Spaniard himself started an objection, which had so much prudence in it on one hand, and so much sincerity on the other hand, that I could not but be very well satisfied in it; and, by his advice, put off the deliverance of his comrades for at least half a year. The case was thus: he had been with us now about a month, during which time I had let him see in what manner I had provided, with the assistance of Providence, for my support; and he saw evidently what stock of corn and rice I had laid up; which, though it was more than sufficient for myself, yet it was not sufficient, without good husbandry, for my family, now it was increased to four; but much less would it be sufficient if his countrymen, who were, as he said, sixteen, still alive, should come over; and least of all would it be sufficient to victual our vessel, if we should build one, for a voyage to any of the Christian colonies of America; so he told me he thought it would be more advisable to let him and the other two dig and cultivate some more land, as much as I could spare seed to sow, and that we should wait another harvest, that we might have a supply of corn for his countrymen, when they should come; for want might be a temptation to them to disagree, or not to think themselves delivered, otherwise than out of one difficulty into another. "You know," says he, "the children of Israel, though they rejoiced at first for their being delivered out of Egypt, yet rebelled even against God Himself, that delivered them, when they came to want bread in the wilderness."

His caution was so seasonable, and his advice so good, that I could not but be very well pleased with his proposal, as well as I was satisfied with his fidelity; so we fell to digging, all four of us, as well as the wooden tools we were furnished with permitted; and in about a month's time, by the end of which it was seed-time, we had got as much land cured and trimmed up as we sowed two-and-twenty bushels of barley on, and sixteen jars of rice, which was, in short, all the seed we had to spare: indeed, we left ourselves barely sufficient, for our own food for the six months that we had to expect our crop; that is to say reckoning from the time we set our seed aside for sowing; for it is not to be supposed it is six months in the ground in that country.

Having now society enough, and our numbers being sufficient to put us out of fear of the savages, if they had come, unless their number had been very great, we went freely all over the island, whenever we found occasion; and as we had our escape or deliverance upon our thoughts, it was impossible, at least for me, to have the means of it out of mine. For this purpose I marked out several trees, which I thought fit for our work, and I set Friday and his father to cut them down; and then I caused the Spaniard, to whom I imparted my thoughts on that affair, to oversee and direct their work. I showed them with what indefatigable pains I had hewed a large tree into single planks, and I caused them to do the like, till they made about a dozen large planks, of good oak, near two feet broad, thirty-five feet long, and from two inches to four inches thick: what prodigious labour it took up any one may imagine.

At the same time I contrived to increase my little flock of tame goats as much as I could; and for this purpose I made Friday and the Spaniard go out one day, and myself with Friday the next day (for we took our turns), and by this means we got about twenty young kids to breed up with the rest; for whenever we shot the dam, we saved the kids, and added them to our flock. But above all, the season for curing the grapes coming on, I caused such a prodigious quantity to be hung up in the sun, that, I believe, had we been at Alicant, where the raisins of the sun are cured, we could have filled sixty or eighty barrels; and these, with our bread, formed a great part of our food—very good living too, I assure you, for they are exceedingly nourishing.

It was now harvest, and our crop in good order: it was not the most plentiful increase I had seen in the island, but, however, it was enough to answer our end; for from twenty-two bushels of barley we brought in and thrashed out above two hundred and twenty bushels; and the like in proportion of the rice; which was store enough for our food to the next harvest, though all the sixteen Spaniards had been on shore with me; or, if we had been ready for a voyage, it would very plentifully have victualled our ship to have carried us to any part of the world; that is to say, any part of America. When we had thus housed and secured our magazine of corn, we fell to work to make more wicker-ware, viz. great baskets, in which we kept it; and the Spaniard was very handy and dexterous at this part, and often blamed me that I did not make some things for defence of this kind of work; but I saw no need of it.

And now, having a full supply of food for all the guests I expected, I gave the Spaniard leave to go over to the main, to see what he could do with those he had left behind him there. I gave him a strict charge not to bring any man who would not first swear in the presence of himself and the old savage that he would in no way injure, fight with, or attack the person he should find in the island, who was so kind as to send for them in order to their deliverance; but that they would stand by him and defend him against all such attempts, and wherever they went would be entirely under and subjected to his command; and that this should be put in writing, and signed in their hands.

How they were to have done this, when I knew they had neither pen nor ink, was a question which we never asked. Under these instructions, the Spaniard and the old savage, the father of Friday, went away in one of the canoes which they might be said to have come in, or rather were brought in, when they came as prisoners to be devoured by the savages. I gave each of them a musket, with a firelock on it, and about eight charges of powder and ball, charging them to be very good husbands of both, and not to use either of them but upon urgent occasions.

This was a cheerful work, being the first measures used by me in view of my deliverance for now twenty-seven years and some days. I gave them provisions of bread and of dried grapes, sufficient for themselves for many days, and sufficient for all the Spaniards—for about eight days' time; and wishing them a good voyage, I saw them go, agreeing with them about a signal they should hang out at their return, by which I should know them again when they came back, at a distance, before they came on shore. They went away with a fair gale on the day that the moon was at full, by my account in the month of October; but as for an exact reckoning of days, after I had once lost it I could never recover it again; nor had I kept even the number of years so punctually as to be sure I was right; though, as it proved when I afterwards examined my account, I found I had kept a true reckoning of years.

It was no less than eight days I had waited for them, when a strange and unforeseen accident intervened, of which the like has not, perhaps, been heard of in history. I was fast asleep in my hutch one morning, when my man Friday came running in to me, and called aloud, "Master, master, they are come, they are come!" I jumped up, and regardless of danger I went, as soon as I could get my clothes on, through my little grove, which, by the way, was by this time grown to be a very thick wood; I say, regardless of danger I went without my arms, which was not my custom to do; but I was surprised when, turning my eyes to the sea, I presently saw a boat at about a league and a half distance, standing in for the shore, with a shoulder-of-mutton sail, as they call it, and the wind blowing pretty fair to bring them in: also I observed, presently, that they did not come from that side which the shore lay on, but from the southernmost end of the island.

Upon this I called Friday in, and bade him lie close, for these were not the people we looked for, and that we might not know yet whether they were friends or enemies. In the next place I went in to fetch my perspective glass to see what I could make of them; and having taken the ladder out, I climbed up to the top of the hill, as I used to do when I was apprehensive of anything, and to take my view the plainer without being discovered. I had scarce set my foot upon the hill when my eye plainly discovered a ship lying at anchor, at about two leagues and a half distance from me, SSE., but not above a league and a half from the shore. By my observation it appeared plainly to be an English ship, and the boat appeared to be an English long-boat.

I cannot express the confusion I was in, though the joy of seeing a ship, and one that I had reason to believe was manned by my own countrymen, and consequently friends, was such as I cannot describe; but yet I had some secret doubts hung about me—I cannot tell from whence they came—bidding me keep upon my guard. In the first place, it occurred to me to consider what business an English ship could have in that part of the world, since it was not the way to or from any part of the world where the English had any traffic; and I knew there had been no storms to drive them in there in distress; and that if they were really English it was most probable that they were here upon no good design; and that I had better continue as I was than fall into the hands of thieves and murderers.

Let no man despise the secret hints and notices of danger which sometimes are given him when he may think there is no possibility of its being real. That such hints and notices are given us I believe few that have made any observation of things can deny; that they are certain discoveries of an invisible world, and a converse of spirits, we cannot doubt; and if the tendency of them seems to be to warn us of danger, why should we not suppose they are from some friendly agent (whether supreme, or inferior and subordinate, is not the question), and that they are given for our good?

The present question abundantly confirms me in the justice of this reasoning; for had I not been made cautious by this secret admonition, come it from whence it will, I had been done inevitably, and in a far worse condition than before, as you will see presently. I had not kept myself long in this posture till I saw the boat draw near the shore, as if they looked for a creek to thrust in at, for the convenience of landing; however, as they did not come quite far enough, they did not see the little inlet where I formerly landed my rafts, but ran their boat on shore upon the beach, at about half a mile from me, which was very happy for me; for otherwise they would have landed just at my door, as I may say, and would soon have beaten me out of my castle, and perhaps have plundered me of all I had. When they were on shore I was fully satisfied they were Englishmen, at least most of them; one or two I thought were Dutch, but it did not prove so; there were in all eleven men, whereof three of them I found were unarmed and, as I thought, bound; and when the first four or five of them were jumped on shore, they took those three out of the boat as prisoners: one of the three I could perceive using the most passionate gestures of entreaty, affliction, and despair, even to a kind of extravagance; the other two, I could perceive, lifted up their hands sometimes, and appeared concerned indeed, but not to such a degree as the first. I was perfectly confounded at the sight, and knew not what the meaning of it should be. Friday called out to me in English, as well as he could, "O master! you see English mans eat prisoner as well as savage mans." "Why, Friday," says I, "do you think they are going to eat them, then?" "Yes," says Friday, "they will eat them." "No no," says I, "Friday; I am afraid they will murder them, indeed; but you may be sure they will not eat them."

All this while I had no thought of what the matter really was, but stood trembling with the horror of the sight, expecting every moment when the three prisoners should be killed; nay, once I saw one of the villains lift up his arm with a great cutlass, as the seamen call it, or sword, to strike one of the poor men; and I expected to see him fall every moment; at which all the blood in my body seemed to run chill in my veins. I wished heartily now for the Spaniard, and the savage that had gone with him, or that I had any way to have come undiscovered within shot of them, that I might have secured the three men, for I saw no firearms they had among them; but it fell out to my mind another way. After I had observed the outrageous usage of the three men by the insolent seamen, I observed the fellows run scattering about the island, as if they wanted to see the country. I observed that the three other men had liberty to go also where they pleased; but they sat down all three upon the ground, very pensive, and looked like men in despair. This put me in mind of the first time when I came on shore, and began to look about me; how I gave myself over for lost; how wildly I looked round me; what dreadful apprehensions I had; and how I lodged in the tree all night for fear of being devoured by wild beasts. As I knew nothing that night of the supply I was to receive by the providential driving of the ship nearer the land by the storms and tide, by which I have since been so long nourished and supported; so these three poor desolate men knew nothing how certain of deliverance and supply they were, how near it was to them, and how effectually and really they were in a condition of safety, at the same time that they thought themselves lost and their case desperate.

So little do we see before us in the world, and so much reason have we to depend cheerfully upon the great Maker of the world, that He does not leave His creatures so absolutely destitute, but that in the worst circumstances they have always something to be thankful for, and sometimes are nearer deliverance than they imagine; nay, are even brought to their deliverance by the means by which they seem to be brought to their destruction.

It was just at high-water when these people came on shore; and while they rambled about to see what kind of a place they were in, they had carelessly stayed till the tide was spent, and the water was ebbed considerably away, leaving their boat aground. They had left two men in the boat, who, as I found afterwards, having drunk a little too much brandy, fell asleep; however, one of them waking a little sooner than the other and finding the boat too fast aground for him to stir it, hallooed out for the rest, who were straggling about: upon which they all soon came to the boat: but it was past all their strength to launch her, the boat being very heavy, and the shore on that side being a soft oozy sand, almost like a quicksand. In this condition, like true seamen, who are, perhaps, the least of all mankind given to forethought, they gave it over, and away they strolled about the country again; and I heard one of them say aloud to another, calling them off from the boat, "Why, let her alone, Jack, can't you? she'll float next tide;" by which I was fully confirmed in the main inquiry of what countrymen they were.

All this while I kept myself very close, not once daring to stir out of my castle any farther than to my place of observation near the top of the hill: and very glad I was to think how well it was fortified. I knew it was no less than ten hours before the boat could float again, and by that time it would be dark, and I might be at more liberty to see their motions, and to hear their discourse, if they had any. In the meantime I fitted myself up for a battle as before, though with more caution, knowing I had to do with another kind of enemy than I had at first. I ordered Friday also, whom I had made an excellent marksman with his gun, to load himself with arms. I took myself two fowling-pieces, and I gave him three muskets. My figure, indeed, was very fierce; I had my formidable goat-skin coat on, with the great cap I have mentioned, a naked sword by my side, two pistols in my belt, and a gun upon each shoulder.

It was my design, as I said above, not to have made any attempt till it was dark; but about two o'clock, being the heat of the day, I found that they were all gone straggling into the woods, and, as I thought, laid down to sleep. The three poor distressed men, too anxious for their condition to get any sleep, had, however, sat down under the shelter of a great tree, at about a quarter of a mile from me, and, as I thought, out of sight of any of the rest. Upon this I resolved to discover myself to them, and learn something of their condition; immediately I marched as above, my man Friday at a good distance behind me, as formidable for his arms as I, but not making quite so staring a spectre-like figure as I did.

I came as near them undiscovered as I could, and then, before any of them saw me, I called aloud to them in Spanish, "What are ye, gentlemen?" They started up at the noise, but were ten times more confounded when they saw me, and the uncouth figure that I made. They made no answer at all, but I thought I perceived them just going to fly from me, when I spoke to them in English. "Gentlemen," said I, "do not be surprised at me; perhaps you may have a friend near when you did not expect it." "He must be sent directly from heaven then," said one of them very gravely to me, and pulling off his hat at the same time to me; "for our condition is past the help of man." "All help is from heaven, sir," said I, "but can you put a stranger in the way to help you? for you seem to be in some great distress. I saw you when you landed; and when you seemed to make application to the brutes that came with you, I saw one of them lift up his sword to kill you."

The poor man, with tears running down his face, and trembling, looking like one astonished, returned, "Am I talking to God or man? Is it a real man or an angel?" "Be in no fear about that, sir," said I; "if God had sent an angel to relieve you, he would have come better clothed, and armed after another manner than you see me; pray lay aside your fears; I am a man, an Englishman, and disposed to assist you; you see I have one servant only; we have arms and ammunition; tell us freely, can we serve you? What is your case?" "Our case, sir," said he, "is too long to tell you while our murderers are so near us; but, in short, sir, I was commander of that ship—my men have mutinied against me; they have been hardly prevailed on not to murder me, and, at last, have set me on shore in this desolate place, with these two men with me—one my mate, the other a passenger—where we expected to perish, believing the place to be uninhabited, and know not yet what to think of it." "Where are these brutes, your enemies?" said I; "do you know where they are gone? There they lie, sir," said he, pointing to a thicket of trees; "my heart trembles for fear they have seen us and heard you speak; if they have, they will certainly murder us all." "Have they any firearms?" said I. He answered, "They had only two pieces, one of which they left in the boat." "Well, then," said I, "leave the rest to me; I see they are all asleep; it is an easy thing to kill them all; but shall we rather take them prisoners?" He told me there were two desperate villains among them that it was scarce safe to show any mercy to; but if they were secured, he believed all the rest would return to their duty. I asked him which they were. He told me he could not at that distance distinguish them, but he would obey my orders in anything I would direct. "Well," says I, "let us retreat out of their view or hearing, lest they awake, and we will resolve further." So they willingly went back with me, till the woods covered us from them.

"Look you, sir," said I, "if I venture upon your deliverance, are you willing to make two conditions with me?" He anticipated my proposals by telling me that both he and the ship, if recovered, should be wholly directed and commanded by me in everything; and if the ship was not recovered, he would live and die with me in what part of the world soever I would send him; and the two other men said the same. "Well," says I, "my conditions are but two; first, that while you stay in this island with me, you will not pretend to any authority here; and if I put arms in your hands, you will, upon all occasions, give them up to me, and do no prejudice to me or mine upon this island, and in the meantime be governed by my orders; secondly, that if the ship is or may be recovered, you will carry me and my man to England passage free."

He gave me all the assurances that the invention or faith of man could devise that he would comply with these most reasonable demands, and besides would owe his life to me, and acknowledge it upon all occasions as long as he lived. "Well, then," said I, "here are three muskets for you, with powder and ball; tell me next what you think is proper to be done." He showed all the testimonies of his gratitude that he was able, but offered to be wholly guided by me. I told him I thought it was very hard venturing anything; but the best method I could think of was to fire on them at once as they lay, and if any were not killed at the first volley, and offered to submit, we might save them, and so put it wholly upon God's providence to direct the shot. He said, very modestly, that he was loath to kill them if he could help it; but that those two were incorrigible villains, and had been the authors of all the mutiny in the ship, and if they escaped, we should be undone still, for they would go on board and bring the whole ship's company, and destroy us all. "Well, then," says I, "necessity legitimates my advice, for it is the only way to save our lives." However, seeing him still cautious of shedding blood, I told him they should go themselves, and manage as they found convenient.

In the middle of this discourse we heard some of them awake, and soon after we saw two of them on their feet. I asked him if either of them were the heads of the mutiny? He said, "No." "Well, then," said I, "you may let them escape; and Providence seems to have awakened them on purpose to save themselves. Now," says I, "if the rest escape you, it is your fault." Animated with this, he took the musket I had given him in his hand, and a pistol in his belt, and his two comrades with him, with each a piece in his hand; the two men who were with him going first made some noise, at which one of the seamen who was awake turned about, and seeing them coming, cried out to the rest; but was too late then, for the moment he cried out they fired—I mean the two men, the captain wisely reserving his own piece. They had so well aimed their shot at the men they knew, that one of them was killed on the spot, and the other very much wounded; but not being dead, he started up on his feet, and called eagerly for help to the other; but the captain stepping to him, told him it was too late to cry for help, he should call upon God to forgive his villainy, and with that word knocked him down with the stock of his musket, so that he never spoke more; there were three more in the company, and one of them was slightly wounded. By this time I was come; and when they saw their danger, and that it was in vain to resist, they begged for mercy. The captain told them he would spare their lives if they would give him an assurance of their abhorrence of the treachery they had been guilty of, and would swear to be faithful to him in recovering the ship, and afterwards in carrying her back to Jamaica, from whence they came. They gave him all the protestations of their sincerity that could be desired; and he was willing to believe them, and spare their lives, which I was not against, only that I obliged him to keep them bound hand and foot while they were on the island.

While this was doing, I sent Friday with the captain's mate to the boat with orders to secure her, and bring away the oars and sails, which they did; and by-and-by three straggling men, that were (happily for them) parted from the rest, came back upon hearing the guns fired; and seeing the captain, who was before their prisoner, now their conqueror, they submitted to be bound also; and so our victory was complete.

It now remained that the captain and I should inquire into one another's circumstances. I began first, and told him my whole history, which he heard with an attention even to amazement—and particularly at the wonderful manner of my being furnished with provisions and ammunition; and, indeed, as my story is a whole collection of wonders, it affected him deeply. But when he reflected from thence upon himself, and how I seemed to have been preserved there on purpose to save his life, the tears ran down his face, and he could not speak a word more. After this communication was at an end, I carried him and his two men into my apartment, leading them in just where I came out, viz. at the top of the house, where I refreshed them with such provisions as I had, and showed them all the contrivances I had made during my long, long inhabiting that place.

All I showed them, all I said to them, was perfectly amazing; but above all, the captain admired my fortification, and how perfectly I had concealed my retreat with a grove of trees, which having been now planted nearly twenty years, and the trees growing much faster than in England, was become a little wood, so thick that it was impassable in any part of it but at that one side where I had reserved my little winding passage into it. I told him this was my castle and my residence, but that I had a seat in the country, as most princes have, whither I could retreat upon occasion, and I would show him that too another time; but at present our business was to consider how to recover the ship.

He agreed with me as to that, but told me he was perfectly at a loss what measures to take, for that there were still six-and-twenty hands on board, who, having entered into a cursed conspiracy, by which they had all forfeited their lives to the law, would be hardened in it now by desperation, and would carry it on, knowing that if they were subdued they would be brought to the gallows as soon as they came to England, or to any of the English colonies, and that, therefore, there would be no attacking them with so small a number as we were.

I mused for some time on what he had said, and found it was a very rational conclusion, and that therefore something was to be resolved on speedily, as well to draw the men on board into some snare for their surprise as to prevent their landing upon us, and destroying us. Upon this, it presently occurred to me that in a little while the ship's crew, wondering what was become of their comrades and of the boat, would certainly come on shore in their other boat to look for them, and that then, perhaps, they might come armed, and be too strong for us: this he allowed to be rational. Upon this, I told him the first thing we had to do was to stave the boat which lay upon the beach, so that they might not carry her of, and taking everything out of her, leave her so far useless as not to be fit to swim. Accordingly, we went on board, took the arms which were left on board out of her, and whatever else we found there—which was a bottle of brandy, and another of rum, a few biscuit-cakes, a horn of powder, and a great lump of sugar in a piece of canvas (the sugar was five or six pounds): all which was very welcome to me, especially the brandy and sugar, of which I had had none left for many years.

When we had carried all these things on shore (the oars, mast, sail, and rudder of the boat were carried away before), we knocked a great hole in her bottom, that if they had come strong enough to master us, yet they could not carry off the boat. Indeed, it was not much in my thoughts that we could be able to recover the ship; but my view was, that if they went away without the boat, I did not much question to make her again fit to carry as to the Leeward Islands, and call upon our friends the Spaniards in my way, for I had them still in my thoughts.

Chapter 18 - The Ship Recovered

While we were thus preparing our designs, and had first, by main strength, heaved the boat upon the beach, so high that the tide would not float her off at high-water mark, and besides, had broke a hole in her bottom too big to be quickly stopped, and were set down musing what we should do, we heard the ship fire a gun, and make a waft with her ensign as a signal for the boat to come on board—but no boat stirred; and they fired several times, making other signals for the boat. At last, when all their signals and firing proved fruitless, and they found the boat did not stir, we saw them, by the help of my glasses, hoist another boat out and row towards the shore; and we found, as they approached, that there were no less than ten men in her, and that they had firearms with them.

As the ship lay almost two leagues from the shore, we had a full view of them as they came, and a plain sight even of their faces; because the tide having set them a little to the east of the other boat, they rowed up under shore, to come to the same place where the other had landed, and where the boat lay; by this means, I say, we had a full view of them, and the captain knew the persons and characters of all the men in the boat, of whom, he said, there were three very honest fellows, who, he was sure, were led into this conspiracy by the rest, being over-powered and frightened; but that as for the boatswain, who it seems was the chief officer among them, and all the rest, they were as outrageous as any of the ship's crew, and were no doubt made desperate in their new enterprise; and terribly apprehensive he was that they would be too powerful for us.

I smiled at him, and told him that men in our circumstances were past the operation of fear; that seeing almost every condition that could be was better than that which we were supposed to be in, we ought to expect that the consequence, whether death or life, would be sure to be a deliverance. I asked him what he thought of the circumstances of my life, and whether a deliverance were not worth venturing for? "And where, sir," said I, "is your belief of my being preserved here on purpose to save your life, which elevated you a little while ago? For my part," said I, "there seems to be but one thing amiss in all the prospect of it." "What is that?" say he. "Why," said I, "it is, that as you say there are three or four honest fellows among them which should be spared, had they been all of the wicked part of the crew I should have thought God's providence had singled them out to deliver them into your hands; for depend upon it, every man that comes ashore is our own, and shall die or live as they behave to us." As I spoke this with a raised voice and cheerful countenance, I found it greatly encouraged him; so we set vigorously to our business.

We had, upon the first appearance of the boat's coming from the ship, considered of separating our prisoners; and we had, indeed, secured them effectually. Two of them, of whom the captain was less assured than ordinary, I sent with Friday, and one of the three delivered men, to my cave, where they were remote enough, and out of danger of being heard or discovered, or of finding their way out of the woods if they could have delivered themselves. Here they left them bound, but gave them provisions; and promised them, if they continued there quietly, to give them their liberty in a day or two; but that if they attempted their escape they should be put to death without mercy. They promised faithfully to bear their confinement with patience, and were very thankful that they had such good usage as to have provisions and light left them; for Friday gave them candles (such as we made ourselves) for their comfort; and they did not know but that he stood sentinel over them at the entrance.

The other prisoners had better usage; two of them were kept pinioned, indeed, because the captain was not able to trust them; but the other two were taken into my service, upon the captain's recommendation, and upon their solemnly engaging to live and die with us; so with them and the three honest men we were seven men, well armed; and I made no doubt we should be able to deal well enough with the ten that were coming, considering that the captain had said there were three or four honest men among them also. As soon as they got to the place where their other boat lay, they ran their boat into the beach and came all on shore, hauling the boat up after them, which I was glad to see, for I was afraid they would rather have left the boat at an anchor some distance from the shore, with some hands in her to guard her, and so we should not be able to seize the boat. Being on shore, the first thing they did, they ran all to their other boat; and it was easy to see they were under a great surprise to find her stripped, as above, of all that was in her, and a great hole in her bottom. After they had mused a while upon this, they set up two or three great shouts, hallooing with all their might, to try if they could make their companions hear; but all was to no purpose. Then they came all close in a ring, and fired a volley of their small arms, which indeed we heard, and the echoes made the woods ring. But it was all one; those in the cave, we were sure, could not hear; and those in our keeping, though they heard it well enough, yet durst give no answer to them. They were so astonished at the surprise of this, that, as they told us afterwards, they resolved to go all on board again to their ship, and let them know that the men were all murdered, and the long-boat staved; accordingly, they immediately launched their boat again, and got all of them on board.

The captain was terribly amazed, and even confounded, at this, believing they would go on board the ship again and set sail, giving their comrades over for lost, and so he should still lose the ship, which he was in hopes we should have recovered; but he was quickly as much frightened the other way.

They had not been long put off with the boat, when we perceived them all coming on shore again; but with this new measure in their conduct, which it seems they consulted together upon, viz. to leave three men in the boat, and the rest to go on shore, and go up into the country to look for their fellows. This was a great disappointment to us, for now we were at a loss what to do, as our seizing those seven men on shore would be no advantage to us if we let the boat escape; because they would row away to the ship, and then the rest of them would be sure to weigh and set sail, and so our recovering the ship would be lost. However we had no remedy but to wait and see what the issue of things might present. The seven men came on shore, and the three who remained in the boat put her off to a good distance from the shore, and came to an anchor to wait for them; so that it was impossible for us to come at them in the boat.

Those that came on shore kept close together, marching towards the top of the little hill under which my habitation lay; and we could see them plainly, though they could not perceive us. We should have been very glad if they would have come nearer us, so that we might have fired at them, or that they would have gone farther off, that we might come abroad. But when they were come to the brow of the hill where they could see a great way into the valleys and woods, which lay towards the north-east part, and where the island lay lowest, they shouted and hallooed till they were weary; and not caring, it seems, to venture far from the shore, nor far from one another, they sat down together under a tree to consider it. Had they thought fit to have gone to sleep there, as the other part of them had done, they had done the job for us; but they were too full of apprehensions of danger to venture to go to sleep, though they could not tell what the danger was they had to fear.

The captain made a very just proposal to me upon this consultation of theirs, viz. that perhaps they would all fire a volley again, to endeavour to make their fellows hear, and that we should all sally upon them just at the juncture when their pieces were all discharged, and they would certainly yield, and we should have them without bloodshed. I liked this proposal, provided it was done while we were near enough to come up to them before they could load their pieces again. But this event did not happen; and we lay still a long time, very irresolute what course to take. At length I told them there would be nothing done, in my opinion, till night; and then, if they did not return to the boat, perhaps we might find a way to get between them and the shore, and so might use some stratagem with them in the boat to get them on shore. We waited a great while, though very impatient for their removing; and were very uneasy when, after long consultation, we saw them all start up and march down towards the sea; it seems they had such dreadful apprehensions of the danger of the place that they resolved to go on board the ship again, give their companions over for lost, and so go on with their intended voyage with the ship.

As soon as I perceived them go towards the shore, I imagined it to be as it really was that they had given over their search, and were going back again; and the captain, as soon as I told him my thoughts, was ready to sink at the apprehensions of it; but I presently thought of a stratagem to fetch them back again, and which answered my end to a tittle. I ordered Friday and the captain's mate to go over the little creek westward, towards the place where the savages came on shore, when Friday was rescued, and so soon as they came to a little rising round, at about half a mile distant, I bid them halloo out, as loud as they could, and wait till they found the seamen heard them; that as soon as ever they heard the seamen answer them, they should return it again; and then, keeping out of sight, take a round, always answering when the others hallooed, to draw them as far into the island and among the woods as possible, and then wheel about again to me by such ways as I directed them.

They were just going into the boat when Friday and the mate hallooed; and they presently heard them, and answering, ran along the shore westward, towards the voice they heard, when they were stopped by the creek, where the water being up, they could not get over, and called for the boat to come up and set them over; as, indeed, I expected. When they had set themselves over, I observed that the boat being gone a good way into the creek, and, as it were, in a harbour within the land, they took one of the three men out of her, to go along with them, and left only two in the boat, having fastened her to the stump of a little tree on the shore. This was what I wished for; and immediately leaving Friday and the captain's mate to their business, I took the rest with me; and, crossing the creek out of their sight, we surprised the two men before they were aware—one of them lying on the shore, and the other being in the boat. The fellow on shore was between sleeping and waking, and going to start up; the captain, who was foremost, ran in upon him, and knocked him down; and then called out to him in the boat to yield, or he was a dead man. They needed very few arguments to persuade a single man to yield, when he saw five men upon him and his comrade knocked down: besides, this was, it seems, one of the three who were not so hearty in the mutiny as the rest of the crew, and therefore was easily persuaded not only to yield, but afterwards to join very sincerely with us. In the meantime, Friday and the captain's mate so well managed their business with the rest that they drew them, by hallooing and answering, from one hill to another, and from one wood to another, till they not only heartily tired them, but left them where they were, very sure they could not reach back to the boat before it was dark; and, indeed, they were heartily tired themselves also, by the time they came back to us.

We had nothing now to do but to watch for them in the dark, and to fall upon them, so as to make sure work with them. It was several hours after Friday came back to me before they came back to their boat; and we could hear the foremost of them, long before they came quite up, calling to those behind to come along; and could also hear them answer, and complain how lame and tired they were, and not able to come any faster: which was very welcome news to us. At length they came up to the boat: but it is impossible to express their confusion when they found the boat fast aground in the creek, the tide ebbed out, and their two men gone. We could hear them call one to another in a most lamentable manner, telling one another they were got into an enchanted island; that either there were inhabitants in it, and they should all be murdered, or else there were devils and spirits in it, and they should be all carried away and devoured. They hallooed again, and called their two comrades by their names a great many times; but no answer. After some time we could see them, by the little light there was, run about, wringing their hands like men in despair, and sometimes they would go and sit down in the boat to rest themselves: then come ashore again, and walk about again, and so the same thing over again. My men would fain have had me give them leave to fall upon them at once in the dark; but I was willing to take them at some advantage, so as to spare them, and kill as few of them as I could; and especially I was unwilling to hazard the killing of any of our men, knowing the others were very well armed. I resolved to wait, to see if they did not separate; and therefore, to make sure of them, I drew my ambuscade nearer, and ordered Friday and the captain to creep upon their hands and feet, as close to the ground as they could, that they might not be discovered, and get as near them as they could possibly before they offered to fire.

They had not been long in that posture when the boatswain, who was the principal ringleader of the mutiny, and had now shown himself the most dejected and dispirited of all the rest, came walking towards them, with two more of the crew; the captain was so eager at having this principal rogue so much in his power, that he could hardly have patience to let him come so near as to be sure of him, for they only heard his tongue before: but when they came nearer, the captain and Friday, starting up on their feet, let fly at them. The boatswain was killed upon the spot: the next man was shot in the body, and fell just by him, though he did not die till an hour or two after; and the third ran for it. At the noise of the fire I immediately advanced with my whole army, which was now eight men, viz. myself, generalissimo; Friday, my lieutenant-general; the captain and his two men, and the three prisoners of war whom we had trusted with arms. We came upon them, indeed, in the dark, so that they could not see our number; and I made the man they had left in the boat, who was now one of us, to call them by name, to try if I could bring them to a parley, and so perhaps might reduce them to terms; which fell out just as we desired: for indeed it was easy to think, as their condition then was, they would be very willing to capitulate. So he calls out as loud as he could to one of them, "Tom Smith! Tom Smith!" Tom Smith answered immediately, "Is that Robinson?" for it seems he knew the voice.

The other answered, "Ay, ay; for God's sake, Tom Smith, throw down your arms and yield, or you are all dead men this moment." "Who must we yield to? Where are they?" says Smith again. "Here they are," says he; "here's our captain and fifty men with him, have been hunting you these two hours; the boatswain is killed; Will Fry is wounded, and I am a prisoner; and if you do not yield you are all lost." "Will they give us quarter, then?" says Tom Smith, "and we will yield." "I'll go and ask, if you promise to yield," said Robinson: so he asked the captain, and the captain himself then calls out, "You, Smith, you know my voice; if you lay down your arms immediately and submit, you shall have your lives, all but Will Atkins."

Upon this Will Atkins cried out, "For God's sake, captain, give me quarter; what have I done? They have all been as bad as I:" which, by the way, was not true; for it seems this Will Atkins was the first man that laid hold of the captain when they first mutinied, and used him barbarously in tying his hands and giving him injurious language. However, the captain told him he must lay down his arms at discretion, and trust to the governor's mercy: by which he meant me, for they all called me governor. In a word, they all laid down their arms and begged their lives; and I sent the man that had parleyed with them, and two more, who bound them all; and then my great army of fifty men, which, with those three, were in all but eight, came up and seized upon them, and upon their boat; only that I kept myself and one more out of sight for reasons of state.

Our next work was to repair the boat, and think of seizing the ship: and as for the captain, now he had leisure to parley with them, he expostulated with them upon the villainy of their practices with him, and upon the further wickedness of their design, and how certainly it must bring them to misery and distress in the end, and perhaps to the gallows. They all appeared very penitent, and begged hard for their lives. As for that, he told them they were not his prisoners, but the commander's of the island; that they thought they had set him on shore in a barren, uninhabited island; but it had pleased God so to direct them that it was inhabited, and that the governor was an Englishman; that he might hang them all there, if he pleased; but as he had given them all quarter, he supposed he would send them to England, to be dealt with there as justice required, except Atkins, whom he was commanded by the governor to advise to prepare for death, for that he would be hanged in the morning.

Though this was all but a fiction of his own, yet it had its desired effect; Atkins fell upon his knees to beg the captain to intercede with the governor for his life; and all the rest begged of him, for God's sake, that they might not be sent to England.

It now occurred to me that the time of our deliverance was come, and that it would be a most easy thing to bring these fellows in to be hearty in getting possession of the ship; so I retired in the dark from them, that they might not see what kind of a governor they had, and called the captain to me; when I called, at a good distance, one of the men was ordered to speak again, and say to the captain, "Captain, the commander calls for you;" and presently the captain replied, "Tell his excellency I am just coming." This more perfectly amazed them, and they all believed that the commander was just by, with his fifty men. Upon the captain coming to me, I told him my project for seizing the ship, which he liked wonderfully well, and resolved to put it in execution the next morning. But, in order to execute it with more art, and to be secure of success, I told him we must divide the prisoners, and that he should go and take Atkins, and two more of the worst of them, and send them pinioned to the cave where the others lay. This was committed to Friday and the two men who came on shore with the captain. They conveyed them to the cave as to a prison: and it was, indeed, a dismal place, especially to men in their condition. The others I ordered to my bower, as I called it, of which I have given a full description: and as it was fenced in, and they pinioned, the place was secure enough, considering they were upon their behaviour.

To these in the morning I sent the captain, who was to enter into a parley with them; in a word, to try them, and tell me whether he thought they might be trusted or not to go on board and surprise the ship. He talked to them of the injury done him, of the condition they were brought to, and that though the governor had given them quarter for their lives as to the present action, yet that if they were sent to England they would all be hanged in chains; but that if they would join in so just an attempt as to recover the ship, he would have the governor's engagement for their pardon.

Any one may guess how readily such a proposal would be accepted by men in their condition; they fell down on their knees to the captain, and promised, with the deepest imprecations, that they would be faithful to him to the last drop, and that they should owe their lives to him, and would go with him all over the world; that they would own him as a father to them as long as they lived. "Well," says the captain, "I must go and tell the governor what you say, and see what I can do to bring him to consent to it." So he brought me an account of the temper he found them in, and that he verily believed they would be faithful.

However, that we might be very secure, I told him he should go back again and choose out those five, and tell them, that they might see he did not want men, that he would take out those five to be his assistants, and that the governor would keep the other two, and the three that were sent prisoners to the castle (my cave), as hostages for the fidelity of those five; and that if they proved unfaithful in the execution, the five hostages should be hanged in chains alive on the shore. This looked severe, and convinced them that the governor was in earnest; however, they had no way left them but to accept it; and it was now the business of the prisoners, as much as of the captain, to persuade the other five to do their duty.

Our strength was now thus ordered for the expedition: first, the captain, his mate, and passenger; second, the two prisoners of the first gang, to whom, having their character from the captain, I had given their liberty, and trusted them with arms; third, the other two that I had kept till now in my bower, pinioned, but on the captain's motion had now released; fourth, these five released at last; so that there were twelve in all, besides five we kept prisoners in the cave for hostages.

Crusoe
Robinson
Chapter 18

I asked the captain if he was willing to venture with these hands on board the ship; but as for me and my man Friday, I did not think it was proper for us to stir, having seven men left behind; and it was employment enough for us to keep them asunder, and supply them with victuals. As to the five in the cave, I resolved to keep them fast, but Friday went in twice a day to them, to supply them with necessaries; and I made the other two carry provisions to a certain distance, where Friday was to take them.

When I showed myself to the two hostages, it was with the captain, who told them I was the person the governor had ordered to look after them; and that it was the governor's pleasure they should not stir anywhere but by my direction; that if they did, they would be fetched into the castle, and be laid in irons: so that as we never suffered them to see me as governor, I now appeared as another person, and spoke of the governor, the garrison, the castle, and the like, upon all occasions.

The captain now had no difficulty before him, but to furnish his two boats, stop the breach of one, and man them. He made his passenger captain of one, with four of the men; and himself, his mate, and five more, went in the other; and they contrived their business very well, for they came up to the ship about midnight. As soon as they came within call of the ship, he made Robinson hail them, and tell them they had brought off the men and the boat, but that it was a long time before they had found them, and the like, holding them in a chat till they came to the ship's side; when the captain and the mate entering first with their arms, immediately knocked down the second mate and carpenter with the butt-end of their muskets, being very faithfully seconded by their men; they secured all the rest that were upon the main and quarter decks, and began to fasten the hatches, to keep them down that were below; when the other boat and their men, entering at the forechains, secured the forecastle of the ship, and the scuttle which went down into the cook-room, making three men they found there prisoners. When this was done, and all safe upon deck, the captain ordered the mate, with three men, to break into the round-house, where the new rebel captain lay, who, having taken the alarm, had got up, and with two men and a boy had got firearms in their hands; and when the mate, with a crow, split open the door, the new captain and his men fired boldly among them, and wounded the mate with a musket ball, which broke his arm, and wounded two more of the men, but killed nobody. The mate, calling for help, rushed, however, into the round-house, wounded as he was, and, with his pistol, shot the new captain through the head, the bullet entering at his mouth, and came out again behind one of his ears, so that he never spoke a word more: upon which the rest yielded, and the ship was taken effectually, without any more lives lost.

As soon as the ship was thus secured, the captain ordered seven guns to be fired, which was the signal agreed upon with me to give me notice of his success, which, you may be sure, I was very glad to hear, having sat watching upon the shore for it till near two o'clock in the morning. Having thus heard the signal plainly, I laid me down; and it having been a day of great fatigue to me, I slept very sound, till I was surprised with the noise of a gun; and presently starting up, I heard a man call me by the name of "Governor! Governor!" and presently I knew the captain's voice; when, climbing up to the top of the hill, there he stood, and, pointing to the ship, he embraced me in his arms, "My dear friend and deliverer," says he, "there's your ship; for she is all yours, and so are we, and all that belong to her." I cast my eyes to the ship, and there she rode, within little more than half a mile of the shore; for they had weighed her anchor as soon as they were masters of her, and, the weather being fair, had brought her to an anchor just against the mouth of the little creek; and the tide being up, the captain had brought the pinnace in near the place where I had first landed my rafts, and so landed just at my door. I was at first ready to sink down with the surprise; for I saw my deliverance, indeed, visibly put into my hands, all things easy, and a large ship just ready to carry me away whither I pleased to go. At first, for some time, I was not able to answer him one word; but as he had taken me in his arms I held fast by him, or I should have fallen to the ground. He perceived the surprise, and immediately pulled a bottle out of his pocket and gave me a dram of cordial, which he had brought on purpose for me. After I had drunk it, I sat down upon the ground; and though it brought me to myself, yet it was a good while before I could speak a word to him.

All this time the poor man was in as great an ecstasy as I, only not under any surprise as I was; and he said a thousand kind and tender things to me, to compose and bring me to myself; but such was the flood of joy in my breast, that it put all my spirits into confusion: at last it broke out into tears, and in a little while after I recovered my speech; I then took my turn, and embraced him as my deliverer, and we rejoiced together. I told him I looked upon him as a man sent by Heaven to deliver me, and that the whole transaction seemed to be a chain of wonders; that such things as these were the testimonies we had of a secret hand of Providence governing the world, and an evidence that the eye of an infinite Power could search into the remotest corner of the world, and send help to the miserable whenever He pleased. I forgot not to lift up my heart in thankfulness to Heaven; and what heart could forbear to bless Him, who had not only in a miraculous manner provided for me in such a wilderness, and in such a desolate condition, but from whom every deliverance must always be acknowledged to proceed.

When we had talked a while, the captain told me he had brought me some little refreshment, such as the ship afforded, and such as the wretches that had been so long his masters had not plundered him of. Upon this, he called aloud to the boat, and bade his men bring the things ashore that were for the governor; and, indeed, it was a present as if I had been one that was not to be carried away with them, but as if I had been to dwell upon the island still. First, he had brought me a case of bottles full of excellent cordial waters, six large bottles of Madeira wine (the bottles held two quarts each), two pounds of excellent good tobacco, twelve good pieces of the ship's beef, and six pieces of pork, with a bag of peas, and about a hundred-weight of biscuit; he also brought me a box of sugar, a box of flour, a bag full of lemons, and two bottles of lime-juice, and abundance of other things. But besides these, and what was a thousand times more useful to me, he brought me six new clean shirts, six very good neckcloths, two pair of gloves, one pair of shoes, a hat, and one pair of stockings, with a very good suit of clothes of his own, which had been worn but very little: in a word, he clothed me from head to foot. It was a very kind and agreeable present, as any one may imagine, to one in my circumstances, but never was anything in the world of that kind so unpleasant, awkward, and uneasy as it was to me to wear such clothes at first.

Crusoe
Chapter 18

After these ceremonies were past, and after all his good things were brought into my little apartment, we began to consult what was to be done with the prisoners we had; for it was worth considering whether we might venture to take them with us or no, especially two of them, whom he knew to be incorrigible and refractory to the last degree; and the captain said he knew they were such rogues that there was no obliging them, and if he did carry them away, it must be in irons, as malefactors, to be delivered over to justice at the first English colony he could come to; and I found that the captain himself was very anxious about it. Upon this, I told him that, if he desired it, I would undertake to bring the two men he spoke of to make it their own request that he should leave them upon the island. "I should be very glad of that," says the captain, "with all my heart." "Well," says I, "I will send for them up and talk with them for you." So I caused Friday and the two hostages, for they were now discharged, their comrades having performed their promise; I say, I caused them to go to the cave, and bring up the five men, pinioned as they were, to the bower, and keep them there till I came. After some time, I came thither dressed in my new habit; and now I was called governor again. Being all met, and the captain with me, I caused the men to be brought before me, and I told them I had got a full account of their villainous behaviour to the captain, and how they had run away with the ship, and were preparing to commit further robberies, but that Providence had ensnared them in their own ways, and that they were fallen into the pit which they had dug for others.

I let them know that by my direction the ship had been seized; that she lay now in the road; and they might see by-and-by that their new captain had received the reward of his villainy, and that they would see him hanging at the yard-arm; that, as to them, I wanted to know what they had to say why I should not execute them as pirates taken in the fact, as by my commission they could not doubt but I had authority so to do.

One of them answered in the name of the rest, that they had nothing to say but this, that when they were taken the captain promised them their lives, and they humbly implored my mercy. But I told them I knew not what mercy to show them; for as for myself, I had resolved to quit the island with all my men, and had taken passage with the captain to go to England; and as for the captain, he could not carry them to England other than as prisoners in irons, to be tried for mutiny and running away with the ship; the consequence of which, they must needs know, would be the gallows; so that I could not tell what was best for them, unless they had a mind to take their fate in the island. If they desired that, as I had liberty to leave the island, I had some inclination to give them their lives, if they thought they could shift on shore. They seemed very thankful for it, and said they would much rather venture to stay there than be carried to England to be hanged. So I left it on that issue.

However, the captain seemed to make some difficulty of it, as if he durst not leave them there. Upon this I seemed a little angry with the captain, and told him that they were my prisoners, not his; and that seeing I had offered them so much favour, I would be as good as my word; and that if he did not think fit to consent to it I would set them at liberty, as I found them: and if he did not like it he might take them again if he could catch them. Upon this they appeared very thankful, and I accordingly set them at liberty, and bade them retire into the woods, to the place whence they came, and I would leave them some firearms, some ammunition, and some directions how they should live very well if they thought fit. Upon this I prepared to go on board the ship; but told the captain I would stay that night to prepare my things, and desired him to go on board in the meantime, and keep all right in the ship, and send the boat on shore next day for me; ordering him, at all events, to cause the new captain, who was killed, to be hanged at the yard-arm, that these men might see him.

When the captain was gone I sent for the men up to me to my apartment, and entered seriously into discourse with them on their circumstances. I told them I thought they had made a right choice; that if the captain had carried them away they would certainly be hanged. I showed them the new captain hanging at the yard-arm of the ship, and told them they had nothing less to expect.

ENTERTAINMENT Robinson Chapter 18

When they had all declared their willingness to stay, I then told them I would let them into the story of my living there, and put them into the way of making it easy to them. Accordingly, I gave them the whole history of the place, and of my coming to it; showed them my fortifications, the way I made my bread, planted my corn, cured my grapes; and, in a word, all that was necessary to make them easy. I told them the story also of the seventeen Spaniards that were to be expected, for whom I left a letter, and made them promise to treat them in common with themselves. Here it may be noted that the captain, who had ink on board, was greatly surprised that I never hit upon a way of making ink of charcoal and water, or of something else, as I had done things much more difficult.

I left them my firearms—viz. five muskets, three fowling-pieces, and three swords. I had above a barrel and a half of powder left; for after the first year or two I used but little, and wasted none. I gave them a description of the way I managed the goats, and directions to milk and fatten them, and to make both butter and cheese. In a word, I gave them every part of my own story; and told them I should prevail with the captain to leave them two barrels of gunpowder more, and some garden-seeds, which I told them I would have been very glad of. Also, I gave them the bag of peas which the captain had brought me to eat, and bade them be sure to sow and increase them.

Chapter 19 - Return To England

Having done all this I left them the next day, and went on board the ship. We prepared immediately to sail, but did not weigh that night. The next morning early, two of the five men came swimming to the ship's side, and making the most lamentable complaint of the other three, begged to be taken into the ship for God's sake, for they should be murdered, and begged the captain to take them on board, though he hanged them immediately. Upon this the captain pretended to have no power without me; but after some difficulty, and after their solemn promises of amendment, they were taken on board, and were, some time after, soundly whipped and pickled; after which they proved very honest and quiet fellows.

Some time after this, the boat was ordered on shore, the tide being up, with the things promised to the men; to which the captain, at my intercession, caused their chests and clothes to be added, which they took, and were very thankful for. I also encouraged them, by telling them that if it lay in my power to send any vessel to take them in, I would not forget them.

When I took leave of this island, I carried on board, for relics, the great goat-skin cap I had made, my umbrella, and one of my parrots; also, I forgot not to take the money I formerly mentioned, which had lain by me so long useless that it was grown rusty or tarnished, and could hardly pass for silver till it had been a little rubbed and handled, as also the money I found in the wreck of the Spanish ship. And thus I left the island, the 19th of December, as I found by the ship's account, in the year 1686, after I had been upon it eight-and-twenty years, two months, and nineteen days; being delivered from this second captivity the same day of the month that I first made my escape in the long-boat from among the Moors of Sallee. In this vessel, after a long voyage, I arrived in England the 11th of June, in the year 1687, having been thirty-five years absent.

When I came to England I was as perfect a stranger to all the world as if I had never been known there. My benefactor and faithful steward, whom I had left my money in trust with, was alive, but had had great misfortunes in the world; was become a widow the second time, and very low in the world. I made her very easy as to what she owed me, assuring her I would give her no trouble; but, on the contrary, in gratitude for her former care and faithfulness to me, I relieved her as my little stock would afford; which at that time would, indeed, allow me to do but little for her; but I assured her I would never forget her former kindness to me; nor did I forget her when I had sufficient to help her, as shall be observed in its proper place. I went down afterwards into Yorkshire; but my father was dead, and my mother and all the family extinct, except that I found two sisters, and two of the children of one of my brothers; and as I had been long ago given over for dead, there had been no provision made for me; so that, in a word, I found nothing to relieve or assist me; and that the little money I had would not do much for me as to settling in the world.

I met with one piece of gratitude indeed, which I did not expect; and this was, that the master of the ship, whom I had so happily delivered, and by the same means saved the ship and cargo, having given a very handsome account to the owners of the manner how I had saved the lives of the men and the ship, they invited me to meet them and some other merchants concerned, and all together made me a very handsome compliment upon the subject, and a present of almost £200 sterling.

But after making several reflections upon the circumstances of my life, and how little way this would go towards settling me in the world, I resolved to go to Lisbon, and see if I might not come at some information of the state of my plantation in the Brazils, and of what was become of my partner, who, I had reason to suppose, had some years past given me over for dead. With this view I took shipping for Lisbon, where I arrived in April following, my man Friday accompanying me very honestly in all these ramblings, and proving a most faithful servant upon all occasions. When I came to Lisbon, I found out, by inquiry, and to my particular satisfaction, my old friend, the captain of the ship who first took me up at sea off the shore of Africa. He was now grown old, and had left off going to sea, having put his son, who was far from a young man, into his ship, and who still used the Brazil trade. The old man did not know me, and indeed I hardly knew him. But I soon brought him to my remembrance, and as soon brought myself to his remembrance, when I told him who I was.

After some passionate expressions of the old acquaintance between us, I inquired, you may be sure, after my plantation and my partner. The old man told me he had not been in the Brazils for about nine years; but that he could assure me that when he came away my partner was living, but the trustees whom I had joined with him to take cognisance of my part were both dead: that, however, he believed I would have a very good account of the improvement of the plantation; for that, upon the general belief of my being cast away and drowned, my trustees had given in the account of the produce of my part of the plantation to the procurator-fiscal, who had appropriated it, in case I never came to claim it, one-third to the king, and two-thirds to the monastery of St. Augustine, to be expended for the benefit of the poor, and for the conversion of the Indians to the Catholic faith: but that, if I appeared, or any one for me, to claim the inheritance, it would be restored; only that the improvement, or annual production, being distributed to charitable uses, could not be restored: but he assured me that the steward of the king's revenue from lands, and the providore, or steward of the monastery, had taken great care all along that the incumbent, that is to say my partner, gave every year a faithful account of the produce, of which they had duly received my moiety. I asked him if he knew to what height of improvement he had brought the plantation, and whether he thought it might be worth looking after; or whether, on my going thither, I should meet with any obstruction to my possessing my just right in the moiety.

He told me he could not tell exactly to what degree the plantation was improved; but this he knew, that my partner was grown exceeding rich upon the enjoying his part of it; and that, to the best of his remembrance, he had heard that the king's third of my part, which was, it seems, granted away to some other monastery or religious house, amounted to above two hundred moidores a year: that as to my being restored to a quiet possession of it, there was no question to be made of that, my partner being alive to witness my title, and my name being also enrolled in the register of the country; also he told me that the survivors of my two trustees were very fair, honest people, and very wealthy; and he believed I would not only have their assistance for putting me in possession, but would find a very considerable sum of money in their hands for my account, being the produce of the farm while their fathers held the trust, and before it was given up, as above; which, as he remembered, was for about twelve years.

I showed myself a little concerned and uneasy at this account, and inquired of the old captain how it came to pass that the trustees should thus dispose of my effects, when he knew that I had made my will, and had made him, the Portuguese captain, my universal heir, &c.

He told me that was true; but that as there was no proof of my being dead, he could not act as executor until some certain account should come of my death; and, besides, he was not willing to intermeddle with a thing so remote: that it was true he had registered my will, and put in his claim; and could he have given any account of my being dead or alive, he would have acted by procuration, and taken possession of the ingenio (so they call the sugar-house), and have given his son, who was now at the Brazils, orders to do it. "But," says the old man, "I have one piece of news to tell you, which perhaps may not be so acceptable to you as the rest; and that is, believing you were lost, and all the world believing so also, your partner and trustees did offer to account with me, in your name, for the first six or eight years' profits, which I received. There being at that time great disbursements for increasing the works, building an ingenio, and buying slaves, it did not amount to near so much as afterwards it produced; however," says the old man, "I shall give you a true account of what I have received in all, and how I have disposed of it."

After a few days' further conference with this ancient friend, he brought me an account of the first six years' income of my plantation, signed by my partner and the merchant-trustees, being always delivered in goods, viz. tobacco in roll, and sugar in chests, besides rum, molasses, &c., which is the consequence of a sugar-work; and I found by this account, that every year the income considerably increased; but, as above, the disbursements being large, the sum at first was small: however, the old man let me see that he was debtor to me four hundred and seventy moidores of gold, besides sixty chests of sugar and fifteen double rolls of tobacco, which were lost in his ship; he having been shipwrecked coming home to Lisbon, about eleven years after my having the place. The good man then began to complain of his misfortunes, and how he had been obliged to make use of my money to recover his losses, and buy him a share in a new ship. "However, my old friend," says he, "you shall not want a supply in your necessity; and as soon as my son returns you shall be fully satisfied." Upon this he pulls out an old pouch, and gives me one hundred and sixty Portugal moidores in gold; and giving the writings of his title to the ship, which his son was gone to the Brazils in, of which he was quarter-part owner, and his son another, he puts them both into my hands for security of the rest.

I was too much moved with the honesty and kindness of the poor man to be able to bear this; and remembering what he had done for me, how he had taken me up at sea, and how generously he had used me on all occasions, and particularly how sincere a friend he was now to me, I could hardly refrain weeping at what he had said to me; therefore I asked him if his circumstances admitted him to spare so much money at that time, and if it would not straiten him? He told me he could not say but it might straiten him a little; but, however, it was my money, and I might want it more than he.

Everything the good man said was full of affection, and I could hardly refrain from tears while he spoke; in short, I took one hundred of the moidores, and called for a pen and ink to give him a receipt for them: then I returned him the rest, and told him if ever I had possession of the plantation I would return the other to him also (as, indeed, I afterwards did); and that as to the bill of sale of his part in his son's ship, I would not take it by any means; but that if I wanted the money, I found he was honest enough to pay me; and if I did not, but came to receive what he gave me reason to expect, I would never have a penny more from him.

When this was past, the old man asked me if he should put me into a method to make my claim to my plantation. I told him I thought to go over to it myself. He said I might do so if I pleased, but that if I did not, there were ways enough to secure my right, and immediately to appropriate the profits to my use: and as there were ships in the river of Lisbon just ready to go away to Brazil, he made me enter my name in a public register, with his affidavit, affirming, upon oath, that I was alive, and that I was the same person who took up the land for the planting the said plantation at first. This being regularly attested by a notary, and a procuration affixed, he directed me to send it, with a letter of his writing, to a merchant of his acquaintance at the place; and then proposed my staying with him till an account came of the return.

Never was anything more honourable than the proceedings upon this procuration; for in less than seven months I received a large packet from the survivors of my trustees, the merchants, for whose account I went to sea, in which were the following, particular letters and papers enclosed:—

First, there was the account-current of the produce of my farm or plantation, from the year when their fathers had balanced with my old Portugal captain, being for six years; the balance appeared to be one thousand one hundred and seventy-four moidores in my favour.

Secondly, there was the account of four years more, while they kept the effects in their hands, before the government claimed the administration, as being the effects of a person not to be found, which they called civil death; and the balance of this, the value of the plantation increasing, amounted to nineteen thousand four hundred and forty-six crusadoes, being about three thousand two hundred and forty moidores.

Thirdly, there was the Prior of St. Augustine's account, who had received the profits for above fourteen years; but not being able to account for what was disposed of by the hospital, very honestly declared he had eight hundred and seventy-two moidores not distributed, which he acknowledged to my account: as to the king's part, that refunded nothing.

There was a letter of my partner's, congratulating me very affectionately upon my being alive, giving me an account how the estate was improved, and what it produced a year; with the particulars of the number of squares, or acres that it contained, how planted, how many slaves there were upon it: and making two-and-twenty crosses for blessings, told me he had said so many Ave Marias to thank the Blessed Virgin that I was alive; inviting me very passionately to come over and take possession of my own, and in the meantime to give him orders to whom he should deliver my effects if I did not come myself; concluding with a hearty tender of his friendship, and that of his family; and sent me as a present seven fine leopards' skins, which he had, it seems, received from Africa, by some other ship that he had sent thither, and which, it seems, had made a better voyage than I. He sent me also five chests of excellent sweetmeats, and a hundred pieces of gold uncoined, not quite so large as moidores. By the same fleet my two merchant-trustees shipped me one thousand two hundred chests of sugar, eight hundred rolls of tobacco, and the rest of the whole account in gold.

I might well say now, indeed, that the latter end of Job was better than the beginning. It is impossible to express the flutterings of my very heart when I found all my wealth about me; for as the Brazil ships come all in fleets, the same ships which brought my letters brought my goods: and the effects were safe in the river before the letters came to my hand. In a word, I turned pale, and grew sick; and, had not the old man run and fetched me a cordial, I believe the sudden surprise of joy had overset nature, and I had died upon the spot: nay, after that I continued very ill, and was so some hours, till a physician being sent for, and something of the real cause of my illness being known, he ordered me to be let blood; after which I had relief, and grew well: but I verily believe, if I had not been eased by a vent given in that manner to the spirits, I should have died.

I was now master, all on a sudden, of above five thousand pounds sterling in money, and had an estate, as I might well call it, in the Brazils, of above a thousand pounds a year, as sure as an estate of lands in England: and, in a word, I was in a condition which I scarce knew how to understand, or how to compose myself for the enjoyment of it. The first thing I did was to recompense my original benefactor, my good old captain, who had been first charitable to me in my distress, kind to me in my beginning, and honest to me at the end. I showed him all that was sent to me; I told him that, next to the providence of Heaven, which disposed all things, it was owing to him; and that it now lay on me to reward him, which I would do a hundred-fold: so I first returned to him the hundred moidores I had received of him; then I sent for a notary, and caused him to draw up a general release or discharge from the four hundred and seventy moidores, which he had acknowledged he owed me, in the fullest and firmest manner possible. After which I caused a procuration to be drawn, empowering him to be the receiver of the annual profits of my plantation: and appointing my partner to account with him, and make the returns, by the usual fleets, to him in my name; and by a clause in the end, made a grant of one hundred moidores a year to him during his life, out of the effects, and fifty moidores a year to his son after him, for his life: and thus I requited my old man.

I had now to consider which way to steer my course next, and what to do with the estate that Providence had thus put into my hands; and, indeed, I had more care upon my head now than I had in my state of life in the island where I wanted nothing but what I had, and had nothing but what I wanted; whereas I had now a great charge upon me, and my business was how to secure it. I had not a cave now to hide my money in, or a place where it might lie without lock or key, till it grew mouldy and tarnished before anybody would meddle with it; on the contrary, I knew not where to put it, or whom to trust with it. My old patron, the captain, indeed, was honest, and that was the only refuge I had. In the next place, my interest in the Brazils seemed to summon me thither; but now I could not tell how to think of going thither till I had settled my affairs, and left my effects in some safe hands behind me. At first I thought of my old friend the widow, who I knew was honest, and would be just to me; but then she was in years, and but poor, and, for aught I knew, might be in debt: so that, in a word, I had no way but to go back to England myself and take my effects with me.

It was some months, however, before I resolved upon this; and, therefore, as I had rewarded the old captain fully, and to his satisfaction, who had been my former benefactor, so I began to think of the poor widow, whose husband had been my first benefactor, and she, while it was in her power, my faithful steward and instructor. So, the first thing I did, I got a merchant in Lisbon to write to his correspondent in London, not only to pay a bill, but to go find her out, and carry her, in money, a hundred pounds from me, and to talk with her, and comfort her in her poverty, by telling her she should, if I lived, have a further supply: at the same time I sent my two sisters in the country a hundred pounds each, they being, though not in want, yet not in very good circumstances; one having been married and left a widow; and the other having a husband not so kind to her as he should be. But among all my relations or acquaintances I could not yet pitch upon one to whom I durst commit the gross of my stock, that I might go away to the Brazils, and leave things safe behind me; and this greatly perplexed me.

I had once a mind to have gone to the Brazils and have settled myself there, for I was, as it were, naturalised to the place; but I had some little scruple in my mind about religion, which insensibly drew me back. However, it was not religion that kept me from going there for the present; and as I had made no scruple of being openly of the religion of the country all the while I was among them, so neither did I yet; only that, now and then, having of late thought more of it than formerly, when I began to think of living and dying among them, I began to regret having professed myself a Papist, and thought it might not be the best religion to die with.

But, as I have said, this was not the main thing that kept me from going to the Brazils, but that really I did not know with whom to leave my effects behind me; so I resolved at last to go to England, where, if I arrived, I concluded that I should make some acquaintance, or find some relations, that would be faithful to me; and, accordingly, I prepared to go to England with all my wealth.

In order to prepare things for my going home, I first (the Brazil fleet being just going away) resolved to give answers suitable to the just and faithful account of things I had from thence; and, first, to the Prior of St. Augustine I wrote a letter full of thanks for his just dealings, and the offer of the eight hundred and seventy-two moidores which were undisposed of, which I desired might be given, five hundred to the monastery, and three hundred and seventy-two to the poor, as the prior should direct; desiring the good padre's prayers for me, and the like. I wrote next a letter of thanks to my two trustees, with all the acknowledgment that so much justice and honesty called for: as for sending them any present, they were far above having any occasion of it. Lastly, I wrote to my partner, acknowledging his industry in the improving the plantation, and his integrity in increasing the stock of the works; giving him instructions for his future government of my part, according to the powers I had left with my old patron, to whom I desired him to send whatever became due to me, till he should hear from me more particularly; assuring him that it was my intention not only to come to him, but to settle myself there for the remainder of my life. To this I added a very handsome present of some Italian silks for his wife and two daughters, for such the captain's son informed me he had; with two pieces of fine English broadcloth, the best I could get in Lisbon, five pieces of black baize, and some Flanders lace of a good value.

Having thus settled my affairs, sold my cargo, and turned all my effects into good bills of exchange, my next difficulty was which way to go to England: I had been accustomed enough to the sea, and yet I had a strange aversion to go to England by the sea at that time, and yet I could give no reason for it, yet the difficulty increased upon me so much, that though I had once shipped my baggage in order to go, yet I altered my mind, and that not once but two or three times.

It is true I had been very unfortunate by sea, and this might be one of the reasons; but let no man slight the strong impulses of his own thoughts in cases of such moment: two of the ships which I had singled out to go in, I mean more particularly singled out than any other, having put my things on board one of them, and in the other having agreed with the captain; I say two of these ships miscarried. One was taken by the Algerines, and the other was lost on the Start, near Torbay, and all the people drowned except three; so that in either of those vessels I had been made miserable.

Having been thus harassed in my thoughts, my old pilot, to whom I communicated everything, pressed me earnestly not to go by sea, but either to go by land to the Groyne, and cross over the Bay of Biscay to Rochelle, from whence it was but an easy and safe journey by land to Paris, and so to Calais and Dover; or to go up to Madrid, and so all the way by land through France. In a word, I was so prepossessed against my going by sea at all, except from Calais to Dover, that I resolved to travel all the way by land; which, as I was not in haste, and did not value the charge, was by much the pleasanter way: and to make it more so, my old captain brought an English gentleman, the son of a merchant in Lisbon, who was willing to travel with me; after which we picked up two more English merchants also, and two young Portuguese gentlemen, the last going to Paris only; so that in all there were six of us and five servants; the two merchants and the two Portuguese, contenting themselves with one servant between two, to save the charge; and as for me, I got an English sailor to travel with me as a servant, besides my man Friday, who was too much a stranger to be capable of supplying the place of a servant on the road.

In this manner I set out from Lisbon; and our company being very well mounted and armed, we made a little troop, whereof they did me the honour to call me captain, as well because I was the oldest man, as because I had two servants, and, indeed, was the origin of the whole journey.

As I have troubled you with none of my sea journals, so I shall trouble you now with none of my land journals; but some adventures that happened to us in this tedious and difficult journey I must not omit.

When we came to Madrid, we, being all of us strangers to Spain, were willing to stay some time to see the court of Spain, and what was worth observing; but it being the latter part of the summer, we hastened away, and set out from Madrid about the middle of October; but when we came to the edge of Navarre, we were alarmed, at several towns on the way, with an account that so much snow was falling on the French side of the mountains, that several travellers were obliged to come back to Pampeluna, after having attempted at an extreme hazard to pass on.

When we came to Pampeluna itself, we found it so indeed; and to me, that had been always used to a hot climate, and to countries where I could scarce bear any clothes on, the cold was insufferable; nor, indeed, was it more painful than surprising to come but ten days before out of Old Castile, where the weather was not only warm but very hot, and immediately to feel a wind from the Pyrenean Mountains so very keen, so severely cold, as to be intolerable and to endanger benumbing and perishing of our fingers and toes.

Poor Friday was really frightened when he saw the mountains all covered with snow, and felt cold weather, which he had never seen or felt before in his life. To mend the matter, when we came to Pampeluna it continued snowing with so much violence and so long, that the people said winter was come before its time; and the roads, which were difficult before, were now quite impassable; for, in a word, the snow lay in some places too thick for us to travel, and being not hard frozen, as is the case in the northern countries, there was no going without being in danger of being buried alive every step. We stayed no less than twenty days at Pampeluna; when (seeing the winter coming on, and no likelihood of its being better, for it was the severest winter all over Europe that had been known in the memory of man) I proposed that we should go away to Fontarabia, and there take shipping for Bordeaux, which was a very little voyage. But, while I was considering this, there came in four French gentlemen, who, having been stopped on the French side of the passes, as we were on the Spanish, had found out a guide, who, traversing the country near the head of Languedoc, had brought them over the mountains by such ways that they were not much incommoded with the snow; for where they met with snow in any quantity, they said it was frozen hard enough to bear them and their horses. We sent for this guide, who told us he would undertake to carry us the same way, with no hazard from the snow, provided we were armed sufficiently to protect ourselves from wild beasts; for, he said, in these great snows it was frequent for some wolves to show themselves at the foot of the mountains, being made ravenous for want of food, the ground being covered with snow.

We told him we were well enough prepared for such creatures as they were, if he would insure us from a kind of two-legged wolves, which we were told we were in most danger from, especially on the French side of the mountains. He satisfied us that there was no danger of that kind in the way that we were to go; so we readily agreed to follow him, as did also twelve other gentlemen with their servants, some French, some Spanish, who, as I said, had attempted to go, and were obliged to come back again.

Accordingly, we set out from Pampeluna with our guide on the 15th of November; and indeed I was surprised when, instead of going forward, he came directly back with us on the same road that we came from Madrid, about twenty miles; when, having passed two rivers, and come into the plain country, we found ourselves in a warm climate again, where the country was pleasant, and no snow to be seen; but, on a sudden, turning to his left, he approached the mountains another way; and though it is true the hills and precipices looked dreadful, yet he made so many tours, such meanders, and led us by such winding ways, that we insensibly passed the height of the mountains without being much encumbered with the snow; and all on a sudden he showed us the pleasant and fruitful provinces of Languedoc and Gascony, all green and flourishing, though at a great distance, and we had some rough way to pass still.

We were a little uneasy, however, when we found it snowed one whole day and a night so fast that we could not travel; but he bid us be easy; we should soon be past it all: we found, indeed, that we began to descend every day, and to come more north than before; and so, depending upon our guide, we went on.

It was about two hours before night when, our guide being something before us, and not just in sight, out rushed three monstrous wolves, and after them a bear, from a hollow way adjoining to a thick wood; two of the wolves made at the guide, and had he been far before us, he would have been devoured before we could have helped him; one of them fastened upon his horse, and the other attacked the man with such violence, that he had not time, or presence of mind enough, to draw his pistol, but hallooed and cried out to us most lustily. My man Friday being next me, I bade him ride up and see what was the matter. As soon as Friday came in sight of the man, he hallooed out as loud as the other, "O master! O master!" but like a bold fellow, rode directly up to the poor man, and with his pistol shot the wolf in the head that attacked him.

It was happy for the poor man that it was my man Friday; for, having been used to such creatures in his country, he had no fear upon him, but went close up to him and shot him; whereas, any other of us would have fired at a farther distance, and have perhaps either missed the wolf or endangered shooting the man.

But it was enough to have terrified a bolder man than I; and, indeed, it alarmed all our company, when, with the noise of Friday's pistol, we heard on both sides the most dismal howling of wolves; and the noise, redoubled by the echo of the mountains, appeared to us as if there had been a prodigious number of them; and perhaps there was not such a few as that we had no cause of apprehension: however, as Friday had killed this wolf, the other that had fastened upon the horse left him immediately, and fled, without doing him any damage, having happily fastened upon his head, where the bosses of the bridle had stuck in his teeth. But the man was most hurt; for the raging creature had bit him twice, once in the arm, and the other time a little above his knee; and though he had made some defence, he was just tumbling down by the disorder of his horse, when Friday came up and shot the wolf.

It is easy to suppose that at the noise of Friday's pistol we all mended our pace, and rode up as fast as the way, which was very difficult, would give us leave, to see what was the matter. As soon as we came clear of the trees, which blinded us before, we saw clearly what had been the case, and how Friday had disengaged the poor guide, though we did not presently discern what kind of creature it was he had killed.

Chapter 20 - Fight Between Friday And A Bear

But never was a fight managed so hardily, and in such a surprising manner as that which followed between Friday and the bear, which gave us all, though at first we were surprised and afraid for him, the greatest diversion imaginable. As the bear is a heavy, clumsy creature, and does not gallop as the wolf does, who is swift and light, so he has two particular qualities, which generally are the rule of his actions; first, as to men, who are not his proper prey (he does not usually attempt them, except they first attack him, unless he be excessively hungry, which it is probable might now be the case, the ground being covered with snow), if you do not meddle with him, he will not meddle with you; but then you must take care to be very civil to him, and give him the road, for he is a very nice gentleman; he will not go a step out of his way for a prince; nay, if you are really afraid, your best way is to look another way and keep going on; for sometimes if you stop, and stand still, and look steadfastly at him, he takes it for an affront; but if you throw or toss anything at him, though it were but a bit of stick as big as your finger, he thinks himself abused, and sets all other business aside to pursue his revenge, and will have satisfaction in point of honour—that is his first quality: the next is, if he be once affronted, he will never leave you, night or day, till he has his revenge, but follows at a good round rate till he overtakes you.

My man Friday had delivered our guide, and when we came up to him he was helping him off his horse, for the man was both hurt and frightened, when on a sudden we espied the bear come out of the wood; and a monstrous one it was, the biggest by far that ever I saw. We were all a little surprised when we saw him; but when Friday saw him, it was easy to see joy and courage in the fellow's countenance. "O! O! O!" says Friday, three times, pointing to him; "O master, you give me te leave, me shakee te hand with him; me makee you good laugh."

I was surprised to see the fellow so well pleased. "You fool," says I, "he will eat you up."—"Eatee me up! eatee me up!" says Friday, twice over again; "me eatee him up; me makee you good laugh; you all stay here, me show you good laugh." So down he sits, and gets off his boots in a moment, and puts on a pair of pumps (as we call the flat shoes they wear, and which he had in his pocket), gives my other servant his horse, and with his gun away he flew, swift like the wind.

The bear was walking softly on, and offered to meddle with nobody, till Friday coming pretty near, calls to him, as if the bear could understand him. "Hark ye, hark ye," says Friday, "me speakee with you." We followed at a distance, for now being down on the Gascony side of the mountains, we were entered a vast forest, where the country was plain and pretty open, though it had many trees in it scattered here and there. Friday, who had, as we say, the heels of the bear, came up with him quickly, and took up a great stone, and threw it at him, and hit him just on the head, but did him no more harm than if he had thrown it against a wall; but it answered Friday's end, for the rogue was so void of fear that he did it purely to make the bear follow him, and show us some laugh as he called it. As soon as the bear felt the blow, and saw him, he turns about and comes after him, taking very long strides, and shuffling on at a strange rate, so as would have put a horse to a middling gallop; away reins Friday, and takes his course as if he ran towards us for help; so we all resolved to fire at once upon the bear, and deliver my man; though I was angry at him for bringing the bear back upon us, when he was going about his own business another way; and especially I was angry that he had turned the bear upon us, and then ran away; and I called out, "You dog! is this your making us laugh? Come away, and take your horse, that we may shoot the creature." He heard me, and cried out, "No shoot, no shoot; stand still, and you get much laugh:" and as the nimble creature ran two feet for the bear's one, he turned on a sudden on one side of us, and seeing a great oak-tree fit for his purpose, he beckoned to us to follow; and doubling his pace, he got nimbly up the tree, laying his gun down upon the ground, at about five or six yards from the bottom of the tree.

The bear soon came to the tree, and we followed at a distance: the first thing he did he stopped at the gun, smelt at it, but let it lie, and up he scrambles into the tree, climbing like a cat, though so monstrous heavy. I was amazed at the folly, as I thought it, of my man, and could not for my life see anything to laugh at, till seeing the bear get up the tree, we all rode near to him.

When we came to the tree, there was Friday got out to the small end of a large branch, and the bear got about half-way to him. As soon as the bear got out to that part where the limb of the tree was weaker, "Ha!" says he to us, "now you see me teachee the bear dance:" so he began jumping and shaking the bough, at which the bear began to totter, but stood still, and began to look behind him, to see how he should get back; then, indeed, we did laugh heartily. But Friday had not done with him by a great deal; when seeing him stand still, he called out to him again, as if he had supposed the bear could speak English, "What, you come no farther? pray you come farther;" so he left jumping and shaking the tree; and the bear, just as if he understood what he said, did come a little farther; then he began jumping again, and the bear stopped again. We thought now was a good time to knock him in the head, and called to Friday to stand still and we should shoot the bear: but he cried out earnestly, "Oh, pray! Oh, pray! no shoot, me shoot by and then:" he would have said by-and-by.

However, to shorten the story, Friday danced so much, and the bear stood so ticklish, that we had laughing enough, but still could not imagine what the fellow would do: for first we thought he depended upon shaking the bear off; and we found the bear was too cunning for that too; for he would not go out far enough to be thrown down, but clung fast with his great broad claws and feet, so that we could not imagine what would be the end of it, and what the jest would be at last. But Friday put us out of doubt quickly: for seeing the bear cling fast to the bough, and that he would not be persuaded to come any farther, "Well, well," says Friday, "you no come farther, me go; you no come to me, me come to you;" and upon this he went out to the smaller end, where it would bend with his weight, and gently let himself down by it, sliding down the bough till he came near enough to jump down on his feet, and away he ran to his gun, took it up, and stood still.

"Well," said I to him, "Friday, what will you do now? Why don't you shoot him?" "No shoot," says Friday, "no yet; me shoot now, me no kill; me stay, give you one more laugh:" and, indeed, so he did; for when the bear saw his enemy gone, he came back from the bough, where he stood, but did it very cautiously, looking behind him every step, and coming backward till he got into the body of the tree, then, with the same hinder end foremost, he came down the tree, grasping it with his claws, and moving one foot at a time, very leisurely.

At this juncture, and just before he could set his hind foot on the ground, Friday stepped up close to him, clapped the muzzle of his piece into his ear, and shot him dead. Then the rogue turned about to see if we did not laugh; and when he saw we were pleased by our looks, he began to laugh very loud. "So we kill bear in my country," says Friday. "So you kill them?" says I; "why, you have no guns."—"No," says he, "no gun, but shoot great much long arrow." This was a good diversion to us; but we were still in a wild place, and our guide very much hurt, and what to do we hardly knew; the howling of wolves ran much in my head; and, indeed, except the noise I once heard on the shore of Africa, of which I have said something already, I never heard anything that filled me with so much horror.

These things, and the approach of night, called us off, or else, as Friday would have had us, we should certainly have taken the skin of this monstrous creature off, which was worth saving; but we had near three leagues to go, and our guide hastened us; so we left him, and went forward on our journey.

The ground was still covered with snow, though not so deep and dangerous as on the mountains; and the ravenous creatures, as we heard afterwards, were come down into the forest and plain country, pressed by hunger, to seek for food, and had done a great deal of mischief in the villages, where they surprised the country people, killed a great many of their sheep and horses, and some people too.

We had one dangerous place to pass, and our guide told us if there were more wolves in the country we should find them there; and this was a small plain, surrounded with woods on every side, and a long, narrow defile, or lane, which we were to pass to get through the wood, and then we should come to the village where we were to lodge.

It was within half-an-hour of sunset when we entered the wood, and a little after sunset when we came into the plain: we met with nothing in the first wood, except that in a little plain within the wood, which was not above two furlongs over, we saw five great wolves cross the road, full speed, one after another, as if they had been in chase of some prey, and had it in view; they took no notice of us, and were gone out of sight in a few moments. Upon this, our guide, who, by the way, was but a fainthearted fellow, bid us keep in a ready posture, for he believed there were more wolves a-coming. We kept our arms ready, and our eyes about us; but we saw no more wolves till we came through that wood, which was near half a league, and entered the plain. As soon as we came into the plain, we had occasion enough to look about us. The first object we met with was a dead horse; that is to say, a poor horse which the wolves had killed, and at least a dozen of them at work, we could not say eating him, but picking his bones rather; for they had eaten up all the flesh before. We did not think fit to disturb them at their feast, neither did they take much notice of us. Friday would have let fly at them, but I would not suffer him by any means; for I found we were like to have more business upon our hands than we were aware of.

We had not gone half over the plain when we began to hear the wolves howl in the wood on our left in a frightful manner, and presently after we saw about a hundred coming on directly towards us, all in a body, and most of them in a line, as regularly as an army drawn up by experienced officers. I scarce knew in what manner to receive them, but found to draw ourselves in a close line was the only way; so we formed in a moment; but that we might not have too much interval, I ordered that only every other man should fire, and that the others, who had not fired, should stand ready to give them a second volley immediately, if they continued to advance upon us; and then that those that had fired at first should not pretend to load their fusees again, but stand ready, every one with a pistol, for we were all armed with a fusee and a pair of pistols each man; so we were, by this method, able to fire six volleys, half of us at a time; however, at present we had no necessity; for upon firing the first volley, the enemy made a full stop, being terrified as well with the noise as with the fire.

Four of them being shot in the head, dropped; several others were wounded, and went bleeding off, as we could see by the snow. I found they stopped, but did not immediately retreat; whereupon, remembering that I had been told that the fiercest creatures were terrified at the voice of a man, I caused all the company to halloo as loud as they could; and I found the notion not altogether mistaken; for upon our shout they began to retire and turn about. I then ordered a second volley to be fired in their rear, which put them to the gallop, and away they went to the woods. This gave us leisure to charge our pieces again; and that we might lose no time, we kept going; but we had but little more than loaded our fusees, and put ourselves in readiness, when we heard a terrible noise in the same wood on our left, only that it was farther onward, the same way we were to go.

The night was coming on, and the light began to be dusky, which made it worse on our side; but the noise increasing, we could easily perceive that it was the howling and yelling of those hellish creatures; and on a sudden we perceived three troops of wolves, one on our left, one behind us, and one in our front, so that we seemed to be surrounded with them: however, as they did not fall upon us, we kept our way forward, as fast as we could make our horses go, which, the way being very rough, was only a good hard trot. In this manner, we came in view of the entrance of a wood, through which we were to pass, at the farther side of the plain; but we were greatly surprised, when coming nearer the lane or pass, we saw a confused number of wolves standing just at the entrance. On a sudden, at another opening of the wood, we heard the noise of a gun, and looking that way, out rushed a horse, with a saddle and a bridle on him, flying like the wind, and sixteen or seventeen wolves after him, full speed: the horse had the advantage of them; but as we supposed that he could not hold it at that rate, we doubted not but they would get up with him at last: no question but they did.

But here we had a most horrible sight; for riding up to the entrance where the horse came out, we found the carcasses of another horse and of two men, devoured by the ravenous creatures; and one of the men was no doubt the same whom we heard fire the gun, for there lay a gun just by him fired off; but as to the man, his head and the upper part of his body was eaten up. This filled us with horror, and we knew not what course to take; but the creatures resolved us soon, for they gathered about us presently, in hopes of prey; and I verily believe there were three hundred of them. It happened, very much to our advantage, that at the entrance into the wood, but a little way from it, there lay some large timber-trees, which had been cut down the summer before, and I suppose lay there for carriage.

I drew my little troop in among those trees, and placing ourselves in a line behind one long tree, I advised them all to alight, and keeping that tree before us for a breastwork, to stand in a triangle, or three fronts, enclosing our horses in the centre. We did so, and it was well we did; for never was a more furious charge than the creatures made upon us in this place. They came on with a growling kind of noise, and mounted the piece of timber, which, as I said, was our breastwork, as if they were only rushing upon their prey; and this fury of theirs, it seems, was principally occasioned by their seeing our horses behind us. I ordered our men to fire as before, every other man; and they took their aim so sure that they killed several of the wolves at the first volley; but there was a necessity to keep a continual firing, for they came on like devils, those behind pushing on those before.

When we had fired a second volley of our fusees, we thought they stopped a little, and I hoped they would have gone off, but it was but a moment, for others came forward again; so we fired two volleys of our pistols; and I believe in these four firings we had killed seventeen or eighteen of them, and lamed twice as many, yet they came on again. I was loth to spend our shot too hastily; so I called my servant, not my man Friday, for he was better employed, for, with the greatest dexterity imaginable, he had charged my fusee and his own while we were engaged—but, as I said, I called my other man, and giving him a horn of powder, I had him lay a train all along the piece of timber, and let it be a large train.

He did so, and had but just time to get away, when the wolves came up to it, and some got upon it, when I, snapping an unchanged pistol close to the powder, set it on fire; those that were upon the timber were scorched with it, and six or seven of them fell; or rather jumped in among us with the force and fright of the fire; we despatched these in an instant, and the rest were so frightened with the light, which the night—for it was now very near dark—made more terrible that they drew back a little; upon which I ordered our last pistols to be fired off in one volley, and after that we gave a shout; upon this the wolves turned tail, and we sallied immediately upon near twenty lame ones that we found struggling on the ground, and fell to cutting them with our swords, which answered our expectation, for the crying and howling they made was better understood by their fellows; so that they all fled and left us.

We had, first and last, killed about threescore of them, and had it been daylight we had killed many more. The field of battle being thus cleared, we made forward again, for we had still near a league to go. We heard the ravenous creatures howl and yell in the woods as we went several times, and sometimes we fancied we saw some of them; but the snow dazzling our eyes, we were not certain. In about an hour more we came to the town where we were to lodge, which we found in a terrible fright and all in arms; for, it seems, the night before the wolves and some bears had broken into the village, and put them in such terror that they were obliged to keep guard night and day, but especially in the night, to preserve their cattle, and indeed their people.

The next morning our guide was so ill, and his limbs swelled so much with the rankling of his two wounds, that he could go no farther; so we were obliged to take a new guide here, and go to Toulouse, where we found a warm climate, a fruitful, pleasant country, and no snow, no wolves, nor anything like them; but when we told our story at Toulouse, they told us it was nothing but what was ordinary in the great forest at the foot of the mountains, especially when the snow lay on the ground; but they inquired much what kind of guide we had got who would venture to bring us that way in such a severe season, and told us it was surprising we were not all devoured.

When we told them how we placed ourselves and the horses in the middle, they blamed us exceedingly, and told us it was fifty to one but we had been all destroyed, for it was the sight of the horses which made the wolves so furious, seeing their prey, and that at other times they are really afraid of a gun; but being excessively hungry, and raging on that account, the eagerness to come at the horses had made them senseless of danger, and that if we had not by the continual fire, and at last by the stratagem of the train of powder, mastered them, it had been great odds but that we had been torn to pieces; whereas, had we been content to have sat still on horseback, and fired as horsemen, they would not have taken the horses so much for their own, when men were on their backs, as otherwise; and withal, they told us that at last, if we had stood altogether, and left our horses, they would have been so eager to have devoured them, that we might have come off safe, especially having our firearms in our hands, being so many in number. For my part, I was never so sensible of danger in my life; for, seeing above three hundred devils come roaring and open-mouthed to devour us, and having nothing to shelter us or retreat to, I gave myself over for lost; and, as it was, I believe I shall never care to cross those mountains again: I think I would much rather go a thousand leagues by sea, though I was sure to meet with a storm once a-week.

I have nothing uncommon to take notice of in my passage through France—nothing but what other travellers have given an account of with much more advantage than I can. I travelled from Toulouse to Paris, and without any considerable stay came to Calais, and landed safe at Dover the 14th of January, after having had a severe cold season to travel in.

I was now come to the centre of my travels, and had in a little time all my new-discovered estate safe about me, the bills of exchange which I brought with me having been currently paid.

My principal guide and privy-counsellor was my good ancient widow, who, in gratitude for the money I had sent her, thought no pains too much nor care too great to employ for me; and I trusted her so entirely that I was perfectly easy as to the security of my effects; and, indeed, I was very happy from the beginning, and now to the end, in the unspotted integrity of this good gentlewoman.

And now, having resolved to dispose of my plantation in the Brazils, I wrote to my old friend at Lisbon, who, having offered it to the two merchants, the survivors of my trustees, who lived in the Brazils, they accepted the offer, and remitted thirty-three thousand pieces of eight to a correspondent of theirs at Lisbon to pay for it.

In return, I signed the instrument of sale in the form which they sent from Lisbon, and sent it to my old man, who sent me the bills of exchange for thirty-two thousand eight hundred pieces of eight for the estate, reserving the payment of one hundred moidores a year to him (the old man) during his life, and fifty moidores afterwards to his son for his life, which I had promised them, and which the plantation was to make good as a rent-charge. And thus I have given the first part of a life of fortune and adventure—a life of Providence's chequer-work, and of a variety which the world will seldom be able to show the like of; beginning foolishly, but closing much more happily than any part of it ever gave me leave so much as to hope for.

Any one would think that in this state of complicated good fortune I was past running any more hazards—and so, indeed, I had been, if other circumstances had concurred; but I was inured to a wandering life, had no family, nor many relations; nor, however rich, had I contracted fresh acquaintance; and though I had sold my estate in the Brazils, yet I could not keep that country out of my head, and had a great mind to be upon the wing again; especially I could not resist the strong inclination I had to see my island, and to know if the poor Spaniards were in being there.

My true friend, the widow, earnestly dissuaded me from it, and so far prevailed with me, that for almost seven years she prevented my running abroad, during which time I took my two nephews, the children of one of my brothers, into my care; the eldest, having something of his own, I bred up as a gentleman, and gave him a settlement of some addition to his estate after my decease. The other I placed with the captain of a ship; and after five years, finding him a sensible, bold, enterprising young fellow, I put him into a good ship, and sent him to sea; and this young fellow afterwards drew me in, as old as I was, to further adventures myself.

In the meantime, I in part settled myself here; for, first of all, I married, and that not either to my disadvantage or dissatisfaction, and had three children, two sons and one daughter; but my wife dying, and my nephew coming home with good success from a voyage to Spain, my inclination to go abroad, and his importunity, prevailed, and engaged me to go in his ship as a private trader to the East Indies; this was in the year 1694.

In this voyage I visited my new colony in the island, saw my successors the Spaniards, had the old story of their lives and of the villains I left there; how at first they insulted the poor Spaniards, how they afterwards agreed, disagreed, united, separated, and how at last the Spaniards were obliged to use violence with them; how they were subjected to the Spaniards, how honestly the Spaniards used them—a history, if it were entered into, as full of variety and wonderful accidents as my own part—particularly, also, as to their battles with the Caribbeans, who landed several times upon the island, and as to the improvement they made upon the island itself, and how five of them made an attempt upon the mainland, and brought away eleven men and five women prisoners, by which, at my coming, I found about twenty young children on the island.

Here I stayed about twenty days, left them supplies of all necessary things, and particularly of arms, powder, shot, clothes, tools, and two workmen, which I had brought from England with me, viz. a carpenter and a smith.

Besides this, I shared the lands into parts with them, reserved to myself the property of the whole, but gave them such parts respectively as they agreed on; and having settled all things with them, and engaged them not to leave the place, I left them there.

From thence I touched at the Brazils, from whence I sent a bark, which I bought there, with more people to the island; and in it, besides other supplies, I sent seven women, being such as I found proper for service, or for wives to such as would take them. As to the Englishmen, I promised to send them some women from England, with a good cargo of necessaries, if they would apply themselves to planting—which I afterwards could not perform. The fellows proved very honest and diligent after they were mastered and had their properties set apart for them. I sent them, also, from the Brazils, five cows, three of them being big with calf, some sheep, and some hogs, which when I came again were considerably increased.

But all these things, with an account how three hundred Caribbees came and invaded them, and ruined their plantations, and how they fought with that whole number twice, and were at first defeated, and one of them killed; but at last, a storm destroying their enemies' canoes, they famished or destroyed almost all the rest, and renewed and recovered the possession of their plantation, and still lived upon the island.

All these things, with some very surprising incidents in some new adventures of my own, for ten years more, I shall give a farther account of in the Second Part of my Story.

14 Back to the Future I Script

This is the Back to the Future I script for you to read over if you're bored. It helps to follow along if you've seen the movie too! There are quite a few differences to the film which you might pick up on while reading, but it's essentially the same story. Read it from left to right, top to bottom. Scene changes are in **bold** and names of speakers are underlined. O.S. means 'Offscreen' - when someone outside the shot is talking. (a beat) signifies a time gap or a moment of silence.

BACK TO THE FUTURE
Written by
Robert Zemeckis & Bob Gale

Introductions

INT. HIGH SCHOOL CLASSROOM – DAY
A weird flickering white light strobes the screen, accompanied by projector noise and an offscreen control voice.

CONTROL VOICE
5...4...3...2...1...detonate!

The light becomes brighter as we pan over to MARTY MCFLY, 17, a good looking kid wearing Porsche mirrored sunglasses. The mirrored lenses reflect the mushroom cloud of an atomic explosion. The red hot openeing music kicks in; Main titles begin.

Marty starts bopping along to the rock and roll: he's plugged into a walkman stereo. We are in a contemporary high school classroom where 30-odd students are watching a 16mm documentary about nuclear tests of the 1950's.

SERIES OF SHOTS — MAIN TITLE SEQUENCE
BORED STUDENTS watch the black and white movie. Only MARTY is enjoying himself as he listens to his stereo. MARTY'S FOOT taps in time to the music. The teacher, MRS. WOODS, 45, looks around the classroom, making sure the students are paying attention. She has her “Classroom Planner” in hand.

The DOCUMENTARY depicts preparations for another atomic test, noting that as many as 20 were done per year in the 1950's. Footage shows how tract houses were constructed and peopled with mannequins to measure the effects of radiation.

MARTY continues bopping along. MRS. WOODS notices the one head in the classroom bobbing. MARTY'S foot continues tapping in time. Now a pair of woman's shoes step into FRAME. MRS. WOODS is standing next to Marty, arms crossed, staring at him. But Marty is oblivious to her. SUZY PARKER, 17, an attractive girl, looks over at the situation in horror.

Mrs. Woods waves her hand in front of Marty's sunglasses. No reaction. Suzy turns her head — she can't bear to watch. Mrs. Woods gently removes Marty's sunglasses. His eyes are closed. Now Marty opens his eyes. He looks up at Mrs. Woods and smiles weakly.

Mrs. Woods does not smile back. She rips the headphones off — the MUSIC abruptly stops.

CUT TO: INT. STRICKLAND'S OFFICE — DAY
Close on Marty's walkman in a pair of elderly male hands being placed in a woodworking vise mounted on the corner of a desk.

STRICKLAND'S OFFICE
Marty fidgets uneasily in an uncomfortable wooden chair in the sparse office as MR. STRICKLAND, a humorless disciplinarian, tightens the vise. Strickland looks 60, but he could be 160 — he was born old and stayed that way, and has been at this school forever.

Strickland gazes at Marty, then gives the vise a hard, mean wrench. The walkman crunches... it sounds like bones breaking.

Marty cringes. Strickland smiles sadistically and hands it back to him.

MR. STRICKLAND
That's number three, isn't it, McFly?

MARTY
Four.

MR. STRICKLAND
You don't like school, do you, McFly?
Marty rolls his eyes. Is this question for real?

MARTY
Oh, no. sir. I LOVE school.

MR. STRICKLAND
(snaps at him)
You've got a real attitude problem, you know that?
(opens a file on his desk)
You're a slacker, McFly. You've got aptitude, but you don't apply yourself. You remind me of your father: He was a slacker, too.
Marty just sits there, bored.

MR. STRICKLAND
Now, for slacking off in class and for having a serious attitude problem, your punishment is two weeks in detention, with me, starting this afternoon.

MARTY
This afternoon? But I can't! Me and my band have an audition at 3:45 for the YMCA dance. It's really important that I be there — they're counting onme. I gotta be there at 3:45.

MR. STRICKLAND
Too bad, McFly. I guess this isn't your day.
Marty is sick.

CUT TO: INT. DETENTION CLASSROOM — ON A WALL CLOCK — DAY
It's 3:28.

A regular math classroom used as detention after hours. Again, we see signs of an old school dressed to be more modern: green chalkboards, repainted walls, new desks, and a sprinkler system. 8 or 10 STUDENTS are seated far apart from each other throughout the room. All are supposedly studying. One of them has a skateboard along with his books.

MARTY is at the pencil sharpener in the back, sharpening a pencil...but the look on his face indicates he's up to something. He looks at the clock, looks up at the SPRINKLER PIPE, then glances toward the front of the room. MR. STRICKLAND sits at the teacher's desk, grading a large stack of papers.

Marty finishes at the sharpener. He sticks a piece of gum in his mouth and starts chewing like mad. Then he steps alongside the carousel slide projector and surreptitiously sneaks the lens into his jacket pocket. He quickly returns to his seat.

Now, Strickland stands up and starts toward Marty! Did he see Marty swipe the lens? No, he's merely “patrolling” the room. When Strickland isn't looking, Marty produces a matchbook and a rubber band from the pencil pouch of his loose leaf binder. He opens the matchbook cover and sticks his gum to the backside. He waits for Strickland to walk past him, then quickly, Marty stands and, using the rubber band, fires the matchbook at the ceiling.

Strickland whirls around upon hearing the snap, but Marty is already seated, "studying." Strickland looks around suspiciously, but sees nothing. He continues along.

Marty glances up: The gum is holding the matchbook on the ceiling, right near the sprinkler valve. He smiles. Now Marty sets his mirrored sunglasses on his leg positioning them to reflect the rays of the sun up at the matchbook. That done, he pulls the lens out of his pocket and focuses the beam onto the matchbook. He adjusts the lens ever so slightly... there! Perfect! A hot white pinpoint of light is focused on the matchbook.

MR. STRICKLAND returns to his paper grading. He marks an entire set of answers wrong and puts "F" at the top of a paper. The next paper has two right. Strickland gives it an "F+." MARTY continues holding the lens as steady as he can, watching anxiously for results. Above there is a faint trace of smoke on the matchbook.

The clock now reads 3:37. STRICKLAND grades his last paper, then stands up and starts pulling down the window shades! MARTY is horrified! Strickland is 3 shades away from Marty's window. Marty looks anxiously up at the matchbook.

MARTY
(under his breath)
Come on, come on...!
Strickland pulls down the next shade. There is more smoke from the matchbook...

MARTY
Burn, you sucker...!
Strickland pulls down another shade. The next one is Marty's... Strickland steps toward it... Suddenly the matchbook ignites! FIRE! Immediately the fire alarm sounds and the sprinklers go off!

MARTY
FIRE!!!
Students jump up and scream as water sprays all over them! They rush for the door. MARTY grabs the kid with the skateboard, named WEEZE.

MARTY
Weeze — let me borrow this! I'll bring it back tomorrow!
Marty takes the skateboard and dashes out.

MR. STRICKLAND
Stop! Wait! We must file out in an orderly fashion!
Another sprinkler goes off and sprays Strickland right in the face!

EXT. HILL VALLEY HIGH SCHOOL — DAY
It's a classic WPA style high school, built in the 1930's. Marty dashes out, jumps on the skateboard, and skateboards down the front steps!

EXT. HILLY RESIDENTIAL STREET — DAY
Marty comes from around the corner, skateboards down a hill, weaving through traffic. He skateboards like a champ.

EXT. STREET — TOWN SQUARE — DAY
This is HILL VALLEY, a northern California town; it's October. The town has been here a while — and its town square business district is beginning to deteriorate... undoubtedly because there's a mall someplace. The old courthouse, now the Department of Social Services, has a clock tower — but the clock is stopped at 10:02. A time and temperature clock on the BANK reads 3:43. MARTY skateboards down the business street and across traffic, narrowly missing being hit by a car!

INT. YMCA — STAGE — DAY
3 members of the PINHEADS rock band, keyboards, bass and drums, exchange nervous glances, repeatedly checking their watches. They're all set up on stage. SUZY PARKER is also here — but she's not part of the band. Suddenly, Marty skateboards onto the stage.

SUZY
Marty! Marty gives her a wink; she smiles.

Marty's guitar, amp and microphone have already been set up for him. He picks up the guitar and tunes up, then looks over at Suzy. Suzy smiles and holds up her crossed fingers. Marty grins back. Clearly, they're "an item." Marty practices a riff...and he's great. You can't tell where the guitar ends and the man begins. He turns and addresses the dance committee.

MARTY
All right, we're the Pinheads, and we're gonna rock 'n roll! They kick into a red hot number. Marty's fingers dance across the strings and frets in a complicated lead line. He's terrific, and the band sounds great. They get only about 25 seconds into the number when a VOICE calls out.

DANCE COMMITTEEMAN
That's enough. Thank you.
Marty and the group stop playing, exchanging bewildered glances.

CUT TO: EXT. TOWN SQUARE — DAY
On some of the boarded up buildings are election posters: "RE-ELECT MAYOR 'GOLDIE' WILSON: HONESTY, DECENCY, INTEGRITY" and a picture of the incumbent.
Mayor Wilson is black, about 45, with a gold front tooth. MARTY and SUZY are walking together. She carries her schoolbooks: he has the skateboard. And he's depressed.

SUZY
Marty, one rejection isn't the end of the world.

MARTY
I don't know. Maybe I'm just not cut out for music.

SUZY
But you're good, Marty. You're really good. And this audition tape of yours is great... (she gives him back a cassette tape) You've got to send it in to that record company.

MARTY
But what if they hate it? What if they say, "get outta here, kid, you got no future?" Why should I put myself through all that anxiety? (He sighs.) I'm sorry. I guess I sound like some kinda schizoid neurotic.

SUZY
Well, according to my shrink, all of our emotional anxieties are a direct result of the influence our parents had in our childhood.

MARTY
In that case, you can kiss me off right now. You've met my old man. You know what a zero he is.
Suzy nods knowingly. They are walking past a Totota dealership.

SUZY
At least he's letting you borrow the car tomorrow night. That's a step in the right direction.

MARTY
Hey, I'm taking the car tomorrow night. That way it saves him the anxiety of making a decision.

Marty spots a tricked-out black supra in the showroom.

MARTY
Hey, check out that tricked-out Supra. Now that's a car. (sighs, admiring it longingly) Someday, Suzy, someday...

SUZY
What about your mother? Does she know?

MARTY
Are you kidding? She thinks I'm going camping with the guys. If she found out I was going camping with you, she'd go crazy.

Marty sprays some BINACA in his mouth.

'SUZY
(nods knowingly) My shrink says a lot of parents are sexually repressed.

MARTY
My mom's not sexually repressed. How can you be repressed about something you know absolutely nothing about? They pause across from the former courthouse building.

SUZY
(flirting) She's just trying to keep you respectable.

MARTY
(flirting back) She's not doing a very good job, is she?
They move closer...

SUZY
Terrible...
They're about to kiss…

CLOCK WOMAN (O.S.)
Save the Clock Tower!

Marty and Suzy turn. A middle-aged church group type woman has a donation can and an armful of printed flyers.

CLOCK WOMAN
Please make a donation to save the clock tower.

MARTY
Lady, can't you see I'm busy here?

CLOCK WOMAN
Mayor Wilson is sponsoring an initiative to repair that clock...
She points to the stopped clock on the old courthouse building.

CLOCK WOMAN
(continuing)
We at the Hill Valley Preservation Society think it should be preserved exactly the way it is.

MARTY
But it doesn't tell time. What good is it?

CLOCK WOMAN
It's part of our history. Here — it's all in this flyer. (gives Marty one) 30 years ago, lightning struck that clock tower, and the clock hasn't run since. We at the society feel it's a landmark of scientific importance, attesting to the power of the Almighty.

MARTY
All right, lady. Here's a quarter. Marty drops a quarter into her can.
She nods and moves along to bother someone else.

MARTY
(to Suzy)
Now... you were saying that my mother wasn't doing a very good job...
They move closer again as before, about to kiss...
Suddenly, a male voice booms out over a P.A.

SPEAKER VOICE (O.S.)
Marty! Marty McFly!
Marty turns. A medium sized RV with speakers mounted on the side is idling across the street. The vehicle is quite used. It's towing a tarped vehicle on a trailer. Marty recognizes it, and rolls his eyes.

MARTY
Doc, I'm busy.

DRIVER
It'll only take a minute...

MARTY
(to Suzy)
Come on, you should see what's inside this thing.
They go over and step inside.

INT. RV — TOWN SQUARE — DAY
The driver is DR. EMMETT BROWN, about 65. He looks like an old hippie, with shoulder length white hair, Hawaiian shirt, faded jeans, an Indian turquoise around his neck and lively — almost wild — eyes. He's full of energy, full of life, talks fast, and is immediately likable for his eccentricities.

With him in the RV is his big dog, "Einstein." The inside of the vehicle is full of clocks — every imaginable type, a Cuckoo, a Grandfather, even a classic "Felix the Cat with moving eyes". All of them are in dead sync. There is also a bank of state-of-the-art component video and audio equipment.

The 25-inch monitor is tuned to MTV. There are discarded fast food cartons, and a spilled box of sugar coated cereal, an unmade bed, a doggie dish, and tools and electronic parts. We might also notice a lead canister with purple radiation symbols.

MARTY
What's up, Doc?

BROWN
One a.m., right, Marty? You're gonna be there, right? Twin Pines Mall.

MARTY
Yeah, right.
Brown takes the "Save the Clock" flyer out of Marty's hand.

BROWN
Let me write it down for you so you don't forget... (writes on the back) "Twin Pines Mall... one a.m." Twin Pines Mall — remember when that used to be Peabody's farm? It was all farmland out there. No — I guess that was before your time, Marty.
He folds the flyer and sticks it in Marty's pocket.

BROWN
(continuing)
You're feeling all right, Marty? You've been getting plenty of rest?

MARTY
Yeah, but Doc, exactly what are we gonna do at one a.m.?

BROWN
You want me to spoil it for you? Don't worry about it — it'll be great.

MARTY
You're not planning on breaking into another power plant or something...? That was kinda risky.

BROWN
That's the point, Marty. Risk. Risk makes life worth living. What would you rather do, sleep?

Brown checks one of the 4 watches on his arm.

BROWN
(sudden urgency)
It's almost time — quiet!
Suzy gives Marty a bewildered look, but Marty knows what's about to happen...
It's exactly 4 o'clock, and all of the clocks chime at once — dings, dongs, electronic tones, cuckoo birds... Brown loves it — he drinks it up like a proud father.

BROWN
I love that!

MARTY
Look, Doc, we've gotta go. I'll...see you tonight.

BROWN
Yes! At one a.m.! It could change your life.
Marty and Suzy step out of the RV.

EXT. STREET — TOWN SQUARE — DAY
Marty and Suzy watch the RV go.

SUZY
I don't know if you should be hanging out with a guy like that after midnight.

MARTY
Doc Brown's all right — he's just a little hung up on time. A couple of years ago, he showed up at my house and hired me to sweep out this garage of his. He pays me 50 bucks a week, gives me free beer... and gives me total access to his record collection — he's got this great old record collection.

(a beat)

Hard to believe he was one of the world's greatest nuclear physicists.
Down the street, Brown's RV waits for an elderly man to hobble across the street. Brown's voice booms out over his P.A.

BROWN (V.O. P.A.)
Let's move it, Gramps! You're not that old!
Suzy gives Marty a look of disbelief.

MARTY
(shrugs)
Too much radiation, I guess.
(a beat, moves closer to her)
Where were we?
She smiles and moves toward him.

SUZY
I think we were right here...
Again they're about to kiss...
A car horn honks loudly. Suzy turns away.

SUZY
That's my Dad. See you tomorrow.
She hops into the waiting car. Marty watches it go.

MARTY
This is not my day.

EXT. MCFLY HOUSE — DUSK
A WRECKER is in the McFly driveway with a 1979 Plymouth Reliant in tow: its front end is completely smashed, as if someone rammed it into a brick wall. The truck driver is unhitching it. Looking on with horror is timid GEORGE McFLY, 47, a balding, boring, uninspired man who wears a suit he bought at Sears 4 years ago.

Next to him is BIFF TANNEN, 48, an intimidating lout, who wears gold chains and pinky rings, with sartorial taste to match. MARTY skateboards up to the scene and is shocked. He listens as Biff lambasts his father.

BIFF
I can't believe you did this, McFly. I can't believe you loaned me your car without telling me it had a blind spot. I could have been killed!

GEORGE
Biff, I never noticed any blind spot before.

BIFF
It's there, McFly. How else can you explain this?

GEORGE
Can I assume that your insurance will pay for this?

BIFF
My insurance? It's your car. Your insurance should pay for it. I wanna know who's gonna pay for THIS! (indicates his stained suit) I spilled beer all over it when that car hit me. Who's gonna pay the cleaning bill?

George hesitates, then meekly pulls out his wallet.

GEORGE
Do you think 20 dollars will cover it?
Biff snatches the 20 dollar bill out of George's hand.

BIFF
It's a start. And hey... where's my reports?

GEORGE
Well, I haven't finished them yet. I figured since they weren't due till Monday…

BIFF
(knocks on George's head)
Hello? Anybody home? Think, McFly, think! I've gotta have time to get 'em retyped. If I turn in my reports in your handwriting, I'll get fired.

GEORGE
Okay, I'll finish them tonight and run them over first thing in the morning.

BIFF
Not too early — I sleep in on Saturday.
(about to leave)
Oh, hey, McFly: your shoe's untied.

GEORGE
(falling for it)
Huh?
He looks down and Biff hits him on the chin. Biff laughs loudly.

BIFF
Don't be so gullible, McFly!
Biff walks over to his sparkling year old cadillac on the street. He spots Marty.
Hiya, kid. How do you like my new paint job?
Marty doesn't. He steps over to his father, outraged. He's about to say something, but George raises his hands and cuts him off.

GEORGE
I know what you're going to say, son, and you're right. You're right. But he happens to be my supervisor, and I'm afraid I'm just not very good at confrontations.

MARTY
Dad, look at the car! Look what he did to the car!

GEORGE
I know. And I know you were counting on using it, and I'm sorry.

MARTY
Do you have any idea how important this was to me, Dad? Do you have any idea at all?

GEORGE
(shrugs)
Well... I guess I don't...
Biff screeches out in his Cadillac.

MARTY
Dad, did it ever occur to you to say "no?" To just once try saying "no?"

GEORGE
Son, I know it's hard for you to understand, but the fact is, I'm just not a fighter.

MARTY
Try it once, Dad. Just one time, say "no."
Now the next door neighbor sticks his head out the window of the adjacent house. He's 40, pot-bellied, named HOWARD.

HOWARD
Hey, McFly! My kid's selling Girl Scout cookies! I told her you'd be good for a case.
Marty shakes his head. George gulps, then calls back.

GEORGE
Well... okay.
Marty shakes his head hopelessly.

CUT TO: INT. AT THE McFLY DINNER TABLE — NIGHT
The McFly family is dining on meat loaf, Kraft macaroni and cheese, Bird's Eye mixed vegetables, and French's instant mashed potatoes. Marty's mother, LORRAINE, 47, was once very attractive. Now she's overweight, in a rut, a victim of suburban stagnation. She has more food on her plate than anyone else, and a glass of vodka.

GEORGE has papers in front of him instead of food: he's doing the work Biff gave him. He's also glancing at the TV, which is tuned to a "Honeymooners" rerun. Sister LINDA, 19, is cute but wears too much eye makeup; brother DAVE, 22, wears a MdDonald's uniform and is wolfing down his food.

GEORGE
(to Marty)
Believe me, son, you're better off not having the aggravation of dealing with that YMCA dance. You'd have to worry about getting all your equipment there, making contingency plans in case someone got sick, making sure you got paid correctly, settling with the Musician's union... and what if you were so good that other people wanted to hire you? You'd have to worry about scheduling your jobs around school. Believe me, son, you're better off without those headaches.

MARTY
Thanks for the pep talk, Dad.

LORRAINE
Kids, your Uncle Joey didn't make parole again. I think it would be nice if you all dropped him a line.

MARTY
Uncle "Jailbird Joey"?

DAVE
He's your brother, Mom.

LINDA
Yeah. I think it's a major embarrassment having an uncle in prison.

LORRAINE
We all make mistakes in life, children.

DAVE
(checks watch)
Damn, I'm late.
He wipes his mouth and hurries off.

LORRAINE
Please watch your language, David.

LINDA
(to Marty)
Suzy Parker called... wants you to call her back.

LORRAINE
I don't like her, Marty. Any girl who calls up a boy is looking for trouble. Pass the mashed potatoes, please.
Marty passes them and Lorraine takes a big helping.

LINDA
Oh, Mother, there's nothing wrong with calling a boy.

LORRAINE
Well, I think it's terrible, girls chasing boys. I never chased a boy when I was your age. I never called a boy, or asked a boy on a date, or sat in a parked car with a boy. Because when you behave like that, boys won't respect you, Linda. They'll think you're cheap.

Linda rolls her eyes. She's heard this a million times.

LINDA
Then how are you ever supposed to meet anybody?

LORRAINE
It'll just happen. Like the way I met your father.

LINDA
But that was so stupid! Grandpa hit him with his car.

LORRAINE
It was meant to be.

LINDA
I still don't understand what Dad was doing in the middle of the street.

LORRAINE
What was it, George? Birdwatching?

GEORGE
(absorbed in his work)
Huh? Did you say something, Lorraine?

LORRAINE
(to Linda and Marty)
Anyway, Grandpa hit him with the car and brought him into the house. He seemed so helpless... like a little lost dog. And my heart just went out to him.

LINDA
Yeah, Mom, you've told us a million times: "Florence Nightingale to the rescue."

LORRAINE
(thoughtfully, remembering)
The next weekend, we went on our first date: the "Enchantment Under the Sea" school dance. I'll never forget it — it was the night of that terrible thunderstorm. Remember, George?

GEORGE
What's that, dear?

LORRAINE
(ignores him; to Marty and Linda)
Your father kissed me for the very first time on the dance floor... and that was when I realized I was going to spend the rest of my life with him. Marty and Linda exchange a look and shake their heads.

LINDA
I can't believe Dad actually got up enough nerve to kiss you in public.

LORRAINE
Well, I may have encouraged him a little...

MARTY
I'll bet you had to practically jump on his bones.
Marty gets up, finished eating.

LORRAINE
You watch your mouth, young man. And excuse yourself when you get up from the table.

Marty is already out of the room.

MARTY (O.S.)
May I be excused?

The DeLorean Test

CUT TO: INT. MARTY'S BEDROOM — NIGHT
Marty's walls are covered with posters of rock stars and cars — particularly Toyota Supras. There is also a portable home synthesizer, a tape recorder, and a stack of lead sheets. Marty sits at his desk, with an submission form that has an "R & G RECORDS" letterhead, an envelope, and the cassette tape Suzy Parker gave him. There's also a picture of Suzy there. He signs the form and puts it in the envelope, along with the cassette tape. He is about to seal it — then he hesitates, and ponders a moment. He stares at the envelope — it's addressed to the "R & G RECORDS, NEW TALENT DIVISION." He sighs, shakes his head, pulls the tape out and chucks the envelope and application into the trash can.

CUT TO: INT. MARTY'S BEDROOM — CLOCK ON MARTY'S NIGHTSTAND
It's almost 12:30. Camera pans to pick up Marty lying asleep on the bed fully clothed. Now Marty's cordless phone beeps. Marty stirs and answers it.

MARTY
(into phone)
Hello?
(a beat, rolls his eyes)
No, I haven't forgotten, Doc. One a.m., Twin Pines Mall.
He hangs up and shakes his head.

CUT TO: EXT. TWIN PINES MALL PARKING LOT — NIGHT
Camera pan from the lit entrance sign, depicting 2 pine trees with "Twin Pines Mall" in lettering below (along with a digital clock at 12:59) to pick up MARTY on his skateboard with another walkman (it's a different brand than the one Strickland smashed). Marty skateboards around a corner of the mall and sees Brown's RV on the vast, sodium vapor lit parking lot. DR. BROWN is clad in a white radiation suit, hood off, (still with his Indian turquoise around his neck) and Einstein, are both next to a sleek, stainless steel DeLorean sports car. It's been modified with some wicked looking units on its rear engine, giving it a particularly dangerous feel. There are coils along the front and rear decks.

There are also several small cases of supplies and equipment, and a piece of American Tourister luggage around the RV. Marty skateboards over, totally blown away by the car.

MARTY
Jeez, Doc, a DeLorean! What the hell did you do to it?

BROWN
Grab the camera and start taping, Marty. I'll explain as we go.
Brown indicates a home video camera nearby. Marty picks it up.

MARTY
And what's with the Devo suit?
Brown lifts open the driver's side gull wing door.

BROWN
Come on, Einstein. Get in, boy.

The dog obediently jumps in and sits in the driver's seat. Brown buckles him in with the shoulder harness. The dog has a battery operated digital clock hanging around his neck. Marty begins taping, handheld, cinema verite style.

BROWN
(to Marty and video camera)
All right, this is test #1. Please note that Einstein's clock here is in precise synchronization with my control watch.

Brown holds up a digital watch next to Einstein's clock; indeed, the two are in dead sync.

BROWN
(to the dog)
Good luck, Einie.

Brown reaches in and starts the ignition. The DeLorean engine ROARS to life. Brown turns on the headlights and lowers the gull wing door, sealing Einstein in. He steps back and picks up a remote control unit, similar to one for a radio controlled toy car. There are buttons labeled “Accelerator” and “Brake”, a joystick, and an L.E.D. digital readout labeled “Miles Per Hour.”

Brown flicks the power switch on and, using the accelerator button and joystick for steering, sends the DeLorean down to the far, far end of the parking lot. He turns the car around so that it's pointing toward them, idling.

BROWN
Here we go, Marty. If my calculations are correct, when the car hits 88 miles an hour, you're gonna see some serious s***.

Brown takes a deep breath, then pushes the accelerator button. The DeLorean takes off, shifting gears automatically. The L.E.D. speedometer passes 30. The stainless steel vehicle zooms faster... past 40... Marty is getting it all on tape. Brown watches intently. The speedometer climbs past 60.

In the car, Einstein remains calmly in the driver's seat. Gauges and instrument lights mounted behind him begin flashing. Brown's finger holds the accelerator button down. The meter passes 75. The DeLorean keeps accelerating, approaching Marty and Brown. The coils mounted around the car begin glowing.

EXT. MALL, DELOREAN — NIGHT
The speedometer hits 85... 86... 87... 88…

The automobile is suddenly engulfed by a blinding white glow — then, BLAM! It's gone, a trail of fire left in its wake. Brown and Marty are hit by a sharp blast of air. Marty blinks in disbelief: it's as if the car never existed. Only the license plate is left behind — a vanity plate: “NO TIME.”

BROWN
(elated)
What'd I tell you? 88 miles per hour! Temporal displacement occurred at (checks watch) exactly 1:02 a.m. and zero seconds.

MARTY
(shocked)
Oh my god! You disintegrated Einstein!

BROWN
Calm down, Marty. I didn't disintegrate anything. The molecular structure of both Einstein and the car are completely intact.

MARTY
Then where the hell are they?

BROWN
The appropriate question is: WHEN the hell are they. You see, Einstein has just become the world's first time traveler. I sent him into the future — one minute into the future, to be exact. And at exactly 1:03 a.m. and zero seconds, we shall catch up to him... and the time machine.

MARTY
Time machine? Are you trying to tell me you built a time machine out of a DeLorean?

BROWN
(smiles, modestly)
The way I figured it, if you're gonna build a time machine into a car, why not do it with some style? Besides, the stainless steel construction made the flux dispersal—
(his digital watch beeps)

Ten seconds! Roll tape — and brace yourself for a sudden displacement of air. Marty aims the camera right where the DeLorean disappeared. Brown grips the remote control unit tightly and counts down.

BROWN
5...4...3...2...1...
Their hair stands up on end, charged up with static electricity... Suddenly, a sharp blast of wind comes up out of nowhere, along with a deafening sonic boom — and the DeLorean reappears right where it vanished, still going 88 m.p.h.!

Brown hits the brake button. The car wheels lock up and the DeLorean comes to a screeching halt, smoke pouring off the body. Brown and Marty rush over to the car. Brown approaches cautiously and reaches for the door handle. He touches it and recoils in pain.

MARTY
Is it hot?

BROWN
It's cold. Damned cold.
Brown raises the driver's side door: there sits Einstein, none the worse for wear. Brown again compares his watch with Einstein's.
Einstein's reads 1:02:10; Brown's is 1:03:10.

BROWN
Exactly one minute difference — and still ticking!

MARTY
Is Einstein all right?
Brown unbuckles the shoulder harness, and Einstein bounds out, happy and playful. Brown gives the dog a Milk Bone reward.

BROWN
Good boy, Einie!

(to Marty)
He's fine. And he's completely unaware that anything happened. As far as he's concerned, the trip was instantaneous. That's why his watch is a minute behind mine — he “skipped over” that minute to instantly arrive at this moment in time. Come here, let me show you how it works...

Marty is still a bit skeptical, uneasy. Brown waves him over, like a kid who wants to show off a new toy. Marty approaches cautiously.

BROWN
First, you turn the time circuits on...
Brown flips the labeled switch. An array of indicator lights go on inside.

BROWN
(continuing)
This readout, tells you where you're going, this one tells you where you are, this one tells you where you were. The three readouts are respectively labeled “DESTINATION TIME,” “PRESENT TIME” and “LAST TIME DEPARTED.”

BROWN
(continuing)
You input your destination time on this keypad. Want to see the signing of the Declaration of Independence?
He punches 7-4-1776. The “DESTINATION TIME” readout lights up with the date.

BROWN (continuing) Or witness the birth of Christ? He punches in 12-25-0. BROWN (continuing) Here's a red letter date in the history of science: March 19, 1955... He pauses, realizing something — as if something suddenly makes sense to him. BROWN Yes, of course... March 19, 1955...	MARTY What happened then? BROWN That was the day I invented time travel. Actually, it was night. I remember it vividly: I got hit over the head, and when I came to, I had a revelation — a vision — a picture in my head. A picture of THIS... Brown points to a particular centerpiece unit mounted inside the DeLorean. Marty aims the video camera and gets it on tape. He continues taping as Dr. Brown explains.
BROWN This is what makes time travel possible: the Flux Capacitor. MARTY Flux Capacitor, huh? How'd you get beaned? BROWN Well, I was trying to— (stops short, thinking better of it) Well, it's not important. What is important is that it works. It's taken me over 30 years to fulfill the vision of that night. He faces the DeLorean proudly.	MARTY Heavy duty, Doc. And it runs on, like, regular unleaded gasoline? Unfortunately, no. It requires something with a little more kick… Brown indicates a container with purple radioactivity symbols on it. MARTY (reads the label) Plutonium?! You mean this sucker's nuclear?
BROWN Electrical. But I need a nuclear reaction to generate the 1.21 jigowatts of electricity I need. The Flux Capacitor stores it, then discharges it all at once, like a gigantic bolt of lightning. Oh, you'd better put on this radiation suit before I reload. Not that there's any danger, but it never hurts to take precautions. Brown hands him the YELLOW RADIATION SUIT which is near the RV. Marty puts the camera down.	MARTY Hold the phone, Doc — plutonium's illegal. Did you rip it off? BROWN No, of course not. Here, let me help you with that. Brown helps Marty get into the suit. BROWN Put your hood up, Marty, while I reload... and keep Einstein covered, too. Marty and Brown both pull their hoods over their heads. Marty covers Einstein with a sheet of the same radiation proof material.
Brown opens the container and removes a 4-inch clear cylinder with a plutonium rod within (it's surrounded by water), then closes the container. Brown steps over to the rear of the DeLorean and places the plutonium cylinder into the loading hopper. The plutonium rod drops down into the reactor, which then seals shut. BROWN (removes his hood) It's safe now. Everything is lead lined. Marty removes his hood and releases Einstein. He picks up the video camera and starts taping again.	BROWN Oh — I mustn't forget my luggage... Brown grabs his suitcase and puts it in the trunk (it's in the front). BROWN Who knows if they'll have cotton underwear in the future? I'm allergic to all synthetics. Brown slams the trunk shut. MARTY The future? Is that where you're going?
BROWN That's right. 25 years into the future. I've always dreamed of seeing the future — looking beyond my years, observing the progress of mankind. It's almost like cheating death. (pauses, then smiles wryly) I'll also be able to find out who wins the next 25 World Series. Suddenly, Einstein starts BARKING at something. BROWN What is it, Einie? Brown turns, and reacts with horror to an approaching pair of headlights: it's an ominous van.	BROWN Oh, no — they found me. I don't know how, but they found me. MARTY Who? BROWN The Libyans! MARTY What Libyans?
BROWN The Libyans who got me the Plutonium! They wanted me to build 'em a bomb — I told 'em I would, but I lied! The van side door slides open and a swarthy character who resembles Yasser Arafat leans out with an AK 47 submachine gun. He opens fire. BROWN Run for it, Marty! I'll draw their fire!	Brown pulls a .45 revolver from inside his radiation suit and fires at the van! He then breaks for the mall, a good 500 yards away. The terrorist van screeches around sharply and gives chase. The terrorist fires a machine gun blast. MARTY Doc — no! Wait! But Brown keeps running and firing — and the van closes the distance. No way can Brown outrun it to the mall.
The Terrorist gunner screams a Libyan curse, then fires a burst at Brown. The bullets rip into Brown's chest and the scientist goes down. Marty stands frozen in horror, video camera still in hand. Doc! Oh my God! (at the terrorists) You bastards! As if hearing Marty, the van makes a U-turn: it's coming for Marty! Marty looks around. He's out in the open, and has only one chance: The DeLorean. Marty dashes for it, even as the van accelerates toward him, and dives into the still open driver's door.	**IN THE CAR** Marty swings the door shut, then looks over the array or switches and buttons on the console with frightened bewilderment: how do you start this thing? Then he spots the keys in the ignition on the steering column, just like any other car. He turns it over and shifts into first. He floors it. **EXT. — CHASE** The DeLorean roars off! The van gives chase.

The speedometer approaches 40.
The Terrorist Gunner leans out of the van and takes aim.
MARTY looks into the side view mirror to see the Libyan gunner taking aim.
The speedometer climbs past 50.

The gunner fires. Bullets rip into the parking lot just behind the speeding DeLorean.
Marty has the pedal to the metal.
The speedometer hits 75.
Marty again checks the side view mirror.
The van is still keeping up.

MARTY
Let's see if you bastards can do 90…

The DeLorean continues accelerating.
The van continues pursuit, but begins to lose ground.

The speedometer passes 85!

Gauges and indicators light up behind Marty's head, just as they did before Einstein traveled through time — the Flux Capacitor. is about to kick in! The speedometer climbs...86...87...88...

Entering 1955

INT. MOVING DELOREAN, BEHIND MARTY, THROUGH THE WINDSHIELD
The mall parking lot is suddenly changed into an open field with a scarecrow in the middle of it! Marty is speeding toward it at 88 miles an hour — he hits it! The scarecrow's face is hideously smashed against the windshield. Marty continues toward a haystack! He's completely disoriented.

EXT. FARM FIELD AND BARN — NIGHT
The DeLorean speeds right through the haystack, and then into an open barn. We hold on the barn exterior — we hear a crash; hay and dust are kicked up out the
door... then a crack of wood — and a large section of the barn roof caves in! We hold on the barn. We hear a dog start barking.

EXT. NEARBY FARM HOUSE — NIGHT
A light goes on in the nearby farm house. Now, farmer PA PEABODY, 45, comes out in his red flannels, carrying a lantern. Behind him is his wife, MA; their buxom 14 year old DAUGHTER, and lively 11 year old son SHERMAN. They approach the barn and cautiously enter through the rear doors.

'INT. BARN — NIGHT
The Peabodys stare in open-mouthed astonishment: The stainless steel vehicle faces them head on, headlight beams shining through the dust. With its wheels buried in the straw and amber hazard lights blinking, it looks like a SPACE SHIP! The COWS in the barn don't seem to care much, but Ma and Pa look up at the hole where the roof caved in, then exchange an uneasy look.

MA
What is it, Pa?

PA
Looks like an airplane...without wings…

SHERMAN
Airplane? It's a flying saucer, Pa! From outer space! The driver's gull wing door rises slowly... just like a hatch. Pa motions them all back. They watch expectantly, uneasily, with expressions of curiosity mixed with fear. Now Marty steps out, dazed — he's in the radiation suit, and the hood is down giving him the appearance of an alien! Ma screams and faints!

PA
Run, children! Run for your lives!
They all run like hell out of the barn! Marty takes a few steps, then removes the hood.

MARTY
Hey! Hello? Where am I?
Marty looks around. The cows in the barn just chew their cud. Marty shakes his head, then steps out the barn door.

EXT. BARNYARD — NIGHT
Marty steps out into the barnyard.

MARTY
Excuse me! Anybody here?

EXT. FARM HOUSE — NIGHT
PA busts out of the farmhouse with a double-barreled shotgun. Sherman is right behind him, with something rolled up in his hand.

SHERMAN
Look, Pa — it's already mutated into human form! Shoot it!
Pa raises his shotgun and FIRES! Buckshot cracks into the barn wall behind Marty.

PA
Take that, you mutated son-of-a-bitch!
He squeezes off the second barrel! Shot explodes in the dirt near Marty's feet! He dashes back into the barn! Pa breaks the gun and reloads, then moves cautiously toward the barn. Just as he's about to enter, the delorean thunders out! Pa Peabody jumps back!

The car spins around in the barnyard, and smashes through a white picket fence surrounding 2 newly planted pine trees in a line, just like on the sign at "TWIN PINES MALL." The DeLorean takes out one of the small trees, then finds the dirt access road and ROARS AWAY.

PA
You space bastard! You killed one of my pines!
Pa FIRES both barrels at the departing vehicle, then runs over to his "pine grove."

PA
(extremely upset)
Now I only got one.
Now he looks up and sees Ma coming out of the barn. She's dazed, rubbing her head.

PA
Ma! Are you all right!
Sherman runs over, terrified, with a rolled up something in his hand.

SHERMAN
Pa! No! Don't go near her! She's a zombie! She's got no more free will! The spaceman took over her brain!

PA
What the hell are you talking', boy?

SHERMAN
Read this! It's all right here!

Sherman shows him his weird science comic book: On the cover is a space ship that resembles a 50's version of the DeLorean. An alien is stepping out who looks
something like Marty in the radiation suit, and he appears to have enslaved several human females. The title of the story is "Space Zombies From Pluto." Pa looks at it, then glances over at his wife with trepidation.

CUT TO: EXT. THE DELOREAN — MORNING tears along the dirt road and out onto the main paved road.

EXT. STREET — DAY
The DeLorean pulls into frame and stops. The gull wing door opens, revealing Marty's shocked expression as he sees his own house — (matte painting) brand new, freshly painted — a model home, complete with colored pennants and "model home" signs... without any landscaping. Next to it is a large sign with an artist's rendering of an idyllic home, nestled between magnificent oak trees, with a proud family of four beside their Cadillac. Below, in big block letters: "Live in the home of tomorrow...today! Lyon Estates, scheduled completion, This Winter." Beyond it is vacant land, with some of it graded for construction. There are a few foundations and perhaps a wood frame or two... and the familiar high tension wires.

MARTY
is in shock. He looks at the dashboard readouts.

The date on the "Destination time" is Saturday, 3-19-1955, 5:35 a.m.... and that matches the date on "Present time." ("Last Time Departed" is 10—5 1985, 1:11 a.m.)
Below, the "Plutonium Chamber" light flashes "EMPTY."

MARTY
1955? 1 don't believe it!
He turns on the car radio and tunes in a newscast.

NEWSCASTER (V.O.)
...and President Eisenhower predicted that 1955 would see an increase in housing starts…

MARTY
Eisenhower?

Marty spots a page of discarded NEWSPAPER on the sidewalk in front of his house-to-be. He gets out of the car and picks it up.

The date is March 18, 1955.

MARTY
This is definitely not my day.

On the back of the newspaper is an AUTOMOBILE ADVERTISEMENT with a picture of a "new" 1955 Studebaker. The copy clearly says "YOU'LL BE NOTICED driving the car of the future — the All New 1955 Studebaker." Marty looks at the DeLorean, looks again at the ad copy, then looks at the garage door of his house-to-be.

MARTY
Why not...?

He tries to open the garage door: it's locked. Then he reaches in his pocket and pulls out his KEYS. He tries one in the garage lock. It works! Marty smiles and opens the garage door.

ANGLE ON THE OPEN GARAGE — DAY
The DeLorean backs into the garage.
Marty is about to turn off the car when he hears the RADIO DJ from the car radio.

DJ (V.O. RADIO)
And now, one of the top records of the week...
Marty turns up the volume: he wants to hear this. "Papa Loves Mambo" by Perry Como starts playing. Marty can't believe what he is hearing. He shakes his head.

MARTY
This is not a good year.

Music becomes score and continues over the next sequence.

EXT. STREET IN FRONT OF MARTY'S (MODEL) HOME — MATTE SHOT — DAY
MARTY walks down the street toward Hill Valley. He's out of the radiation suit and in his street clothes.

CUT TO: EXT. HILL VALLEY TOWN SQUARE — DAY
The town square is immediately recognizable because the courthouse clock tower is now working. In 1955, the town square is a healthy, vibrant center of commerce. The same buildings are well kept and clean, and the street bustles with Saturday morning activity. Marty notices THE MOVIE THEATER is now playing "Cattle Queen of Montana" starring Barbara Stanwyck and Ronald Reagan. THE TOYOTA DEALERSHIP is now a STUDEBAKER DEALERSHIP selling new 1955 cars. AN APPLIANCE STORE is selling "modern" small appliances.

A WOMAN'S STORE displays tie latest fashions. A TRAVEL AGENCY advertises "Fabulous Vacations in Cuba." THE BANK has a round clock instead of the digital version of 1985. A sign in the window promotes "Passbook Savings at 2-1/4%." A RECORD STORE displays the latest records and albums: Eddie Fisher, Perry Como, Pat Boone. There is no Rock and Roll. AN ELECTION POSTER: "Re-elect Mayor Frank 'Red' Thomas. Honesty, Decency, Integrity." With the exception of the name and face, it's the same as the "Goldie Wilson" poster of 1985. MARTY walks along tie street staring at the places and people. The people stare at him too, particularly his green shoes. The previously boarded up CAFÉ is now open for business. Marty notices a PUBLIC TELEPHONE SIGN on the window: he's got an idea. He enters.

INT. CAFE — DAY
A typical café/soda fountain of the period; 2 or 3 CUSTOMERS are at the counter. Marty stares at the signs advertising menu items: Hamburger — 25 cents. Ham & Cheese — 30 cents. Chocolate Sundae — 15 cents. A sign over the cigarette display says "All Brands 20 cents." LOU, the counterman, spots Marty.

LOU
Lookin' for something, kid?

MARTY
Uh, the telephone?
Lou points it out, in back: a phone booth

MARTY goes into the phone booth and flips through the directory. Marty's finger comes to rest at "Brown, Emmett L. (Scientist)." 1640 Riverside Dr. HIllside 3-4385.
MARTY smiles — just what he was hoping for. The sign on the phone says "Local Calls — 5 cents." Marty digs out a nickel and dials the number. It rings...and rings... and rings. No answer.

He hangs up.

MARTY
Not my day.
He rips the page out.

INT. CAFÉ
Marty saunters out of the phone booth and takes a seat at the counter. A NERDY LOOKING KID is seated nearby, sipping a soda and reading a comic book. Marty looks at Lou, indicating the address on the phone book page.

MARTY
Can you tell me where 1640 Riverside—

LOU
You gonna order something, kid?

MARTY
Uh, yeah. Gimme a Pepsi Free.

LOU
Kid, if you want a Pepsi, you gotta pay for it.

MARTY
No, a Pepsi Free — you know, diet soda?
Lou looks at him like he's from another planet.

LOU
No, I don't know.

MARTY
Uh, well, just give me something to drink that doesn't have sugar in it.
Lou gives him a look, then puts a cup of coffee in front of him. Marty looks at the bowl of sugar cubes in front of him.

MARTY
Have you got any Sweet 'N Low?

LOU
Sweet and what?
(eyeing him suspiciously)
Say, kid, you'd better pay for this right now.

MARTY
Okay.

He pulls out his wallet and gives Lou a crisp, new 20 dollar bill. Lou's eyes nearly fall out of his head.

LOU
A 20? What do you think this is, a bank? I can't break a 20 for a nickel cup of coffee. (suddenly suspicious) Say, what's a kid your age doing with a 20 dollar bill anyway?

Marty gulps, pulls a nickel out of his pocket and takes back his 20. Lou gives him a look, then walks away. Marty raises his coffee cup and just as he's about to take a sip...

VOICE (O.S.)
Hey, McFly!

MARTY
Huh?
He spins around on his stool.

The voice came from a PUNK, 17; behind him are 3 OTHER PUNKS. The lead punk is coming right toward Marty... no, he's stepping over to the NERDY KID next to him.

NERDY KID
Uh, hi, Biff, how's it going?

Yes, the punk is BIFF TANNEN, aged 17! And the nerdy kid is GEORGE McFLY, also 17. Biff takes George's soda and drinks it all. Biff's boys buy cigarettes at the counter. They are MATCH, perpetually chewing a wooden matchstick; SKINHEAD, who has a crewcut just this side of being bald; and 3-D, who always wears red-green 3-D glasses. Marty watches the exchange between Biff and George with utter amazement.

BIFF
You got my homework finished, McFly?

GEORGE
Well, no. I figured since it's not due till Monday...
Biff knocks on George's head.

BIFF
Hello? Anybody home? Think, McFly, think! I've gotta have time to recopy it. Do you realize what would happen if I turned in MY homework in YOUR handwriting? I'd get kicked out of school!

(notices Marty staring at him)
What are you lookin' at, dips***?

SKINHEAD
Biff — get a load of his shoes. This dork thinks he's a leprechaun — he painted 'em green!
They all laugh. Biff turns back to George.

BIFF
So how about my homework, McFly?

GEORGE
Um, okay, Biff, I'll do it tonight and bring it over first thing tomorrow.

BIFF
Not too early — I sleep in on Sundays. Oh, hey, McFly — your shoe's untied.

GEORGE
(looks down, falls for it)
Huh?
Biff hits him in the chin. He laughs loudly, as do his cronies... and they leave. Marty, still in disbelief, turns to George.

MARTY
I don't believe it. You're George McFly...?

GEORGE
Uh-huh.

MARTY
Your birthday's August 18th, and your mother's name is Sylvia?

GEORGE
Uh-huh. Who are you?

MARTY
I'm a relative of yours. A very distant relative.
A black busboy has been sweeping up in the background, making his way over. He looks at George. As he talks, we see he has a gold front tooth — it's Goldie Wilson, aged 22!

GOLDIE
Say, what do let that boy push you around for?

GEORGE
Well, uh, he's bigger than me...

GOLDIE
Stand tall, boy. Have some respect for yourself. You let people walk over you now, they'll be walkin' over you for the rest of your life. Look at me. You think I'm gonna spend the rest of my life in this slophouse?

LOU
(has heard the remark)
Watch it, Goldie.

GOLDIE
(he's on a roll) No, sir! I'm gonna make something of myself! I'm going to night school — I'm gonna be somebody!

MARTY
That's right — he's gonna be Mayor someday.
This is an idea that's never occurred to Goldie.

GOLDIE
Mayor? That's a good idea! I could run for mayor!
George slips out as the conversation continues.

LOU
Ha! A colored mayor! That'll be the day!

GOLDIE
You wait and see, Mr. Carruthers. I'm gonna be mayor.

LOU
Just keep sweeping, Goldie.
Now Marty notices that George has left. He goes out after him.

GOLDIE
(to himself)
"Mayor Goldie Wilson." I like the sound of that.

EXT. — HILL VALLEY TOWN SQUARE
Marty looks around and sees George bicycling down the street.

MARTY
George! Hey, George! I want to talk to you!
But George doesn't hear him. He disappears around a corner. Marty runs after him.

EXT. — A RESIDENTIAL STREET — DAY
The homes evoke pleasant nostalgia: front porches and white picket fences. MARTY comes from around the corner and sees GEORGE'S BIKE parked underneath a tree. Marty looks around, then spots GEORGE up in the tree, precariously out on a branch overhanging the street, about 12 feet up.

George has a pair of binoculars trained on a second story window in the house across the street. MARTY can't figure it out. He moves closer for a better view. GEORGE focuses the binoculars. GEORGE'S P.O.V. through binoculars of a naked girl in the 2nd story bedroom window, dressing. MARTY watches in disbelief as he realizes what George is doing.

MARTY
He's a peeping tom!

GEORGE'S P.O.V.
as the girl moves closer to the window. GEORGE tries to move closer, but loses his balance — he tumbles into the street!

WIDER
MARTY watches as George groans, then slowly tries to get up. Now a CAR comes from around the corner. George doesn't see it, but Marty can see that it's going to hit George.

MARTY
Dad! Look out!
But George is still dazed. Marty dashes into the street, and in a spectacular flying leap, knocks him out of the path of the oncoming car. As Marty moves to avoid the car, the car swerves in the same direction — there's a screech of brakes, and the car hits Marty!

George, never one to get involved, grabs his bike and pedals off, leaving Marty lying in the street, unconscious.

DISSOLVE TO: INT. DARKENED BEDROOM — NIGHT
MARTY is lying in bed, lit by ambient light from a doorway. FEMALE HANDS place a cold compress on the bruise on his forehead. Marty groans and stirs.

MARTY
Mom? Is that you?

WOMAN
Ssshhh. Everything's going to be all right.
It sounds like his mother. He opens his eyes. All he can see is her silhouette.

MARTY
God, what a horrible nightmare. I dreamt I went way back in time...
He starts to sit up.

WOMAN
Take it easy, now... you've been asleep for almost 9 hours.

ENTERTAINMENT | Solo | Back to the Future I Script | Entering 1955

MARTY
It was terrible. It was a terrible place to be. The music was awful — they didn't have rock. The cars were ugly. My neighborhood hadn't been built yet, and everything was so weird looking.

WOMAN
Well, you're safe and sound, back where you belong, in good old 1955.

MARTY
1955!
She turns on the bedside lamp. It's the same girl George was spying on, and Marty recognizes her just as we do...

MARTY
Oh my God. You're — you're my— my—

LORRAINE
My name's Lorraine. Lorraine Baines.
Marty stares at her for a long moment.

MARTY
But — but you're so thin!

LORRAINE
Just relax, Calvin. You got quite a bruise on your head.

MARTY
(looks under the blankets)
Uh... where are my pants?

LORRAINE
(points)
Over there on the chair.
(notices the color of his underwear)
I've never seen red underwear before, Calvin.
Marty covers himself up.

MARTY
Calvin? Why are you calling me Calvin?

LORRAINE
Well, isn't that your name — Calvin Klein? It's written in your underwear.
(suddenly realizing) Oh — I guess people call you Cal.

MARTY
No, well, actually people call me Marty.

LORRAINE
Well, I'm pleased to meet you, Marty.
She comes over and sits on the bed right next to him. She's very interested in him.

LORRAINE
Mind if I sit here?

MARTY
(gulps, nervous)
Uh... no...
Marty moves as far away as he can without falling off the bed. He holds the blanket tight around his waist. She looks at him, fascinated.

LORRAINE
That is quite a bruise there...
She gently strokes his bruised forehead... and then runs her hand through his hair. Marty moves even further — and falls off the bed! He covers himself with the blankets.

STELLA (O.S.)
Lorraine? Are you up there?
We hear FOOTSTEPS coming up the stairs.

LORRAINE
(to Marty)
It's my mother! Quick, put your pants back on!
She throws him his pants.

CUT TO: INT. DINING ROOM — NIGHT
Marty takes a seat at the dinner table next to Lorraine as MRS. STELLA BAINES, 40 and pregnant, makes the introductions to the kids. The chair at the head of the table is empty.

STELLA
That's Milton, that's Sally, that's Toby...
MILTON, 12, wears a Davy Crockett coonskin cap; SALLY is 6, TOBY is 4.
(continuing)
...and next to you there in the playpen is little Joey.
Marty turns and looks with amazement at 11-month old JOEY rattling the bars of his playpen.

MARTY
(whispers to him)
So you're my Uncle Joey. Get used to those bars, kid.

STELLA
Oh, yes, little Joey loves being in his pen. He actually cries when we take him out, so we leave him in there all the time — it seems to make him happy. Have some meat loaf, Marty.

She hands him a plate of meat loaf. It looks like the same meat loaf he had for dinner in 1985... in fact, the whole dinner is the same!

STELLA
(calls into the other room)
Sam, would you quit fiddling with that thing and come in here and eat?
(to Milton) Milton, don't eat so fast!
(to Lorraine) Lorraine, you're not eating enough. Have some mashed potatoes.

LORRAINE
No thanks, Mom.
Now gruff SAM BAINES, 45, rolls in a brand new television, on a plywood dolly of his own construction.

SAM
Look at this: it rolls. Now we can watch Jackie Gleason while we eat.

MILTON
Oh boy!

Sam fiddles with the rabbit ears and brings in a rather muddy image of a cigarette commercial. ON TV a SURGEON steps out of an operating room, lights up a cigarette, and turns to do a testimonial.

DOCTOR (on TV)
After facing the tension of doing 3 lung operations in a row, I like to relax by lighting up a "Sir Randolph." I know its fine tobacco taste will soothe my nerves and improve my circulation...

SAM
Look at that picture: crystal clear! Why would anybody want to go to the movies when you can see this in your own home — free!

LORRAINE
(to Marty, explaining)
Our first television set. Dad picked it up today. Do you have a television?

MARTY
Uh... yeah... two of 'em.

MILTON
Wow! You must be rich!

STELLA
Milton, he's teasing you. Nobody has two television sets.
"The Honeymooners" has resumed — the classic "Man From Space" episode.

MARTY
Hey, I've seen this one — this is a good one. This is where Ralph dresses up as "the man from space."

MILTON
What do you mean, you've seen it? It's brand new.

MARTY
I saw it on a rerun.

MILTON What's a rerun? MARTY You'll find out. SAM Quiet! I want to hear this! STELLA Marty, I'd like to give your mother a call and let her know you're all right.	MARTY (gives Lorraine a glance) Uh, well, no — you can't. STELLA Why not? MARTY Uh — she's out of town. With my Dad. (pulls out the phone book page) Could you tell me where Riverside Drive is?
SAM Riverside? Sure, it's on the east end of town, a block past Maple. MARTY A block past Maple? But that's Kennedy Drive. SAM Pardon me? MARTY That's John F. Kennedy Drive.	SAM Who in the world is John F. Kennedy? MARTY (realizes the problem) Never mind. LORRAINE Mother, with Marty's parents out of town, don't you think he should spend the night here? I'd hate for anything to happen to him with that bruise on his head. She gives him a flirtatious smile.
STELLA Marty, Lorraine is right. You must spend the night. You're our responsibility. MARTY Uh, gee, I don't know… LORRAINE And he can sleep in my room. Under the table, Lorraine puts her hand on Marty's leg. Marty immediately jumps to his feet.	MARTY Uh, actually, I've really gotta be going... (he's backing out, toward the front door) So, thank you for everything, and I'll see you all later. Much later. He turns and hurries out of the house. Lorraine sighs romantically.

Doc Brown

CUT TO: EXT. DR. BROWN'S HOUSE The house at 1640 Riverside Drive is spectacular, the home of a very wealthy man. Marty ogles it as he walks up to the front door. He checks the address against the page he ripped out of the phone book: it checks. All the lights are on — a party is going on inside. Marty rings the doorbell. It's answered by DR. BROWN, aged 35. Brown is dressed in evening clothes, and is flanked by two lovely girls. BROWN Hiya, kid. Looking for somebody?	MARTY Uhhh, Dr. Brown — yeah, you ARE Dr. Brown... Boy, am I glad to see you. BROWN Do I know you, kid? MARTY Well, not exactly — that is, not yet. My name's Marty — Marty McFly. Now what I'm about to say is going to sound incredible, but you're the only man on earth who'll believe it... (he takes a deep breath) I'm from the future.
BROWN (smiles) Great sales pitch, kid — terrific. So what are you selling? Floor wax? MARTY No, I'm serious! You've gotta believe me! You're the only one who can get me back home! BROWN Get you back home? Kid, I think you got me confused with the Wizard of Oz.	MARTY Look, I can prove I'm from 1985! Marty pulls out his wallet and starts showing the contents to Brown. MARTY See this? My driver's license — expires 1987. Look at my birthdate — I haven't even been born yet. (pulls out a 20 dollar bill) Look at this money: "Series 1981." (pulls out a color snapshot)
Here's a picture of me, my sister, and my brother. Look at her sweatshirt: it says "Class of '84." Brown gives it all a cursory look, particularly the snapshot. BROWN Oh, I get it — you're selling trick film. This is great — it really looks like the guy's got no head. Very clever. MARTY Huh? Brown hands it back to Marty. Marty looks at it.	Sure enough, the image of Dave in the photo has no head. It's not torn, or rubbed off — the figure genuinely is headless. **EXT. BROWN'S HOUSE — ON MARTY AND BROWN** Marty stares at it, unable to figure it out. BROWN (continuing) I'd buy a roll, but I'm not much of a photographer. MARTY Doctor Brown, this is no trick. I really am from the future. Brown rolls his eyes.
BROWN Well then, tell me something, young man from the future: who's the president of the United States in 1985? MARTY Ronald Reagan. Brown and the girls burst out laughing. BROWN That's a good one! The kid's a riot! A regular riot!	(pulls out his wallet) Here's 5 bucks, kid! Thanks for the laughs! He hands Marty a five, then closes the door. Marty sighs, then walks around the side of the house and looks in the window. **MARTY'S P.O.V. THROUGH THE WINDOW — BROWN'S LIVING ROOM** The party is an eclectic collection of society types college types, beat generation types, and lots of attractive women. Brown wanders over to the best looking woman in the place. Brown whispers into her ear. She responds by hitting him in the head with a beer bottle! Brown goes down, dazed. She walks off in a huff. Brown rubs his head... then his eyes open wide in the same crazed expression we've seen in 1985.

BROWN
Of course. Of course! It's so obvious!
(jumps to his feet, shouts)
All right, the party's over! Everybody go home! I have work to do!
The guests exchange looks.

BROWN
Go home! Everybody out! I need quiet!
Some of the guests begin to leave.

EXT. BROWN'S HOUSE — ON MARTY
Marty realizes what has just happened. He gets an idea.

CUT TO: INT. BROWN'S GARAGE/WORKSHOP — NIGHT
It's a large closed garage, with a PACKARD CONVERTIBLE and a large work area, organized and well-kept. A clock shows the time is 12:45.

BROWN is hunched over his workbench, furiously scribbling down notes and plans. He's disheveled — he's been here for a while. Brown's DOG is sitting near its "bed." The name on the dog dish is "COPERNICUS." Copernicus suddenly reacts to something...

MARTY appears at a partially open WINDOW. He opens it the rest of the way and climbs in.

MARTY
Doc, listen, you gotta hear me out—

BROWN
Get lost kid! I'm working!

MARTY
I know! And I know what you're doing — you're inventing time travel. It came to you in a vision when you got hit over the head with that beer bottle. And that thing you're drawing is the Flux Capacitor!
Brown is totally astonished.

BROWN
My God. How did you know that?

MARTY
I told you — I'm from the future.
With that, he walks over to the garage door and raises the overhead door, revealing the DeLorean sitting there in the driveway.

Brown's mouth falls open as he stares at it — and the mechanism visible through the open gull wing door. He grabs the drawing he's been working on and runs over to the DeLorean to compare it.
It's a drawing of the Flux Capacitor! It matches the real thing perfectly.

CUT TO: INT. BROWN'S GARAGE — A LITTLE LATER — NIGHT
The DeLorean is now in the garage; the garage door is closed. The 1985 suitcase is open, and we can see its contents — clothes, toilet articles, and a CONAIR (battery) hair dryer.

MARTY is busily attaching the video camera into a 1953 model TV.

MARTY
Okay, Doc. Take a look at this...
Brown comes over and Marty rolls the tape he shot in the mall parking lot where Brown is explaining the operation of the time machine. Brown is amazed to see himself as a man of 65.

BROWN
Why — that's me! I'm an old man! Incredible! Thank God I've still got my hair... baldness runs in my family, you know. But what on earth am I wearing?

MARTY
A radiation suit!

BROWN
Of course, because of all the fallout from the Atomic wars. And what's that thing around my neck?

MARTY
Indian jewelry.

BROWN
I'm not even gonna ask.

ON TV
The part of the tape comes up about the Plutonium. We see the image of the Plutonium cannister with old Dr. Brown next to it.

MARTY (V.O. tape)
Plutonium? You mean this sucker's nuclear?

OLD BROWN (on TV)
Electrical. But I need a nuclear reaction to generate the 1.21 jigowatts of electricity I need...
Young Brown is taken aback.

BROWN
1.21 JIGOWATTS? Kid, you're outta gas, going no place fast.

MARTY
Huh?

BROWN
Look, I'm sure that in 1985, plutonium is available in any corner drug store. But in 1955, it's a little hard to come by. And unless you figure on driving out into a nuclear test site while an A-bomb's going off, I'm afraid you're stuck here.

MARTY
But isn't there some other way to generate that kind of power?

BROWN
1.21 jigowatts? Oh, sure. We can tie into Hoover Dam with a very long cable. Or we build a turbine on the back of this thing and you can drive it over Niagara Falls. Or you can drive across the country at 88 miles an hour and hope that you get struck by a bolt of lightning.

MARTY
Lightning! Hold the phone, Doc — check this out!

Marty pulls out the "Save the Clock Tower" flyer from his pocket (with it is the mysterious "headless snapshot" we saw earlier). Marty shows the flyer to Brown. It includes a photocopy of a NEWSPAPER ARTICLE, dated March 27, 1955, with a picture of the clock tower stopped at 10:02."

The headline: "CLOCK TOWER STRUCK BY LIGHTNING. CLOCK STOPPED AT 10:02."

Brown reads it, nodding. He's getting an idea.

BROWN
Kid, if this is true, we just might be able to get your ass back to the future! It's totally insane, but it's certainly no crazier than building a nuclear reactor onto the back of a car... According to this, we know the exact moment lightning will strike a specific spot — at 10:02 p.m. and 11 seconds on next Saturday. All I have to do is rig up a conducting system that'll channel the lightning directly into the Flux Capacitor. As long as you're doing 88 miles an hour when it happens... See you later, alligator.
But Marty isn't paying attention. He's looking at the snapshot again, and he's quite concerned.

BROWN
What's wrong, kid?

MARTY I don't know, but something weird is going on with this picture. My brother — he's fading out… BROWN Lemme see that... Brown studies it. He too reacts with concern. Indeed, more of Dave has faded away — his neck is gone, along with part of his shoulders.	MARTY It looks like he's being erased or something… BROWN Erased from existence... (to Marty, urgently) Kid — we've gotta get you some new clothes!

The Plan

CUT TO: EXT. HILL VALLEY HIGH SCHOOL — DAY Hill Valley High looks pretty much the same in 1955, but with a little less graffiti. There is not much activity in front — school is in session. BROWN'S Packard pulls up and DR. BROWN and MARTY get out. Marty is now dressed in total 1955 period garb. He and Brown ascend the school steps. Marty seems unsure and confused. MARTY Are you sure about this?	BROWN Figure it out, kid. Your old man was supposed to get hit by your Grandpa's car, not you — therefore, you interfered in your parents' first meeting. If they don't meet, they don't fall in love; if they don't fall in love, they don't get married; if they don't get married they don't have kids. That's why your older brother's fading out — he's being erased from existence. He's first, since he's the oldest. Your sister'll be next... and then you... unless you repair the damage by getting your folks back together. Once you introduce 'em to each other, nature will take its course.
(a beat) I hope. Marty pauses to check his reflection in the windowed door. He combs back his slicked down hair in a ducktail, only to get a handful of "greasy kid stuff." MARTY I can't believe you actually put this crap in your hair.	BROWN Come on kid, let's get this over with. Brown pulls him inside. P.O.V. through a classroom door on the students of an ordinary 1955 History class, taking a test. LORRAINE can be clearly seen. MARTY and DR. BROWN are watching from the hall. MARTY (points her out to Brown) That's her — in the 2nd row... Jesus! She's cheating!
THEIR P.O.V. OF LORRAINE, copying an answer from the boy sitting next to her. The school bell rings in the hall. It's passing period. Another classroom door opens and students head out for the next class. GEORGE McFLY is one of them. His shirt tail is out, his hair is poorly combed, and papers are practically falling out of his 3-ring binder. MARTY AND DR. BROWN watch from down the hall. BROWN So which one's your father? MARTY (points) That's him...	As GEORGE walks down the hall, students laugh at him behind his back, and some of the boys kick him in the ass. George turns. He has a "KICK ME" sign hooked on his collar. DR. BROWN shakes his head at this pathetic sight. BROWN (to Marty) Are you sure you're not adopted? Now a hand yanks George by the arm: MR. STRICKLAND — and he looks exactly the same! Marty is amazed.
STRICKLAND McFly! Shape up, man! He pulls the sign off George's shirt and shows it to him. You're a slacker! Do you want to be a slacker for the rest of your life? George shakes his head unconvincingly. Marty and Brown look down the hall in the opposite direction where LORRAINE is at her locker, giggling with a girl friend.	**ON MARTY AND BROWN** BROWN Looks like a match made in heaven. MARTY My mom always said it was meant to be. I sure hope she's right... Marty takes a deep breath and starts walking toward George. MARTY George! Hey, buddy, you're just the guy I wanted to see! You remember me — from Saturday? I saved your life, remember?
GEORGE Oh...yeah… MARTY Listen, there's somebody I want you to meet. C'mere... He pulls him down the hall to Lorraine, who has her back to them. MARTY Excuse me, Lorraine... Lorraine turns.	LORRAINE Calvin! I mean, Marty! She's so delighted to see Marty, she drops her books. MARTY Oh, let me get those... He picks up her books and gives them back to her. She's totally infatuated. LORRAINE Thank you.
MARTY Lorraine, I want to introduce you to someone. This is my good friend, George McFly. George, this is Lorraine. GEORGE Hi. It's really a pleasure to meet you. Lorraine doesn't pay George the slightest bit of attention. She only has eyes for Marty. LORRAINE Oh, Marty, I was so worried about you running off like that the other night with that bruise on your head. Is it all right?	MARTY Um, yeah.... The BELL RINGS. LORRAINE I'm late. See you later. She hurries off down the hall, joining a girl friend. They pass by Dr. Brown. LORRAINE (to her friend) Isn't he a dreamboat?

George has run off in the opposite direction. Marty stands in the middle of the hall, completely bewildered. Brown joins him. MARTY She didn't even look at him! BROWN Obviously, you being in the picture is a real distraction for her. You've got to get him to ask her out on a date — so they can be alone together.	MARTY A date? What kinda date? I don't know what kids do in the 50's. BROWN What do they do in the 80's? MARTY Sex and drugs and rock 'n roll.
BROWN No comment, kid. Brown notices a hand-painted banner in the hall announcing the "Enchantment Under The Sea Dance" this Saturday night. BROWN Look — there's a dance coming up. Get him to take her to that. Marty sees the sign and has a revelation.	MARTY That's right! "Enchantment Under The Sea!" They're SUPPOSED to go to that dance — that's where they kiss for the first time! BROWN Well then, kid, you gotta make sure they go to that dance. Together. **CUT TO: INT. SCHOOL CAFETERIA** GEORGE is seated at a table, having lunch and writing furiously. He has a copy of amazing stories science fiction magazine with his books. MARTY comes over and sits down next to him.
MARTY Hi, George. What are you writing? GEORGE Stories. MARTY Yeah? What kind of stories? GEORGE Science fiction stories... about space travel... and visitors from other planets coming to earth.	MARTY I never knew you did anything creative. How about letting me read one of 'em? GEORGE Oh, no. I never let anybody read my stories. MARTY How come?
GEORGE What if they didn't like 'em? What if they told me I was not good? I couldn't take that kind of rejection. Marty's having a bad case of deja vu. GEORGE (continuing) My father's always telling me that if I never let anyone read my work, I'll have no future as a writer. I know he's right... but I guess that's just the way I am.	(a beat) This must be pretty hard for you to understand, huh? MARTY No, George, it's not that hard at all. There is a long moment as Marty looks at George in a new light... and sees himself. MARTY Listen, George, you know that girl I introduced you to? Lorraine? She really likes you. And I think you should ask her to the "Enchantment Under The Sea" dance. I think you'd have a great time with her.
GEORGE Well, I really couldn't ask her. MARTY Why not? GEORGE What if she says "no?" I'd hate to be rejected. Marty is starting to get exasperated.	MARTY George, I'm telling you, if you don't ask Lorraine to that dance, you're gonna regret it for the rest of your life... and I'm gonna regret if for the rest of mine. GEORGE Well, it's not like I don't want to... It's just that I kinda think she'd rather go out with somebody else. MARTY Who?
GEORGE (points) Biff. Marty looks and reacts with horror **AT ANOTHER TABLE** BIFF is trying to put his hands on LORRAINE. She's trying to push him away. LORRAINE Quit pawing me, Biff! Leave me alone.	BIFF Come on, Lorraine, You want it, you know you want it, and you know you want me to give it to you. LORRAINE Shut your filthy mouth! I'm not that kinda girl! BIFF Maybe you are and you just don't know it yet.
LORRAINE Get your hands off me! But Biff persists. MARTY (O.S.) She said to get your hands off her. Biff turns to find himself facing Marty. BIFF What's it to you, dips***? You know, you've been looking for— MR. STRICKLAND approaches behind Marty. Biff sees him and plays it cool.	BIFF Since you're new here, I'll give you a break. Today. But if you don't shape up, I'm shippin' you out. Biff walks off. Lorraine looks at Marty and sighs with infatuation. LORRAINE Oh, Marty, that was wonderful! Thank you. MARTY Oh, yeah. You're welcome.

CUT TO: INT. BROWN'S LIVING ROOM — DAY
Marty is on the phone.

MARTY
What do you mean, She's not your type? It's destiny, George. You and Lorraine are meant for each other.
(pause, listens)

Look, I'll give you 20 dollars if you take her to that dance. 20 whole dollars.
(sighs, disappointed)
Okay, George. I'll see you tomorrow.

Marty hangs up, exasperated. He pulls out the snapshot again. All that's left of Dave are his feet! MARTY reacts uneasily.

CUT TO: INT. BROWN'S GARAGE — DAY
Brown is fiddling with the video camera, playing the end section of the mail tape over his TV set. Brown seems particularly curious about what happens at the end, why it cuts off so abruptly.

MARTY enters as the tape reaches the end...

ON TV
OLD BROWN reacts to the dog barking.

OLD BROWN
(on TV)
What is it, Einie?
(reacting with horror)
Oh, no, they found me! I don't know how—

The tape ends abruptly.

MARTY reacts with pain, remembering what followed.

MARTY
Say, Doc—
Brown turns, surprised that Marty has been watching.

BROWN
Oh, hi, kid.
(indicates video camera)
Fascinating device, this camera. I can't believe it's made in Japan.

MARTY
Doc, there's something I haven't told you about what happens... (gulps) ...on the night we make that tape...

BROWN
Hold it right there, kid. Don't tell me anything, I don't want to take any more chances of screwing up the space-time Continuum. No man should know too much about his own destiny. If I know too much about the future, I could endanger my own existence. Besides, I've always hated fortune tellers.
(a beat)
And speaking of endangered species, how did it go today with your pop?

MARTY
Terrible. He just doesn't want to go out with my mom. I tried everything. I reasoned with him, begged him, pleaded with him, yelled at him... I even tried bribing him. The only thing I haven't tried is scaring him—
Marty stops short. He's getting an idea...

CUT TO: EXT. GEORGE'S HOUSE — NIGHT
All is quiet; the house is dark.

INT. GEORGE'S BEDROOM
Close on a clock on the nightstand. It's almost 1:30. We pan over to GEORGE'S FACE. He's sleeping soundly, in bed. Now a pair of gloved hands place featherweight headphones on George's ears. George doesn't stir.

The hands now insert a cassette tape labeled "VAN HALEN" into a Walkman. A finger dials the volume level to "10," then presses "PLAY."

GEORGE AWAKENS SCREAMING! He opens his eyes and reacts in further terror: He sees A FRIGHTENING YELLOW MONSTER... Marty, in full radiation suit... at the foot of his bed! Marty turns off the music. When he talks, his voice is distorted through the mouth filter in the hood. An open window indicates how Marty got in.

MARTY
Silence, Earthling!

GEORGE
Who — who are you?

MARTY
(imitating Darth Vader)
My name is Darth Vader. I am an extra-terrestrial from the planet Vulcan.

GEORGE
I must be dreaming...

MARTY
This is no dream! You are having a Close Encounter of the Third Kind! You have reached the Outer Limits of the Twilight Zone!

GEORGE
Mom! Dad!
George throws off the covers, but Marty pulls the portable hair dryer (from Brown's suitcase) out of his belt like a gun. He fires a blast of heat at George.

MARTY
Silence! My heat ray will vaporize you if you do not obey me!
George raises his hands in surrender.

GEORGE
All right! I surrender! Turn it off!
Marty lowers it. Now his digital watch alarm begins BEEPING. Marty raises his wrist as if it were a radio.

MARTY
Silence! I am receiving a transmission from the Battlestar Galactica!
(after several more beeps)
You, George McFly, have created a rift in the space-time continuum. The Supreme Klingon hereby commands you to take the female earth-person called "Baines Lorraine" to the location known to you as Hill Valley High School exactly 4 earth cycles from now — Saturday night in your language.

GEORGE
You mean, take Lorraine to the dance?

MARTY
Affirmative.

GEORGE
But I don't know if I'll be able—
Marty turns on the Walkman again. George SCREAMS!

GEORGE
Turn if off! Please, turn it off!
Marty turns it off.

MARTY
Insolent Earthling! Do you wish me to melt your brain?

GEORGE
No! Please! I'm sorry, I'll do it! I'll take her to the dance — but please don't turn that noise on again.

MARTY
Very good, Earthling. You will tell no one of this visit. Now, close your eyes, and see me no more....

GEORGE
Okay, Okay.
George closes his eyes. Marty holds a vial under George's nose and George passes out. Marty removes the featherweight headphones from George's head, takes off his hood, and goes back out the window.

EXT. GEORGE'S HOUSE — NIGHT Marty climbs down a trellis and jumps down into Dr. Brown's waiting Packard convertible. BROWN How'd it go? MARTY Great! That chloroform sure put him out — I hope I didn't overdo it.	

Fighting Biff

CUT TO: EXT. TOWN SQUARE — DAY MARTY is loitering in the grassy town square. Now GEORGE comes running up from the street. He's disheveled and wild-eyed. MARTY (spots him) George! You weren't at school. Where've you been all day? GEORGE I just woke up — I overslept. Look, you've gotta help me! I want to ask Lorraine out, but I don't know how to do it.	MARTY All right, keep your pants on. She's over there in the café, having a soda. Come on... They head across the street toward the CAFÉ — it's the local teen after school hangout. TWO KIDS on homemade scooters (roller skates nailed to a 2 x 4 with an orange crate on top) cruise down the sidewalk past them. Marty points through the café window.
MARTY Look, there she is. Their P.O.V. through the window of Lorraine, seated with 2 girlfriends (BETTY and BABS) in a booth, sipping ice cream sodas and talking. MARTY It's simple, George. You just go in there and invite her. GEORGE All right. but what do I say?	MARTY Say whatever feels natural — whatever comes to your mind. George thinks about this a moment, then shrugs. GEORGE Nothing's coming to my mind. MARTY Gee, it's a miracle I was even born. GEORGE Huh?
MARTY Nothing. Just tell her destiny has brought you to her and you think she's the most beautiful girl you've ever seen. Girls like to hear that — what are you doing, George? George has taken out pencil and paper and is writing. GEORGE I'm writing it down. This is good stuff.	**INT. CAFÉ — DAY** The place is really jumping — it's full of kids. A jukebox is playing. Marty enters with George. MARTY There she is. Just go and ask her. Marty points George in the right direction, and takes a stool at the counter, out of Lorraine's immediate view.
George looks at his "script" and mouths the words to himself. He gets up his nerve and approaches Lorraine. Despite his awkwardness and fear, there's something endearing about him, like a lost dog. GEORGE Uh, Lorraine... (reads) "My density has brought me to you." LORRAINE I beg your pardon?	GEORGE Oh — what I mean to say is... LORRAINE (looks at him curiously) Haven't I seen you somewhere? GEORGE (big smile) Yes! I'm George. George McFly. I'm your density — I mean, destiny. Lorraine giggles with her girl friends. We hear the sound of the door being thrown open and a familiar VOICE calls to George.
BIFF (O.S.) McFly, I thought I told you never to come in here! George turns and sees Biff and his gang standing there. He shudders. Marty drops his head in his hands and sighs. BIFF Well, it's gonna cost you, McFly. How much money you got on you?	GEORGE (quickly pulls out his wallet) How much do you want, Biff? As Biff starts to walk toward George, Marty sticks out his leg and trips him! Everyone in the malt shop laughs, but Biff doesn't think it's very funny. Now Biff sees who tripped him. BIFF YOU! (getting up)
All right, wise ass, it's fat lip time... Marty jumps off his stool, ready for action. Biff throws a punch which Marty easily avoids; then Marty delivers a left jab to Biff's gut, and slams a right into his face, sending Biff reeling backward into a table. Match, 3-D and Skinhead rush Marty. Marty doesn't like the odds. He bolts out. The 3 guys pull Biff to his feet and they all run out after Marty. LORRAINE (to her girlfriends) That's Calvin Klein! Oh, God, he's a dream!	**EXT. CAFÉ AND STREET** Marty dashes down the street, followed by Biff and the boys. Most of the kids in the café hurry outside to watch, including LORRAINE and her friends. Marty looks behind him — Biff and company are gaining. Then one of the kids on the scooters comes by. Thinking quickly, Marty yanks the scooter out from under him, kicks off the orange crate and creates a homemade skateboard! Marty hops on it and sails off down the sidewalk! Biff and the boys have never seen anything like it — nor has the kid whose scooter it was! Everyone stares as Marty whizzes down the sidewalk.

KID
Wow! Look at him go!

ANOTHER KID
What is that thing?

BIFF
(to his boys)
In the car!

Biff and the gang jump into Biff's convertible parked nearby. Biff peels out after Marty.

FURTHER DOWN THE STREET
Marty looks over his shoulder and sees the convertible closing in. He cuts a sharp turn into the street, crossing right in front of Biff's car, and heads back in the opposite direction.

INT. BIFF'S MOVING CONVERTIBLE
Biff and the boys are stunned!

EXT. STREET
Another car comes up from behind Marty. As it passes, Marty grabs onto the back and hooks a ride! Biff cuts a U-Turn and continues the pursuit.

EXT. CAFÉ
Marty, towed by the car, zooms past the café. The spectators are truly amazed. Lorraine stares in open-mouthed awe.

LORRAINE
He's an absolute dream...!

Now Biff's convertible comes racing after Marty.
MARTY again looks over his shoulder and sees that Biff is closing in, fast. Things don't look good. Up ahead is an intersecting street: Hill Street.

Marty lets go of the car and cuts a sharp left onto Hill Street. BIFF is coming too fast to make the turn. He overshoots the intersection and has to make another U. His boys are watching Marty with amazement.

MATCH
What is that thing he's on?

SKINHEAD
It's a board with a roller skate nailed under it.

3-D
Hey — we could build those things and sell 'em — we could call 'em "Roller Boards!"

EXT. HILL STREET
It's an incredibly steep hill, and at the bottom is a railroad crossing. Marty accelerates and he coasts down. Now Biff's convertible shoots onto Hill Street, actually lifting off the ground as it comes over the hill! Biff drives like hell after Marty and he's closing fast. Then Marty drops into a crouch, cuts his wind resistance and speeds away!

AT THE RAILROAD CROSSING, the warning bells start ringing and the gate begins to lower. Marty reacts with fear. A Diesel Freight is approaching. The gate drops all the way down.

Biff speeds up to stay on Marty's tail. Marty has no choice — he vaults over the crossing gate and lands back on his "skateboard," crossing the tracks just inches in front of the barreling Diesel! Biff slams on his brakes. His wheels lock up and rubber SCREECHES across the pavement... but nevertheless, he CRASHES through the crossing gate, coming to a stop right at the edge of the tracks... and the Diesel engine runs over his front bumper!

MARTY continues on with a euphoric yell as the train roars on behind him, completely cutting off Biff's pursuit.
ON THE OTHER SIDE OF THE TRACKS, BIFF is pissed.

BIFF
I'm gonna get that son of a bitch.

CUT TO: EXT. TOWN SQUARE — LATER
Time has passed; things are quiet at the café. Marty comes gliding down the street on his "skateboard," looking around for somebody. He hops off and sticks his head in the café.

MARTY
George?

VOICE (O.S.)
Hi, Calvin — I mean, Marty.
Marty turns: LORRAINE is standing on the sidewalk behind him.

MARTY
Oh, hi.

LORRAINE
You know, you're the first person who's ever given Biff a taste of his own medicine.
Marty shrugs if off as no big deal. She moves toward him. He backs away.

LORRAINE
Marty, this may seem a little forward, but I was hoping you might take me to the "Enchantment Under the Sea" Dance on Saturday.

MARTY
Uh, well, funny you should bring that up, because you know who really wants to take you, and I really think you'd hit it off with him, is George McFly.

LORRAINE
Yeah, he asked me, but I turned him down.

MARTY
You did WHAT?

LORRAINE
George just isn't my type. He's sort of cute and all, but he's such a... well, you know, a chicken.
(moving closer to him)

'I think a man should be strong...so he can protect the woman he loves. Don't you?
She moves closer. Marty gulps. This is REALLY getting out of hand!

LORRAINE
So what do you say about Saturday?

MARTY
Uh...well...yeah, sure. Okay. It'll be...great. You and me... on a...
(coughs, nearly chokes)
...date.

CUT TO: INT. BROWN'S GARAGE — NIGHT
Brown is shocked to hear what Marty has just told him.

BROWN
What do you mean you said "yes"?

MARTY
I had to. At least that way I'll know she'll be there. Now all I've gotta do is figure out some way to make her end up with George.

BROWN
You're not gonna have much time, kid. You've gotta make everything happen by 9:30 — 9:45 at the latest — because you've gotta beat it back to the courthouse square in time for the fireworks. Come here, I'll show you the set-up.
Brown takes him over to a CRUDE PLYWOOD TABLETOP MODEL of Hill Valley town square which he's constructed himself.

A "lightning rod" (a nail) has been attached to the top of the "clock tower" (a piece of wood with a watch strapped around it). A wire runs down from the "lightning rod," across "town square" and between two "lamp posts" (candles in candlesticks) across the "street." Brown explains the layout to Marty.

ENTERTAINMENT | Solo | Back to the Future | Fighting Biff

BROWN
We put a lightning rod on the clock tower and we run some industrial strength electrical cable from the lightning rod, across the street. Meanwhile, we've outfitted your car with a big hook directly connected into the Flux Capacitor....

Brown brings out a wind-up toy car with a wire sticking straight up from the back. There's a hook on the top of it. (There is a similar rig on the real DeLorean, visible in the background.) Brown winds up the toy car.

(continuing)
On a signal, you'll take off down the street toward the cable, accelerating to 88...
Brown releases the toy car from one end of the model, toward the strung wire...
He picks up a stripped wire, plugged into the AC outlet and brings it toward the "lightning rod."

BROWN
(continuing)
Lightning strikes, electrifying the cable, just in time to...
He touches the live wire to the nail. The toy car's antenna snags the cable.
SPARKS FLY, and the toy car catches FIRE! It flies off the table top, into some drapes, and they catch fire as well!

Brown grabs a FIRE EXTINGUISHER and puts everything out. Marty shakes his head.

MARTY
You're instilling me with a lot of confidence here, Doc.

BROWN
Don't worry. I'll take care of the lightning. You just take care of your old man.
Marty has another look at the fateful snapshot. Dave is entirely gone, and now Linda's head is beginning to go.

MARTY
gulps

MARTY
Yeah...

CUT TO: EXT. GEORGE'S BACKYARD — DAY
GEORGE seems very bewildered about what MARTY has been trying to explain to him.

GEORGE
I still don't understand. How can I go to the dance with her if she's going with YOU?

MARTY
She wants to go with YOU George — she just doesn't know it yet. That's why we've gotta convince her that you're not a chicken — so she'll realize that. Now come on, hit me in the stomach. Right here, go ahead.

Marty makes himself a target, but George seems quite unwilling. In the background, a homemade body bag (a duffel bag filled with clothes) is hanging from a clothesline pole.

'GEORGE
I don't want to hit you in the stomach.

MARTY
You're not gonna hurt me. Just give me a punch.

GEORGE
Look, I'm not a fighter.

MARTY
How many times do I have to explain it to you? We know you're not a fighter. You know it, I know it...but she doesn't know it. That's why we've gotta make you look like a fighter, somebody who'll stand up for her, somebody who'll protect her. And you're not gonna look like a fighter if you can't hit me in the stomach.

GEORGE
But I've never picked a fight in my life!

MARTY
You're not picking a fight, you're coming to her rescue. Maybe we'd better go over the plan again. Where are you gonna be at 8:55?

GEORGE
At the dance.

MARTY
And where am I gonna be?

GEORGE
In the parking lot, with her.

MARTY
Okay. So right around 9:00, she's gonna get very angry with me—

GEORGE
Why?

MARTY
Why what?

GEORGE
Why is she gonna get angry with you?

MARTY
(it's hard for him to say)
Well...because...well, nice girls get angry at guys who... who try to take advantage of 'em.

GEORGE
You mean you're gonna—

MARTY
George, don't worry about it. Just remember that at 9 o'clock, you'll be strolling through the parking lot and you'll see us...
(gulps)
...struggling in the car, you'll run over, open the door, and say...?
George doesn't say anything.

MARTY
Your line, George.

GEORGE
Oh. Uh... "Hey, you! Get your damn hands off her." You really think I should swear?

MARTY
Yes, definitely, George, swear. Then you hit me in the stomach, I go down for the count, and you and Lorraine live happily ever after.

GEORGE
You make it sound so easy. I wish I wasn't so scared.

MARTY
There's nothing to be scared of. Now come on and hit me in the stomach.
George takes a deep breath and throws a flimsy punch into Marty's gut.

MARTY
No, George, put a little emotion into it. A little hostility, a little anger.
George tries to get himself angry. He makes some faces and throws another punch. It's not much better.

MARTY
Anger, George, anger.

GEORGE
Maybe if I used my left...

MARTY
No, George. Just concentrate on the anger. Anger.
George throws another punch. This one is slightly better than the last one.

MARTY
(sighs)
Well... I think you're starting to get the hang of it. Just keep practicing. I'll see you later. Remember, anger, George. Anger.
Marty walks off, leaving George with the body bag. He stares at it, trying to make himself mad.

GEORGE
...anger...
He hits it. He hits it again, harder... again... harder... again — he hits the tree!
George howls in pain!

GEORGE
Yeeeowww!! Goddammit!!

He's really angry now, and he socks the bag with his left — and KNOCKS IT CLEAR OFF THE TREE!
George is astonished!

Preparations

EXT. TOWN SQUARE CLOCK TOWER — NIGHT
It's a few minutes before 8 o'clock.

We hear a radio weather forecast as the camera takes us from the lightning rod atop the clock tower, along the cable strung down across the square, to the street where Brown's Packard is parked nearby — the weather report emanates from the car radio. BROWN is on a ladder; he's connecting the paddle plug end of the clock tower cable to the socket on an extension cable tied around a lamp post. The DeLorean is nearby covered with a tarp. MARTY arrives, dressed up for the dance.

FORECASTER (V.O. radio)
Area weather on this Saturday night: An electrical storm in the vicinity will bypass Hill Valley, but we can expect continued cloudiness and some light rain...
Brown reacts to the weather report.

BROWN
Kid, are you sure about this storm?

MARTY
Doc, since when can a weatherman predict the weather — let alone the future?
Brown smiles. He plugs in the cables, then descends the ladder.

BROWN
Right.

(a beat)

You know, kid, I... well, I'm gonna be sad to see you go. You've really made a difference in my life — you've given me something to shoot for. Just knowing that I'm gonna live to see 1985... that I'll succeed in this... that I'll get a chance to travel through time... well, it's just gonna be hard for me to wait 30 years before we can talk about everything that's happened in the past few days. I'm gonna really miss you.

Marty is particularly uncomfortable, knowing the fate of Dr. Brown.

MARTY
Yeah... uh, Doc, about the future...

BROWN
No, kid. We've already agreed that having knowledge of the future can be extremely dangerous. Even if your intentions are good, it could backfire drastically. Whatever it is you want to tell me, I'll find out through the natural course of time.

This is not what Marty wanted to hear, but he can see there's no arguing with Brown.

MARTY
(sighs)
Yeah... Listen, I'm gonna get a candy bar or something. You want anything?

BROWN
No thanks.

CUT TO: INT. CAFÉ
A hand with a pen writes on a letter.

INT. CAFÉ — WIDE ANGLE — NIGHT
MARTY is sitting at a booth writing. He reads it over.

MARTY
"Dr. Brown, on October 5, 1985, at about 1:30 a.m., you will be shot by terrorists. Please take whatever precautions are necessary to prevent this terrible disaster. Your friend, Marty. March 26, 1955."

Satisfied, Marty folds the letter, puts it in an envelope, and writes something on it.
"Dr. Brown: do not open until October 1, 1985."

CUT TO: EXT. ON STREET — NIGHT
Brown is on the ladder stringing electrical cable across the street, between the two lamp posts. MARTY returns with a candy bar. Brown's trenchcoat is laying on the tarped DeLorean. Making sure that Brown isn't watching, Marty surreptitiously places the ENVELOPE into a pocket.

Now a COP meanders over and watches.

COP
Evening, Dr. Brown. What's with the wire?

BROWN
Oh, I'm just doing a little weather experiment.

COP
(notices the tarped DeLorean)
And what's under here?

BROWN
Some new specialized weather sensing equipment.
Brown comes down from the ladder.

COP
You got a permit for this?

BROWN
(smiles)
Of course I do... right here.
He takes out his wallet and gives the cop a 50 dollar bill.

COP
(hesitant)
You're... not going to set anything on fire this time, are you, Dr. Brown?
Brown looks to Marty for guidance. Marty shakes his head.

BROWN
(to cop)
Naw.

COP
In that case, good luck.
He continues down the street.

BROWN
Thank you, officer.

(to Marty)
Say, kid, you'd better pick up your mom and get going.
Marty is about to get into the Packard. He hesitates and pulls the snapshot out of his pocket. Marty is the only one in the picture now, it's as if his siblings never existed. Marty stares at it, then puts it back in his pocket. He is uneasy and scared.

BROWN
You look a little pale. Are you okay?

MARTY
Oh sure, I feel great. Why shouldn't I? I'm going on a hot date with my mother.

Enchantment Under the Sea

CUT TO: INT. SCHOOL GYMNASIUM — DANCE — NIGHT
"Enchantment Under The Sea" is well underway. On stage is the band: Marvin Berry and the Midnighters. They're all black. Marvin plays lead guitar and sings; there is also a drummer, piano player, sax and bass.

They're playing "3 Coins In The Fountain." The gym has been decorated in an undersea motif: seaweed, fish on the walls, a paper mache sunken ship, a "treasure chest," and a single school locker labeled "Davey Jones." There is also a BUBBLE MACHINE, ala Lawrence Welk.

As usual at school dances, there are teachers acting as chaperones (including Mr. Strickland), a busy refreshment table (including a cake in the shape of a fish), and
wallflowers on the sidelines. GEORGE is on the sidelines, bopping out of time to the music. He's quite nervous.

EXT. SCHOOL PARKING LOT
Brown's Packard pulls into the lot and parks.

INT. PACKARD — MARTY, LORRAINE
Marty, at the wheel, is very uneasy; Lorraine next to him looks beautiful in her best party dress. Marty glances at the clock on the dashboard. It's 8 minutes before 8

ENTERTAINMENT Solo Back to the Future | Script Enchantment Under the Sea

MARTY Uh, you don't mind if we, uh, park for a few minutes...? LORRAINE Why do you think I'd mind? MARTY Well, I don't know, some girls just don't like to… LORRAINE Marty, I'm almost 18 years old. It's not like I've never parked before. She scoots over, very close to him. Marty fidgets. Boy, is he nervous!	LORRAINE You seem nervous, Marty. Is anything wrong? MARTY Uh, no… LORRAINE Have some of this — it'll help you relax. She pulls a pint bottle of gin out of her purse. Marty is shocked.
MARTY What are you doing with that? LORRAINE I swiped it from the old man's liquor cabinet. She takes a nip. MARTY Lorraine, you shouldn't drink! LORRAINE Why not?	MARTY Well, it's just not healthy. LORRAINE Don't be so square, Marty. Everybody who's anybody does it. She hands it to him. MARTY Maybe I could use a hit.... Just as he takes a swig, she pulls out a pack of cigarettes and lights up. Marty spits out the gin in surprise.
MARTY Geez — you smoke, too? LORRAINE Now, Marty, you're not going to tell me that smoking is unhealthy. Everyone knows that it calms your nerves and it's good for the circulation. MARTY It'll give you cancer!	LORRAINE You know, you sound just like my mother. When I have kids. I'm gonna let them do anything they want. Anything. MARTY I'd sure like to have that in writing. The comment goes right past Lorraine. LORRAINE So what are your parents like? Are they as square as mine?
MARTY Lorraine, lately I've come to the conclusion that I don't know anything about 'em. **INT. SCHOOL GYMNASIUM — THE DANCE** Marvin Berry and the Midnighters finish up a number. Everyone applauds. Marvin steps up to the microphone. MARVIN We're gonna take a break now, but we'll be back in just a little while, so don't go away. The band members leave their instruments on the stage and head out a side door.	GEORGE now glances at the clock in the gym. It says "8:59." Alarmed, he checks his own watch which reads "8:55." GEORGE is even more alarmed. He runs over to a nearby student. GEORGE What time do you have? STUDENT Five after nine. George is panic stricken! He runs like hell out of the gym!
INT. PACKARD — MARTY, LORRAINE — NIGHT Marty fidgets and looks at the clock again. LORRAINE Marty, why are you so nervous? Marty takes a deep breath. MARTY Well, have you ever been in a situation where, well, you know you have to act a certain way, but when you get there, you don't know if you can go through with it?	LORRAINE You mean like how you're supposed to act with someone on a first date? MARTY Well, sort of… LORRAINE I think I know exactly what you mean. MARTY You do?
LORRAINE (nods) And you know what I do in those situations? Marty looks at her. LORRAINE I don't worry about it! And with that, she throws herself on him, kissing him passionately. Marty is absolutely shocked!	**INT. SCHOOL HALL — NIGHT** George is in a phone booth dialing a number. It rings and a woman answers. WOMAN (V.O. phone) At the tone, the time will be nine o'clock, exactly.... A KID named dixon (class prankster type) sticks a broom through the phone booth door handle. George tries to get out, but he's trapped. Dixon LAUGHS loudly.
George jerks the door frantically, and Dixon just laughs louder. **INT. PACKARD — NIGHT** Lorraine continues her passionate assault of Marty — then abruptly stops and pushes him away. She's very confused. LORRAINE This isn't right. (sighs)	I don't know what it is, but... when I kiss you, something's wrong. I almost feel like... like I was kissing my brother... or my father. I don't understand it, but I just know it's wrong. I guess that doesn't make any sense, does it? MARTY Believe me, it makes perfect sense. We hear the sounds of APPROACHING FOOTSTEPS on gravel. LORRAINE Sounds like somebody's coming. Marty hears it too. He looks at the dashboard clock: 9:00. He sighs with defeat.

MARTY
Yeah... I know...
Suddenly the driver's door is opened, an arm reaches in, yanks Marty out, and Marty finds himself face to face with BIFF!

Match, 3-D and Skinhead are with him.

BIFF
You caused $300 damage to my car, dips***. And I'm gonna take it outta your ass... Hold him, guys.

Biff shoves him roughly into the arms of Skinhead. Marty struggles, but Skinhead and Match grab him and restrain him

LORRAINE
Let go of him! Leave him alone, Biff! You're drunk.
Biff takes a look at Lorraine in the car.

BIFF
Well, lookee what we have here. Maybe I'll take it out of your ass...
She lunges at her door to escape, but Biff grabs her and climbs into the car.

BIFF
Oh, no, you're stayin' right here with me.
Biff pulls her toward him.

MARTY
Get you hands off her, you son-of-a-bitch.
Biff leers at Marty.

BIFF
I'll take care of you after I take care of her. (to his boys) Take him around back. I'll be there in a minute.

(a beat)
Go on! This ain't no peepshow!

They drag Marty away. Biff shuts the car door and tries to kiss her. She struggles, and in a moment, all we can see through the windshield are tussling arms and legs, accompanied by Lorraine's muffled screams.

EXT. SIDE OF SCHOOL
Skinhead, Match and 3-D drag Marty around the corner to the side of the school where a cadillac is parked with its trunk open.

SKINHEAD
Hey — let's lock him in that trunk!

They throw Marty into the car trunk and slam the lid shut. Then, the Cadillac's driver's door is thrown open and the DRUMMER from the band steps out. He's smoking a reefer.

DRUMMER
Say, what you messin' with my car for?

3-D
Beat it, spook, this don't concern you!

The other 3 car doors open, and MARVIN BERRY and the other band members get out. They look real "bad" with their processed hair.

MARVIN
Who you callin' "spook," peckerwood?
Biff's boys exchange worried looks as the band members advance on them.

SKINHEAD
Hey, I don't want to mess with no reefer addicts!

Biff's boys take off (in the opposite direction from the Packard), but Marvin and the band manage to kick 'em all in the ass as they run away. Now we hear beating on the trunk from the inside, and Marty's muffled voice.

MARTY'S VOICE
Lemme out! Lemme out!

MARVIN
Hey, Reginald, where's your keys?
The drummer checks his pockets, and inside the car. He can't find them.

MARTY'S VOICE
They're in here! The keys are in here!

MARVIN
Dammit, boy, you left them suckers in the trunk!

INT. — PACKARD
Lorraine is trying to fight off Biff. It's a real struggle for her.

EXT. PARKING LOT — ON THE PACKARD
Through the windshield we see arms and legs flailing about in a struggle. We hear SCREAMING.

Now GEORGE arrives. He spots the car and goes into his act. He adjusts his pants, strides to the car like John Wayne, and opens the driver's door.

GEORGE
Hey, you! Get your damn hands — uh, oh!

George realizes he's facing Biff. Now he's really scared.

BIFF
I think you got the wrong car, McFly.

LORRAINE
George! Help me!
George doesn't know what to do. He stares in dumbfounded amazement.

BIFF
Just close the door, McFly and walk away.

GEORGE
Uh, okay, Biff...
He turns and takes a few steps.

LORRAINE
George! Please! Help me!
George can't stand it. He stops and goes back. He takes a deep breath.

GEORGE
All right, Biff. You let her alone.

BIFF
Who's gonna make me?

GEORGE
(gulps)
I am.
Biff steps out of the car and laughs loudly.

'BIFF
Yeah? You and what army, McFly?
George balls his right hand into a fist and takes a swing at Biff — but Biff grabs his arm and starts twisting it. George grimaces.

EXT. AT THE CADILLAC
Meanwhile, Marvin is trying to pop the trunk lock with a screwdriver. He's not having much luck.

EXT. PACKARD
Biff twists George's arm harder.

LORRAINE
Stop it, Biff! You'll break his arm!

She tries to pull him away. He slaps her backhand, knocking her down.
Biff laughs. George's expression immediately goes from pain to rage — intense rage... and George lets go with a TREMENDOUS LEFT HOOK, SMACK INTO BIFF'S FACE!
Biff hits the ground, out cold! George can't believe he did it! He looks at his fist, looks down at Biff, and grins widely.

LORRAINE
Oh, George, you were wonderful!
She looks at him with adoring eyes.

AT THE CADILLAC
Marvin has his screwdriver in the lock. He gives it a hard jerk: the trunk pops open, but he puts a big gash in his hand.

MARVIN
Damnit — I sliced my hand!
Marty jumps out of the trunk.

MARTY
Thanks a lot!
He dashes back toward the Packard.

MARTY rushes onto the parking lot and is astonished to see GEORGE AND LORRAINE EMBRACING... and BIFF out cold on the ground. He keeps his distance, allowing them to have their moment.

Nearby, a few kid bystanders come over to them.

BYSTANDER #1
George, we never knew you had it in you!

BYSTANDER #2
Yeah! Ever think about going out for the team?

BYSTANDER #3
How about running for class president?

GEORGE
Well, I'll have to think about it.
Marty can't believe what he's hearing.
Now George and Lorraine head for the school.

EXT. FRONT OF SCHOOL
George and Lorraine go up the front stairs. Marty watches from a safe distance away. Just as they're about to go in, Lorraine turns and sees Marty. She smiles. He smiles back. Now Marty pulls out the snapshot and takes a look. Marty's own image is beginning to fade.

In the background, we hear distant thunder.
MARTY is shocked. He considers the situation a moment, then realizes the answer. He runs back toward the Cadillac.

AT THE CADILLAC
Marvin is wrapping a handkerchief around his cut hand while the band looks on. Marty runs over to them.

MARTY
Hey, you guys, you've gotta get back in there and finish the dance!

MARVIN
Sorry, my friend, but we're through for tonight.

MARTY
What do you mean, you're through?

DRUMMER
Look at Marvin's hand! He can't play with it like that. And we can't play without Marvin.

MARTY
But you've gotta play! That's where they kiss for the first time — on the dance floor! If there's no music, they won't dance, they won't kiss, they won't fall in love.., and I'm a goner!

DRUMMER
Hey, man, the dance is over... unless you know somebody who can play guitar.

Marty looks at Marvin and smiles.

CUT TO: INT. SCHOOL GYM
Marty is playing the guitar with the Midnighters, in a version of "Earth Angel." George and Lorraine are on the floor, dancing. Marty looks at them, then looks at the back of his guitar where, attached with chewing gum.

He glances at the snapshot, nothing has changed. Marty watches his parents. He's getting nervous.
GEORGE AND LORRAINE are looking at each other as they dance. George seems a little unsure of himself.

LORRAINE
Aren't you going to kiss me, George?

GEORGE
(uncertain)
Well... I don't know...
Now DIXON butts in.

DIXON
Beat it, McFly, I'm cuttin' in.

He pushes George out of the way. On stage, Marty reacts with horror. He looks at the snapshot. Marty's image is definitely fading! MARTY blinks his eyes and start hitting wrong notes. He doesn't seem to be able to play the guitar anymore. The DRUMMER notices this.

DRUMMER
Hey, man...what's wrong?

MARTY
I can't play! I don't know how to play the guitar!
On the dance floor, Dixon has his hands all over Lorraine. Lorraine doesn't like it. She looks to George with pleading eyes. MARTY is turning pale. He can barely stand up.

MARTY
I don't feel so good...
The band keeps on playing.
GEORGE sees Dixon with Lorraine. His anger rises and he strides over the them.

GEORGE
(to Dixon)
Get lost, jerk!

He yanks Dixon away from Lorraine and shoves him hard, sending him sprawling into the refreshment table — right into the punch bowl! George takes Lorraine in his arms and kisses her!

ON STAGE
Marty immediately recovers! He jumps up, full of life, wired with energy. The color returns to his face, and he looks at the snapshot. Marty's image is now sharp and clear, and his sister and brother are fading back in!

ON THE DANCE FLOOR
George and Lorraine are dancing very close. From the looks on their faces, there can be no doubt: they're in love.

GEORGE
You know, I'm gonna write all this up in a story and send it in for publication.

LORRAINE
I thought you only wrote science fiction.

GEORGE
It IS science fiction.

The photo is now as it was originally, with Marty, Linda and Dave all "back in existence."

ON STAGE
Marty is euphoric. He remembers how to play, and jumps into the opening riff of "Johnny B. Goode!"

MARTY
(to the band)
Follow me, fellas! Let's rock 'n roll!
The band joins in.

SERIES OF SHOTS — DANCE NUMBER
On the dance floor, heads turn. There are reactions of astonishment from everyone — and the kids start dancing.

Marty euphorically begins cavorting around like Little Richard! The band is really getting into it. And the kids all go nuts, jumping and screaming. Mr. Strickland, however, just shakes his head with disgust. Marty whips off his sport coat and throws it into the crowd!

INT. BACK STAGE — PUBLIC TELEPHONE
MARVIN BERRY is on the phone.

MARVIN
(into phone)
Chuck? This is Marvin!
(pauses)
Marvin Berry! Your cousin! Now, listen — I think this is the sound you've been looking for…
He holds the phone toward the music.

INT. SCHOOL GYM
The pandemonium continues.
Now Marty tears open his shirt and does some Elvis pelvis moves. Girls scream! Marty's movements become Mick Jaggeresque, then take on a Michael Jackson style...

Finally he drifts into pure heavy metal, puts his guitar next to the amp, making feedback. This goes a little too far for 1955 musical tastes — the band stops playing, and the kids stop dancing. They all watch Marty, not sure what to think. Marty suddenly realizes he's gone too far. He smiles sheepishly and steps up to the microphone.

MARTY
Uh, sorry, you guys aren't ready for that yet. But your kids are gonna love it.
He picks up the song again with the band. They do one more chorus. Marty wraps up the song with a final riff, and the students all go berserk with applause!

Return to 1985

CUT TO: EXT. CLOCK TOWER — NIGHT
It's 4 minutes before 10:00.

ON THE STREET
BROWN, wearing the trenchcoat, paces back and forth anxiously. The wind is picking up, and we hear distant thunder. The entire "lightning rod setup" is complete, with the cable strung across the street between the two lampposts.
Brown checks his wristwatch: 9:56.

BROWN
Damn! Where is that kid?

Brown pulls out a pocket watch and checks it: 9:56.

BROWN
Damn!

Brown checks a wristwatch on his other wrist. It's 9:56.

BROWN
Damn!

At last, the Packard pulls up across the street from the tarped DeLorean. Marty jumps out, dressed in his 1985 clothes.

BROWN
You're late! Do you have no concept of time?
Brown pulls the tarp off the DeLorean and raises the "trolley hook" on back to its full height.

MARTY
Take it easy, Doc! I had to change my clothes. Everything's cool — they're back together...and here's the proof.

Marty shows him the fully restored snapshot.

MARTY
Yeah, old George really came through. Laid out Biff with one punch — cold cocked him... and I had to miss it. I never knew he had it in him. Hell, my old man's never stood up to Biff in his life.
Brown opens the DeLorean door.

BROWN
All right, let's set your destination time. This is the exact time you left...

On a readout labeled "Last Time of Departure" is "OCTOBER 5, 1985, 1:11 A.M."
BROWN punches the appropriate keypad.

BROWN
(continuing)
Let's send you home 10 minutes later...
The readout labeled "Destination Time" lights up to read "OCTOBER 5, 1985, 1:21 A.M." We can see that the two readouts differ by 10 minutes.

EXT. ON BROWN AND MARTY
BROWN
(continuing)
Ten minutes isn't long enough for you to be missed. Now, I've painted a white line on the street up there — that's where you start from.
(continuing)
I've calculated the precise distance, taking into account the acceleration speed and wind resistance retroactive from the moment the lightning will strike...
He picks up a wind-up alarm clock.

BROWN
(continuing)
When this alarm goes off, you hit the gas.
Brown gives it a wind, then sets it on the DeLorean dashboard. Brown looks around, then sighs.

BROWN
Well, I guess that's everything.
Marty extends his hand.

MARTY
Doc, thanks for everything.
They shake hands.

BROWN
Thank YOU. I'll see you in about 30 years.
Marty sighs, again thinking of Brown's destiny and the letter.

MARTY
I... I hope so.

BROWN
Don't worry. As long as you hit that wire with this hook, everything'll be fine.

MARTY
Right...
Brown puts his hands in his pockets and withdraws the letter Marty put there. He looks at it curiously. Marty turns away.

BROWN
What's the meaning of this?

MARTY
You'll find out in 30 years.

BROWN
It's about the future, isn't it? Information about the future?

MARTY
You'll find out in 30 years.

BROWN
I warned you about this, kid. The consequences could be disastrous.

MARTY
You've gotta take that risk, Doc. Your life depends on it.

BROWN
(shakes his head)
No. I'm not going to accept the responsibility.
Brown tears up the envelope and shoves the pieces into the Packard ashtray.

MARTY
All right, Doc, in that case, I'll just have to tell you straight out—

But before Marty can get the words out, a tremendous gust of wind comes up accompanied by a loud crack! They turn: A tree limb in the square has blown down right on top of the cable between the clock tower and the first lamp post! The paddle-plug attached to the lightning rod on the clock tower is yanked out, and the cable drops down from the clock tower!

BROWN
Great Scott! Kid — find the end of that cable — I'll throw the rope down to you!

Brown grabs a big coil of rope and dashes into the courthouse. Marty gulps. He takes a look at the fallen tree branch on the cable, then goes hunting for the end of it. The wind is picking up, and the sound of THUNDER approaches.

INT. CLOCK TOWER STAIRS — NIGHT
Brown charges up the several flights of stairs like a madman!

EXT. COURTHOUSE SQUARE
Marty pulls in the cable, hunting for the end of it. At last he finds it. He looks up at the clock tower.

EXT. ON THE CLOCK TOWER
A door opens up, giving access to the ledge below the clock. BROWN steps out. His hair blows wildly in the wind, and lightning flashes in the distance. He looks up.
BROWN'S P.O.V. OF the connecting socket, dangling on its cable between the "1" and "2" on the huge clock face. Its other end is attached to the lightning rod on the tower above. BROWN looks down.

BROWN'S P.O.V. of MARTY, 5 stories below, waving with the paddle plug in hand. BROWN tosses one end of the rope down. The coil unravels. The rope drops to the ground. Marty runs over, grabs it, and ties it to the paddle plug. He waves back to Brown. BROWN nods and starts pulling the rope with the cable back up.

MARTY watches anxiously as the cable goes back up. He yells up at Brown.
MARTY
Doc! I gotta tell you about the future!
But Brown can barely hear him.

BROWN
What??

MARTY
The future! On the night I travel back in time, the terrorists show up and you get—
BONG! It's exactly 10:00 — and the clock bells strike ten! Marty can't be heard over the sound!

Brown almost loses his balance with the huge bells tolling so close! He regains his footing, then pulls the rope up the rest of the way. He's got the paddle plug in hand.
Brown yells at Marty, but he can't be heard over the bells. Brown gestures that he's got the cable and that Marty should go. MARTY hesitates, but Brown gestures adamantly. At last Marty nods and runs to the DeLorean.

BROWN
unties the rope from the end of the paddle plug and looks up at its socket mate dangling on the clock face. He reaches up for it, but he can't quite get it. He'll have to move across the ledge to get closer to it.

MARTY climbs into the DeLorean and closes the gull wing door.

INT. DELOREAN
Marty turns the key in the ignition and revs it up. He puts the car in gear.

EXT. STREET — TOWN SQUARE
The DeLorean takes off.

EXT. CLOCK TOWER
Brown looks down and sees the DeLorean heading down the street. Brown moves along the ledge. He reaches up but he's still not close enough to grab the dangling socket. Lightning and thunder move ever closer.

EXT. STREET
The DeLorean passes a hand-painted white line on the street — Brown has also painted the words "START HERE" for Marty's benefit. Marty makes a U-turn and pulls up to it, like a starting line.

Marty has an anxious expression on his face.

MARTY
Dammit, Doc, why'd you have to tear up that letter? If only there was a little more time— Marty glances down at the 2 readouts, "Destination Time," and "Last Time Departed." The "Destination Time" is set for "1:21 A.M.," 10 minutes later than the "Last Time Departed," which is at "1:11 A.M."

MARTY has an idea.

MARTY
More time! I'll give myself some more time!
He pushes the appropriate buttons on the keypad.

The "minutes" indicator on the "Destination Time" begins counting backwards: 1:21...1:20...1:19...

EXT. CLOCK TOWER
Brown, with the cable in his left hand, moves a little further along the ledge.

Suddenly, the ledge cracks and crumbles beneath his feet! Brown drops the cable and grabs onto the clock hands to save himself! The cable drops onto his left foot!
Brown hangs precariously from the clock face like Harold Lloyd, wind blowing his hair, and lightning, cracking in the sky! Brown carefully moves his right foot toward the intact section of ledge while trying to keep the cable balanced on his left foot. His right foot moves closer... at last it finds safe footing.

Brown takes a deep breath, then hops over onto the ledge. He kicks the cable up with his left foot and catches it in his hand. He sighs relief. Everything is all right. He reaches up with his right hand and is able to grab the dangling socket.

INT. DELOREAN
Marty is still fiddling with destination time. The destination time drops back to 1:12... 1:11... 1:10... 1:09... 1:08... 1:07— Suddenly the engine dies! MARTY tries to restart it but it won't turn over.

MARTY
Come on, come on...!

EXT. CLOCK TOWER
Brown has the plug in his left hand, the socket in his right. He brings them toward each other to plug them in — but they won't reach! Both ends are taut, but he's about a foot short!

Brown looks down. His P.O.V. of the tree limb caught on the cable — which is the reason there's no slack!

BROWN jerks the end of the cable, trying to free it from the limb. Brown tries to disengage the cable from the limb but can't free it. His face takes on intense determination, exaggerated by the wind and lightning. He gives the cable a tremendous yank. The cable jerks free from the tree — but the plug at the other end is wrenched out of the connecting socket on the lamp post!

BROWN reacts with horror. He now has a useless plug in his hand. Lightning cracks even closer!

INT. DELOREAN
Marty is still trying to get the car restarted. Now the alarm clock rings!

MARTY
S***!

At last the engine roars to life! Marty switches THE TIME CIRCUITS ON! The various indicators light up! Marty puts the car in gear. Marty's foot hits the gas pedal.

The DeLorean peels out!

EXT. THE CLOCK TOWER
Brown looks at the two cables in his hand, and the loose end below: how can he get everything connected? Suddenly he realizes what he must do. He ties the two of them tightly together, then plugs them in.

The DeLorean accelerates...
The speedometer passes 40 mph.

EXT. CLOCK TOWER
Brown tests the tied connected cable ends to make sure they won't come apart: they're secure. He takes a deep breath, then grips the line tightly. He jumps!
BROWN slides down the cable!

EXT. COURTHOUSE SQUARE
Brown drops down to the ground! He runs with the cable toward the lamp post!

EXT. STREET
The DELOREAN approaches the square!

INT. MOVING DELOREAN
Marty drives with determination.
The speedometer passes 65.
MARTY'S P.O.V. OF the approaching wire strung across the street.

BROWN gets to the plug end of the cable! It's dislodged from the tree limb, so he has enough slack. He races to the lamp post and the dangling socket.
The DeLorean continues accelerating!

The speedometer passes 85!
The indicator lights behind MARTY begin registering.

BROWN grabs the socket cable and plugs his cable in!
The speedometer hits 88!

THE MOST SPECTACULAR BOLT OF LIGHTNING STRIKES THE LIGHTNING ROD!

The connecting cable becomes electrified!
The DeLorean passes under the cable between the lamp posts.
The trolley hook on the DeLorean makes contact with the electrified cable!
The Flux Capacitor glows and discharges!
The DeLorean's time coils light up and the vehicle is sent BACK TO THE FUTURE!

DR. BROWN
lets out a whoop of delight and relief as he's drenched by the deluge.

THE CABLE ACROSS THE STREET has wrenched the trolley pole out of the rear of the DeLorean. It's left there, swinging from the cable.

BROWN looks up at the clock tower. THE CLOCK is stopped at 10:02
Lightning cracks behind it and we DISSOLVE TO:

1985

THE CLOCK — OCTOBER 5, 1985 — NIGHT
The storm dissolves away into an ordinary night sky. The clock tower shows 30 years of additional age…

Camera cranes down to reveal Hill Valley town square, as we saw it in the beginning. All is quiet — it's late. A raggedy bum is asleep on a bench.
Suddenly his hair begins to stand on end… He's lit by an offscreen flash of light, accompanied by a sonic boom and a sharp blast of wind. We hold on him as we hear a screech of tires and an offscreen crash. The bum awakens and looks up to see...

EXT. THE BOARDED UP MOVIE THEATER — BUM'S P.O.V.
There is a big hole in the front of what used to be the theater.
Suddenly, the DeLorean backs out and onto the street!

THE BUM shakes his head.

BUM
Crazy drunk driver.
He goes back to sleep.

INT. DELOREAN
MARTY looks at the readouts.

"Present Time" now matches "Destination Time" at OCTOBER 5, 1985, 1:07 A.M. "Last
Time Departed" is now MARCH 26, 1955; 10:02 P.M."
MARTY is delighted.

MARTY
All right!
He turns on the car radio. A contemporary rock tune comes on.

MARTY
All right!
He puts the car into forward gear. The engine dies!

MARTY
Aw, s***!
He tries to start it again, but he can't get it to turn over.

MARTY
Come on, come on—
He looks up and sees out the windshield...

MARTY'S P.O.V. THROUGH THE WINDSHIELD — NIGHT
The terrorist van, cruising down the street and around a corner.
MARTY is horrified.

MARTY
The terrorists!
(tries starting the car again)
Damn, it's frozen!

EXT. STREET IN FRONT OF THEATER, DELOREAN — NIGHT
Marty gets out of the DeLorean and runs like hell down the street after the terrorist van.

CUT TO: EXT. THE MALL — NIGHT
as MARTY arrives at the Mall. He keeps on running, past the entrance sign that reads "LONE PINE MALL" (with an image of a single pine tree), into the parking lot, just in time to see, a good 150 yards away... MARTY'S P.O.V. OF the Terrorist van chasing down Dr. Brown — with Marty's younger self watching frozen in horror. MARTY is both horrified and amazed — horrified at being too late; amazed at seeing himself, and to be seeing something he's already experienced from a third person point of view.

MARTY
Oh, God, no, I'm too late!

HIS P.O.V.
The Terrorist leans out of the van with the machine gun.

TERRORIST
Dr. Brown, you American dog, you have betrayed our cause! For that you die!
He BLASTS Dr. Brown in the chest. Brown goes down. Everything is as it already happened.

MARTY
Oh, no!

HIS P.O.V.
The Terrorist van turns and goes after the younger Marty. Just as before, Marty dives into the DeLorean and roars off. Marty watches himself chased by the terrorists.

The DeLorean accelerates, even as it's being shot at, going faster and faster until it's enveloped in the blinding white glow and vanishes! But the terrorist van drives into the white glow; we hear cursing as the blinded driver loses control of the van. It swerves and goes out of control, hitting a parking median and flipping over on its side.
MARTY now runs toward the fallen Dr. Brown, lying face down in the parking lot.

He reaches him, along with Einstein the faithful dog. Marty turns Brown over, tears in his eyes.

MARTY
Doc, no...
Suddenly, BROWN openms his eyes and smiles!

MARTY
You're alive!
Brown stands.

BROWN
Of course, I'm alive.

MARTY
But you were shot — I saw it! I saw it twice!
Brown rips open his radiation suit revealing a bullet proof vest.

BROWN
It's the latest fashion in personal protection. It'll stop a slug from an elephant rifle at 30 yards.

MARTY
But how did you know?

Brown smiles, reaches into his pocket and pulls out the LETTER THAT MARTY WROTE — SCOTCH TAPED TOGETHER! It's yellow and brittle: 30 years old!

MARTY
(smiles, shaking his head)
After all that lecturing about screwing up future events and the space-time continuum...

BROWN
(shrugs)
Yeah, well, I figured, what the hell.
We hear approaching police sirens.

CUT TO: EXT. MARTY'S HOUSE — NIGHT
The DeLorean pulls up to the darkened house. The gull wing passenger door opens and Marty gets out. Brown is driving and Einstein takes Marty's seat.
Marty turns to talk to Brown.

INTERCUT WITH BROWN IN THE DELOREAN
MARTY
So how far ahead are you going?

BROWN
I figure I'll take it slow at first...go about 30 years, just to get my feet wet; then maybe see what's shaking in the 22nd or 23rd century.

MARTY
Well... good luck. And if you get a chance, look me up. I'll be... 47 years old.

BROWN
I will. Funny... I had to wait 30 years to catch up to you. Now you've gotta wait 30 years to catch up to me. Ain't life weird.
Brown gives him a wink. Marty closes the door.

EXT. MARTY'S HOUSE — NIGHT
Marty waves Brown off and heads toward his front door. In the background, the DeLorean zooms off, and we see light from the offscreen time travel glow.
Marty is hit by the sharp blast of wind.

A Changed World

CUT TO: INT. MARTY'S BEDROOM — DAY
MARTY is on top of the bed, asleep in his clothes. Morning light streams in through the bedroom window; he stirs and opens his eyes. He blinks several times, as if getting his bearings, then sits up and looks around.

Yes, it's his room all right, and everything seems the same, from the Z-28 posters to his audio equipment. Marty looks at the clock: 8:30. He looks at the wall calendar: the first four days of October are X'ed off — today is the 5th. Could it have all been a dream?

He gets out of bed and looks at himself in the mirror, then pinches himself to make sure he's real. He is. On the nightstand is a framed 5 x 7 version of the snapshot with he and his siblings. it looks the same.

He reaches into his waste can and pulls out the submission form to the record company. He looks at it, then decisively pulls the cassette tape out of his drawer, and puts it in the envelope with the form.

INT. BEDROOM CORRIDOR — DAY
MARTY comes out of his room with the envelope. He goes down the hall and stops short as he enters.

INT. DINING ROOM — DAY
LINDA and DAVE are seated at the dining room table which has been beautifully set for breakfast. The 5 table settings are elegant; Dave is eating a half of grapefruit; Linda has eggs benedict. Dave is wearing an expensive tailored suit and reads the business section of the morning paper.

MARTY
Say, are we having company or something?

LINDA
Not that I know of.

MARTY
Dave, aren't you working today?

DAVE
Sure, I always work on Saturday.

MARTY
Then what's with the fancy suit?

DAVE
(confused, doesn't understand)
Marty, are you all right?

MARTY
Yeah. Are YOU guys all right?

DAVE
Sure, never better. Here, let me take that — I'll mail it from the office.

Dave takes Marty's envelope. Marty nods uneasily and takes his place at the table. A bowl of fresh strawberries is waiting for him. Now GEORGE and LORRAINE enter from outside. They're tanned and healthy in tennis outfits with tennis rackets.

George carries himself with an air of confidence, and Lorraine looks terrific — thin and svelte, radiantly healthy and positive. This is a happy marriage.
Marty can't believe how good his mother looks.

MARTY
Mom! You look — great!!

LORRAINE
Why, thank you, Marty. Say, tonight's the big night, right? Your big date with Suzy Parker? Such a nice girl, I sure like her.

MARTY
(can't believe it's his mother talking)
Pardon me, Ma?

LORRAINE
You're going up to the lake tonight, aren't you? Haven't you been planning it for 2 weeks?

MARTY
Mom, we went through this last night. How can I go if Dad's car is wrecked?

GEORGE
Wrecked? There's nothing wrong with my car. In fact, Biff is out there waxing it right now.

INT./EXT. MCFLY KITCHEN — P.O.V — DAY
George opens the curtains, revealing BIFF waxing a new Lincoln Continential in the driveway. Biff is working diligently; his rough edges and arrogance are all gone.
George opens the window.

GEORGE
Hey, Biff, don't forget to wax the inside of the wheel covers. You forgot that last time.

BIFF
(friendly, eager to please)
Yes, sir, you're the boss, sir!
Marty is absolutely astonished.

GEORGE
(sitting back down)
Some employees will get away with murder if you don't stay on 'em. I've had to keep him in line ever since high school. Although if it wasn't for him, your mother and I would have never met.

LINDA
Yeah, Dad, you've told us a million times: you beat him up when he was bothering Mom and that's how the two of you fell in love.

ENTERTAINMENT | Solo | Back to the Future | Script | A Changed World

LORRAINE It was more than that. Your father literally came to my rescue. (sighs) It was so romantic! LINDA (rolls her eyes) Cornball city. Marty nods with complete understanding. GEORGE (calls into the kitchen) Bertha, how about bringing Marty his French Toast?	A uniformed maid enters with a tray and sets a lovely plate of French Toast in front of Marty. Marty is too dumbfounded to speak. GEORGE Well, Bertha, you won't have to put up with that tiny kitchen much longer. BERTHA When will the new house be ready, sir?
GEORGE Just as soon as they finish painting the tennis court and re-tiling the swimming pool. It'll be sad to leave this place, though. So many memories... of you kids, and of my days as a struggling writer. BIFF ENTERS and hands George a hardback book. BIFF Oh, Mr. McFly, this just came in: It's the British edition of your current best seller. How many has it sold so far? A million?	It's called "A Match Made in Space," and the cover shows a bedroom with a space alien talking to a couple in bed — very reminiscent of Marty's "Darth Vader" visitation to George. The style indicates it's a science-fiction romance novel. The author's name, GEORGE McFLY, is in big letters. GEORGE Two million, hard cover. BIFF Oh, Marty — here's your keys. Your car is all waxed and ready for tonight. Biff tosses him a set of keys.
MARTY My car? CUT TO: EXT. McFLY HOUSE — DAY Marty comes out of the house and opens the garage door, revealing a tricked out black supra, just like he saw in the showroom. MARTY can't believe it. The personalized license plate says "MARTY I." Marty approaches his new car. VOICE (O.S.) How about a ride, mister? Marty turns — it's SUZY PARKER. She looks just the same: great.	MARTY Suzy! Are you ever a sight for sore eyes! Let me look at you! Marty looks at her, as if trying to make sure she's real. Suzy is hard-pressed to understand why Marty is making such a big deal about this. SUZY Marty, are you okay? You're acting like you haven't seen me in a week. MARTY I haven't. He pulls her toward him... they're about to kiss... closer, closer... And just as they kiss, their hair stands up on end. Marty's eyes widen with the inevitable expectation...
MARTY Oh, no... not again... We hear a sonic boom, and Marty turns — the DeLorean streaks up in front of the house. DR. BROWN jumps out, more wild-eyed and frantic than we've ever seen him. His clothes are particularly bizarre — a weird mixture of past and future: a cowboy hat, a strange variation on a Roman tunic, a cape, and striped plastic pants. BROWN Marty — you've gotta come with me — back to the future!	MARTY Doc, I've got Suzy here. I was just gonna try out my new wheels. BROWN Well, bring her along — this concerns her, too. Brown opens the passenger gull wing door for him. Marty and Suzy approach cautiously. MARTY What do you mean? What happens?
(sudden alarm) Does something happen to us? Do we turn into assholes or something? BROWN No, you and Suzy both turn out fine. But your kids, Marty — something's gotta be done about your kids! Brown gets back in the DeLorean.	**INT. DELOREAN** Marty gets in, and Suzy sits on his lap. She closes the door. BROWN Okay, here we go… MARTY You'd better back this thing up, Doc. We haven't got enough road to get up to 88.
BROWN Where we're going, we don't need roads. Brown hits a new switch on the dashboard: "Westinghouse Fusion Energizer." **EXT. STREET** The DeLorean speeds down the street, then blasts off into the sky like a streak! Once again, the coils glow and the DeLorean is enveloped in the familiar white glow and disappears into the future…	

15 Conspiracies

Conspiracies

The aim of conspiracies is to provide a perspective on the removal of God from society, the decline of morality, values and ethics and to provide hope when the world is spiralling into the depths of socialism, hedonism and one-worldism. If anything else, it will keep you engaged, asking questions and pondering the issues of our day.

Introduction

We live in a world which is deteriorating rapidly with violence, riots, thievery, terrorism and natural disasters occurring on an increasingly frequent basis. These disasters - but particularly the natural disasters - are not only becoming more frequent but are also increasing in power, duration, size and magnitude. A few examples of the current decline of our world today would be; COVID-19, Colossal plagues of locusts in the middle east; Hurricanes Katrina, Maria, Harvey and Sandy; The Australian Bushfires; The many volcanic eruptions occurring more frequently; The economic crash of many governments such as Venezuela and Lebanon, and the multitudes of increasing earthquakes around the globe.

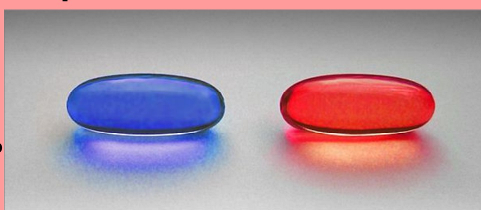
The man-made disasters are also at record highs; The continual riots and unrest around the world such as Hong Kong and the Yellow-Vests in Britain; Nazism, White Supremacy, Occult Practises, Satan worship and Witchcraft are on the rise; Terrorism is becoming more frequent but less broadcasted; Pollution of the land, seas and sky is on a sharp increase; Stealing is commonplace in California if the total is under $950; The continued violence and bombings in the Middle East - Specifically in Iraq, Iran, Yemen, Israel and Turkey, and so much more... The media commonly labels these as "disasters of biblical proportions" which isn't actually far from the truth if you've ever read Revelation in the Bible.

Not only are the two linked, but it's becoming increasingly evident that as the morality and values of humanity degrades - so too does the weather and the people. Our planet is in trouble and people need to start waking up and looking at the signs occurring on literally every continent and every corner of the world.

The values and ethics of our ancestors and of those who built our great countries of America, Australia and Britain are being eroded - not by mere chance, but a planned assault on our once great countries. This category will explain **who** is instigating this attack, **why** they are attempting to change the world, **how** they are conducting it and what their endgame **goals** are - all backed up by historical, current and tangible, REAL evidence. The category title is partially incorrect as this isn't a section for multiple conspiracies but one huge overarching conspiracy designed to keep the elites and those with money controlling the system and the lives of the population, in a world where this is now technologically possible.

Today, the term conspiracy often comes with negative connotations with many believing that they simply aren't true because of what they've been told. The definition of a conspiracy is "a secret plan by a group to do something unlawful or harmful". Nothing to do with its validity but a conspiracy is simply an evil plot done in secret. I understand this category won't be adopted well by many but this massive shift in our culture is worth taking a look at even if you appreciate the new direction of this future "New World Order". It is best read from start to end like a book as it's formatted to flow from one point to the next slowly building on the premise.

1 The Agenda



"You take the blue pill...the story ends, you wake up in your bed and believe whatever you want to believe. You take the red pill...you stay in Wonderland, and I show you how deep the rabbit hole goes."
Morpheus

Throughout history there have always been those with an intent to conquer the world. They feel a compulsive urge to be the most powerful person on the planet and nothing short of sitting on a throne, being worshiped by every person on earth is good enough. Genghis Khan, Alexander the Great, Cyrus the Great, Caesar Augustus and recently Adolf Hitler are all examples of individuals who either tried - or came very close to achieving this goal, however nobody has successfully ruled the entire world yet. The techniques and tactics of these men were legendary and often far beyond their time, however they all had one thing in common - they all used brute force to achieve their goals unlike the subtle invasion of our world today. You can't (easily) get subservience of an entire planet through a violent conquering of nations, the loyalty simply won't be there when the dust settles.

Therefore a new tactic was developed by the most elite and powerful to deceive the peoples and nations of this world without them even realizing they are under attack. A tactic that warps and dements the very foundation on which our great countries were founded. This is an invasion of the mind and a twisting of true ethics and morality of the population. Their aim is to slowly tear down the most powerful and godly countries on earth, to impose their socialist and communistic agendas on the world - while keeping them at the top.

The communists primary purpose is a vision of a completely new society - one of a socioeconomic order structured upon the ideas of common ownership of production and the absence of social classes, money and the state with them sitting right at the top. To achieve this vision they realized that the current Judeo-Christian values which our countries were founded on, and which make us so strong, are a direct conflict to their own goals so they must be eliminated by any means possible.

If the Government is big enough to give you everything you want,
it is big enough to
take away everything you have.
John F. Parker

These values are: Loving your neighbour; the value of every life; the knowledge and love of God; the sanctity of marriage and the institution of nations and families. It is only within the last 100 years we have seen the collapse of every single one of these values. In place of them they have instituted their own form of morality which they are imposing onto the world today - a value of "Do whatever pleases you".

To misquote the Joker: "~~Madness~~ Sin as you know, is like gravity, all it takes is a little push". Through experience we can clearly see that there's been a lot more than a 'little push' to get us to the stage we're at now. Like a virus, it spreads throughout the world, gaining momentum and supporters who don't know any better, all because of a few truly evil communistic individuals, who want to get rich, stay rich and rule the world.

The first step of achieving a form of control over a population is to make people discontent with their current lives. Today this is accomplished via a multitude of ways easily observable in society today:

- Feminism causes women to be discontent with their marriage and family.
- The LGBTI movement causes discontent with their birth gender and those opposed to their way of life.
- Models, photoshop and magazines cause discomfort in one's own body.
- Materialism and advertisements cause discontent with what we own.
- A lack of money or high debt causes discontent towards those high earners and capitalism.
- A hatred of capitalism causes a hatred of one's nation, one's leaders and a love of socialism and 'equality'.
- Pornography causes discontent in marriage and relationships.
- Abortion causes murder, contention, anguish and the destruction of the family unit and stems from a view of selfishness.
- Political and environmental misinformation such as global warming leads to contention between different generations.
- Indoctrination and schooling misinformation such as evolution causes deception resulting in contention between parents and elders.
- Class separation maintains hatred between whites and blacks... And too many more to list...

What is Socialism?

Let's start with one of the above, the problem of a lack of money, debt and indoctrination. This causes thinking to warp as individuals begin to want what someone else has without any of the effort, bringing us to a socialism mindset. Sure, it starts with often 'pure' ambitions such as helping those in poverty, but eventually socialism corrupts every part of society until you have an all-powerful government taking from whoever they want and giving it to anyone they please.

Socialism is a range of economic and social systems characterised by social ownership of the means of production and workers' self-management as well as the political theories and movements associated with them. Social ownership can be public, collective or cooperative ownership, or citizen ownership of equity. There are many varieties of socialism and there is no single definition encapsulating all of them, with social ownership being the common element shared by its various forms.

Value	Capitalism	Socialism	Communism
Definition	Private ownership and investment of money to make a profit	Some production is owned by the public and operate for the welfare of all	All production is owned by the people, all goods and services are shared equally
Government	Democracy	Democracy, Invasive government	Dictatorship, Invasive government
Asset Division	Each person gains assets and wealth according to the work they put in. incentivizes hard work.	From each according to their ability, to each according to their contribution. Rewards laziness. Redistributes wealth. Kills incentive.	From each according to their ability, to each according to their needs. No incentive.
Production Ownership	Means of production and distribution of goods are owned by individuals and corporations	Collective ownership. Means of key production industries are owned by the government or state	All means of production are owned by the government or state.
Classes	Features a class-based society	Rejects the necessity of a class-based society in favour of a society of equals	Classless society. 'Equality'
Atmosphere	Fosters a competitive atmosphere in which workers and companies are encouraged to work hard to achieve personal success	Encourages an atmosphere of cooperation in which no matter how hard a person works, he or she reaps the same benefits as everyone else.	Encourages an atmosphere of cooperation and equality in which no matter how hard a person works, he or she reaps the same benefits as everyone else
Private Property	Ownership of private property is encouraged	Ownership of private property is largely forbidden	Ownership of private property is forbidden.
Production	Produces goods based on the law of supply and demand	Government mandates production and prices	Government mandates all production and prices based on its needs rather than on products the consumer might want
Countries	• United States • United Kingdom • Australia • Canada	• Sweden • Venezuela • Denmark • Armenia	• China • Cuba • Former Soviet Union • Vietnam

In the classic view of communism, a communist society was the ultimate goal and destination for humankind. Followers of classic communism realized that it would be impossible to switch to communism directly from a capitalistic system they deemed immoral. They believed that society needed time for transition. During that transition, called socialism, the representatives of people should be in charge of the means of production, and guide the society toward communism. This was the essence of the very existence of the Union of Soviet Socialist Republics. They had their Communist Party of the Soviet Union, but the longer they were in power, the less they talked about transition to communism. In China, their communist party ended up leading the transition to capitalism.

"Socialism is the plundering of the productive by the unaccountable"
Chuck Missler

Communism as a political system never was implemented anywhere. Cuba was flirting with it within the first few years after the revolution. China tried to move in that direction during the Cultural Revolution. North Korea might make some claims, too. But, in reality, all of these countries always have been socialistic countries. Communism as a political reality existed mostly in the minds of undereducated American politicians and commentators.

Capitalism just happened. It emerged from a spontaneous technological progress and associated with it, social and political developments. Socialism is a human invention; it represents a human desire to take control of the social progress. It is no coincidence that many socialists call themselves “progressives.” This approach is sometimes called a “scientific socialism“ as it means that for the first time in the history of humankind, people take a systematic critical view of the existing political order and by collective action decide to change it.

Socialists take a lot of pride and satisfaction from forming and implementing policies that change the world, presumably for the better. Marx said it the best: “The philosophers have only interpreted the world, in various ways; the point is to change it.” Critics see this as hubris, as playing god, because humans and societies are part of nature; hence, we have no power to change the rules of nature and we never will know them well enough to play safely with the social order.

The socialistic system as established almost 100 years ago in the Soviet Union was intended as an egalitarian society run by people’s representatives in the best interests of all. It does not sound too bad, and has some connotations to the American political system. The difference is in the freedoms of individuals. In socialism, by definition, the good of the society as a whole is collectively defined, and the representatives are given powers to implement it. Those powers imply suppression of the rights and aspirations of individuals who are perceived as not going along with what is believed as the good of the society at the time.

In the Soviet Union, the right to own private property was one of these rights not recognized there. The freedom of expression was another one, as it was perceived as disturbing people’s minds with obsolete and immoral capitalistic ideas. In capitalism, personal freedoms - in particular, protection of private property, freedom of enterprise and freedom of expression - are essential; people should be free in pursuing their economic interests. In the capitalistic system, the government’s role should be solely in guaranteeing safety and equal freedoms for everyone.

The concept is that the good of the society as a whole is achieved optimally if people are free from government coercion in pursuing their personal goals, be it economic, ideological, scientific, religious, philanthropic, or any other activity. Government should not be involved in any of these activities. This concept of the free market society (this is how capitalism was labelled before the term “capitalism” came into existence) to a great extent was adopted as the base of the political system in the Unites States at the time of its inception.

This section by Marion Smith March 22, 2016

In 1936, when Franklin Roosevelt sought re-election to the presidency, some of his critics labelled him a “socialist.” The charge was so incendiary that the White House moved quickly to rebut it, labelling it an accusation “which no patriotic, honourable, decent citizen would purposefully inject into American affairs.”

That was then. Today, in America, for the first time in nearly a century, socialism is not a dirty word, or a shunned label, for many people. On the contrary. President Barack Obama, with a minimum of controversy, has reopened relations with the unabashedly socialist regime in Cuba, demanding almost no concessions in exchange for becoming the first U.S. president in 88 years to visit the island. (Indeed, on the eve of the president’s arrival, Cuba’s Ministry of Foreign Affairs declared that Cuba—together with China—was committed to the “irreversibility of socialism.”)

Meanwhile, the overwhelming and seemingly improbable support among America’s youth for the 74-year-old Bernie Sanders—a self-described democratic socialist who once proudly defended communist dictatorships across the world—is the latest example of a historical illiteracy that treats socialism as a benign economic system that is more equitable and fair than capitalism.

A Pew poll from June 2015 shows a staggering 69% of voters under 30 expressing a willingness to vote for a socialist for president of the United States. This was well before Sanders’ electoral successes in the early Democratic primaries. A more recent YouGov survey found that voters under 30 actually have a higher opinion of socialism (43 percent in favour) than they do of capitalism (32 percent in favour).

“For older people, socialism is associated with communism and the Soviet Union and the Cold War,” says Michelle Diggles, a senior policy analyst at Third Way, a liberal D.C. think tank. “The oldest millennials were 8 years old when the Berlin Wall fell. They have never known a world where the Soviet Union exists. … The connotations associated with the word ‘socialism’ just don't exist with millennials.”

Watching the false hope of socialism be resurrected amid ignorance of basic 20th century history is particularly distressing for me. I am a millennial American myself, but I am also head of the Victims of Communism Memorial Foundation. I have dedicated my professional life to honouring the millions who paid with their lives so that totalitarian leaders could build their socialist “utopias.”

Many are still paying. Today, 20 percent of the world’s population continues to live under communist regimes, in China, Vietnam, Cuba, Laos and North Korea. These countries are some of the worst violators of human rights in history. China operates its own “gulag” system of labour camps for political prisoners. The Castros in Cuba—the Obama administration’s newest friends—routinely throw their opponents in prison, despite Raúl Castro’s misleading comments at his news conference with Obama on Monday. There remain more than 50 political prisoners in Cuba, which the Castro government denies.

Maybe we should have seen this loss of historical memory coming nearly 25 years after the collapse of the Soviet Union. Perhaps we should have heard the alarm bells of a 2011 Newsweek survey that reported 73 percent of Americans “couldn’t correctly say why we fought the Cold War” in response to a question taken from the official test for U.S. citizenship. Ignorance of socialism and America’s decades long struggle against it has become the norm, and the data suggest this norm will only harden as a generation of Americans pass away and national memory fades.

For a generation with no memory of bomb shelter drills or sledgehammers smashing the Berlin Wall to pieces, the sad reality of life under socialist rule has been forgotten, and the lessons of the Cold War have been relegated to the “ash heap of history” alongside communism. Instead, the concept of socialism has often been confused with liberalism. Socialism seems like a fine idea that means a more social equitable society for everyone—free health care and free education for starters. Socialism conjures the image of a place like Sweden and Denmark, which contrary to popular belief, are not socialist systems at all. In fact, Danish Prime Minster Lars Lokke Rasmussen responded to claims by Senator Bernie Sanders that the Scandinavian countries were socialist by saying: “Denmark is far from a socialist planned economy. Denmark is a market economy.”

Socialism is not roads, welfare, and free education. Socialism has always had a more ominous goal and shares close historical and ideological connections with more reviled terms: Marxism and communism. Karl Marx took socialism to what he viewed as its natural conclusion: The “abolition of private property.”

Class warfare is a long-running theme in socialism, even in this country. American socialist (and failed presidential candidate) Eugene Debs promised a world where “no man will work to make a profit for another.” Even earlier, French socialist Jean Jaurès lamented: “All this misery, all this injustice and disorder, results from the fact that one class monopolizes the means of production and of life, and imposes its laws on another class and on society as a whole.” Jaurés said that to equalize things, “to break down the supremacy of one class,” the ultimate “aim of socialism, whether collectivist or communist, is to transform capitalist property into social property.”

The process of transforming “capitalist property”—that is, something legitimately purchased, inherited or otherwise earned—into “social property” for everyone is when socialism becomes sinister. This promise of redistribution always involves winners and losers picked by the government. What if one has acquired capitalist property and does not wish it to become “social property?” Well, then the government might have to step in and take it.

The loss of private property—which ensures one’s independent livelihood—perforce erodes one’s ability to exercise free speech. What if the owner of some capitalist property taken by the government dares to protest its seizure? That sort of dissent must be stifled to maintain order, so free speech is replaced by government-sanctioned propaganda. Unpopular opinions are shamed, and those expressing them are barred from forums like colleges and universities.

How do we know? Because we’ve seen it happen time and again. Ninety-nine years ago the Bolshevik Revolution in Russia showed the danger of combining socialist ideas with totalitarian violence, which created modern totalitarian communism. It was Bolshevik leader Vladimir Lenin who expressed a sort of unifying theory, finally achieving Marx’s goals. “In striving for socialism,” Lenin said in 1917, “we are convinced it will develop into communism.” The result in more than 40 national experiments since then has been either totalitarian dictatorship or economic collapse, costing some 100 million lives before the communist experiment collapsed in Europe and the Soviet Union.

To be sure, not everyone in these societies was a loser, which gets at one of the great paradoxes of all socialist systems: the extreme inequality that allows a cabal of party members to control the political and economic power in a country to the exclusion of an overwhelming majority of the citizens. Only socialist countries have achieved the tragic distinction of launching rockets into outer space while millions of their citizens starve to death in famine. Now that’s inequality!

The Centre for Global Policy at George Mason University has recorded an interesting historical development. Its Political Instability Task Force plotted a chart showing the percentage of countries in which mass killings were occurring from the end of World War II until the present day. For most of the second half of the 20th century, that percentage increased steadily. Then, in the early 1990s, a precipitous drop occurred, and in the 2010s we have seen the lowest percentage of countries on Earth with ongoing mass killings ever recorded. What happened in the early 1990s? The Cold War ended and millions were freed from behind communist walls and secret police holding cells. This was also when our millennial generation was born.

Indeed, there is very much a generation gap in today’s socialist resurgence. Nate Silver points out that while polling from May 2015 shows a plurality of voters under 30 supporting socialism, that figure drops to a mere 15 percent among those over 65. The reason for this is not difficult to see. It reflects a difference in personal experience.

Millennials either missed the Cold War entirely or were young children in its final years, with little or no conception of the triumph of liberty achieved with the fall of the Berlin Wall and the collapse of the Union of Soviet Socialist Republics (USSR). They do not understand the menace that socialism— combined with power—posed to the people it enslaved and to the free nations that it threatened. The violence and brutality of the communist regimes of the past are irrelevant, just lines in the history book somewhere between the Spanish-American War and 9/11.

It's more personal for older Americans. Perhaps some of their friends or neighbours—or they themselves—arrived in this country just ahead of Soviet tanks that were rolling into their homeland. Perhaps they remember the stories of citizens of these supposed utopian socialist prison states arrested, "disappeared," tortured, or shot simply for trying to cross a border. Perhaps they remembered cowering under their school desks during drills in case of a nuclear attack, planned in communist Russia and launched from communist Cuba.

This is the context young American voters should know as they prepare to cast their vote—many of them for the first time. We should all be mindful of the power of words and ideologies, and how discredited ideas can flourish again as memories of their failure fade. We cannot forget the lessons of history. All of us, but especially the youngest among us who will have to live in that world for the longest, should make this election about the future by rejecting the ugly, violent legacy of socialism's past.

3 The Plot

Now that we know the basic premise of socialism and the fact that the elites are trying to make everyone discontent with their current lives and indirectly - capitalism, we should look at their own goals they've stated in detail.

Communist Goals

This is a list of communist goals from the book "The Naked Communist". Written by W. Cleon Skousen and published in 2007. These are the introductory passages to give an insight into the book and give an introduction on their purpose. All italicized text is quoted from this book.

The Naked Communist Excerpts
By W. Cleon Skousen

"One of the most fantastic phenomena of modern times has been the unbelievable success of the Communist conspiracy to enslave mankind. Part of this has been the result of two species of ignorance -- ignorance concerning the constitutional requirements needed to perpetuate freedom, and secondly, ignorance concerning the history, philosophy and strategy of World Communism. This study is designed to bring the far-flung facts about Communism into a single volume. It contains a distillation of more than one hundred books and treatises -- many of them written by Communist authors. It attempts to present the Communist in his true native elements, stripped of propaganda and pretense. Hence, the title, "The Naked Communist.""

It is a terrible and awesome thing when a man sets out to create all other men in his own image. Such became the goal and all consuming ambition of Karl Marx. Not that he would have made each man equal to himself; in fact, it was quite the contrary. The image he hoped to construct was a great human colossus with Karl Marx as the brain and builder and all other men serving him as the ears and eyes, feet and hands, mouth and gullet. In other words, Marx surveyed the world and dreamed of the day when the whole body of humanity could be forced into a gigantic social image which conformed completely to Marx's dream of a perfect society. To achieve his goal, Marx required two things: First, the total annihilation of all opposition, the downfall of all existing governments, all economies and all societies. "Then," he wrote, "I shall stride through the wreckage a creator!" The second thing he needed was a new kind of human being.

I highly recommend purchasing the complete book and reading it in it's entirety as it will open your eyes to the current predicament of the world.
The Naked Communist is a 1958 book by American political theorist W. Cleon Skousen, a former FBI employee. The book has been highly praised by American conservatives Glenn Beck and Ben Carson, the latter of whom stated, "The Naked Communist lays out the whole progressive plan. It is unbelievable how fast it has been achieved."

"Lest we forget at least an over the shoulder acknowledgment to the very first radical: from all our legends, mythology and history, the very first radical known to man who rebelled against the establishment and did it so effectively that he at least won his own kingdom - Lucifer."
Saul D. Alinsky

Saul is one of the evil men who helped push America towards the corrupt, immoral and wicked nation it is today, by re-packaging Antonio Gramsci and The Fabian Socialists ideas and selling them to the 60's radicals.

The Naked Communist Goals

These 45 goals are all part of the campaign to soften America and other Christian based nations for the final takeover. Below we begin exploring their goals outlined by them back in the early 1900s. It should be kept in mind that many loyal Americans/Australians are working for these same objectives because they're not aware that these objectives are designed to destroy them and their country. Generally only those who were alive between 1940-1960 can see the immense shift our culture has gone through where almost every value has been rewritten.

"My object in life is to dethrone God and destroy capitalism."
Karl Marx
(Father of Communism)

1	U.S. acceptance of coexistence as the only alternative to atomic war.	**In Progress**	With "coexistence" comes a degradation of values and ethics to appease the other side. Nations should be individual and have their own values.
2	U.S. willingness to capitulate (yield) in preference to engaging in atomic war.	**In Progress**	Americas ability to defend itself if the need arises is a cornerstone of what makes it the strongest nation on earth.
3	Develop the illusion that total disarmament by the United States would be a demonstration of moral strength.	**In Progress**	The disarmament agreement with Russia is progressing as planned but they still are a way off. USA: 6,185 current nukes with 2,385 awaiting disarmament. *"A few easily concealed or clandestinely manufactured weapons would, in a totally disarmed world, give one nation decisive military power over others.... A totally disarmed world is also one in which Communists' characteristics of secrecy and of a society organized along military lines would give them maximum advantage."*
4	Permit free trade between all nations regardless of Communist affiliation and regardless of whether or not items could be used for war.	**In Progress**	President Trump has raised tariffs to most external suppliers particularly communist China.
5	Extension of long-term loans to Russia and Soviet Satellites.	**In Progress**	
6	Provide American aid to all nations regardless of Communist domination.	**In Progress**	President Trump has raised tariffs to most external suppliers particularly communist China and cut off funding to the U.N.

7	Grant recognition of Red China. Admission of Red China to the U.N.	**In Progress**	
8	Set up East and West Germany as separate states in spite of Khrushchev's promise in 1955 to settle the Germany question by free elections under supervision of the U.N.	**In Progress**	"30 years after the Berlin Wall came down, East and West Germany are still divided". The latest news article on the issue.
9	Prolong the conferences to ban atomic tests because the U.S. has agreed to suspend tests as long as negotiations are in progress.	**Successful**	America hasn't tested a nuclear weapon since 1992 as per the Comprehensive Test Ban Treaty.
10	Allow all Soviet satellites individual representation in the U.N.	**In Progress**	
11	Promote the U.N. as the only hope for mankind. If its charter is rewritten, demand that it be set up as one-world government with its own independent armed forces. (Some Communist leaders believe the world can be taken over as easily by the U.N. as by Moscow)	**In Progress**	The U.N. is fast becoming the "Go-To" system of government as the world collapses. They concoct and attempt to push out worldwide solutions to further their agenda of a global government with climate change at their forefront.
12	Resist any attempt to outlaw the Communist Party.	**In Progress**	This one will always be 'In Progress' until they succeed.
13	Do away with all loyalty oaths.	**In Progress**	Some courts have removed loyalty oaths before they begin but they are working on replicating this for the whole country. They have recently removed swearing on the Bible in courts of law.
14	Continue giving Russia access to the U.S. Patent office.	**In Progress**	Russia still has access to the U.S. patent office allowing them to utilize any patents they wish to further their communist goals.
15	Capture one or both of the political parties in the United States.	**Successful**	They have entire control of the left wing party, but have also been successful in pushing both political parties to the left of their origin.
16	Use technical decisions of the courts to weaken basic American institutions by claiming their activities violate civil rights.	**In Progress**	The courts are in the process of reducing religious freedoms so it's illegal to utilize the Bible to bring people to faith. They are also attempting to take away tax exempt status from churches who don't comply with their demands. Euthanasia and abortion are other court rulings which demoralise the population.
17	Get control of the schools. Use them as transmission belts for socialism and current Communist propaganda. Soften the curriculum. Get control of teachers' associations. Put the party line in textbooks.	**Successful**	Schools have been hijacked so much that the kids who graduate have no use of the information given to them. God has been removed from the schools and replaced by evolution and other religions. They know that if you get to kids from a young age they can shape their beliefs and values for the rest of their life.
18	Gain control of all student newspapers.	**Successful**	This is part of the previous goal where they utilize papers for their own goals such as climate change which has no real evidence.
19	Use student riots to foment public protests against programs or organizations which are under Communist attack.	**Successful**	An example is the climate change debacle. They first lie to kids in school about climate change and then set them loose on the world to protest.
20	Infiltrate the press. Get control of book-review assignments, editorial writing, and policy-making positions.	**Successful**	There used to be 30+ news reporting mediums 100 years ago and now there is 3 major companies controlling every one of them, feeding the population false facts and junk to control them. They attempt to further their goals through this medium. It's obvious today how disguising movies, Tv, internet and music has become when only 50 years ago every single show was wholesome and family friendly.
21	Gain control of key positions in radio, TV and motion pictures.	**Successful**	
22	Continue discrediting American culture by degrading all forms of artistic expression. An American Communist cell was told to "eliminate all good sculpture from parks and buildings, substitute shapeless, awkward and meaningless forms."	**Successful**	Many of the christian sculptures, paintings and historical statues such as the confederate memorials have been removed and replaced with abstract, meaningless art.
23	Control art critics and directors of art museums. "Our plan is to promote ugliness, repulsive meaningless art."	**Successful**	
24	Eliminate all laws governing obscenity by calling them "censorship" and a violation of free speech and free press.	**Successful**	This goal has been somewhat amended to alter the obscenity law to incorporate hate speech against transgender, abortion etc.
25	Break down cultural standards of morality by promoting pornography and obscenity in books, magazines, motion pictures, radio and TV.	**Successful**	One simply needs to take a look at any Tv shows or movies to see the promiscuity that runs rampant. People believe sex outside of marriage is a norm.
26	Present homosexuality, degeneracy and promiscuity as "normal, natural, and healthy."	**Successful**	This has been so successful that the people are siding with "their right" to do what they want with their body. Gay marriage has been made legal.

27	Infiltrate the churches and replace revealed religion with "social" religion. Discredit the Bible and emphasize the need for intellectual maturity which does not need a "religious crutch."	**Successful**	Highly successful with many churches becoming apostate and interpreting incorrectly the facts laid out in the Bible. More and more people are leaving Christianity which is the foundation of America.
28	Eliminate prayer or any phase of religious expression in the schools on the ground that it violates the principle of "separation of church and state."	**Successful**	The interpretation of "separation of church and state" has been twisted. Thomas Jefferson said: "Make no law respecting an establishment of religion, or prohibiting the free exercise thereof". This means that the state shouldn't be solely giving funds to a single church denomination, as during the 1800's people were paying taxes which were given to churches the taxpayer didn't agree with. All public, private and some christian schools have now removed religious expression from their curriculums.
29	Discredit the American Constitution by calling it inadequate, old-fashioned, out of step with modern needs, a hindrance to cooperation between nations on a world-wide basis.	**Successful**	Since the 20th Century, Marxist men have publically and privately discredited the United States Constitution as "old fashioned that Needs to be changed to reflect the current times".
30	Discredit the American founding fathers. Present them as selfish aristocrats who had no concern for the "common man."	**Successful**	If you've been watching the decline on America lately you would know that there has been an incredible push to remove the entire history of the country and this includes the founding fathers.
31	Belittle all forms of American culture and discourage the teaching of American history on the ground that it was only a minor part of "the big picture." Give more emphasis to Russian history since the Communists took over.	**Successful**	This goal is in alignment with #17 as a means to avoid teaching American history and pushing them towards global goals. Lately the BLM protests have been utterly destroying America's culture and history in the fight against what they see as 'racism'.
32	Support any socialist movement to give centralized control over any part of the culture -- education, social agencies, welfare programs, mental health clinics, etc.	**Successful**	Obama attempted to instigate multiple socialist schemes during his time in office. "Voters under 30 actually have a higher opinion of socialism (43% in favour) than they do of capitalism (32% in favour)." Due to an infiltration in the schools as per #17.
33	Eliminate all laws or procedures which interfere with the operation of the Communist apparatus.	**Successful**	Law and Order is discredited and US departments have been taken over and rendered ineffective, particularly the US Justice Department. Such agencies fly in the face of the communist goals and their intent of government control and world domination. An example of law enforcement infiltration and the process to render agencies ineffective are areas where stories of police brutality is claimed to be widespread.
34	Eliminate the House Committee on Un-American Activities.	**Successful**	
35	Discredit and eventually dismantle the FBI.	**Successful**	The FBI has been discredited multiple times recently with debacles such as the Hillary Clinton email controversy, Andrew McCabe dismissal and the James Comey dismissal. It's also closely related to #34.
36	Infiltrate and gain control of more unions.	**Successful**	Most of the biggest unions in the world have been taken control of and run by these communist individuals which they use to further their agendas.
37	Infiltrate and gain control of big business.	**Successful**	Google, Microsoft, Apple, Amazon, Facebook, Twitter, Instagram etc, have all been infiltrated by communists seeking power. They do this through the subtle (and lately the not so subtle) influence social networks and other media have on our lives the same way Tv and movies do. They can use personal data and preferences to influence the outcomes of elections such as sending a "don't forget to vote" message only to democrats. A method which can't be traced back to them.
38	Transfer some of the powers of arrest from the police to social agencies. Treat all behavioural problems as psychiatric disorders which no one but psychiatrists can understand or treat.	**Successful**	The Nixon administration attempted to fund the health department to conduct psychological testing on all children between the ages of 6 and 8 in the country to see if any of them have been "Genetically-Marked" for any future criminal activity. "The aim is to prevent a child with a delinquent character structure from being allowed to grow into a full-fledged teen-age delinquent or adult criminal."
39	Dominate the psychiatric profession and use mental health laws as a means of gaining coercive control over those who oppose Communist goals.	**Successful**	
40	Discredit the family as an institution. Encourage promiscuity and easy divorce.	**Successful**	The family unit is one of the basic foundations given to us by God and by destroying it, families disintegrate along with society. Children are taught their own values in schools controlled by communists, contradicting their parents. This leads to a lack of respect and breaks the family unit.
41	Emphasize the need to raise children away from the negative influence of parents. Attribute prejudices, mental blocks and retarding of children to suppressive influence of parents.	**Successful**	This one is easy to recognise how successful it's been by looking at families today. Divorce, religion, domestic violence and even political-correctness has been breaking families. The aim is to discredit the parents beliefs, ethics and religion to be able to mould the child the way they want to create someone dependant on the system.
42	Create the impression that violence and insurrection are legitimate aspects of the American tradition; that students and special-interest groups should rise up and use "united force" to solve economic, political or social problems.	**Successful**	Through the means of goal #17, kids are taught that they should do whatever is necessary to "fix the planet" themselves by uniting through protests, clashes or riots. Anything besides peaceful objections. Take a look at where we are after the George Floyd riots.

43	Overthrow all colonial governments before native populations are ready for self-government.	Unsuccessful	These colonial governments are the individual states who have their own Governors, Attorney Generals, Legislatures and Senate that govern their own activities in their own states. In the 20's-40's the communists advocated for a Negro Soviet Republic in the southern state of America which if it was successful, the idea was that the African-Americans living in those designated states would rise-up, overthrow the state governments and run them under the direction of the Soviet Union.
43	Internationalize the Panama Canal.	In Progress	It is currently managed and operated by the government-owned Panama Canal Authority.
45	Repeal the Connally Reservation so the U.S. cannot prevent the World Court from seizing jurisdiction over domestic problems. Give the World Court jurisdiction over nations and individuals alike.	In Progress	The Connally Reservation was set up to keep The World Court (United Nations) from interfering with American matters on; tariffs, immigration laws, school curriculums, gun control, etc. It states that America will always decide what its business is and what is the world's business. It is that very law and the only law, that "legally" protects the US from being taken over by the UN, a predominantly muslim organization that believes in Sharia Law. This goal has not yet been successful, but it may have been shifted in an attempt to take down America and get this as a bonus.

	Totals	Successful =	28	In Progress =	16	Unsuccessful =	1

People need to wake up and take a closer look at this MASSIVE cultural shift which has slowly taken place over the course of 100 years. As you can see from the list of goals above, almost every one of them is in direct opposition to the Bible and the biblical values once held by almost every nation on earth. The goals above have been designed to lead the majority of people astray into a culture glorifying themselves and giving them pleasure over doing what's right.

Research what life was like before your generation because almost every single aspect has changed. Nearly everyone used to go to church on Sunday and shops were closed to respect the sabbath. Citizens were better behaved, dressed well, were polite and courteous to each other and children were disciplined when they strayed from the Christian values which everyone held because America was founded on the principles of God and Christianity. People didn't need to lock their homes when because everyone was (fairly) trustworthy and thieves were few and far between. You don't have to believe in God to see that the direction in which we're hurtling towards can only be disastrous for humanity.

Agenda Documentary

I highly recommend watching "The Agenda - Grinding America Down" documentary by Curtis Bowers. It basically outlines this entire category in better terms than I could ever put it. Curtis has also recently released "The Agenda 2" which further expands on the points in the first DVD.

"Socialism, by whatever name, and in all its forms is the ultimate evil. Sooner or later it destroys everything in its path, law, morality, family, prosperity, productivity, education, incentive and finally life itself."
Curtis Bowers - The Agenda

The Agenda (Grinding America Down)
By Curtis Bowers

Georgia Guidestones

The Georgia Guidestones are another display of the 'goals of the enlightened' (the illuminati) and the communists, as the communists have been infiltrated by the illuminati because of their aligning goals. The guidestones consist of a granite monument erected 22 March 1980 in Elbert County, Georgia, in the United States. A set of 10 guidelines is inscribed on the structure in eight modern languages and a shorter message is inscribed at the top of the structure in four ancient language scripts.

One slab stands in the center, with four arranged around it. A capstone lies on top of the five slabs, which are astronomically aligned. An additional stone tablet, which is set in the ground a short distance to the west of the structure, provides some notes on the history and purpose of the guidestones. Just by reading the goals engraved on these stones you can tell their aims are sinister.

1	Maintain humanity under 500,000,000 in perpetual balance with nature.

Simply put, they are aiming at killing about 7.3 Billion people. They've already put multiple plans into motion to achieve this goal, but describing them takes us too far down the rabbit hole and would almost be unbelievable to anyone reading what they are planning to do. Have you looked at any world population growth charts recently? The rate was increasing for the entirety of human history up until 1968 where we peak at 2.1% growth per year. Lately however we've been dipping lower and lower and are currently at 1% growth rate.

Experts predict that by the year 2100 the growth rate will be 0.1%. If you look at the changes in our society since the 60s, there are some pretty substantial differences which have occurred, most of which are linked with the communism values above. Other recent trends can easily be linked with this population decline such as new abortion and euthanasia policies. It's not hard to see how these both fit nicely into their 500 million population goal.

2	Guide reproduction wisely — improving fitness and diversity.

This goal entails an implementation of reproduction limits. Basically either allowing people to have a child or forbidding it. This also flows from the first goal meaning that if you have a child and the population is over 500 million then they will murder them. By extension, anyone who is opposed to their 'New World Order', such as christians, will have no place in it and will be 'removed'.

The second half is even scarier - 'improving fitness' means genetically modifying human DNA to produce superior beings which is already being experimented with. To have a diverse population would mean having people from all over the world living together harmoniously, unfortunately that means that some countries such as China and India have too large a population - but according to their first goal anyway MOST countries have too high a population.

3	Unite humanity with a living new language.

This "Living, New Language" is in fact as old as time itself. It is the language of the emotions, appealing to the flesh through the five senses. It is about making life defining moral decisions based not upon the absolute truths of God's law, but feelings and perception. It is doing whatever feels good in the moment without regard for the long term consequences. Another expression of a living language is music. The Bible tells us that Satan was created as a living musical instrument. Within his body is the means to produce both rhythm and melody. Music is also used to great effect to manipulate the masses, such as those celebrities today who have sold their soul to the devil quite literally.

Or perhaps it speaks of an actual new language which will be implemented when the new world order arrives which everyone on earth has to learn? Only time will tell, because unfortunately they will succeed with their globalism goal.

4	Rule passion — faith — tradition — and all things with tempered reason.

A tempered reason could mean that rulings are decided justly, but it probably refers to a judgement based on the goals and values of the illuminati therefore condemning those harshly who oppose them. We know that literal beheadings will occur in the tribulation for all those who refuse to take the mark of the beast, which doesn't sound very 'tempered' to me.

5	Protect people and nations with fair laws and just courts.

This assumes that the court is a global court as per the wording and 'commandment' 6 below. Again, like number 4, the rulings will be based on their twisted values. Therefore 'fair' is not what anyone opposed to their values would call them.

6	Let all nations rule internally resolving external disputes in a world court.

Another plug at a global government led by the illuminati to guide the nations in their own understanding. Nations should govern and guide other nations otherwise it's a dictatorship on the entire planet. If a nation steps out of line, one or more nations band together to help put them back in place. How can this be done if the global government IS the corrupt one?

7	Avoid petty laws and useless officials.

This rule seems a bit unimportant and obvious to be able to go into much detail about what they mean by it, but useless officials could be those opposed to their goals. It could also mean that there will be very few rules to follow besides those they institute, which means anyone can basically do whatever they desire in the moment.

8	Balance personal rights with social duties.

This assumes that socialism or communism has been instituted in a nation already. A point to note is that the **system** is governing the personal rights and not the individual. It basically forces the population to do what the country needs when it needs it.

9	Prize truth — beauty — love — seeking harmony with the infinite.

'Truth', that's a laugh coming from those who use deception, trickery and lies to attain this goal of the new world order. Their entire founding is based on lying to further their goals, so naturally they are always going to have to hide the truth from their subjects - or risk an uprising. Prizing beauty seems a bit vain. Are they going to murder all those who don't have natural beauty or are disabled? That sounds a lot like Nazism. Prizing love is what they're already pushing with their twisted LGBTI agenda - which in the end, ends up hurting themselves and any children involved.

"The Infinite" is a plug to the otherworldly forces which they follow. In particular satan, as written by Albert Pike in his book "Morals and Dogma". Below is an excerpt from his book:
"Lucifer, the Son of the Morning! Is it he who bears the Light, and with its splendors intolerable blinds feeble, sensual, or selfish Souls? Doubt it not!""

10	Be not a cancer on the earth — Leave room for nature — Leave room for nature.

A further extension of the first rule by keeping the worlds population low by murdering those opposed to them and their goals. One of their primary themes has been the protection of the earth to save humanity from 'climate change'.

Plot Quotes

These are quotes by famous individuals highlighting the validity and truth of this shadow government.

If I Were The Devil

During the height of some of the fiercest geopolitical turmoil in 1965, Paul Harvey on his radio broadcast told the truth about many of the issues of his day through the means of a poem named "If I were the Devil". It clearly mirrors the 45 goals of communism listed above and how far they're progressing - even back in 1965.

If I were the devil … If I were the Prince of Darkness, I'd want to engulf the whole world in darkness. And I'd have a third of its real estate, and four-fifths of its population, but I wouldn't be happy until I had seized the ripest apple on the tree — Thee. So I'd set about however necessary to take over the United States. I'd subvert the churches first — I'd begin with a campaign of whispers. With the wisdom of a serpent, I would whisper to you as I whispered to Eve: 'Do as you please'.

To the young, I would whisper that 'The Bible is a myth.' I would convince them that man created God instead of the other way around. I would confide that what's bad is good, and what's good is 'square.' And the old, I would teach to pray, after me, 'Our Father, which art in Washington…'

And then I'd get organized. I'd educate authors in how to make lurid literature exciting, so that anything else would appear dull and uninteresting. I'd threaten TV with dirtier movies and vice versa. I'd pedal narcotics to whom I could. I'd sell alcohol to ladies and gentlemen of distinction. I'd tranquilize the rest with pills.

If I were the devil I'd soon have families at war with themselves, churches at war with themselves, and nations at war with themselves; until each in its turn was consumed. And with promises of higher ratings I'd have mesmerizing media fanning the flames. If I were the devil I would encourage schools to refine young intellects, but neglect to discipline emotions — just let those run wild, until before you knew it, you'd have to have drug sniffing dogs and metal detectors at every schoolhouse door.

Within a decade I'd have prisons overflowing, I'd have judges promoting pornography — soon I could evict God from the courthouse, then from the schoolhouse, and then from the houses of Congress. And in His own churches I would substitute psychology for religion, and deify science. I would lure priests and pastors into misusing boys and girls, and church money. If I were the devil I'd make the symbols of Easter an egg and the symbol of Christmas a bottle.

If I were the devil I'd take from those who have, and give to those who want until I had killed the incentive of the ambitious.

And what do you bet I could get whole states to promote gambling as the way to get rich? I would caution against extremes and hard work in Patriotism, in moral conduct. I would convince the young that marriage is old-fashioned, that swinging is more fun, that what you see on the TV is the way to be. And thus, I could undress you in public, and I could lure you into bed with diseases for which there is no cure. In other words, if I were the devil I'd just keep right on doing what he's doing." - ***Paul Harvey***

It's shocking that this is exactly what's been happening in the world the past hundred years, slowly at first but at a break-neck speed today. Satan has been slowly gaining ground in every part of society, from the church to the media to the schools until today, corruption and deceit reigns and there's no such thing as God.

The President and the Press

Below is the summary of a famous speech by President John F. Kennedy on the nature of the press, the shadow government and the communists.

President John F. Kennedy
Waldorf-Astoria Hotel, New York City
27 April 1961

Here's a summary of the speech above if you don't wish to read the whole article, three dots means a jump in the speech:
The very word "secrecy" is repugnant in a free and open society; and we are as a people inherently and historically opposed to secret societies, to secret oaths and to secret proceedings...Our way of life is under attack. Those who make themselves our enemy are advancing around the globe...no war ever posed a greater threat to our security.

If you are awaiting a finding of "clear and present danger," then I can only say that the danger has never been more clear and its presence has never been more imminent...For we are opposed around the world by a monolithic and ruthless conspiracy that relies primarily on covert means for expanding its sphere of influence–on infiltration instead of invasion, on subversion instead of elections, on intimidation instead of free choice, on guerrillas by night instead of armies by day.

It is a system which has conscripted vast human and material resources into the building of a tightly knit, highly efficient machine that combines military, diplomatic, intelligence, economic, scientific and political operations. Its preparations are concealed, not published. Its mistakes are buried, not headlined. Its dissenters are silenced, not praised. No expenditure is questioned, no rumor is printed, no secret is revealed.

Only headings 1-3 are included here. The rest can be downloaded from my online archives.

9 Interaction

This section is for interaction between something else as a form of entertainment such as humans, animals and AI.

Subheadings

1. Speech	**2. Sex**	**3. Cooperation**	**4. Competition**
5. Animal Interaction	**6. Robotic Interaction**		

1 Speech

An invigorating conversation which is interesting for all participants can often go on for hours. The following are different forms of speech.

- Dictating
- Debate
- Discussion
- Deliberation
- Dialog

- Bonding
- Romance

Topic Starters

Preparedness/Survival Related Questions

- If starving extended family members came knocking on your door asking for food in a major shortage, would you give them any?
- If you had to evacuate your home with only what you could carry on your back, what five essential items would you prioritize?
- What's the most valuable survival skill that can't be bought or packed? How do you cultivate it?
- In a long-term grid-down scenario, what modern convenience would you miss the most, and how would you adapt without it?
- If you found yourself unexpectedly stranded in the wilderness, what's the very first thing you would do, and why is that your priority?
- How do you think living in an urban, suburban, or rural environment impacts your preparedness strategies for different types of emergencies?
- What's a common misconception about survival that you believe could put people at risk?
- What role does community play in effective disaster preparedness and recovery?
- If you could only learn one method of primitive skill (e.g., fire starting, water purification, shelter building), which would you choose and why?
- What's the psychological impact of a prolonged survival situation, and how would you try to maintain morale and mental well-being?
- How do you assess risk in your daily life, and how does that influence your approach to preparedness?
- If you had to teach someone only one critical piece of advice about self-reliance in a crisis, what would it be?

- How do personal values, ethics, and morality play a role when considering difficult decisions in a survival scenario?
- How do you balance the desire to be prepared for potential crises with avoiding a life dominated by fear or anxiety about them?
- How do you discern reliable information from misinformation during a global emergency when traditional news sources might be compromised?
- What's a historical event or real-life survival story that offers profound lessons for modern preparedness?
- What ethical dilemmas might arise when resources are scarce, and how would you navigate them?
- How do you prepare for the unforeseen or "black swan" events, rather than just the commonly anticipated disasters?
- What role does hope play in survival, and how can it be maintained in the face of overwhelming odds?
- If you could only keep five tools from your current household for survival, what would they be and what makes them indispensable?
- What's one aspect of modern society that you believe makes us inherently less prepared for genuine adversity than past generations?
- How would you introduce the concept of preparedness to someone who finds it overwhelming or dismisses it as unnecessary?
- How do you plan for the emotional toll of a prolonged crisis, not just the physical demands?
- If a crisis forced people to re-evaluate what truly matters, what do you think would become humanity's most cherished non-material possessions?

Other Questions

- If you could have a one-hour conversation with any historical figure, living or dead, who would it be and what would be your first question?
- What makes a person truly evil? Are they born that way or did their environment make them that way?
- What are the highest and lowest points of your life?
- How have your strengths help you to succeed? How have your faults hindered you?
- What are your biggest goals for your life? What progress have you made in attaining them?
- Who are you really? Who is behind the mask that you show to the rest of the world?
- What is holding you back from being the person you want to be?
- How do you think you will die?
- Is human nature constant or is it moulded by culture? Can human nature be completely changed by culture or society?
- If pressing a button meant you received 5 million dollars but it also killed 5 people somewhere in the world, would you press it? What if it killed only 1 person or killed 20 people? What if the people were those you were friends with on social media?
- What aspects of humans have made us a successful species?
- If you could perfectly understand and communicate with any animal, which would it be and why?
- What is a belief you once held very strongly that you've since changed your mind about? What caused that shift?
- If happiness were the national currency, what kind of work would guarantee you the most wealth?
- What do you believe is the most significant challenge facing humanity in the next 50 years, and how do you think it can be addressed?
- If you could choose to erase one memory from your life, what would it be and why? How do you think your life would be different without it?
- What does "legacy" mean to you, and what kind of legacy, if any, do you hope to leave behind?
- In what ways do you think technology is enhancing or detracting from genuine human connection?
- If you had to teach one thing to every child in the world, what universal lesson would you choose?
- What is a personal truth you've discovered that profoundly changed your perspective on life, love, or the universe?
- How do you define "freedom," and do you believe true freedom is attainable in modern society?
- What role do you think art and creativity play in understanding the human condition?
- Where's your life headed?
- If you were stuck on a desert island forever, what book and food would you want and who would you want there with you?
- If you could design your ideal society from scratch, what three core principles would it be built upon?
- What's a hidden talent or passion you have that most people don't know about, and what draws you to it?
- How do you reconcile the pursuit of individual happiness with the responsibility we have to the collective good?
- What is your greatest regret in life?
- If you could perfectly master one skill instantly, what would it be and how would you use it to make a positive impact?
- What's a small act of kindness you've witnessed or experienced that had a surprisingly big impact on you?
- If you could have a "reset" button for one aspect of your life (career, relationships, health, etc.), would you press it? Why or why not?
- What's a common piece of advice you hear that you strongly disagree with, and what's your alternative perspective?
- When do you feel most authentically yourself? What are you doing, and who are you with?
- If you had to give up all but three modern conveniences, which would you keep and why?
- What's something you've learned recently that challenged a long-held assumption you had about the world?
- How do you distinguish between what you truly want and what society or others tell you should want?
- What's a book, movie, or piece of music that profoundly changed the way you see the world?
- If you could send a single message back in time to your younger self, what wisdom would you impart?
- What's a small decision you made that, in hindsight, had a surprisingly large impact on your life's trajectory?
- If you could observe any historical event without being able to intervene, which one would you choose and why?
- How do you personally define "success," and has that definition changed over time for you?
- What's a skill or hobby you've always wanted to learn, and what holds you back from pursuing it?
- If you could instigate one widespread cultural shift, what would it be and what impact do you hope it would have?
- What's something you believe is often misunderstood about your generation?
- What's a piece of advice you'd give to someone struggling to find their purpose or passion?
- If you could create a new national holiday, what would it celebrate and how would people observe it?
- If you could instantly solve one global problem, but it required a significant personal sacrifice, would you do it?

ENTERTAINMENT Interaction Speech Topic Starters

- Is what we perceive reality or just a construct of our minds? Can our minds correctly interpret reality or is reality subjective?
- What makes people believe absurd conspiracy theories?
- What's something terrifying that we've all come to accept as a fact of life?
- What does honour mean to you? How important is it to you? Does your culture value honour? What exemplifies honour in your culture?
- How important are morals in a healthy society? What are the most important morals for citizens to have?
- What is a miracle that happens every day?
- What are the most important factors in maintaining a well functioning society? What does it mean for a society to function well?
- Do people have an obligation to help others or should people be responsible for helping themselves?
- Can people with vastly different cultural backgrounds live together peacefully? How?
- What is a year of life worth? How about a day?
- If sacrificing your own life would save the lives of a specific number of strangers, how many strangers would need to be saved for you to sacrifice your own life? What if the people were friends? How about family?
- If you died today, how would you be remembered?
- Are some lives more valuable than others?
- What does it mean to die well?
- If you were given an envelope with the time and date of your death inside, would you open it?
- If you died today, what regrets would you have about your life?
- Is taking a life ever justified? If so, where is the line? When is a person's life considered forfeit?
- What do you think about the singularity? The idea that eventually artificial intelligence will advance to the point where computers are more intelligent than humans.
- What are the pros and cons of colonizing other planets? How could this help or hurt the human race?
- Will humans as a species ever be able to work together as a whole to achieve a goal? What is holding humans back from working together on a global scale?
- Are emotions necessary for human survival? Why or why not?
- What is the most beneficial emotion? How about the most destructive?

2 Sex

Sexual intercourse (or coitus or copulation) is principally the insertion and thrusting of the penis, usually when erect, into the vagina for sexual pleasure, reproduction, or both.

Bandoleer	While the woman lays on her back and lifts both knees up towards her chest, the man kneels facing her. She can then rest her feet on his chest, while he places his forearms on her knees. The woman can then grab the man's thighs and pull him closer for deeper penetration. The more he presses down on her knees, the greater the pleasure for her. A relatively simple sex position, which doesn't require too much flexibility.
Afternoon Delight	The man lays on his side, while the woman lays on her back at a right angle to her partner. She puts her knees over his hip to allow easy penetration. Extremely easy and perfect for a lazy Sunday afternoon or if you need to slow it down a bit during a long sex session.
The Eagle	The woman lays on her back with her legs in the air and knees slightly bent (she may need a cushion under her bottom to make it more comfortable). The man then kneels between her legs and holds onto her ankles while he enters her. Relatively easy and deep penetration.
The Visitor	This position is ideal for an impromptu sex session. The man and the woman stand face to face and he stimulates her genitals with his penis before penetrating her. An easy position if the woman is a similar height to the man (or wearing heels), but if not a table or work surface will help!
The Clasp	He stands and she wraps her legs around his waist while he supports her by holding her bottom and back. For more support and deeper penetration she can rest her back against a wall. Ideal for anytime/anywhere sex, but does require a certain degree of strength and energy from both the man and woman.
The Toad	The woman lies back with her legs open, while the man lies between her legs and slowly penetrates her. For greater intimacy, she can wrap her legs around him and control the pressure of his grinding by gently pressing on his buttocks with her feet. Simple and an ideal sex position for a slower pace of lovemaking.
The Classic	While similar to the missionary, the classic position involves the woman laying on her back with a cushion under her bottom. This slight tilt of the pelvis allows for deeper penetration as the man places himself between her legs and enters her.
The Snail	The woman lies on her back and pulls her knees up to her chest. The man kneels down and enters her. She can then rest her feet on his shoulders, while he supports himself with his hands either side of her shoulders. The penetration is very deep in his sex position, so be careful not to go too fast as it may cause pain for the woman.
From Behind	The man stands behind the woman and enters her. He's in control of the thrusts. She may find it easier to balance with a wall to lean against. This sex position is easy for some, but doesn't work so well if you're not similar heights.
Balancing Act	The man lies on his back with his legs apart while the woman sits down between his thighs. The woman must then curl her body up into a ball while the man supports her. Her hands are free to touch herself or touch his perineum. This position requires a certain degree of strength from both parties.
The Frog	The man sits on the edge of the bed with his feet on the floor while the woman crouches (like a frog) on his lap. She can then move up and down to control the penetration, while pressing on his thighs for support. An easy position for the man, but requires strength and balance from the woman.
The Column	The woman stands in front of the man with her back to him and their arms intertwined. The man can then penetrate the woman from behind. The woman may find it easier to lean on a table.
The Basket	The man sits with one leg stretched out and the other leg bent at the knee to help him balance. The woman sits on his lap. While she can control most of the movement, he also has some control with his hands on her hips. He is also in the ideal position to kiss and suck her nipples while having sex.
The Kneel	In this sex position the woman and the man both kneel. The woman puts her legs either side of the man's so he can penetrate her. They can both wrap their arms around each other. A relatively easy, and yet extremely passionate position.
The Reverse Cowgirl	The reverse cowgirl involves the man laying on his back with the woman sitting astride him with her back to him. The woman is in full control of all the movements. A really simple sex position, which almost anyone can do. Go on, give it a go!
The Lotus Blossom	The man sits with his legs crossed while the woman sits on his lap with her legs wrapped around his waist. An easy, intimate sex position if you are relatively flexible.
The Close-Up	The man and woman both lie on their sides with their legs pulled up to their chests. The woman faces away from the man and pushes her hips down into his crotch. A very easy, gentle sex position, which can be extremely intimate too.

Doggy Style	A classic position which almost anyone can do. The woman crouches on all fours, taking her weight on her hands, while her partner enters her from behind. While the woman can press back into him, the man is in control of most of the movement.
The Padlock	The woman sits on the edge of a high piece of furniture, for example a table or a washing machine. She leans back and supports herself with her arms. The man stands in front of her. She can wrap her legs around his waist as he enters her.
The Crossed Keys	The woman lies on her back with her legs in the air. Her bottom needs to be at the edge of the bed and her legs must be crossed. The man stands facing her and holds onto her legs while he penetrates her.
The Crisscross	The woman lays on her side facing away from the man with her legs slightly parted. The man also lays on his side, but at a right angle to the woman, and slides in between her legs to enter her.
The Erotic V	The woman sits on the edge of a table and the man stands in front of her. The woman needs to lift her legs right up and rest the back of her knees on the man's shoulders. She can also wrap her arms around his neck for support, while he can grip her bottom to help control the motion.
The X-Rated	The man lies flat on his back with a pillow under his head. The woman lies on top of him facing away from him with her legs either side of his waist and her arms wrapped around his legs. She is in the perfect position to slide up and down, while he has an x-rated view.
The Seduction	The woman lays on her back with her legs bent underneath her body - only attempt this if you are quite flexible. The man then lays on top of the woman to penetrate her.
The Lustful Leg	Another position which requires a great deal of flexibility. The man and the woman both stand facing each other. The woman starts by placing her leg on the bed so the man can enter her. Once inside he can slowly help her to raise her leg onto his shoulder. Careful not to lose your balance and topple over!
The Butterfly	Similar to the mermaid, the butterfly position involves having sex while the woman lays on a relatively low table with her bottom right on the edge. The man stands and helps her raise her hips with his hands. He penetrates her while she rests her legs on his shoulders.
The Side Saddle	An easy sex position and great if you fancy trying some a little bit different, which doesn't require too much effort. The man lays on his back, with a pillow behind his head and his legs stretched out. The woman sits across him with her legs on one side of his waist and her hands on the other, supporting her weight. As he penetrates her she can slowly open and close her legs, while making swivelling motions to drive him wild.
The G-Force	In this sex position the woman lays on her back and pulls her knees right up to her chest. The man kneels behind her and lifts her torso off the ground so her back is parallel to his thighs. She can help herself balance by holding onto his legs, while he holds onto her feet and penetrates her.

3 Cooperation

The action or process of working together to the same end.

4 Competition

An event or contest in which people take part in order to establish superiority or supremacy in a particular area.

5 Animal Interaction

Animals provide more then just meat and resources, you can talk to them, be their best friend, teach them tricks which will all help keep you sane.

Cuddling	Sometimes you just need a good cuddle with a pet, especially when there's nobody else around.
Games	A simple game of throwing an object and having it returned to you by the animal.
Taming	If you don't have an animal, you could always find one in the wild and domesticate it.
Training	You could train pets to attack a target or assist you around the campsite.
Hunting	Hunted for entertainment, as opposed to hunted for food.
Competing	Watched when they compete with each other
Care	Having something to look after and take care of gives a sense of purpose and drive in life.

6 AI/Robotic Interaction

Robotic interaction is becoming more and more common as AI learns to interpret and understand more language and have conversations based on your input.

AI Chatbots	There's a lot of Artificial Intelligence chat engines you can talk to today. Many of them can be downloaded and used completely offline if you have a sufficiently powerful PC. All you need is an interpreter such as Jan on PC or Layla on Android and an 'Instruct' GGUF file.
Game NPC	If you have access to modern games, you can play something like Halo or Skyrim and respond to the retorts of the Non-Player-Characters. In Skyrim you can even take a wife/husband and role-play a completely different life to take your mind off the world.
Spoken	There are a couple of ways you can speak to an AI assistant now, although generally it requires you to have a goal in mind to accomplish such as asking what the weather is. Unfortunately they often require the internet.

10 Live Entertainment

Any form of entertainment which is participated in or viewed while it's occurring, such as a dance, sport or cinema.

Live Entertainment

Live entertainment is a public event featuring people showcasing talents or feats that is watched and contributed to in person. It can include magic shows, theatres, circus etc.

Circus	A circus is a special type of theatrical performance, involving a variety of physical skills such as acrobatics and juggling and sometimes performing animals.
Banquets	Banquets have been a venue for entertainment since ancient times, continuing until the 21st century, when they are still being used for many of their original purposes – to impress visitors, especially important ones; to show hospitality; as an occasion to showcase supporting entertainments such as music or dancing, or both.
Music	Music is a supporting component of many kinds of entertainment and most kinds of performance. For example, it is used to enhance storytelling, it is indispensable in dance and opera, and is usually incorporated into dramatic film or theatre productions. E.g. Concerts and Orchestras.
Dance	The many forms of dance provide entertainment for all age groups and cultures. Dance can be serious in tone, such as when it is used to express a culture's history or important stories; it may be provocative; or it may put in the service of comedy.
Fairs & Fetes	Fairs and exhibitions have existed since ancient and medieval times, displaying wealth, innovations and objects for trade and offering specific entertainments as well as being places of entertainment in themselves.
Magic Shows	The form of entertainment known as stage magic or conjuring and recognisable as performance, is based on traditions and texts of magical rites and dogmas that have been a part of most cultural traditions since ancient times.
Street Performance	Street entertainment, street performance or "busking" are forms of performance that have been meeting the public's need for entertainment for centuries.
Parade	Parades are held for a range of purposes, often more than one. Whether their mood is sombre or festive, being public events that are designed to attract attention and activities that necessarily divert normal traffic, parades have a clear entertainment value to their audiences.
Performance	Live performances before an audience constitute a major form of entertainment, especially before the invention of audio and video recording. E.g. Fashion Shows.
Comedy Shows	Comedy is both a genre of entertainment and a component of it, providing laughter and amusement, whether the comedy is the sole purpose or used as a form of contrast in an otherwise serious piece.
Public Punishment	Although most forms of entertainment have evolved and continued over time, some once-popular forms are no longer as acceptable. For example, during earlier centuries in Europe, watching or participating in the punishment of criminals or social outcasts was an accepted and popular form of entertainment.
Sport	Sporting competitions have always provided entertainment for crowds. To distinguish the players from the audience, the latter are often known as spectators.
Shopping & Markets	Whether in a medieval market or a small shop, "shopping always offered forms of exhilaration that took one away from the everyday".

Exhibition Entertainment

An exhibition is a public event of artform observation where pictures or other non-living objects are displayed with occasional interaction, for example at an art gallery or science centre.

Storytelling	The "ancient craft of communicating events and experiences, using words, images, sounds and gestures" by telling a story is not only the means by which people passed on their cultural values and traditions and history from one generation to another, it has been an important part of most forms of entertainment ever since the earliest times. Stories are still told in the early forms, for example, around a fire while camping, or when listening to the stories of another culture as a tourist. The earliest storytelling sequences we possess, now of course, committed to writing, were undoubtedly originally a speaking from mouth to ear and their force as entertainment derived from the very same elements we today enjoy in films and novels."
Showcase	Showcases and exhibitions have existed since ancient and medieval times, displaying wealth, innovations and objects for trade and offering specific entertainments as well as being places of entertainment in themselves. E.g: Museums and Art Shows.
Theatre	Theatre performances, typically dramatic or musical, are presented on a stage for an audience and have a history that goes back to Hellenistic times when "leading musicians and actors" performed widely at "poetical competitions", for example at "Delphi, Delos, Ephesus".
Cinema	Films are a major form of entertainment, although not all films have entertainment as their primary purpose: documentary film, for example, aims to create a record or inform, although the two purposes often work together.
Fireworks	Fireworks are a part of many public entertainments and have retained an enduring popularity since they became a "crowning feature of elaborate celebrations" in the 17th century.

Transport

How to use any air, sea or land transportation

"Success is a journey. The best form of transport is happiness."
Roy Smoothe

Introduction

A category about every method of transport and information on how to drive, maintain and repair them.

Purpose	The aim of TRANSPORT is to provide information of modern transportation systems and how to drive and control each one.
Lost?	• For military transportation systems, see the WARFARE section. • For information on scavenging items from vehicles, see the LOCATIONS section. • To find your position, see the NAVIGATION section. • For air communications, see the COMMUNICATION section. • For information on stealth driving, see the SECURITY section. • For information on the different terrain types when driving off-road, see the SURVIVAL section.

Contents

1 Transport Type

Transport Type

Preppers weigh the impact of the disaster and decide to bug-in or bug-out. Be a grey man in a disaster, blend in to avoid suspicion. Work out how long this disaster will last and calculate how long your supplies will last. Get your group together and discuss a plan of action for the disaster. Get as much knowledge about the disaster as possible and keep listening via radio.

Transports

The first decision you need to make is whether to bug-in or bug-out and weigh the options for each. If you've decided to bug out the next step is choosing a method of bugging out which isn't easy because the variables could be changing often. You need to have multiple contingency plans for the various types of disasters that are possible in your area.

2 On Foot

Techniques on walking and hiking through any terrain.

Walking

Navigation	● Know how to read maps, topography and compasses. ● Know how to navigate via your watch and the stars. ● Don't rely on a GPS and use landmarks for storing caches. ● Ensure highest perception when navigating to avoid dangerous situations. See the NAVIGATION section for more.	**O.O.D.A Loop** ● Observation ● Orientation ● Decision ● Action
Walking	● Ensure you're able to carry your BOB the distance you're walking prior to the event. ● Have a hiking plan set out with checkpoints to rest at. ● Have hidden caches along the way to avoid carrying heavy water and food.	

On Short Grass

Short grass is any grass up to about 10cm (4 in) long. This is probably the easiest medium to walk on as it provides a good amount of traction and won't slow you down like taller grass. It also much harder for critters such as ticks and leeches to grab hold of your pants as you walk. It's safer as well due to snakes not being able to easily hide in short grass.

In Long Grass

Grass becomes 'long' around 10cm (4 in) high all the way to about 40cm (15.7 in).

In Tall Grass

Grass becomes 'tall' around 40cm (15.7 in) high and up. In tall grass your ability to navigate it is severely impeded if you want to remain safe from snakes. It's recommended that you stomp as you walk to ward off any creatures that are sleeping nearby which can cause you harm - however there are some that won't get out of the way even if they know you're there.

On Concrete & Bitumen

The second easiest terrain to walk on. Concrete eliminates the risks of uneven terrain and usually provides paths or roads for many miles in multiple directions. The only risks could be falling and scraping your skin or at worst, breaking a bone. Another risk could be the heat radiated from it on a hot summers day in warm climates, but this would only apply if you aren't wearing shoes.

On Rocks

Rocks can come in a variety of different sizes, from 1x1cm ones to pebbles, to 1x1m rocks. As you probably know, the easiest ones to walk on are the small ones, the bigger the rocks get, the more skill it will take to balance on the irregular shapes they make. Be careful when walking on large rocks as your weight could throw off their weight distribution and cause them to roll over, bringing you down with them. Rocks can also be extremely slippery when they are found near a source of water such as lakes, rivers or the beach. Don't walk on submerged rocks which have the green algae on them as you will slip off almost instantly.

In Rain

Rain isn't a type of terrain you can walk on but it still provides a vastly different experience if you're hiking in it. When hiking in rain you will generally want to be wearing a poncho to help reduce the amount of water caught by your clothes. A backpack poncho will also be essential in keeping your gear dry and to help prevent degradation of gear such as rust on metal. If your socks get damp during the hike, be sure to take them off when you reach camp and dry out your feet - and the socks to help prevent fungal diseases. Take care in the rain as rocks can become very slippery and can easily cause a broken bone when slipped on. Hypothermia is also a risk in colder climates if you're hiking for long periods in a cold, wet environment. If you're starting to go numb, take a break, or set up camp for the night and dry off and recover your body.

In Shallow Water

Shallow water is any stream or lake up to knee height. After this it slowly merges into deep water. Leeches can be found in slow-moving shallow water, so be sure to wear full length pants tucked into your socks if you're in warm weather, or take your long trowsers off while you cross in cold weather and check yourself thoroughtly once you emerge the other side before drying yourself off and putting them back on.

In Deep Water

Deep water is considered anything over knee height, but particularly waist height for an average adult. If you're planning on crossing water by swimming, see the SURVIVAL section. There are a lot of dangers to crossing deep water such as alligators, crocodiles, unknown objects under the water - such as rusty wire, even sharks could potentially hide themselves.

On Sand

Sand is notoriously unstable, every step you take will shift the ground you walk on and make hiking much slower and burning more calories. In deserts, sand is extremely fine and can find its way into every crack of your boots and into your backpack.

On Dirt

Dirt is the third easiest medium to walk on after grass and cement and is generally level and stable. Keep your eye out for rain which can quickly turn dirt into much through and make hiking much harder and slower.

In Thick Undergrowth

Walking through thick undergrowth such as in a jungle can prove challenging to anybody regardless of their experience level. Your legs can get easily cut up and exposed to bacteria and viruses without the proper protection. It's recommended to have at least one pair of thick full-length pants which are resistant to tearing. A pair of gaiters is virtually essential in undergrowth such as in a jungle without any form of natural path. They will not only protect your legs from scratches but also small animals you may encounter which are startled by your presence. Tuck your pants into your socks to help prevent bugs such as ticks and leeches getting in easily and it's recommended to wear white clothes to spot them easier. 30 minutes or so you should stop and do a tick and leech check, just in case one is working its way up your pants.

In Mud

If you're planning on walking through any form of thick mud, be sure to bring a good pair of gumboots to protect your other pair of shoes. Try to work out the depth of the mud before entering it as it may look quite shallow at first, but sometimes can be knee, or even waist deep after entering. Walk with a long poking stick to test the depth ahead of you and make alterations to your course if it becomes too deep. In general you should try to go around any regions of mud as it will slow you down greatly and will often make your clothes and bag much harder to clean.

On Light Snow

Snow is considered 'Light Snow' if it's ankle height or less. Light snow generally isn't much of a problem for walking through if you can tolerate the cold. There's always the chance you can slip though and you won't have the depth of snow to help break your fall, so arguably light snow is more dangerous than deep snow.

In Deep Snow

Snow would be considered deep when your feet sink down to the height of your ankle or calf without snowshoes. If you're doing long distance hiking it's recommended you use snowshoes or use a form of makeshift snowshoes to make walking on deep snow easier and to prevent your legs getting cold.

Hiking

Hiking differs from walking mainly due to the terrain and distance covered. Hiking is generally out in the bush, following trails or walking anywhere where there's no set paths or roads.

Pacing

Appalachian Trail Markings

Distance between blazes varies, but if you have gone a few hundred yards without seeing a blaze, stop. Retrace your steps until you locate a blaze. Then, check to make sure you haven't missed a turn. When your map or guidebook indicates one route, and the blazes show another, follow the blazes.

Single White Blazes	These 2 inch by 6 inch vertical rectangles are painted in white paint on trees, rocks, and sign posts, showing hikers the Appalachian Trail. White blazes may be located on trees, rocks, posts or guardrails, among other places.
Double White Blazes	Two white blazes, one above the other, signal an obscure turn, route changes, an incoming side trail or other situation that requires you to be especially alert to changes in direction. Sometimes the two blazes will be offset in the direction of the turn.
Blue Blazes	A Blue Blaze is a spur trail branching off of the Appalachian Trail. Blue blazed trails could lead to a vista, water source, shelter or campground, or some unusual natural feature.
Rock Cairns	These rock piles identify the route above treeline and where snow and fog may obscure paints blazes.

Swimming

See the SURVIVAL section on various swimming and river crossing techniques.

3 Animal

Any animals which can be used as transport.

Horse

Horses were one of the first methods of transportation and is still the most popular non-technology form of transportation. They require loving and taking care of and you can't push them too hard for too long but their strength comes when technology is useless.

Saddle a Horse

Learn to tack and bridle your horse. Before you ride, a horse needs to be outfitted with a saddle and bridle.
- To saddle a horse, position the saddle blanket above the horse's withers and push it back toward the hind-legs to smooth the hair. Place the saddle behind the shoulder and pull the blanket into the empty area at the front of the saddle.
- Attach the cinch or girth and tighten it gently, allowing the horse enough room to exhale comfortably. You should be able to fit two fingers under the cinch or girth, but no more.
- Make sure you've got a bridle appropriate for your horse's size. Gently place the bit near the horses mouth. Most horses will open their mouths as they're used to bridles, but if your horse doesn't gently push your fingers into the sides of the horse's mouth. Slip the bit in slowly, then slip the top of the bridle over the horse's ears. Secure all the straps and buckles, buckling tight enough that you can only comfortably fit one finger under the straps.

Mounting a Horse

1	Mount your horse. The first thing you'll want to do when riding a horse is to do some groundwork. You don't need to do heaps and make your horse tired, but you only need to do a little bit of groundwork! The next thing you will want to do is mount your horse correctly! Many people are intimidated by the idea of mounting a horse but if you stay calm it should be fun and easy. ● If you're a first time rider, it's not a bad idea to use a mounting block. This is a small wooden structure that you can use to stand on in order to mount the horse. You should also ask someone to hold the horse's head as you mount. Mount the horse from its left near side. Place your left foot in the left stirrup and launch your body up and over. Next, lift the right leg gently over the horse's back and insert your right foot into the right stirrup. ● Select a well-trained horse if you're a beginner. Horses that are younger or poorly trained may shift and move during mounting. Choose an older horse with a reputation for being calm and cooperative during rides. ● If someone doesn't hold the horse's head as you mount, you should hold the reins tightly in your left hand, but not so tightly that the horse backs away from the pressure
2	Position yourself for balance. Once in the saddle, take a moment to make sure you're in the proper position for balance. Keep your back straight. Keep in mind when you ride a horse you should be able to draw a straight line through your ear, shoulder, hip, and heel. Keep your shoulders even and straight as well, with the bulk of your weight resting on your seat bones in your buttocks
3	Get your legs in the right position. Once you feel securely balanced, get your legs into the proper position. This can be particularly difficult for beginning riders so take time to make sure your legs are positioned properly. Keep your heels right under your hips. ● Your legs should be turned inward. Many beginning riders have their legs turned outward, as this can feel more natural, with their knees sticking out. Remember, you're sort of hugging the horse with your legs. You shouldn't squeeze the horse too tightly, but have your legs curved inwards towards the horse. ● Your toes should rest higher than your heels. An easy stretch or practice for this is to stand on something higher than the ground or even a staircase and push your heels down keeping the balls of your feet on the staircase.
4	Hold the reins properly. Once your legs are in the right position, make sure you're holding the reins properly. How you hold the reins depends on whether you're riding English or Western. ● For English style, make a fist and then pass the reins through the fist so the loop of the reins faces upward. Then, remove both your pinky fingers from the fist and place them on the outside of the reins. Place your thumbs on top of the reins, securing them in place. ● In Western, the reins do not form a loop. The western bridle has reins that are knotted at the top. Keep the reins loose at all times and hold them in two fists.

Riding a Horse

1	Learn the different ways to signal your horse to move. When riding English style, there are a variety of ways you can signal your horse to move. ● Starting off, try gently squeezing your horse's side with your legs. This should signal your horse to walk. ● If your horse does not respond to this, he may need further prompting. You can gently kick your horse with your heels. Do not kick too hard, however. While horses have thick hides, they may experience pain if you kick with too much force. A gentle tapping is generally all it takes to get a horse to walk. ● Verbal cues also help in some cases. Depending on how a horse was trained, he may respond to clicking of the tongue and other noises. Ask the horse's trainer if there are any noises he responds to.
2	Follow the movements of a horses head with your arms. When a horse walks, canters, or gallops, his head moves back and forth with the rhythm of his body. Allow your hands to bob back and forth with the horse's head. Not following the horse's movements can hurt the horse.
3	Learn to steer. It's important you learn how to steer your horse. Steering in English style if fairly self explanatory. ● You keep more contact with the horse's mouth while riding English. To signal the horse to turn right, very lightly pull back with your right hand. To signal the horse to turn left, very lightly pull back with your left hand. If the horse does not respond to the lighter pulling, you can gradually begin to pull slightly harder until the horse responds. ● You should also use your legs and body to signal a horse to move. Looking in the direction you wish to move helps. Horse's can feel your seat bones move. You should also gently squeeze your legs to signal a horse to change direction. For example, squeeze your left leg if you want your horse to turn right as the horse will want to move away from the pressure.
4	Learn how to trot. Once you're confident at the walk, gently press your legs into the horse's sides to cue the horse to trot. Sit deep in the saddle and keep contact with your legs. Be careful to keep your elbows relaxed, so you don't jerk on your horse's mouth. ● Some riders prefer to do a "posting trot" as opposed to a sitting trot. This can be more comfortable as a trot is a bouncing gait. To do a "posting trot" simply rise when the horses outside shoulder moves forwards, and gently sit back down in the saddle, as to avoid bouncing heavily on the horses back.
5	Move your outside leg back and squeeze to canter the horse. Cantering is a quicker three-beat speed that's natural to all horses. When you canter, your seat will roll with the canter and you stay in the position you normally ride in. Before you canter, make sure you are comfortable with both posting trot and sitting trot as both of these are major key points. Getting the timing right to get a horse to canter takes time. ● Try not to tense up. Most beginners will find it beneficial to hold onto a saddle or neck strap while learning to canter to help with their balance so they don't fall. ● If your horse just moves into a faster trot when you signal it to canter, ask your horse to walk and continue asking him to canter from the walk instead of the trot. Before learning to canter make sure you know posting trot, and sitting trot. Before cantering, gently squeeze your outside rein to slow your horse to a half halt in a trot before using your inside leg by the girth and then soon adding your outside leg behind the girth to give your horse a bit of a push forward.
6	Practice more advanced riding as you feel ready. Galloping, jumping, and dressage tricks are all fun to learn in English style. However, you should hold off until you've mastered the basics. Spend at least a few months practicing the above techniques before trying anything new. Galloping and jumping especially can be dangerous if you're inexperienced.

Riding a Horse (Western Style)

1	Learn to neck rein. Steering is slightly different in Western style than it is in English style When riding Western, you use a technique called "neck reining." ● Neck reining means you hold the reins loosely and gently touch the horse's neck to signal movements. ● To turn right, move the reins across the horse's neck to the right. To go left, move the reins across the horse's neck to the left. ● Always hold the reins in your left hand. Keep your right hand on your right thigh. ● As with English riding, make sure you use your full body to steer as well. Use your legs and seat bones in addition to your hands.
2	Direct rein during emergencies. If you need to steer your horse quickly, it's recommended you momentarily switch to English style steering. If your horse is not responding to neck reining, grab the reins in both hands. Gently pull or squeeze the left rein to turn left and the right rein to turn right.
3	Walk your horse. Start out walking gently. In Western, you also squeeze your horse to get him to walk. You should follow the motion of his head again, but as you hold the reins looser you might not move your hands as much as you would in English.
4	Jog your horse. While your horse is walking, squeeze his sides gently to signal to him to jog. Trotting is not usually a part of Western style riding. ● A jog is a slow, steady gait. It's a little quicker paced than a walk but not as jaunty as an English trot. ● You can easily sit in a Western jog. Posting trot is not necessary when riding western style.

Camel

How to ride a camel.

Riding a Camel

1	Wear long pants and long socks to protect your skin. Camels have an odd, side-to-side gait that causes a lot of friction if you aren't prepared. And the last thing you want is rough, straw-like camel hairs grinding up and down your soft legs. Your socks should come up as high as you can get them since the motion often hikes your pants up uncomfortably. Other clothing essentials include: ● A hat and sunglasses to protect your face from the sun. ● A long scarf or bandanna to protect your face in case of a dust storm. ● Dust goggles, especially if the forecast hints at possible storms.
2	Approach the sitting camel from the side, slowly and confidently. Don't look it in the eyes if you're nervous. Just stride up to it purposefully, coming from a diagonal angle. Unless you're a pro or have help, you're only going to mount the camel if the beast is sitting. With most guides and groups, the chance of agitating a camel is pretty low. However, there is no reason to take unnecessary risks.
3	Throw your leg over the middle of the humps and quickly mount it. Getting on the camel is the hardest part of riding. Do it quickly, using your momentum as a guide. There is usually a stirrup on one side for your foot. Step up on this stirrup and get your other leg over and around. ● You want to be straddling the camel to keep your balance as you start riding. Once the camel stands up you can then move your legs to get more comfortable. ● There will be a handle on the front of the saddle to help you hold on as you get up. ● Some people actually mount by "leapfrogging" from behind the camel. Trust your guide's judgement if he/she suggests this — they know their animals best.
4	Lean backwards as the camel starts to stand. Camels stand up with their back legs first. If you're not careful, they'll throw you face first into their necks. Hold onto the saddle and lean back to counteract the camel's motion.
5	Slowly lean forward as it gets onto its front legs. Once it has sure footing with the back legs, it will move to the front. Slowly lean forward as the camel pushes up so that you end up with your back straight.
6	Cross one or both legs up on the saddle. While straddling the beast like a horse may seem more natural, camel riders have far more comfort when their legs are up and crossed. This better distributes your weight along the humps, saving your tailbone from unnecessary pain. Wrap one or both legs around the saddle post to look like a pro. ● Without your legs clamped to the sides, you can sway with the camel's natural gait much more freely. ● If you're more comfortable straddling, that's fine! The leg cross is not an absolute must, although it is more comfortable on long rides.
7	Let yourself sway with the camel. A camel's walk is odd, irregular, and herky-jerky. It is not like the measured gait of a horse, so you need to ride accordingly. Instead of fighting it, let your body swing back and forth, holding onto the saddle post for support. ● There is often another post behind your seat. Holding on to both of them, with a hand in front and a hand behind, puts you in line with the camel's body and makes it easier to work with its movements. ● Tie in any valuables and electronics. This movement can easily cause things to shake loose and fall if you're not careful.
8	Do not try and control the animal. Unfortunately, camels won't listen. Camels will listen to their master, however, and follow the line in front of them. While they may respond to the occasional tug or push, you shouldn't try to steer or direct them — they'll just be unhappy with it.
9	Relax. This isn't just for your peace of mind. Loosening your muscles and taking a deep breath will also calm the animal down. Other camels may nip or play with your ride, but if you keep calm and cool, nothing will get out of hand. Panicking, however, may cause the creatures to panic as well. The calmer you are the calmer your ride will be. ● Once you get used to the gait, relax your grip a bit. Take a deep breath. ● Let yourself move around, but trust that you won't fall off. You'll get used to it quickly enough.
10	Wait out any spooked or panicked camels with calm, even words. If the camel gets spooked or starts moving too quickly, stay calm. Keep a firm, but not tugging, grip on the reins and speak calmly until the camel relaxes. If you can, try to use the reins to pull the camera into a circle, so that it rides in small area until it calms.
11	Get comfortable being uncomfortable. If you've never partnered with a camel before, know that this is not going to be the most pleasant ride of your life. You will have some pain in your tailbone, as it's not used to this sort of movement and pressure. Pop a couple of over-the-counter pain relievers thirty minutes before you go, or have some on hand to manage the pain later.
12	Dismount when the camel sits back down. Getting off is much easier than getting off. Use the saddle handles to push yourself up, then swing your leg over the hump to one side. You can simply jump off.

Dog Sled

Pony / Donkey / Mule

Donkeys are gentle, steady creatures that may be saddled and ridden in a similar fashion to horses. The average donkey is too small to be ridden by adults, but mammoth donkeys are sufficiently large in stature to bear as much weight as a small horse could handle. They can be a pleasure to ride as long as you aren't in a hurry and don't attempt to push them out of their comfort zone.

1	Learn the difference between riding donkeys and horses. Many think of donkeys as smaller, more docile version of horses, but in fact donkeys are their own species and have very different personalities and abilities. Riding a donkey is its own unique experience that's especially pleasurable when you don't have the same expectations you would for a horse. ● Donkeys are less responsive to training, so they don't have fancy gaits. A slow, plodding walk is the most comfortable gait for a donkey. ● Donkeys are extremely reliable and gentle, and aren't as finicky as horses. Donkeys are great for kids to ride. ● Dressage training is increasingly popular among donkey riders. Donkey dressage is similar to horse dressage but it showcases donkeys' unique traits and abilities.
2	Know what situations are right for riding donkeys. Donkeys are hard workers with big energy reserves. Because they were originally desert animals, they're adept at moving through tough terrain without very many breaks. They like plenty of exercise and are usually game for a long trail ride or a simple walk around the property. ● Donkeys are wonderful to ride on long trails, where the pace is slow and steady. Because of their great endurance, they have often been used as pack animals and used to traverse tough hiking trails. ● Donkeys can help in work situations, especially with herding goats and sheep. They are excellent herders. For this reason, it's a good idea to always keep a fence between donkeys and other farm animals unless they're actively herding.

3	Understand donkeys' limitations. The experience of riding a donkey is pleasant, but not necessarily exciting. Unlike horses, they won't be interested in jumping logs or galloping across fields. If you try to encourage them to do so, they usually just stand still and won't budge, which is probably why they have a reputation for being stubborn. ● Donkeys have a shorter stride than horses and tend to move slowly. They aren't physically capable of performing feats of agility the way horses can. ● Donkeys like familiarity and get their reputation for stubbornness because they don't react well to unfamiliar situations. They like to have time to consider a given situation, and hurrying them along doesn't do much good.
4	Get to know their training needs. Donkeys should be trained by someone familiar with their temperaments and abilities. Training a donkey is similar to training a horse, but since donkeys have different abilities, they need a trainer who knows what he or she is doing. Donkeys should first learn to be led on a halter, then how to carry a saddle and take riding commands.
5	Find one that's the right size. Donkeys are commonly too small to be ridden. It's very important not to ride a donkey that's too small to carry your weight, since that could injure the donkey. A good rule of thumb to follow is that a donkey can safely carry 20 percent of its body weight. ● Miniature donkeys are not suitable to be ridden, unless you want to have your toddler ride one under supervision. ● Mid-sized donkeys are fine for children, but as the children grow up they will need to find a larger donkey. ● Mammoth donkeys are large enough to carry adults.
6	Take sex and temperament into account. Like horses, donkeys' temperaments differ according to their sex. Finding a donkey with a good riding temperament will have a big impact on the riding experience. Here are the three types of donkeys and their temperaments: ● Geldings are male donkeys that have been castrated. They tend to have a mild temperament well-suited to being ridden. ● Jennys are female donkeys. They usually have a gentle, domesticated temperament as well. ● Jacks are uncastrated males. They are typically too wild to ride.
7	Make sure the donkey has received training. Many donkeys make great pets, but not all are cut out for being ridden. Find out whether the donkey was trained to carry a saddle and follow riding commands. Get a donkey that has been trained to be ridden, not just walked on a lead.
8	Find a good match for your personality and needs. Donkeys have a reputation for being stubborn, but really they just need time to assess each situation and decide how to respond. They're deep thinkers. This can be frustrating when you're on a donkey's back and would like it to move forward. If you're planning to purchase a donkey spend time walking and riding the donkey to make sure it's a good fit. ● Patience is a virtue when it comes to riding donkeys. Try to gain an understanding of the donkey's personality so you can work as a team and have a much more pleasant ride together. ● If you're not the patient type, you'll need a donkey that's exceptionally responsive. You may instead want to consider choosing a small horse or pony.
9	Use equipment made for donkeys. Donkeys' bodies are structured differently from horses' bodies. Get a saddle and other equipment made for donkeys or burros, rather than one for horses. Donkeys can carry a lot of weight, but their backs are wider than horses' backs, so the saddle construction is different. A saddle that doesn't fit correctly can lead to health problems for the donkey. ● Bits and other tack should also be fitted to your donkey's needs. ● Blinders are commonly used to keep donkeys focused on the path ahead, but some donkey trainers recommend against using them. ● If you want to use heavy saddle bags, have the donkey practice with them at home before setting off on a long trail ride.
10	Learn to give a donkey riding commands. If you've never had riding lessons, it's a good idea to take some so you can learn the proper way to command a donkey for a smoother ride. The most important thing to remember is that you shouldn't try to make a donkey to do something it doesn't want to do. You must gently coax the donkey to keep moving instead of using force. ● Verbal commands and nonverbal commands like hand signals and touching the donkey are ways to let it know what you want it to do. ● Whipping and harsh kicking are ineffective, and will serve only to erode the trust you have with your donkey. Treat your donkey gently and patiently as you ride.
11	Take good care of your donkey. Make sure your donkey is healthy so he doesn't get injured when you go for a ride. Donkeys need dry, warm shelter, proper feed and plenty of water, and attention to their hooves and teeth. Make sure you attend to the donkey's health before taking it out for a long ride. ● Donkeys' hooves must be kept dry, or they will begin to rot. Donkeys need to overnight in a dry shelter. If you're doing an overnight trail ride, make sure there's a dry shelter where the donkey can stay overnight. ● When it comes to food, donkeys need plenty of grass, and not much else. They are prone to getting overweight easily, so make sure the donkey is getting plenty of exercise.

Cattle / Yak / Buffalo

Elephant

Ostrich

4 Land

Any forms of transport which are used on land.

Subheadings

1 Simple Transport

These are simple, unpowered forms of transport which could help speed up a bug-out scenario when on foot.

Heelys

These are those kids shoes that have wheels in the heel, if you tilt your feet up the wheels make contact and can be used to roll around. These only have little benefit on flat or almost flat ground and are generally used as a fashion or 'cool' statement. They are also generally ineffective on coarse bitumen.

Rollerskates

Rollerskates are the shoes with a rectangular set of 4 wheels on each side allowing more stability than rollerblades. They would allow a decently quicker form of transportation over walking but are often heavy, and require you to carry an additional pair of shoes.

Rollerblades

Rollerblades are the shoes that have all four wheels in a line on one side - like a blade, as opposed to rollerskates. Like rollerskates, these would speed up a bug-out scenario but are cumbersome to carry and you would need to carry a regular pair of shoes to swap back to.

Skateboard / Longboard

Skateboards are fairly lightweight and can be used to travel relatively short distances with ease, particularly on flat concrete. It could have a place in a solo bug out scenario if you're leaving the suburbs to save your energy when going down slopes.

Sled

2 Scooter

Kick Push Scooter

Generally used by kids to play with on the street, but they could come in handy during bug out if you're hiking and plan to go down a lot of bitumen hills. It would certainly save a lot of time and would be worth having one in your car if you live a long way from work.

One-Wheeled Scooter

An electric self-balancing one-wheeled scooter. They are good for short commutes but probably have no place in a preparedness situation besides gliding around a prepper village. They would also require a strong and steady source of power to continually use it. One advantage it does have is that it would keep both your hands free, thereby allowing you to (dangerously) handle a gun and chase attackers...

Electric Scooter

These are the same as the kick push scooters you stand on, but have motors in them. Don't be confused with the other form of electric (or petrol) scooters you sit on today which generally are used to deliver food. Electric scooters are quite viable in a bug out scenario due to their small frame and incredible power and battery life. Some models can reach a top speed of 80km/h (49.7 mph), with some even reaching up to 120km/h (74.5 mph). They often have ranges up to 70km (43.4 mi), but real world tests are likely to get a bit less than that depending on how old the battery pack is, how heavy the rider is and the type of terrain.

A disadvantage (besides the price) for these scooters is that they can weigh up to 40kg (88 lbs) and therefore aren't easy to carry once they run out of battery. If you live fairly close to your bug out shelter this may be an ideal solution to get you there quickly if you're solo or have one other person. Some scooters can support a rider up to 120kg (264 lbs) therefore if two people combined comes in under this total (such as 70 & 50kgs), you would in theory only need one scooter to bug out with - at the cost of speed and distance - however don't forget to weigh your Bug-Out bags.

I would highly recommend an electric scooter as a bug out vehicle because it's fast, it can go down narrow alleys to avoid people in cars, and it can keep up with, and sometimes exceed the speed a regular car, especially if it's stop start traffic - such as what you would expect in an emergency. It's great on all forms of terrain (except mud) and can be folded up and carried as a last resort - however you would likely keep the scooter in the car during the bug out and only use it in the last stage of a bug out plan.

Elderly Scooter

Elderly scooters are the ones you see in supermarkets whizzing around the place. They generally have a low top speed but are still fairly small and can therefore fit in elevators. They have a lot of storage space over a regular scooter at the cost of portability. These are not recommended for bugging out in unless you want to see the sights and get there reeeallly slowly.

Segway

Just no, these would not make a useful bug out vehicle - but they may come in handy around a large estate you have to defend.

3 Bike

A bicycle, also called a bike or cycle, is a human-powered or motor-powered, pedal-driven, single-track vehicle, having two wheels attached to a frame, one behind the other. A bicycle rider is called a cyclist, or bicyclist. Bicycles were introduced in the 19th century in Europe, and by the early 21st century, more than 1 billion were in existence at a given time. These numbers far exceed the number of cars, both in total and ranked by the number of individual models produced. They are the principal means of transportation in many regions. They also provide a popular form of recreation, and have been adapted for use as children's toys, general fitness, military and police applications, courier services, bicycle racing, and bicycle stunts.

The basic shape and configuration of a typical upright or "safety bicycle", has changed little since the first chain-driven model was developed around 1885. However, many details have been improved, especially since the advent of modern materials and computer-aided design. These have allowed for a proliferation of specialized designs for many types of cycling. The bicycle's invention has had an enormous effect on society, both in terms of culture and of advancing modern industrial methods. Several components that eventually played a key role in the development of the automobile were initially invented for use in the bicycle, including ball bearings, pneumatic tires, chain-driven sprockets and tension-spoked wheels.

A bike would make an ideal bug out vehicle due to low/easy maintenance, no fuel and their ability to easily go around traffic or fallen trees. Disadvantages include their slipperiness in rainy, snowy and icy conditions, being exposed to the elements while riding and you can't carry as much gear as a car. Bikes are also quite heavy to carry unless you buy a small, folding one instead.

Advantages	• No Fuel Requirement • Simple to Repair • Stealthier than Cars • Smaller/Compact • Utilise Off-road Tracks
Accessories	• Lights • Reflectors (Unless SHTF) • Dynamo Generator • Repair Kit • Bike Bags (Pannier/Saddlebag, Frame Bag, Rigid Seat Rack) • Bike Trailers (Single or Double Wheel, should attach to back wheel frame)
Frame Materials	• Carbon Steel • Chromoly Steel • Aluminium • Titanium • Carbon Fibre

Riding a Bike

1	Begin on a flat surface. Flat surfaces such as a driveway, sidewalk, quiet road, or park trail are stable. There are no slopes, so the falls are shorter and you will have an easier time balancing and coming to a stop.
2	Adjust the bike seat. Lower the bike seat far enough that whoever's riding can put both of their feet flat on the ground while seated. A low seat allows you to stop yourself with your feet before you fall. Adults don't need to use training wheels, but young children can use these or specialty balance bikes.
3	Test the brakes. Find out how the brakes work on the bicycle. Stay off the bicycle. Keep it next to you and walk it. Push the brake buttons to get used to their location, how they feel, and how the bike reacts to them. Once you've learned this, you'll feel more comfortable because you'll be able to make an emergency stop when needed.
4	Plant one foot on the ground. It doesn't matter which side you choose, but your dominant side will feel more natural. A right-handed person, for instance, can stand on the left side of the bike. Lift up your right leg, reach it over the bike, and put it on the ground on the other side of the bike. Hold the bike upwards between your legs.
5	Start gliding. Rather than pedal, push yourself off by foot. Tuck your feet upwards and onto the pedals. While in motion, maintain the bike's balance as long as you can. Once you feel the bike beginning to tip, catch it by putting one foot to the ground, then push off again.
6	Keep your eyes straight ahead. When you look at obstacles, your bike heads towards them. Concentrate on looking towards where you want the bike to go. It takes some practice to avoid distractions from road hazards or other sights.
7	Start pedalling. Start with one foot on the ground. Your other foot should be flat on a pedal pointed upwards. Push off, put that foot on the other pedal, and go! Keep going as long as you can maintain balance.
8	Dismount from the bike. Don't stop by foot. A better practice is stop by using the brakes. Stop pedalling, shift your weight onto the lowest pedal, and squeeze both handbrakes, if the bike has them. Once the bike has stopped, raise yourself a little and step off onto the ground.

Bicycle Repairs

Be sure to have a bike pump and a few repair kits for punctures for all wheels.

Redundancies	• Spare Tyre • Chain Repair Kit • Spare Pump • Chain • Brake Replacements

Bicycle Tips

Ensure bag straps don't come into contact with the wheels while riding.

Use an alternator on the wheel to generate electricity while moving.

4 Motorbike

The best solo bug-out vehicle for speed and avoiding traffic.

Riding a Motorbike

1	Learn the controls. Familiarize yourself with the basic controls before riding. When you're actually riding you will have to think quickly, if you're not familiar with the operations it could be dangerous. ● The hand clutch lever is typically located on the left handlebar and is used to disengage the power from the rear wheel when shifting gears. ● The gear shifter is typically located by your left foot and is used to shift one gear up or down while you're pulling the clutch lever. ● The throttle is on the right handlebar and used to accelerate. The handbrake, which applies the brakes to the front wheel, is the lever on the right handlebar. ● The lever on the right side of the bike near your foot works the rear brake. ● As a rule, the left side of your motorcycle controls gears, while the right side controls acceleration and braking.
2	Get on the bike. To properly get on your bike, face the motorcycle from the left side. Grab the left handlebar, and swing your right leg over the seat. Plant your feet firmly on the ground. ● The best way to get to know how a bike operates is to sit on it and go over the functions of the controls before starting it up. ● Get a feel for how you fit on the motorcycle. Grip the handlebars, clutch lever and brake lever. Make sure you can reach these controls comfortably. Your arms should have a slight bend in the elbow when gripping the handlebars. Switches should be within easy reach of your fingers. ● Make sure you can easily plant your feet on the ground. Get a feel for the weight of the bike underneath you. Additionally, you should be able to operate the rear shifter without lifting or sliding foot off the peg.
3	Practice getting a feel for the clutch. The clutch is used to change gears. When you pull the clutch in, you're releasing the engine from the transmission. This action puts your bike in neutral, allowing you to shift gears. ● Think of your clutch as a dimmer switch when using it. Unlike an "On-Off" switch, you want to gradually and smoothly pull and release the clutch to prevent your bike from stalling. ● When starting, pull in the clutch lever and put the bike into 1st gear by pushing down on the gear shifter with your left foot. You may have to push down several times. You'll know you're in 1st when you don't feel any more resistance or indication the gears are moving. ● Most motorcycles operate in a "1 down, 5 up" shifting pattern. The pattern is typically 1st gear, neutral, 2nd gear, 3rd gear, and so on. When shifting gears you will see the appropriate number light up on your gauge. ● When you're driving, you should shift gears by first pulling on your clutch with your left hand to disengage the rear wheel. As you pull the clutch, reduce the throttle. Reducing the throttle will prevent your bike from jerking as you re-engage the rear wheel. Continue by shifting gears with your left foot. Feather the throttle with your right hand to keep the transmission smooth. Finally, release the clutch, engaging the rear tire.
4	Start your engine. Pull the clutch lever in and locate your kill switch. This is usually a red switch located on the right handlebar. Flip it down into the "on" position. Most modern bikes don't require you to kick start your engine, but if you have an older bike you may have to. The kick start lever, if you have one, can be found behind the foot peg on the right side of your bike. ● Turn your key to the "ignition" position and check to make sure the lights and gauges are on and operating. ● Put your bike into neutral. The easiest way to do this is to downshift to 1st gear then shift up once. Look for the "N" on your gauge to light up. ● With your right thumb, push the "Start" button. This is usually located under the kill switch. Start buttons are often identified by a circular arrow with a lightening bolt in the middle. ● Once the engine has turned over, let your bike warm up for about 45 seconds so the engine will work properly. ● When your feet are flat on the ground, pull the clutch lever back in. Then roll back onto your heels and repeat until you have a good feel for the clutch.
5	Try "power walking" the bike. Start with your feet in front of you and on the ground. Slowly let the clutch out until the bike starts to pull itself forward. ● Using only the clutch, walk the bike forward, keeping it steady with your feet. ● Repeat this until you can keep the bike upright when you pull your feet off the ground. You want to get a good sense of balance on your bike.
6	Begin driving your motorcycle. Once the engine has started and warmed up, you can begin to ride. This is done by shifting down into 1st gear and letting the clutch lever out while simultaneously pulling back on the throttle. ● Make sure your kickstand isn't out. ● Slowly let out the clutch lever until the bike starts to roll forward. ● You may have to pull back on the throttle slightly to prevent your bike from stalling while releasing the clutch. ● Once you are moving, accelerate slightly and pull you feet up onto the pegs. ● Try straight line riding. As you let the clutch out and slowly roll the throttle back to pick up a little speed, continue riding in a straight line. When you are ready to stop, pull in the clutch lever, and slowly apply the front and rear brakes simultaneously. Use your left foot to steady the bike at a stop. When you are stopped, put your right foot on the ground.
7	Practice shifting gears. Once you're able to start riding in a straight line, get a feel for shifting. Get a feel for the "friction zone". The friction zone is the area of resistance created as the clutch becomes engaged. This area allows for the transfer of power from the engine to the rear wheel. Motorcycle transmissions are sequential, meaning that you have to shift one gear in a consecutive order, whether shifting up or down. It will take some practice to be able to feel and hear when it's time to shift. The engine will start revving at higher rpms when it's time to shift. ● With your bike on, shift all the way down into 1st gear. You'll know you're in 1st gear when the shift pedal doesn't click down anymore. You should hear a bit of a clicking noise when in 1st. ● Very slowly let your clutch out until the bike starts moving forward. When you want to start moving faster, pull back on the throttle slightly as you let out the clutch. ● To get to 2nd gear, pull the clutch back, ease off the gas, and pull up firmly on your shifter to move through neutral. Check to make sure your neutral light is not on. Let the clutch out and engage the throttle again. Repeat this process to shift through higher gears.
● After 2nd gear, you don't have to pull up with your left toe quite as hard since you're not going through neutral. ● To downshift, release the throttle, squeezing the brake lever slightly. Pull your clutch in and press down on your shifter. Then let out your clutch. ● Once you get a hang of downshifting, you can come to a stop while in second gear. Then, once at a stop, shift down again into 1st.	
8	Practice turning. Much like a bicycle, a motorcycle is turned, once you're at about 10 mph or higher, by counter steering. Push down on the handgrip on the side of the bike you want to turn. Look up and through your turn. ● As you enter your turn, remember to slow down. Don't apply the brakes during your turn. Release the throttle and break if you have to before you start your turn. ● Keep your head up and look through the turn. Press the handlebar in the direction you want to go. Slowly roll on the throttle as you glide through the turn to keep momentum. ● As you slow down, turn your head to look to the end of the turn. Your bike will follow your eyes. Find a point at the end of your turn to aim for and keep your eyes on it. Never look at the ground or down into your turn. Though you may feel weird and want to watch your turn, this is dangerous and can cause you to not complete your turn properly. ● Press on the side you want to turn. If you are making a left turn, push away from yourself on the right side of the handlebar. This will cause the bike to lean to the left. Lean with it and slowly roll on the throttle to slightly increase your speed. As you come out of the turn, keep the throttle steady or add a bit more gas while you lean back up. Let the bike right itself, don't jerk the handlebars.

9	Practice slowing down and stopping. Finally, now that you've practiced starting, shifting, and turning your bike, you need to know how to slow down and come to a stop. Remember that the lever on the right handlebar operates your front brake, while the brake by your right foot operates the brake for the back wheel. As a general rule, you want to begin braking with your front brake and employ your rear brake after to help you slow and stop. ● When coming to a full stop, it's best to begin with your front brake and apply the rear brake after you've slowed down some. ● As you slow down, make sure you downshift. You don't always need to go all the way into 1st gear. You can downshift into 2nd gear and stop before shifting down to 1st. ● Pull in the clutch when braking and gearing down. ● Apply pressure to both your front and rear brake as you slow down and begin braking. Make sure you aren't pulling back on the throttle. This is made easy by the fact that the front brake handle is situated so that you have to roll your hand forward to reach it. ● Gradually increase pressure on your brakes, don't engage the brakes completely, this can cause your bike to stop abruptly and jolt. ● Once you are at a stop, keep the front brake engaged, and plant your feet firmly on the ground. Start with your left foot, then your right.

5 Quad Bike

Quad Bike

The ideal vehicle for moving around a homestead. They can come in electric or fuel varieties and can easily climb steep hills and tackle all forms of terrain.

Golf Buggy

Ride-On Mower

6 Car

Any type of car whether it runs on petrol, diesel or electricity. Electric cars are at the bottom of this section.

Driving a Manual Car

This is how to drive a manual car if you need to during an emergency.

1	Start on level ground with the car off. Especially if this is your first time driving a car with a manual transmission, start slowly and methodically. Put your seat belt on once you sit down. While learning, it can be useful to roll down the windows. This helps you hear the sound of the engine revving and to shift gears accordingly. ● The pedal on the left is the clutch, the middle one is the brake, and the accelerator is on the right (remember it, from left to right, as C-B-A). This layout is the same for both left-hand drive and right-hand drive vehicles.
2	Learn what the clutch does. Before you start pushing down on this unfamiliar pedal on the left, take a moment to figure out the basics of its function. ● The clutch disengages the engine from the wheels. When one or both are spinning, the clutch allows you to switch gears without grinding the teeth of each separate gear. ● Before you change gears (either to move up or down), the clutch must be depressed (pushed).
3	Adjust the seat position so you can access the clutch pedal's full range of motion. Slide forward enough to allow you to press the clutch pedal (the left pedal, next to the brake pedal) fully to the floor with your left foot.
4	Press the clutch pedal and hold it to the floor. This would also be a good time to take note of how the travel of the clutch pedal differs from that of the brake and gas. It's also a good opportunity to get used to slowly and steadily releasing the clutch pedal. ● If you've only ever driven automatic cars, it might feel awkward to use your left foot to push a pedal. With practice, you'll get used to using both feet in concert.
5	Move the gearstick into neutral. This is the middle position that feels free when moved from side to side. The vehicle is considered out of gear when: ● The gearstick is in the neutral position, and/or ● The clutch pedal is fully depressed. ● Don't try to use the gearstick without having the clutch pedal depressed, because it simply won't work.
6	Start the engine with the key in the ignition, making sure the gear stick is still in neutral. Make sure the handbrake is on before starting the car, especially if you are a novice. ● Some cars will start up in neutral without the clutch depressed, but some newer cars will not.
7	Remove your foot from the clutch pedal with the car still in neutral. If you're on level ground, you should remain stationary; you'll start rolling if you're on a hill. If you're ready to move on to actually driving, make sure to release the handbrake (if it's engaged) before you drive off.
8	Press the clutch to the floor and move the gearstick into first gear. It should be the upper-left position, and there should be some kind of visual layout of the gear pattern on top of the gearstick. ● Gear patterns can vary, so take some time beforehand to study your car's gear layout. You may want to practice shifting through the various gears with the engine switched off (and the clutch engaged).
9	Slowly lift your foot up from the clutch pedal. Continue until you hear the engine speed begin to drop, then push it back in. Repeat this several times until you can instantly recognize the sound. This is the friction point. ● When you're shifting gears to start or keep moving, this is the point at which you'll want to have the accelerator depressed enough to provide power.
10	Let up on the clutch while pushing down on the accelerator. In order to get moving, lift your left foot up from the clutch pedal until the RPMs drop slightly. At the same instant, apply light pressure to the accelerator with your right foot. Balance the light downward pressure on the accelerator with slowly releasing pressure on the clutch pedal. You will probably have to do this several times to find the right combination of up and down pressure. ● Another way of doing it; is to release the clutch until the point the engine revs down a little, and then applying pressure on the accelerator as the clutch engages. At this point the car will start to move. It is best to have the engine rev just enough to prevent stalling as the clutch pedal is let up. This process may be a little difficult at first because you are new to the extra pedal in a manual car. ● Release the clutch fully (that is, slowly remove your foot from the pedal) once you start moving forward under control in first gear.

11	Expect to stall at least a few times when you're first starting out. If you release the clutch too quickly the engine will stall. If the engine sounds like it is going to stall, hold the clutch where it is or push down a bit further. If you do stall, depress the clutch fully, apply the handbrake, put the car in neutral, switch the engine off and restart the car as normal. Don't panic. ● Revving the engine while the clutch is between fully up and fully depressed will wear out the clutch parts prematurely, resulting in slippage or smoking of the clutch parts at the transmission. This is called riding the clutch and should be avoided.
12	Recognize when it's time to shift up to a higher gear. When your RPM reaches about 2500 to 3000 while the car is in motion, it is time to shift to the next gear — for example, second gear if you are currently in first. The actual RPMs at which shifting is required will vary by the car you are driving, however. Your engine will begin to race and speed up, and you must learn to recognize this noise. ● Depress the clutch pedal until it disengages and guide the gearstick straight down from first gear into the bottom-left position (which is second gear in most configurations). ● Some cars have a "Shift Light" or indications on the tachometer that will tell you when you need to shift, so you don't rev the engine too fast.
13	Push down on the accelerator very slightly and slowly release the clutch pedal. Shifting gears in motion is the same as shifting into first from a stationary position. It's all about listening, looking, and feeling for the engine's cues and getting the up-and-down timing of your feet on the pedals correct. Keep practicing and you'll get the hang of it. ● Once in gear and on the accelerator, you should completely remove your foot from the clutch pedal. Resting your foot on the clutch pedal is a bad habit, as it applies pressure to the clutch mechanism — and the increased pressure will cause the clutch to wear out prematurely.
14	Shift down into a lower gear as you slow down. If you are going too slow for the current gear you're in, your car will shudder as if it's about to stall. To shift down gears while in motion, follow the same process of depressing the clutch and releasing the accelerator, shifting gears (say, from third to second), and letting off the clutch while depressing the accelerator.
15	Come to a complete stop. To come to a stop in a fully controlled manner, shift down gradually until you reach first gear. When it's time to come to a complete stop, move your right foot from the accelerator to the brake pedal and press down as much as is required. As you slow to about 10 mph (16 km/h), the car will be on the verge of shaking and vibrating. Press the clutch pedal fully down and move the gearstick into neutral to prevent stalling the car. Use the brake pedal to stop completely. ● You can also stop while in any gear by depressing the clutch fully and using the brake while shifting into neutral. This should only be done when you need to stop quickly, though, as it puts you in less control of the vehicle.

Driving an Automatic Car

This is how to drive an automatic car if you need to during an emergency.

1	Identify the controls. It essential to find the accelerator and brake pedals, the steering wheel, the gear selector lever, the light controls, the defroster, and the windshield wipers before you begin. ● The brake and accelerator pedals are located at the bottom front of the area where your feet are. The brake pedal is on the left, the accelerator is on the right. ● The steering wheel is the large wheel in the centre of the driver's console. Turn it to the left and right to turn the wheels of the vehicle. ● Located on the steering column (usually on the left side) is a small lever that has a rest position in the middle and two locking positions above and below. This is the turn signal. Often on the left side of the steering wheel mounted into the console or a knob on one of the levers on the steering column is the control which turns the headlights on and off. ● The gear selector lever will usually be in one of two places: it is either mounted to the right side of the steering column or in-between the driver's and passenger's seats. It will have a display showing gear indicators, usually marked with the letters "P", "D", "N", and "R" and a few numbers. On steering-column shifting levers, this display is usually located on the instrument panel, underneath the speedometer.
2	Start the car. Place your right foot on the brake pedal and push it down, then insert the key and turn it clockwise to start the vehicle.
3	Select your gear. Keep your foot on the brake pedal and shift the gear lever into "Drive." This gear is marked with a "D" on the display panel, and will be highlighted when you've successfully selected it. ● For shift levers mounted on the steering column, pull the lever towards you before moving it up and down to select a gear. ● For shift levers mounted on the floor, there is usually a side button to unlock the lever. It can then be moved along its track into position.
4	Release the parking brake. This is either a lever between the two front seats or a pedal on the far left side of the foot area. There may be a release lever above the lower parking brake or a button to push on the topside model before you can disengage it.
5	Check your surroundings. Look all around the car, including blind spots, to see if there are any moving objects or beings in the vicinity. Make sure to keep your eyes mainly on the direction you're moving.
6	Get your car moving. Slowly release pressure on the brake pedal and the car will start to move slowly. Take your foot off the brake, use the same foot to press the gas pedal gently, and the car will begin to move faster. There is no need to change gears in relation to speed in regular road driving.
7	Turn the steering wheel to turn the car. In "drive," turn it to the left to turn the car left and turn it to the right to turn the car right.
8	Apply the brakes to slow or stop the car. Take your right foot off the accelerator pedal and move it to the brake, applying gradual pressure so as not to jerk to a halt. When you wish to start again, switch your foot back to the accelerator.
9	Park the car. When you have reached your destination, bring the vehicle to a complete stop by applying gradual pressure to the brake pedal and slide the shift lever back into the "P" position. Turn off the engine by turning the key counter-clockwise. Don't forget to turn off the headlights and apply the parking brake before getting out of the car.
10	Travel in Reverse. If you need to travel backward, make sure the vehicle is at a complete stop before changing gears in or out of "reverse." Slide the gear shift to select the gear marked "R" and check behind/ around you for any possible obstructions. Gently remove your foot from the brake and place it on the accelerator. ● When turning in Reverse, your car will turn in the same direction that you turn the wheel. You're just going backwards, so the end of the car will swing in that direction, rather than the front.
11	Use "neutral." The "neutral" gear is only to be used when you have no need to control the speed of your car, not when driving regularly. Examples of this include when idling parked for a short time or when being pushed/towed.
12	Use the lower gears. The gears marked "1," "2," and "3" are known as lower gears. These can work as a sort of in-engine brake system when you need to save your actual brakes. Going down steep hills is a good use of this technique. 1st gear, however, is only to be used when you must go very slowly. There is no need to stop when shifting between these gears and Drive.

Fuel Conservation

When travelling to your bug out shelter, unless you're being pursued or have to get there as fast as possible you should try to conserve your fuel. There are a variety of ways you can accomplish this which are found below. You shouldn't conserve fuel by cutting "corners" such as using main roads instead of back roads which dramatically increase your risk of being attacked during a SHTF situation.

- Accelerate gradually. Avoid jackrabbit starts.
- Anticipate your stops. When approaching a red light, let your foot off the gas as early as possible.
- In summer, drive during cooler parts of the day. Cooler, denser air can boost power and mileage.
- Avoid long warm-ups in the morning. They're unnecessary and waste fuel.
- Maintain recommended tire pressure. Low pressure reduces fuel economy and can damage tires.
- Keep the air filter clean. Clogged filters reduce fuel economy and increase exhaust emissions.
- Reduce speed - you can reduce your fuel consumption by as much as 25% by taking 20 km/h off your speed.
- Keep the windows up and use the ventilation system when travelling over about 50 km/h, if your car doesn't have air conditioning.
- Use your car's air conditioner sparingly.
- If your car's transmission has power and economy modes, use the economy mode to ensure the transmission up-shifts earlier.

Adverse Conditions

Night Driving

- Do not overdrive the vehicle headlights. This means only drive as fast as the vehicle can be stopped within the headlight illumination distance.
- Slow down at night. Most drivers have a false sense of security believing that they can drive as fast at night as they can during daylight.
- Keep the windshield, headlights, rear lights and marker lights clean.
- Use the vehicle high beams when able to do so.
- Avoid looking directly into oncoming headlights.
- More than one half of all traffic deaths occur at night, despite the fact that fewer miles are driven.
- The average glare recovery time (the time it takes your eyes to recover after being blinded by oncoming headlights) is 5 to 7 seconds. With a glare recovery time of 5 seconds, a driver travelling at 80km/h (50 Mph), will travel approximately 111 Metres (365 feet) in total blindness.
- Tinted glass cuts visibility.
- Headlights do not shine around curves, therefore you will be turning into darkness.

Wet Driving

- Rain mixes with oil, dust and dirt to form slippery road surfaces, especially at the beginning of the rain event, until the rain washes away the slippery material.
- Rain reduces vision, especially at night.
- Rain causes glare from the roadway.
- Rain causes hydroplaning. If this occurs take your foot off of the accelerator and do not make any sudden steering or braking manoeuvres until the vehicle tires make contact with the roadway.
- Increase following distances. Use the four or six second rule, depending on the driving conditions. The rule for judging following distances on a road with no adverse driving conditions is called the "Two Second Rule".

Snow Driving

- Snow and ice decrease visibility and hide hazards.
- Snow and ice cause a very low coefficient of friction leaving it very easy to skid.
- Increase following distance and anticipate stopping.
- Clean snow/ice from all windows and lights before driving.
- Watch for ice or frozen spots on the road.
- If the vehicle is equipped with anti-lock brakes, depress the brakes and wait for the vehicle to stop. Do not pump the brakes. Anti-lock brakes also allow the vehicle to be steered during heavy breaking.
- If the vehicle is not equipped with anti-lock brakes, pump or modulate the brakes if needed when the vehicle begins to skid.
- Drive on rough snow for better traction for accelerating and braking surfaces.
- Take advantage of clear spots in the roadway for heavy braking.
- Beware of black ice. An area that appears clear may not be.
- If the vehicle begins to skid, take your foot off of the brake and/or accelerator, quickly look and steer in the direction that you want the vehicle to go.

Car Maintenance

Basic Maintenance

Basic car checks that should be done before driving a vehicle a long distance:

- Check all exterior lights are working.
- Check that glass surfaces (including the mirrors) are clean and free from chips, cracks, and scratches.
- Check that the windscreen wipers and washers operate efficiently.
- Make sure the horn works.
- Test the handbrake to ensure it 'holds' the car on steep hills.
- Check the condition of the seat belts.
- Check tyre pressures, condition, and tread wear and depth.
- Watch for oil or coolant spots on the garage floor.
- Check the fuel level.

Intermediate Maintenance

More advanced car checks that take more time and require additional skills to complete:

- Check the oil level.
- Check the radiator coolant level.
- Check the power steering fluid.
- Check the brake and clutch fluid.
- Check the washer fluid level.
- Check the battery fluid levels.

Skilled Maintenance

- Oil Change
- Air Filter Change

Troubleshooting

These are simple car troubleshooting tips anyone can follow.

Engine Won't Start	
Brakes Are Weak	
Engine Overheating	
Key Won't Turn	To fix a key you can't turn in the ignition, try wiggling the steering wheel left and right while turning the key.
Noisy Brakes	
Lost Keys / No Keys	See the Hotwiring section in SECURITY > Infiltration.

Repairs

These are simple car repairs and troubleshooting which can be done by anyone.

Change a Tyre	1. Pull over in a safe location with ample room around the car and turning on the hazard lights if required. 2. Check you have the basic tools required: A Spare Tyre, A Lug Wrench and a Car Jack. 3. Apply the parking brake and wheel wedges if you have some. 4. Remove the hubcap or wheel cover 5. Loosen the lug nuts about ¼ to ½ of a turn, using the lug wrench which is the one shaped like a '+'. 6. Place the jack under the vehicle frame alongside the tire that's flat. (Make sure it's stable and won't fall) 7. Raise the vehicle with the jack by turning the lever until the tyre is about 15cm (6 in) off the ground. 8. Unscrew the lug nuts all the way and set them down beside you. 9. Remove the flat tyre and set it on its side so it doesn't roll away. 10. Mount the spare tyre on the lug bolts. 11. Tighten the lug nuts by hand

12. Lower the vehicle enough so it isn't fully resting its weight on the new tyre and tighten the nuts all the way using the lug wrench.
13. Lower the vehicle completely
14. Replace the hub cap.
15. Check the tyre pressure is adequate.

Jump Starting	If either vehicle has an electronic ignition system or is an alternatively fueled vehicle, the use of jumper cables may damage it. 1. Take out your jumper cables. 2. Place both vehicles in Park or Neutral and shut off the ignition in both cars. 3. Attach one of the red clips to the positive terminal of your battery. 4. Attach the other red clip to the positive terminal of the other car. 5. Attach one of the black clips to the negative terminal on the other battery. 6. Attach the last black clip to an unpainted metal surface on your car that isn't near the battery. **DO NOT connect the black cable to the negative terminal on the discharged battery as this may cause a dangerous spark** 7. Start the working vehicle and let the engine run for a few minutes. 8. Try to start your vehicle.
Replace a Battery	1. Pop the hood (Use the hood lever to open the clasp and then use the metal arm to hold it in place - if it has one) 2. Disconnect Battery (Remove the negative first, then the positive) 3. Remove Battery Restraints 4. Remove the Battery (Keep the battery upright at all times) 5. Inspect And Clean Terminals (Check for damage and corrosion and clean them if necessary) 6. Install the New Battery 7. Reconnect Battery Terminals (Make sure the positive and negative terminals are on the correct side) 8. Drop the hood back down (Ensure the newly installed battery terminals aren't making contact with the hood)

Other Car Tips

- Camouflage your vehicles with branches, bushes and leaves when stopped to avoid attention.

Electric Car

Electric cars are so substantially different from fuel cars that they merit their own section.

Power
Unlike being able to simply carry a canister of fuel around with you, you will need a way to charge your car with a high voltage power source. The grid is perfect for this at the moment, but in a SHTF situation you won't have any reliable to recharge it. The most viable option for generating enough electricity is to have a large solar panel array and to charge it during the day.

7 Trailer

Could be a bike or car trailer. Make sure it fits for the correct vehicle you have. Find the rated load limit and don't exceed it as it may shorten the trailer's life. Use the trailer for the largest and heaviest items to avoid strain on the shoulders.

Driving with a Trailer

1	Make sure your vehicle is rated for towing the load. You probably can't tow an 8,000 pound full-size camper trailer with a Honda Civic. Depending upon the particular trailer you need to haul, you need to check to determine the weight limits in the owner's manual and determine the appropriate hitch to have installed. ● The weight should be generally specified by the manufacturer and listed in the owner's manual. Look online if you're missing the manual, or check at an auto shop. ● You need to find two numbers, the gross trailer weight (GTW), which is the combined weight of the trailer and the gear on it, and the maximum tongue weight for your vehicle to determine the class of hitch you'll need to tow the load.
2	Get the appropriate class of hitch for your load installed. Generally, you'll get a hitch receiver installed that you can use for different size trailer hitches, for class 3 and up. These receivers include a removable draw-bar that you can use to install different sized hitches for different loads you might use. If you get the largest receiver installed on your vehicle, you'll be ready for any sized load your vehicle can handle, classified according to the following specs: ● Class 1: 2000 pounds GTW/200 pounds tongue weight ● Class 2: 3500 pounds GTW/350 pounds tongue weight ● Class 3: 5000 pounds GTW/500 pounds tongue weight ● Class 4: 7500 pounds GTW/750 pounds tongue weight ● Class 5: 10,000 pounds GTW/1000 pounds tongue weight
3	Get the right-sized ball for the trailer. The larger the ball, the more weight it can carry. Basically, the ball of the hitch will come in one of three sizes: ● 1 7⁄8 inch (4.8 cm) ● 2 inch (5.1 cm) ● 2 5⁄16 inch (5.9 cm)
4	Attach the trailer to the vehicle. Use the tongue jack to raise the trailer and align it with the ball. Make sure that the hitch lock is unlocked before lowering the trailer onto the ball and securing the tongue. Cross the safety chains to the hooks near the vehicle hitch or the vehicle frame, making sure there is enough slack in the chains but not so much that they drag on the ground. ● Using the tongue jack, try to raise the tongue off of the ball. If you are able to do this, the ball and tongue sizes do not match, or the ball is not locked properly. In this case, replace the ball with the correct size, or lock it properly and try again. ● Once the tongue of the trailer is on the ball, you can lock it in place by placing a bolt or padlock through the ball lock mechanism to prevent it from accidentally opening.
5	Attach the lights with the wiring harness. Generally, these employ a simple colour-coded connection that makes it easy to hook up the lights to the harness should make it easy to install the connector properly to the tow vehicle's harness. ● After you've hooked up the lights, do a quick brake check to make sure everything is functioning properly. It's critical to make sure that your turn signals and brakes work on the back of the trailer to ensure a safe trip (as well as no traffic tickets). ● To keep the connection from corroding, you might consider spraying the contacts with a small amount of dielectric grease.
6	Check the tongue weight. You want the amount of weight resting on the hitch to be roughly 10 to 12 percent of the total weight of the trailer. You can use a regular bathroom scale to place under the beam to check. ● If the weight out-weighs your scale (which is likely for 4000 lb. and up trailers) place the scale farther up the trailer to get a smaller measurement. If you go a third of the way up, triple the weight on the scale to get the approximate weight. ● Depending on the weight of the trailer, you might consider using an equalizing bar to even out the pressure on the hitch. These are generally long metal brackets that transfer a bit of the weight more toward your vehicle's front axle. If you're hauling at the upper end of the specs, use an equalizer.
7	Secure your load. Depending on the load you're hauling, you might need to use a tarp to secure loose objects in boats or refuse trailers, since you're responsible for anything that flies out and causes damage. ● You can also take this opportunity to make sure the hitch height is set correctly, your trailer's tires are inflated to the appropriate specifications, and that you haven't overloaded the trailer in such a way as to negate the careful checks you've already performed.
8	Get familiar with the clearance of your new rig. Before you hit the road, get out your tape measure. Does the trailer make your rig considerably taller? By how much? How much length is added to the back of your car or truck? These will be important considerations any time you're trying to park somewhere you normally wouldn't give a second thought to squeezing into. ● If it's your first time towing a trailer, it's best to practice some in a big empty parking lot before taking it out on the road. You want to be as familiar as possible with the vehicle's response time and turning radius.
9	Accelerate and brake slowly. You must always compensate for the extra weight, especially when slowing down, and especially when driving on inclines. Play it safe and be cautious. You also need to pay especially close attention to the added length of your rig anytime you're: ● Changing lanes ● Merging ● Exiting the interstate ● Parking ● Stopping for gas ● Pulling over
10	Prepare for the difference in fuel economy. Towing a significant amount of weight will negatively effect your fuel economy, so keep a close eye on the gauge. Making frequent pull-offs in crowded gas stations can be stressful for first-time towers, so try to anticipate your fuel needs ahead of time to avoid difficult manoeuvres.
11	Stop frequently and check the connection. Even if you checked and doubled checked your connections and everything is up to code, there's always the possibility that something in the road will jostle the trailer lose a bit. It's best to stop sometimes, especially on long or especially bumpy trips, to make sure everything's still hooked up. Seeing your trailer careen off the road isn't the time to double-check.
12	Stay calm if you take a turn too narrowly. It'll probably happen eventually that you'll mis-time a turn, or lack sufficient space to clear a turn like you figured you would. Don't panic. Make sure there isn't traffic behind you and back up slowly and as straight as possible to give yourself the clearance you need. Get a passenger to hop out and watch the trailer from a different angle to give you steering tips, and use your mirrors judiciously.

Reversing with a Trailer

1	Backing up a trailer is one of the most difficult driving manoeuvres there is, but it's easy to master with the right technique and a bit of smarts. To get ready, roll down your windows and kick a passenger out to act as a spotter. It might take a few runs before you get it perfect, so it helps to have another set of eyes.
2	Set yourself up for success by getting perpendicular. To get yourself oriented properly, pull more or less straight perpendicular to where you want the back end of the trailer to go, keeping the truck and the trailer straight. Pull past the spot by 8–10 feet (2.4–3.0 m) to give yourself adequate room to back up. ● When you've got it lined up, turn your wheel opposite the direction of the parking spot. So, in other words, if you've pulled up perpendicular to a spot on your passenger side, enough ahead of the spot to back up, stop the car and jack the wheel to the left, or the driver's side.
3	When you've got it lined up, turn your wheel opposite the direction of the parking spot. So, in other words, if you've pulled up perpendicular to a spot on your passenger side, enough ahead of the spot to back up, stop the car and jack the wheel to the left, or the driver's side. ● Go extremely slowly. If you're in an automatic transmission, the idling speed should be plenty fast to make you nervous. Use gas only sparingly and don't make unnecessary or fast changes. ● Avoid jack-knifing. If, at any point, the angle of the truck to the trailer becomes smaller than a right angle, straight it back out and give it another go. Don't try to force it, because it won't work.
4	Don't neglect your front end. Make friends with your side mirrors so you can keep an eye on where your front end is at all times, taking special caution to watch out for parking obstacles and bumps that might mess up your approach and be a problem when you're trying to straighten back out. Drive like a pro and use your side mirrors. ● Your rear-view will be basically useless in the task. Use the help of a spotter and your side-mirrors to back up correctly.

8 Bus

A bus would be an ideal bug-out vehicle for a whole family with plenty of room for supplies. Reinforce the insides of the bus to shield from gunfire if on the run. Use the available roof space for solar panels to charge batteries.

Driving a Bus

1	Adjust your seat, steering wheel, and mirrors. Just like in a car, you need to adjust your seat when you get in. This step is especially important when driving buses, as other people may be driving the same bus when you're not on shift. Also, adjust the steering wheel so you can comfortably control it. ● Adjusting the mirrors is also essential. Make sure that you can see the rear wheels in the outside ones, as well as the road behind it. On the inside mirror, you should be able to see the inside of the bus and the road behind the bus. ● The cross-view mirrors should help you see the front of the bus, what you can't see from your seat without mirrors.
2	Start the engine. Put the parking brake on if it is not already set. Stomp on the clutch pedal if your bus is a standard rather than an automatic. Change gears to neutral before turning the ignition key.
3	Push the starter. In most buses, you'll now need to push the starter button. However, with some engines, you'll need to wait about five minutes before you push the starter. For instance, if your engine is diesel and has an inlet heater or glow plugs, that means these parts need to warm up before the engine is started. There should be an indicator light that turns off when you can push the starter.
4	Position your hands correctly. Like cars, you should position your hands in a particular way for the best grip on the steering wheel. On the bus, the recommendation is at 9 and 3, meaning that if you imagine the steering wheel as a clock, your hands will be where the 9 and the 3 are. Another way of looking at is your hands should be in the centre on either side of the wheel.
5	Identify the gears on your bus if it is a standard. If your bus is automatic, you don't need to worry about this method, but if it's a standard, you do. Start by establishing how many gear positions your bus has, usually four or five for driving forward, plus neutral and reverse. ● You should be able to find a diagram on your bus. If you can't, find someone more experienced to tell you about the gears on the bus. ● Once someone shows you, you may want to make your own chart just in case you forget.
6	Shift into motion. Start by pressing your left foot down on the clutch, which is the pedal to the left of the brake. Next, place your right foot on the brake, and shift into second gear, which will be your starting gear. ● Next, undo the parking brake. Slowly lift your foot off the clutch until it reaches the friction point then stop. You'll know you've hit the friction point because the bus will start to move forward. Move your foot to the accelerator. ● As you start to accelerate, release the clutch with your left foot, pushing further down on the accelerator with your right foot.
7	Shift to other gears. As you drive and need to go faster, you'll need to shift up. The process is similar to how you shifted to put the bus in motion. Once again, if you are driving an automatic, you can skip this step. ● Push the clutch in with your left foot. As you do, take your right foot off the accelerator. ● Shift up into the next gear. ● Next, take your foot off the clutch, and press down on the accelerator. You'll need to do this step a bit faster than when you started the bus moving. ● Use the same method to shift down.
8	Pick the most comfortable turning method. Just like in a car, you can use one of two methods when turning the wheel. You either move hand over hand to turn the wheel or push with one hand and pull with the other without crossing over. Hand over hand can be a bit smoother, but if you're more comfortable with the push-pull method, it can be just as effective.
9	Brake before curves. If you try to slow down in the middle of a curve, it can be disastrous in a bus. You can cause the bus to skid, for instance. You may even lose control of the bus. Therefore, when approaching a curve, consider whether you will need to slow down, and do so before you hit the curve.
10	Hug the opposite edge of the lane. That is, you need to give yourself as much space as you can to make the curve. Because of that, you need to move to the edge of the lane, giving you more space. ● For example, if the curve is going to the left, you'll be moving toward the right side of the lane. ● If the curve is going to the right, you'll be moving towards the left side of the lane.
11	Accelerate out of curves. This move is just like a car. That is, as you reach the middle of the curve, it's time to start accelerating again. Move back up to speed as you end the curve.
12	Make a right turn. While left turns are generally pretty easy, right turns can be more difficult, given the length of the bus. Approach an intersection as you would in a car, getting in the correct lane and slowing down. ● Do not swing out into the lane to your left, as you could swing into a car. Hug that side of the lane only. ● If you must take extra space to make a turn, do so in the lanes that you're turning into. That is, as you turn right, you can swing out a little into the far lane next to your new lane if you need to, then return to the proper lane. Just be sure to watch for other vehicles and pedestrians.

13	Check for blind spots when changing lanes. As you enter traffic, it's important to not rely solely on your mirrors if you can. Of course, your blind spots are in slightly different places on a bus. Once you put on your turn signal, wait a few seconds before merging, to give other drivers a chance to honk if you don't see them. ● When you're merging left, your blind spot is near the back of the bus on the left side. ● Make sure you move your whole head and body to see around people to check out the back and sides and to see all you can in mirrors. ● Before merging, make sure you have 1 1/2 bus lengths between you and the next vehicle.
14	Stop at train tracks in most states in school buses. Most states have a law about school buses and train tracks. In other words, you must stop, open the door, and look to see if anything is coming on the tracks. Usually, you must take this precaution even if you have no passengers on the bus. ● You'll need to turn on your hazard lights before breaking, as cars might not expect you to stop. ● Stop close enough to get a clear view, but try not to stop within 15 feet or so. ● Stay stopped if you see a train coming. Don't try to race the train. If you don't see a train, proceed across the tracks.
15	Back up with assistance. Avoid backing up whenever possible, as it's always safest to go forward on a vehicle like a bus. However, when you must go backward, it's best to get someone to help you, if someone is around. Have them stand where you can see them, and then they can help guide you into place. ● Before backing up, honk your horn. Also, turn on your hazards and the audible signal that indicates you're backing up. ● Only back up in a straight line. Reverse the bus, and move back slowly until the person tells you to stop. If no one is around, use your mirrors to guide you.
16	Stop the bus. Remember that a bus is very heavy. It can weigh as much as 9 tons with no one even on it. With a full bus, it can weigh as much as 15 tons. That means that it's going to take you much longer to stop in a bus than it would in a car. ● Downshift to 4th gear when you've slowed below 30. ● Press the clutch in as you are stopping. Slowly ease down on the break until you come to a complete stop.
17	Park the bus. Find a suitable place to park. If you're pulling into a gas station, for instance, you should choose one built for trucks and buses, as some parking lots are not made for vehicles that large. Once you've found a place, put the bus in neutral. ● Unless your bus is turned uphill, turn your wheels to the right. If your bus is facing uphill, your wheels should be facing left. ● Engage the parking brake, and turn the key to shut off the ignition. Always take the key out of the ignition.

9 Truck

This is how to drive a truck if you need to in an emergency.

Driving a Truck

1	Understand how the gear shift differs from a normal vehicle's shifter. If you're familiar with a manual transmission, the basic principles of the Eaton-Fuller Transmission shifter–the style used in many commercial trucks today–is similar, but more complex. Basically, it's oriented like a five-speed, but with a total of four different ratios at each position, which you toggle by a combination of switches and positions. This results in a total combination of 18 different speeds. ● The shift knob has two switches controlling air-actuated gears. One is the range switch, which needs to be set on "Low" for gears Lo-4, and the other is the high/low splitter, which is used to toggle between the low and high setting at each gear. Your index finger operates the range switch, which allows you to flip between high and low at each gear position with your thumb.
2	Learn the gear shift pattern. Most gear shifts have a diagram displaying the shifting pattern, which will help to clue you into the organization of the gears. The low gears are usually differentiated from the high gears by colour, and reverse is indicated by an "R." ● Gears 1-4 should all be straightforward, but then to shift into fifth gear, you shift back to the first position, and the pattern repeats. First gear is in the same position as fifth, second in the same as sixth, and so on. ● Remember, at each position, you also have a total of four different speeds, though only two will be accessible, depending on where you shift from. In first gear, you've got 1L and 1H, as well as 5L and 5H.
3	Practice the gear pattern of the semi while the truck is stopped. This allows you to become familiar with the gear pattern so you can shift up and down without looking. This will help you keep your eyes safely on the road while driving. ● Grip the gear shift so that your index finger is available to work the range switch, and the middle and thumb can work the high/low splitter. ● If you don't have experience operating the clutch and driving a manual transmission vehicle, shifting a semi truck is going to have a much larger learning curve. Operating the gear shifter by itself is challenging enough, so you need to be very comfortable operating the clutch on a regular vehicle before you attempt to drive a semi. Practice on a regular car.
4	Start the truck. Hold the clutch pedal to the floor, as you would to start a normal manual transmission vehicle. This stops the transmission gears from turning, which allows the shifter to slide into gear. Select "LoL" by moving the shifter into the Lo-gear position, usually left and back. ● Check to make sure the range switch is in the low position (down), and the splitter is also on "L" and you'll be ready to start the vehicle.
5	Push down the accelerator and slowly release the clutch. As you might guess when the vehicle's got 18 different speeds, getting the truck into Lo gear on Low setting will get you going about one mile per hour, if that. Once you've slid into it, release the clutch and you'll probably be ready to shift into Lo-H. ● To shift into Lo-H, you'll change the splitter to High gear to shift into high. You need to depress the clutch slightly, but not all the way to floor, then let it out to shift into Lo-H.
6	Double-clutch to shift into first gear, low setting. Depress the clutch again slightly (not to the floor) when the RPMs reach first-gear range, and switch the splitter back to "L," then pull the gear shift into the neutral position and release the clutch. Depress the clutch again, all the way, and push the gear shift into first, as you release the clutch. ● This is called double-clutching, and it's necessary because you can't split between low and high on the splitter while you're in neutral, meaning that you have to toggle from "H" back to "L," then shift into neutral, then operate the clutch again to get it into first. It's a lot of work.
7	Continue this pattern through the first half of the gears. After you shift into 1-L you can flip the high/low switch up into the high position, continuing to accelerate and continuing this basic pattern through the upper gears. ● Repeat the previous steps through 1-H, 2-L, 2-H, 3-L, 3-H, 4-L, and 4-H. To make the half steps, continue pushing the splitter button, releasing the accelerator, pushing in, and releasing the clutch.
8	Switch over to fifth gear when you're ready. With the splitter switch in "L," flip up the range selector to 5-H, which will allow you to avoid grinding gears when you switch back into the first position. This is absolutely essential. Switch the range, then double-clutch-shift back to where 1 was before, and it will be fifth gear.
9	Continue shifting through the higher gears. The basic principles now repeats itself. Continue shifting and toggling between "L" and "H," shifting up through 5-H, 6-L, 6-H, 7-L, 7-H, 8-L, and, finally, 8-H.

10	Use the colour indicators on the tachometer. Most RPM gauges should be colour-coded, with 1500 rpms at about the top (12 o'clock) of the gauge, which is typically coloured green. This is the ideal place to shift between gears. ● 1700-2100 is typically beyond the point where you should be shifting, with the exception of going downhill. This region is typically coloured Yellow, with anything above coloured red. ● If you're less than 1200 rpm and try to shift, the engine is likely to splutter and possibly stall.
11	Get used to the general shifting conditions. After a while, you'll be able to familiarize yourself with the general positions that you need to shift, but in instruction school, you learn a few basic rules of thumb. ● Be in top gear at 50 mph (80.5 km/h) or greater. Generally speaking, if you're travelling at highway speeds or greater, you should be at top gear always. ● Be in fifth or sixth gear for sharp turns in city conditions. To avoid stalling, it's good to be switched over into the upper gears. ● Other general speed guidelines will vary from transmission to transmission, for different trucks. You'll need to ask your instructor or other experienced drivers for tips.
12	Downshift whenever you're slowing down. To downshift, you need to slow down to the rolling speed by hitting the brake, then select the gear for that range. Typically, you need to rev up to 1400-1600rpm, then slip the transmission into the proper gear for that speed range.

10 House Trailer / Caravan

A transportable house to easily evacuate in an impending disaster.

Driving with a Long Load

Reversing with a Trailer / Caravan

11 Tram

This is how to drive a tram if you ever need to.

Driving a Tram

12 Train

This is how to drive different types of trains if the need arises.

Driving a Steam Train

1	Push the reverser/Johnson bar forward - grip the very large lever that rises from near the floor in front or beside you, squeeze the release handle and shove it all the way forward, and let go of the release handle to lock it into place.
2	Open the cylinder cocks - find a medium size valve in front of you on the boiler, or a thin lever on the floor in front of you. Turn the valve all the way clockwise, or pull the lever back.
3	Turn the front headlight on - above you on the ceiling, there will be a large, flat, half-round box or on the side of the cab wall . Slide the knob on the round side of the box all the way to front.
4	Blow the whistle code for forward movement - there will be either a cable, cables or whistle handles, above your head or in front of you on the boiler. Quickly pull down on the cable (or push the lever) twice in quick succession to make the steam whistle sound out two short blasts.
5	Release the engine brakes - two brass horizontal levers will be near your left hand. The top one must be moved from right to left to release the brakes on the engine.
6	Open the throttle to start the engine moving - the very long lever close to your face and hanging from the cab roof is the throttle. Grip it firmly and give it a yank towards you. As you feel the engine move slightly, shove it back in most of the way, so that it does not gather speed too fast. Gradually open throttle as the locomotive approaches track speed.
7	Observe cylinder cock exhaust and close them when only steam is emitted. Move the Johnson bar slowly back toward vertical, but never too close to vertical. This is like the gear shift of your car and admits less steam per cylinder stroke. In turn, this increases the efficiency of steam usage so you don't over work the poor guy throwing coal into the fire (and to conserve fuel and water!) If the locomotive's wheels slip, close throttle most of the way immediately. Allowing the wheels to slip will not render any tractive effort and will damage the locomotive's driving (powered) wheels if done continuously (also "tears" holes in a coal fired locomotive, or in an oil burning locomotive, can cause hollow booms much like an explosion). Wheelslip, as it's called, may cause excess damage if allowed for too long. This includes damage to the firebox itself, which may or may not result in the locomotive exploding. Blow the whistle and ring bell at all crossings of all types and DO NOT EXCEED TRACK SPEED. That is very dangerous, as derailments due to excess speed may occur, even on straight track. This too can cause boiler explosions. See the Wreck of the Old 97 for example.

Driving a Diesel Train

- To start your engines, first check that your gear lever is in neutral and throttle in the "engine idling " position.
- Press the engine starter buttons the lamps alongside these buttons will prove that all your engines have kicked into life and are correctly engaged to the final drive to the road wheels.
- The guard's given you the " right away " on the inter-com. bell.
- Take off the brake the vacuum brake gauge is just above it
- Push the gear lever into first and gently open the throttle.
- Now watch the engine r.p.m. gauge. When its needle enters a sector marked " change up ", shut the throttle to "engine idling".
- Change to second gear, pause briefly to let the self-change gearbox mechanism engage the new gear, then gently reopen the throttle. A glance at your rail speed indicator shows that all this has happened at about 15 m.p.h.
- You'll find you have to make your next gear-change at 25-30 m.p.h. and the last, from third to top, at about 40 m.p.h. your engine speed indicator needle will also tell you just when to change down during deceleration.

- Always keep a grip on your throttle, for a " dead man's handle " is built into it; if you let go for more than five seconds the brakes will automatically go on, after the engines have shut down. This is a protection against any sudden illness attacking the driver, and don't forget to keep an eye on the signals and the track ahead will you.
- Other items marked in the photograph are the Electro-pneumatic control air pressure dial and the train lighting switches.

Driving an Electric Train

Driving an electric train is a pointless article to write in a SHTF situation where the grid is likely to be down, thus not letting the train draw power either at one point of multiple sections of track. What follows is a simple overview anyway. Steering is not required in a locomotive because navigation is achieved by the rails/tracks. Talking in a conventional sense, you will have an acceleration lever and a brake lever. The acceleration lever will have several notches and you need to move the acceleration lever to one notch to maintain a particular speed. Typically a diesel loco may have up to less than 10 notches. Electric loco may have more. The driving aspects vary from one loco to another. But driving a train is nevertheless simpler because you need to pay attention to signals, maintain the appropriate speed based on speed directives for that particular segment and adhere to a schedule.

5 Sea

Any forms of transport which are used on or in the ocean.

Subheadings

1. Raft	2. Canoe	3. Speedboat	4. Sailboat
5. Liveaboard	6. Abandoning Ship	7. Adrift	8. Landing
9. Boating Safety			

1 Raft

A raft can be constructed from any material that floats but most commonly by wood. Controlling the direction on a raft may be tricky but it generally used for slow moving wide rivers to travel faster than on foot.

2 Canoe

3 Speedboat

A boat may not be docked where you left it in a SHTF scenario, plan for alternative routes. A boat would be an ideal bug-out vehicle as you can traverse great distances over water where other's can't and reach isolated islands. Have at least 3x the amount of fuel required to get to your destination stored in different locations.

Driving a Powered Boat

4 Sailboat

Piloting a Sailboat

5 Liveaboard

Living life on a ship with everything you need to survive while sailing where you please. See the SURVIVAL > Water Survival > Ocean Crossing section for more info on crossing the ocean in a boat.

6 Abandoning Ship

When and how to abandon your ship safely if the situation arises.

Inflating a Dinghy

Lower a Rowboat

In the Water

What steps you should take if you've abandoned a boat and you're floating in the water.

7 Adrift

How to survive when you're adrift in a dinghy, rowboat or other unpowered or dead boat.

8 Landing

The approach and landing on solid ground with your temporary sea craft.

9 Boating Safety

How to operate boats safely and what to have aboard.

6 Air

Any forms of transport which are used in the sky.

Light Aircraft

Much larger expense then other transport methods and requires a licence to practise. Most versatile and fastest transport system allowing travel of great distances to your bug out location. Have a pre-set destination landing strip and make sure it's clear of debris, have a back-up as well.

Piloting a Light Aircraft

How to pilot a light aircraft if the need arises.

1	Perform an inspection of the aircraft before getting in. Before taking off, it's important to perform a walk-around examination called a "pre-flight." This is a visual inspection of the aircraft to verify that the airplane components are in good working order. You should have an operating checklist for the plane and this will tell you exactly what to do in each phase of flight, even pre-flight. The basics of pre-flight: ● Check control surfaces. Remove any control locks and make sure your ailerons, flaps, and rudder are moving freely and smoothly. ● Visually check your fuel tanks and oil. Make sure they're filled to the specified levels. To check the fuel level, you'll need a clean fuel measuring rod. To check oil, there's a dipstick in the engine compartment. ● Check for fuel contaminants. This is done by draining a small amount of fuel into a special glass container tool, and looking for water or dirt in the fuel. ● Fill out a weight and balance sheet which helps ensure that you are not flying outside the capabilities of your airplane. ● Look for nicks, dings, and any other type of body damage. These small imperfections might inhibit your aircraft's flying ability, especially if the prop is compromised. Always check props before an engine start. Use caution around airplane props. - If there are electrical issues with the plane, the prop could turn over unexpectedly, causing severe injury.
● Check emergency supplies. There is always the possibility of something going wrong with the aircraft. Make sure there is a supply of food, water, and first aid items. Also ensure that you have an operating radio, flashlight, and batteries. A weapon may be needed along with standard repair parts for the plane.	
2	Locate the flight control (column) in the cockpit. When you take your seat in the cockpit, all of the systems and gauges will look complicated, but they'll look much simpler once you become familiar with what they do. In front of you will be a flight control that looks like a modified steering wheel. ● This control, more commonly called the yoke, works like a steering wheel in a car. It controls the pitch of the nose (up or down) and banking of the wings. Get a feel for the yoke. Push to go down, pull to go up, and use left and right to roll, unsurprisingly, left and right. Don't use too much force when flying. - It doesn't take much to control the plane.
3	Locate the throttle and fuel mixture controls. They are usually located between the two seats in the cockpit. The throttle is black, and the mixture knob is red. In General Aviation, they are usually just push/pull knobs. ● Thrust is controlled by the throttle and the mixture knob adjusts the fuel-to-air ratio (lean or rich in gas).

4	Familiarize yourself with the flight instruments. On most aircraft, there are six primary flight instruments located along two horizontal rows. These indicators are often referred to as the six pack and show, among other things, altitude, attitude (orientation of the aircraft relative to Earth's horizon), compass heading, and speed—both forward and up or down (rate of climb).
	● Top left - The "Airspeed Indicator" shows aircraft airspeed, usually in knots. (A knot is one nautical mile per hour—about 1.15 MPH or 1.85km/h). ● Top centre - The "Artificial Horizon" shows the aircraft attitude, that is, whether the plane is climbing or descending and how it is banking - left or right. ● Top right - The "Altimeter" shows the height (altitude) of the aircraft, in feet MSL—feet above mean, or average, sea level. ● Lower left - The "Turn and Bank Indicator" is a dual instrument which tells how fast you are changing the compass heading (rate of turn) and also whether you are in co-ordinated flight, This is also called the "Turn and Slip Indicator" or "Needle Ball." ● Lower centre is the "Heading Indicator" which shows your aircraft current compass heading. This instrument should be calibrated (every 15 minutes). To calibrate, adjust the instrument to agree with the compass. This is done on the ground or only in straight and level flight. 	● Lower right is the "Vertical Speed Indicator" which tells how fast you are climbing or descending in feet per minute. Zero means that you are maintaining altitude and are neither climbing nor descending.
5	Locate the landing gear controls. Many small planes have fixed gear, in which case you will not have a landing gear control knob. For airplanes that do have a landing gear control, the location varies, but it usually has a white rubber handle. You will be using this after you take off and before you land and taxi the plane. It may deploy any non-fixed landing gear—wheels, skis, skids, or floats beneath. 
6	Place your feet on the rudder pedals. These are a set of pedals at your feet used to control the rudder which is attached to the vertical stabilizer. When you want to make minor adjustments to go left or right on the ''vertical'' axis, use the rudder pedals. Basically, the rudder controls the yawing aspect of turning the aircraft. Turning on the ground is also controlled by the rudder pedals and/or the brakes, not by the yoke.
7	Adjust the flaps to the proper angle for takeoff. Usually 10 degrees of flaps are used to help increase lift. Check your aircraft manual, though. - Some aircraft do not use flaps for takeoff.
8	Perform an aircraft run-up procedure. Before you reach the runway, stop at the run-up area. You'll have to perform the engine run-up procedure here. This helps insure that your aircraft is ready to fly safely.
9	Start the take-off run. Push the fuel mixture knob completely in and advance the throttle slowly. This will increase the engine RPMs (revolutions per minute), generating thrust and the airplane will start to move. Note, though, that the plane will want to go left when you do this, so add proper rudder to stay on the runway centreline. ● If there's a crosswind, you will need to turn the yoke, carefully, into the wind. As you pick up speed, slowly decrease this correction. ● You'll need to control the yaw (twisting on a vertical axis) with the rudder pedals. If the plane starts doing twisting, use the foot pedals to control it.
10	Get up to speed. In order to take off into the air, the plane needs to achieve a certain speed to create enough lift. The throttle should be full on in most aircraft, though some will have a maximum setting to reduce over torquing. You will gradually build enough airspeed to become airborne (usually around 60 knots for small planes). The airspeed indicator will tell you when you have reached this speed. ● When the plane gets enough lift, you'll notice the nose lifting off the ground a bit. Pull gently back on the flight control, being sure to maintain the proper climb rate for the particular aircraft.
11	Pull back on the yoke at this point. This will cause the whole airplane to leave the runway and rise into the air. ● Remember to maintain climb speed and apply proper rudder. ● When at a safe height above the ground and you have a positive rate of climb as indicated by the VSI (Vertical Speed Indicator), return the flaps and landing gear to neutral position. This will reduce drag and extend the safe flying time and distance.
12	Line up the artificial horizon, or attitude indicator. This will keep the plane level. If you fall below the artificial horizon, pull back to raise the nose of the airplane, lifting it. Again, be gentle. - It doesn't need much. ● The best way to keep the plane at the right altitude is making sure you constantly scan the attitude indicator and the altimeter, as well as the rest of the six pack. Get in the habit of scanning so that you don't fixate on any single instrument for an extended time. 13	Bank (turn) the plane. If you have a wheel in front of you (the yoke), turn it. If it's a stick, move it to the left or right to turn. Stay in coordinated flight by using the needle ball (turn coordinator). This gauge depicts a little airplane with a level line and a black ball along it. Keep the black ball in the centre by adjusting the rudder so your turns feel smooth (coordinated). ● A useful learning aid is think step on the ball to know which rudder pedal to step on when co-ordinating a turn. ● The ailerons "control" the bank angle and work in conjunction with the rudder. When turning, coordinate the rudder and ailerons by keeping the turn and bank instrument ball centred, remembering to keep an eye on your altitude and air speed by scanning the six pack.
14	Manage the speed of the airplane. Every airplane has an engine power setting optimized for the cruise phase of flight. Once you've reached your desired altitude, this power should be set to around 75%. Trim the aircraft for straight and level flight. You will feel the controls become smoother as you trim the plane. You'll also find on some aircraft that this power setting is in the torque free zone, where no rudder input is required to maintain straight line flight. ● At maximum power you may find that the nose drifts laterally due to the engine torque and requires an opposite rudder correction. Similarly, you may find that the opposite rudder input is required at flight idle power setting. ● To keep the plane steady, it's necessary to maintain sufficient airflow and speed. Flying too slowly or at overly steep angles can cause the plane to lose airflow and stall. This is most dangerous during takeoff and landing, but it's also important to keep the plane at the appropriate speed during flight. ● Just as you would wear out your car engine if you drove with your foot planted to the floor, you'll do the same to the plane's engine. Only increase power to maintain airspeed in a climb and reduce power to descend without accelerating.

15	Fly with a light touch on the controls. If (and when) you experience extreme turbulence, it is critical not to over-correct. Sudden, large changes in the control surface orientations can push the aircraft past its structural limits, causing damage to the plane and, potentially, compromising its ability to continue flying. ● Another issue is carburettor icing. There is a small knob labelled "carb heat". Apply carb heat for short periods of time, about every ten minutes or so, especially at the high relative humidity levels that encourage icing. Note: This only applies for planes with a carburettor. ● Don't zone out. – You still need to be scanning for other aircraft and keeping an eye on the six pack.
16	Set the cruising engine speed. Once you get a constant cruising speed, you can set the controls and lock them, so the plane will remain at a constant power and you can focus on keeping it level. At this stage, reduce the power on the throttle to about 75% of where it was set. For a single engine Cessna, this should be somewhere around 2400 RPM. ● Next set the trim. The trim is a small surface on the edge of the elevator. It can be moved from within the cockpit. Setting it correctly will prevent the plane from climbing or descending while in cruise flight. ● There are different kinds of trim systems. Some consist of a wheel, lever, or crank which pulls a cable or rod attached to a trim surface bell-crank. Another is a jackscrew and rod. And yet others are an electrical system (which is the easiest to use). The trim setting on each plane has a corresponding speed that the aircraft will seek and hold. It varies by weight, plane design, centre of gravity, and carrying weight (cargo plus passengers).
17	Reduce the airspeed. To do this, reduce power and lower the flaps to the appropriate level. Do not deploy flaps at excessively high speeds (only when airspeed is within the white arch on the airspeed instrument). Stabilize the airspeed and rate of descent by applying back pressure on the control wheel. Knowing if you're right just takes practice. ● Pick your aiming point and begin your descent.
18	Get the right angle of descent and airspeed. This is controlled by a mixture of throttle and yoke. Once you've found a runway, you need to have the combination exactly right to land. When it comes to flying an airplane, this is the hardest part. ● A general rule is that the best approach speed is 1.3 multiplied by the stalling speed of the aircraft. This should be indicated on the ASI. However, always take into account wind speed, too.
19	Lower the nose and watch the numbers on the runway. Those are there for a reason: They tell the pilot whether he or she is going to overshoot or land short. Lower the nose, keeping the numbers right on your horizon. ● If the numbers start to disappear under the aircraft nose, you are landing long. ● If the number distance themselves from the aircraft nose, you are landing short. ● As you get closer to the ground, you will experience the "ground-effect." This will be explained by your instructor in detail, but basically the ground effect causes the plane to float a bit because of reduced drag near the ground.
20	Reduce the throttle to idle. Raise the nose slowly by pulling back on the yoke, until the two main wheels touch down. Continue holding the nose wheel off the ground; it will settle to the ground by itself.
21	Come to a stop. Once the nose wheel has touched down, you can apply brakes to slow for exiting the runway. Exit as soon as possible on the off ramp specified by the tower. Never stop on a runway.

Helicopter

Helicopters can be a valuable asset in a SHTF situation. You can get out of town much faster than in a car and the air can't be blocked by traffic. They can be expensive to maintain and a lot of land will need to be owned but options include keeping it at an airfield. You may want to rethink air travel however if there's an airborne disease prevalent as the rotors will kick it up everywhere.

Piloting a Helicopter

1	Familiarize yourself with the helicopter components and controls. Read your individual aircraft's operating handbook. Here are some of the basic controls you'll need to know to operate the helicopter: ● The collective is the lever mounted on the cabin floor to left side of the pilot's seat. ● The throttle is the twistable grip at the end of the collective. ● The cyclic is the "stick" located directly in front of the pilot's seat. ● The tail rotor is controlled by the two pedals on the floor also known as anti-torque pedals.
2	Understand the helicopter's capabilities and limitations. The majority of accidents are caused when the rotor system gets overloaded. When pilots attempt manoeuvres that require more lift than the rotor system can produce or more power than the helicopter's power-plant can provide to maintain lift.
3	Operate the collective control with your left hand. ● Raise the collective to make the helicopter rise, and lower it to make it go down. The collective changes the main rotor's blade angle collectively. The main rotor is on top of the helicopter. ● Adjust the throttle. As you raise the collective, you need to increase engine speed. Decrease speed as you lower the collective. Throttle is directly linked to the position of the collective lever so that the RPM is always in line with the collective setting. You will only need to make adjustments when necessary.
4	Operate the cyclic control with your right hand. The cyclic is similar to a joystick, but sensitive, so make very small movements. ● Push the cyclic forward to move forward, back to move backward, and to either side to travel sideways. The cyclic does not change the direction in which the front of the helicopter points, but it does cause the helicopter to tilt forward and back (pitch) or to the right and left (roll).
5	Operate the tail rotor pedals with your feet. These two pedals (or anti-torque pedals) control the direction in which the helicopter is pointing, more or less having the same effect as the yaw pedals in an airplane. ● Gently increase pressure on the left pedal to swing the nose left, or increase pressure right to swing the nose right. ● The yaw pedals increase or decrease the force that the tail rotor produces, thereby controlling the yaw. Without a tail rotor to counteract main rotor torque, the helicopter will naturally spin in the opposite direction of the main rotor.
6	Take off. Follow these steps to perform a standard takeoff: ● First, open the throttle slowly until you reach proper operating RPM. ● Pull the collective gradually up. As collective pitch increases, push the left pedal (right pedal for clockwise rotating main rotors). Continue pulling on the collective and depressing the left pedal. Adjust the pedal if the aircraft is turning to the left or right. ● The helicopter will leave the ground and you'll be able to use the cyclic. As you continue to pull the collective and depress the pedal, adjust the cyclic to level the aircraft as you take off. Push forward slightly to start moving forward. ● As the helicopter transitions from vertical to forward motion, it will shudder and the nose will pull up. Push the cyclic forward a little more to make sure you keep going forward. The phenomenon that causes the shudder is called effective translational lift (ETL). ● As speed increases the Rotor blades lift becomes more effective. It is important to anticipate for this phenomenon and correct for them. ● As you progress through ETL, reduce the collective lever and apply less pressure to the pedal. Push the cyclic forward to avoid an abrupt nose high attitude and reduction in forward speed.

TRANSPORT | Air | Helicopter | Piloting a Helicopter

	• Once you've taken off, slightly release forward cyclic pressure. The aircraft will then begin to climb and gain airspeed. From this point, the pedals are primarily used to trim the aircraft. Most manoeuvres will only require a combination of the cyclic and collective controls.
7	Hover by finding a balance between the collective, cyclic and tail rotor controls. • Learn to do this with an instructor, who can operate the other controls while you practice them 1 at a time, and then in combination. You must learn to anticipate the time lag between when you adjust the controls and the helicopter's reaction.
8	Climb and descend using speeds according to your pilot operating handbook. This will vary depending on terrain. Maintain 15-20 knots during a steep climb. Carefully increase collective and be sure not to exceed the yellow limit of the torque gauge.
9	Land, taking care to always have your landing target in sight, normally slightly to your right (pilots side). This may mean that you have adjust your trim so you are turned slightly to one side as you approach. • Try to be around 200–500 feet (61.0–152.4 m) above ground or any obstacles when you are .5 kilometres from your landing area. • Watch your airspeed. At around .2km from the landing area slow the aircraft to 40 knots and begin to descend. Check your descent rate. Be careful not to let your vertical speed go over 300 feet (91.4 m) per minute. Vertical speed can be adjusting by applying the necessary amount of collective. • As you approach the edge of the landing area, gradually slow to 30, then 20 knots. You may need to bring the nose up to decrease airspeed. Doing so will momentarily obscure your sight of the landing area. • Keep moving forward when you get to the landing area, since it's much harder to control drift and land on the target if you hover first. Once the spot you want to land appears to slide beneath the nose of the aircraft you can then reduce the collective. • Arm the parking brake. Ease the cyclic back to reduce momentum and then forward to level the altitude. Keep rate of descent as low as possible — adjust the collective appropriately.
	• Once you have made contact with the ground, check that your parking brake is armed and then reduce all power.

7 Space

Any form of transport which is used in space.

Navigation

How to find your way across the globe

"I'm not lost, I'm exploring."
Unknown

Introduction

This category involves navigation over all forms of terrain using various methods of pinpointing your current location.

Purpose	The aim of NAVIGATION is to help the reader navigate around the world using a range of various navigating instruments and techniques. It gives a foundational understanding of compass and GPS basics, how to read the sun and stars to find the date and time and how someone can keep track of their position using what's around them.
Lost?	• For information on the different types of terrain, see the SURVIVAL section. • For information on countries and nations, see the GEOGRAPHY section. • For the different types of transportation while navigating, see the TRANSPORT section. • If you want to know about the different buildings and locations in an area, see the LOCATIONS section.

Contents

1 Location Basics

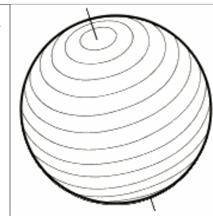
Lat & Long

Latitude

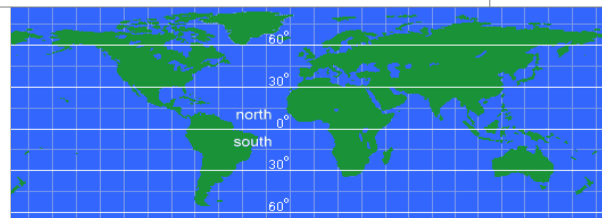
Our coordinate system is going to be based on the spinning earth. The earth spins around on its axis. One end of the axis is the North Pole and the other is the South Pole. These are the two most important points on earth as far as directions and navigating are concerned. The most important number for figuring out locations is 360. There are 360 degrees in a circle and that is the shape of our world, no matter how you slice it.

If you could stand at the centre of the earth, you could look out at the surface of the earth all around you. With the North Pole directly above your head, if you looked straight ahead in any direction, you would be looking at the equator. This imaginary line is exactly halfway between the north and south poles and has a latitude of 0 degrees because you are looking straight ahead at an angle of 0 degrees. If you look up a bit, maybe at an angle of 30 degrees, you have increased your latitude to 30 degrees North.

Continue to look up higher and higher until you are looking straight above you at the north pole which is 90 degrees North. The same thing happens if you look down under the equator. The degrees increase until you are looking straight below you at the south pole which is at 90 degrees south latitude. Just like the equator is a line drawn around the earth at 0 degrees latitude, you can draw a line around the earth at any latitude. Draw a lot of these lines and you will see something like this:

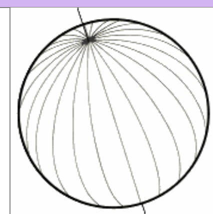


90 degrees north and 90 degrees south are actually just points, not circles. Notice that each latitude is parallel to all others. The actual distance between latitudes is always the same. But, since greater latitudes are closer to the poles, circumferences get smaller as latitudes increase. Drawing those latitude lines onto a map would look like this:

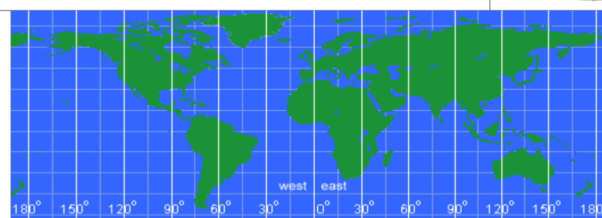


Longitude

Longitude is the angle east or west around the earth, just like latitude is the angle north and south. Longitude lines are called meridians. For latitudes, we have two fixed points - the north and south poles - that we use as end points. But, going around the earth, there is no start or stop, it just keeps spinning and spinning. So, an arbitrary spot was chosen to be the Start point for longitudes. This spot is the Royal Observatory in Greenwich, UK. The longitude line that runs through it is called the Prime Meridian and is longitude zero degrees.

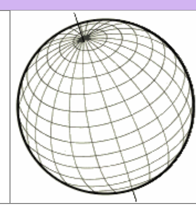


Notice that longitude lines are not parallel. The closer to the poles you get, the shorter the distance between meridians until they all actually converge at the poles. Drawing those longitude lines onto a map would look like this:



Combination

Combining latitude and longitude results in a grid that covers the globe. Every point can be defined by a north/south degree and an east/west degree. For example, Seattle, Washington, USA is at latitude 47.6° North and longitude 122.33° West. From the centre of the earth, look up 47.6° from the equator and turn right (west) 122.33° from the Prime Meridian and you will be looking directly at Seattle. Well, degrees are fine and good, but the earth is almost 25000 miles around so dividing that into 360 pieces means each degree is about 69 miles wide around the equator. That isn't very precise. To help with that, each degree is divided into 60 minutes and each minute is divided into 60 seconds. These used to be used all the time, but now fractional degrees are more common.



For example, the location of the White House in Washington, DC is:
Decimal Degrees (Deg:Min:Sec)
Lat: 38.898648N (38° 53' 55.133" N)
Lon: 77.037692W (77° 02' 15.691" W)

USGS topographic maps are called 7.5 minute maps because they span 7.5 minutes of latitude and 7.5 minutes of longitude. The most common latitude and longitude map is a 1:24,000 scale and the actual map size is about 22 inches by 27 inches. It takes about 57,000 of these maps to cover the entire US and you can buy any of them you want.

Tips
- Latitude is always given before longitude (49° N 100° E)
- Latitudes are parallel, but longitudes are not
- Degrees West and South are sometimes referred to as negative degrees (-12° -23° is the same as 12 S 23 W)
- A place's latitude effects its climate, but its longitude does not
- Key longitude lines are the Prime Meridian (0°) and the International Date Line (180°)
- Key latitude lines include the equator (0°), tropic of cancer (23° 26' N), tropic of Capricorn (23° 26' S), the arctic circle (66° 33' N), and the Antarctic circle (66° 33' S)

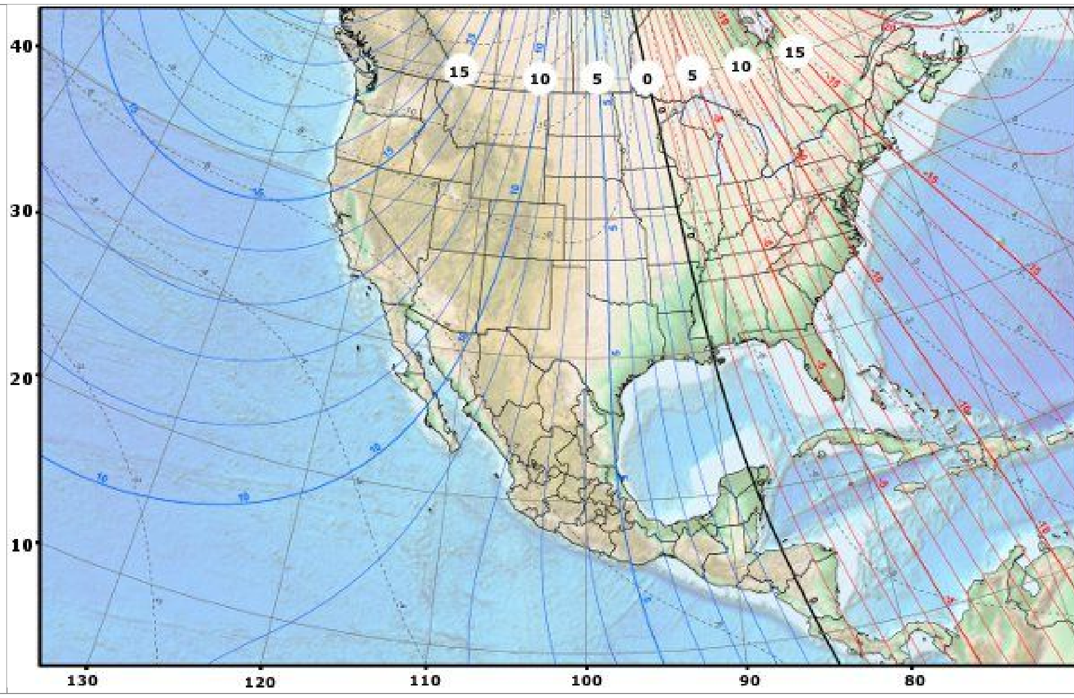
Magnetic Declination

Two North Poles
There are actually two north poles - the Geographic north pole which is the axis around which the earth spins, and the Magnetic north pole which is where compass needles point. Why are there two different poles?

The magnetic north and south poles are the ends of the magnetic field around the earth. The magnetic field is created by magnetic elements in the earth's fluid outer core and this molten rock does not align perfectly with the axis around which the earth spins. There are actually many different sources of magnetic activity around and in the world. All those influencing factors combine to create the north and south attractions at each spot on the globe. The actual strength and direction of 'north' is slightly different everywhere, but it is generally towards the 'top' of the planet.

The difference between the north geographic pole and the north magnetic pole is called magnetic declination or usually just declination.

Depending on where you are on the earth, the angle of declination will be different - from some locations, the geographic and magnetic poles are aligned so declination is minimal, but from other spots, the angle between the two poles is pretty big. To the right is a map of the angles of declination for the U.S. as of 2010.

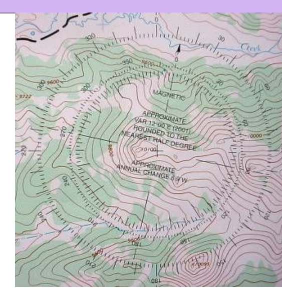


Along the black line with 0° on it running down the Mississippi river, both the geographic and magnetic north poles are in alignment so there is no declination. If you move East of this line, the magnetic north pole will pull your compass needle further and further to the West of geographic north - the angle of compass declination is West Declination. Moving west of the Mississippi river will pull your compass needle further and further to the East.

Compass Declination

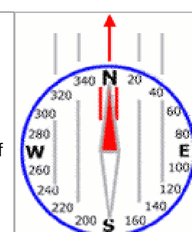
This makes it a bit more challenging to find your way because your compass tells you North is a different direction, depending on where you are. Topographic maps used for navigating should have the declination printed on them like this example. This declination is for an area in the Bighorn Mountains in Wyoming where the declination is 12 degrees East in 2001, when the map was made. It also says that the declination is changing 6.9 minutes West each year.

Using this old map, the declination would be about 11 degrees East in 2010 - about 1 degree less than the map has printed. Unfortunately, the rate of declination change changes over time. When the map was printed, the rate of change was 6.9 minutes West each year. But, it has now sped up to 9 minutes West each year.

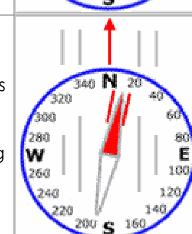


This has been changing every year since the map was printed so the current declination for this area is 10 degrees 41 minutes East. That is already a larger change than what we would expect for 2010, based on the map's information. You should only use recently published maps or know the current declination for the area and use that information for your navigation. There are a few ways to solve this extra challenge of finding true north - either changing your compass or using math in your head.

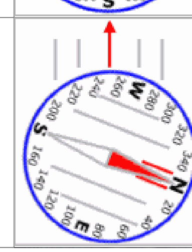
Adjusting Your Compass Declination Adjustment
On many compasses, you are able to adjust the declination by twisting a ring, using a screw, or some other method of changing where the orienting arrow sits in relation to the ring. If you used a compass set with 0 degrees declination in Wyoming where the declination is 12 degrees East, the compass would tell you that you're heading North when you're actually heading 12 degrees East of North. You'd quickly wind up off course and lost.



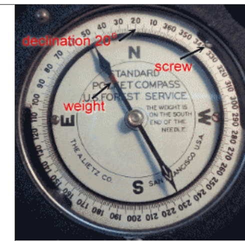
By adjusting the compass to match the declination on our map, the orienting arrow now appears to be off-centre from North, which is how it should be. Now, when you put RED in the SHED (needle inside orienting arrow), the North indicated at the index pointer is true north and matches your map. You can continue to check your location and chart your course correctly. Whenever you stop and check your heading or take a bearing on a distant object, the degrees read on the dial will be the actual true degrees. The only thing that looks a bit odd is that the north end of the compass needle does not point directly at the N when you are heading due North.



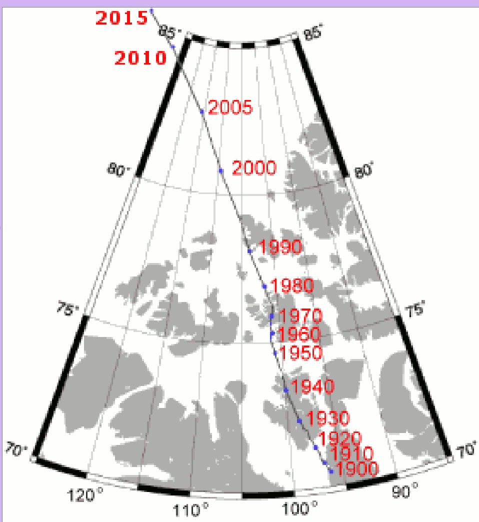
If you have a compass with no declination adjustment or you just like math, then you can do the declination calculations in your head. If you are in Wyoming with a 12 degree East declination, add 12 degrees to the heading you read on your compass dial to determine your true heading. In this example, the reading is 250 degrees. But, you are actually facing 262 degrees. So, to actually head 250 degrees, you need to get a reading of 238 degrees and then you're heading the right way.



Inclination
Inclination is the angle of pull down toward the earth that the magnetic field exerts on a compass needle. At the north magnetic pole, the north end of the needle is pulled straight down toward earth. The compass doesn't do much good if it is pointing straight down. And, actually, for hundreds of miles around the magnetic poles, compasses are worthless. For even more hundreds of miles around that, compasses can be erratic. So, if you are planning an arctic or Antarctic expedition, don't count on your Silva or Brunton for getting you there and back. Not only that, but there are southern hemisphere and northern hemisphere compasses. There is a Forest Service compass shown to the right which has a weight on the southern end to offset the inclination pull in the northern hemisphere. If this compass is taken to the southern hemisphere, the weight would cause it to drag and not balance properly. You might also notice the two declination adjustment screws and the fact that it is currently set for about 20 degrees East declination. This is not a good compass for mountaineering for many reasons.



Drifting Poles



Back to the magnetic north and south poles - which are caused by the earth's molten outer core which is always shifting and churning. As the liquid rock moves, so does the magnetic field. The map to the left shows how the north magnetic pole has shifted over the past century. It has picked up speed lately and has moved more in the last 15 years than in the 50 years before that, it's now moving about 40km (25 miles) per year on its way out of Canada towards Russia.

Therefore if you follow your compass north this year, you will be drawn towards a different place than 15 years ago. Declinations are constantly changing and that means what is written on a map you buy this year will be incorrect next year. The difference depends on where the north pole moves to and what your current declination is.

For example, if you pointed north from Fairbanks, Alaska in 2006, you would follow Line #1. 100 years ago, you would have followed Line #2.

From other places, such as Winnipeg, Manitoba, Line #3 in 2006 and Line #4 100 years ago are nearly the same. These moving magnetic poles continually effect navigation. It's more serious for airplanes and ships, but even for hikers and backpackers, it causes problems. Using a 10 or 15 year old map is a bad idea since the declinations are no longer accurate. If the north pole movement continues at its present speed, it moves 402 km (250 mi) every 10 years. That's about 40 km or 25 miles every year), but lately it has been speeding up so no one knows what the next 10 or 20 years hold in store. Historically, the magnetic field of the earth has churned over and reversed and some scientists say we are well overdue for such a reversal.

Current Declination Map

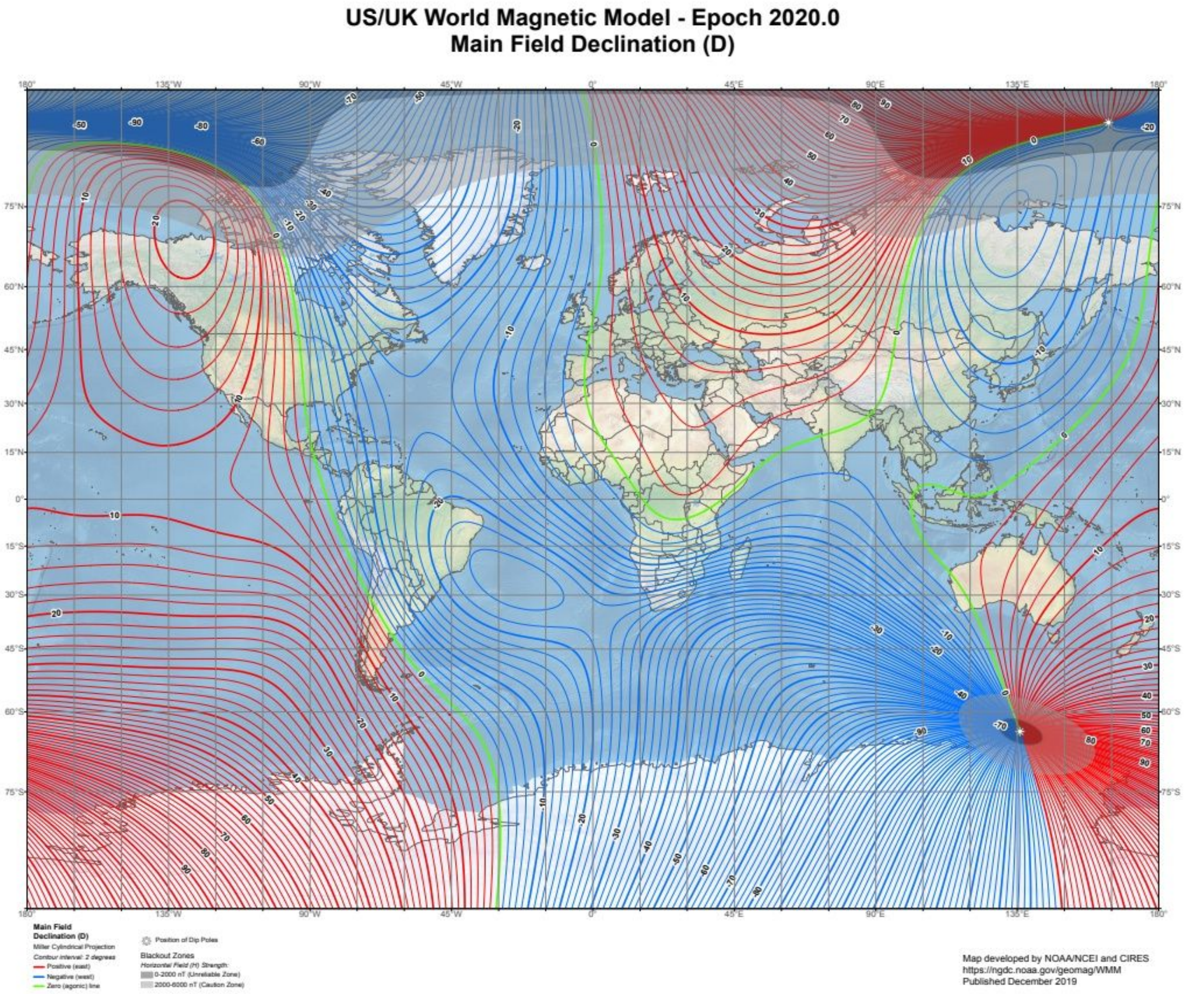
2020 Declination Map

The world magnetic declination map for 2020^n. Red is a positive declination and requires adjusting actual north to the left and blue is a negative reading and north need to be adjusted to the right.

Thick lines are increments of 10° and thin lines are single degrees. Do not use this map to calculate local declinations as they will have changed!

If you must, use it as a general guide only if the internet is out as it will still most likely get you where you're going. Below are declination readings from major cities, adjust in the opposite direction to what is shown.



2018^n City Readings America

2 Compass Basics

The basics of a compass and how to use one properly.

Compass Types

Two main types of the compass are magnetic compass and gyro compass. First one has a magnetic element (needle or a card) that aligns itself with magnetic lines of Earth's magnetic field to point to the magnetic poles of the Earth. Gyro compass has a rapidly spinning wheel whose rotation interacts with the rotation of the earth until its axis of rotation is parallel with the Earth's and points to the Earth's rotational poles. This compass points to the true poles of the Earth.

Liquid Compass	Has a magnetized needle or card immersed in fluid. This method lessens excessive swing and wobble and improves readability while reducing wear.

Marine Compass / Card Compass	This type of compass has a needle that is fixed and a compass card that is mounted in fluid and rotates according to orientation. It is used on boats because the moving card absorbs much of the motion of a boat which makes it easier to read than a needle compass.
Prismatic Compass / Lensatic Compass	They have a glass prism or a lens and a lid that has a hairline. These are used for lining up with an object whose bearing is sought. It also has compass card which rotates in the base. When the compass card stops, the required bearing is read off through the prisms or lens. Some of them have liquid as a damping mechanism while other use electromagnetic induction for the same purpose. Some also have tritium and a combination of phosphors which help to read of the compass in the dark.
Base Plate Compass / Orienteering Compass	It is a liquid filled compass placed on the rectangular base made of transparent plastic so a map can be read through it. It often has a magnifying lens for map reading, some sort of light for low light conditions and a ruler. It is often used for plotting.
Thumb Compass	Is a variant of base plate compass but smaller. It is fixed on the thumb (as its name says) which leaves one hand free.
Solid State Compass	They are found in electric devices. They often have two or three magnetic field sensors from which microprocessor reads data about the orientation of the device. They can often be found in clocks, mobile phones and tablets.
GPS Compass	Uses satellites in a geo synchronous orbit over the Earth to show exact location and direction of movement of bearer.
Astrocompass	Uses positions of various astronomical bodies to find true north. It is used in polar regions where magnetic compasses and gyrocompasses are unreliable. It uses current time and geographical position in the form of latitude and longitude. According to this information, it is sighted on to any astronomical object with a known position to give an extremely accurate reading.

Improvised Compass

Make a Compass
A compass acts as a pointer to magnetic north because the magnetized needle aligns itself with the lines of the Earth' magnetic field. Magnetism and the Earth's poles making a compass in the wild requires a magnetic needle and something to allow it to pivot. Ferrous metal that is un-magnetized can be used and magnetized later. Metal such as a needle or razor blade will suffice and can be suspended from a piece of thread or long hair. You can magnetize (or polarize) a ferrous metal object by slowly stroking it in one direction on a piece of silk or through your own hair. Metal can also be magnetized by stroking it at one end with a magnet. Always stroke in the same direction. As an alternative, insulated wire can be coiled around the metal object and both ends attached to a battery. Then repeatedly insert one end of the metal object in and out of the coil. This will magnetize the metal object. Once the object has been magnetized, suspend if from a piece of non-metallic string or floated on a small piece of wood, cork, or leaf in water (or some other low friction surface). The metal object will align itself with a north-south line.

Materials ● Needle / Ferrous Metal ● Magnet / Silk / Hair ● Leaf ● Water	You can construct a more elaborate improvised compass using a sewing needle or thin metallic object, a non-metallic container (for example, the cut-off bottom of a plastic container or soft drink bottle), and the silver tip from a pen. To construct this compass, take an ordinary sewing needle and break in half. One half will form your direction pointer and the other will act as the pivot point. Push the portion used as the pivot point through the bottom centre of your container; this portion should be flush on the bottom and not interfere with the lid. Attach the centre of the other portion (the pointer) of the needle on the pen's silver tip using glue, tree sap, or melted plastic. Magnetize one end of the pointer and rest it on the pivot point. The needle will align itself on a north-south line.

Using a Compass

Cardinal Directions
There are four cardinal points on a compass - North, South, East, and West. When reading a compass, and telling other people directions, you need to wipe "right" and "left" out of your vocabulary. Right and Left are relative directions and differ depending on your location and direction, but the cardinal points are constant. The direction halfway between North and East is an intercardinal point and is called Northeast. The other three intercardinal points are Southeast, Southwest, and Northwest. Finally, there are secondary intercardinal points halfway between each cardinal point and intercardinal point. These are North-Northeast, East-Northeast, East-Southeast, South-Southeast, ... and so on.

With these directions, you can give someone a fairly good idea of what direction they need to go. We could add additional points, continuing to break each section in half over and over, but telling someone to go East-EastEastNorthEast-EastNorthEast would not be fun. Since there IS a need for more precise directions, the circle of a compass face is split into 360 marks called degrees. For rough directions, go ahead and use North or Northwest. But, for finding your way or locating destinations in the wild, use degrees as you'll see in a bit.

Compass Anatomy

Base Plate
A typical orienteering compass will be rectangular in shape and be approximately 2-by-4 inches in size. The base plate of the unit will be made of clear plastic and marked along the sides with ruler increments. There will also be a direction of travel arrow printed on the centre of the base plate which is used for course plotting. There will also be a small magnification window for reading fine print and is also handy for starting fires in a survival situation. There is also an index pointer at the base of the compass that aligns with the direction of travel arrow and ends at the edge of the compass heading dial for determining degree headings.

Compass Housing
The housing is the raised portion of the compass which contains the direction needle and is filled with liquid. The needle is a magnetized piece of metal with one end painted red to indicate north. The needle rests on a small point which allows for unrestricted free movement. The bubble of air is left as an aid in levelling. The compass should be held so that the bubble is centred over the centre point of the needle where it rotates. Underneath the bubble may be orienting lines that are used to align the compass to lines on a map. This will usually be a starting reference point for reading a map.

Other Compass Features
Other types of compasses may have features that aid in orienteering. A sighting window allows the user to hold the compass at eye level and get a visual fix on a distant object. A mirror may also be featured on some models which you to see reference an object and see the heading at the same time. The mirror is also useful as a signalling device in an emergency situation.

Compass Units

There are a few different ways a compass is divided into units. Depending on the use for the compass, different units of measure may be more useful:

Points	Cheap, basic compasses may be marked with the cardinal points of North, East, West, and South with the intercardinal points of North East, South East, South West, and North West between them. These compasses just provide your general direction when accuracy is not necessary.

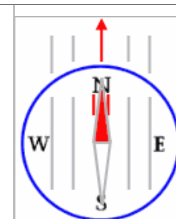
Degrees	A compass divided into 360 degrees is the most common unit of measurement. Each degree is divided into 60 minutes, each minute into 60 seconds. A handheld compass is not able to measure down to a minute, let alone a second, but those units are used for precise locations using latitude and longitude. North is at 0 degrees (and 360 degrees), East is 90 degrees, South is 180 degrees, and West is 270 degrees. Some compasses may be marked in degrees only from 0 to 90. See this example. It has 0 to 90 degrees from North to East. It also has 0 to 90 degrees from South to East, South to West, and North to West. With this style of compass, readings such as North 20 degrees East are used. That means 20 degrees towards East from North. A bearing of South 70 degrees West would be the same as 250 degrees on a normal 360 degree compass (180 degrees for South plus 70 degrees).
Mils	Another unit of measure, the radian, is used mainly by militaries in artillery, tank, and mortar gunnery. There are 2 PI radians in a circle. PI is a constant of approximately 3.1416. That is 2 * 3.1416, or 6.283 radians. Divide each radian into 1000 mil-radians and you see there are 6283 mil-radians in a circle. Mil-radians are called mils for short. 17.78 mils equal 1 degree. Compass use of mils typically rounds 6283 to 6400 for simplification. Some foreign militaries have simplified the other direction and divided the compass face into 6000 units, exactly like the face of a watch, with 100 units the same angle as a minute on the watch face. Using mils, the actual size of an object observed in the field can be estimated. An object that appears to be n mils wide when it is 1000 units away from you, is actually n units wide - the units used does not matter, feet, yards, meters, miles. A vehicle that appears to be 15 mils long and is 1000 feet distant is actually 15 feet long. Or, two vehicles that appear to be 100 mils apart and are 1000 meters away, are actually 100 meters apart. Conversely, if you know the size of an object, you can estimate its distance from you. If the tops of two mountains are 1 mile apart on your map, but they appear to be 100 mils apart, you must be 10 miles away. Sighting on a man (approximately 6 feet tall) who appears to be 12 mils tall must be about 500 feet away. If he seemed 3 mils tall, he'd be 2000 feet away.
Grads	The grad is a metric unit of measure, not commonly used. There are 400 grads in a circle. Each grad can be divided into 100 centigrads. Each centigrad can be divided into 100 milligrads.

Reading a Compass

No matter the compass, one end of the needle always points North. On our mountaineering compasses, it is almost always the RED end, but its a good idea to test your compass before starting to use it.
If you are north of the equator, stand facing the sun around lunchtime with your compass resting in your hand in front of you. Whichever end of the needle points towards the sun is South and the end that points at you is North.
If you're 'down under' the North end points towards the sun and the South end points at you.

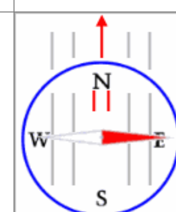
To read your compass
- Hold your compass steadily in your hand so the baseplate is level and the direction-of-travel arrow is pointing straight away from you.
- Hold it about halfway between your face and waist in a comfortable arm position with your elbow bent and compass held close to your stomach.
- Look down at the compass and see where the needle points.
- Turn your body while keeping the compass in front of you.
- Notice that as the compass rotates, the needle stays pointing the same direction.
- Keep turning until the needle points to East on the compass, keeping the direction-of-travel arrow and North mark facing straight in front of you.

This compass is pointing due North (also 0 degrees)

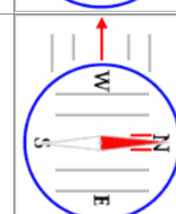


The compass needle is pointing towards East so I must be pointing East, right? No, To find my direction, I must turn the compass dial until the North mark and the "Orienting Arrow" are lined up with the North end of the needle. Then I can read the heading that is at the Index Pointer spot (the butt of the direction-of-travel arrow).
Since the Orienting Arrow is usually two parallel lines on the floor of the compass housing, a good thing to memorize is: RED IN THE SHED

The needle on this compass is pointing East (90 degrees)

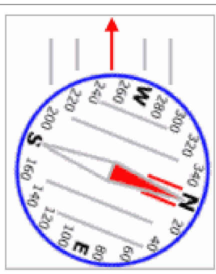


Now we know we are really heading West (270 degrees)



Take a Bearing

By simply moving your compass with your body and using the N-E-S-W markings, you can get a good idea which way you are going. This is often all you need from your compass. But, you've probably noticed on your compass, there are also numbers and tiny lines. These represent the 360 degrees in a circle that surrounds you no matter where you are.



When you need to find your way from one particular place to another, you need to use these numbers to find out the bearing to that remote place. The direction you are going is called your heading. Heading and Bearing are pretty much the same thing. The image above is a heading of about 250 degrees.

Reading Tips
- Hold the compass level - if tilted, the needle will touch the lid and won't move correctly.
- Read the correct end of the needle.
- Knowing that if you are in the northern hemisphere and heading anywhere towards the sun during the middle of the day, you are heading in a southerly direction. If you are in the southern hemisphere and heading towards the sun, you are heading in a northerly direction. (If in the tropics, between the Tropic of Cancer at 23.5 degrees North of the equator and the Tropic of Capricorn at 23.5 degrees South of the equator, this tip should not be used. The sun can be either north or south of you, depending on the time of year.)
- RED IN THE SHED!
- Keep the compass away from metal objects - even a knife, flashlight, or keychain can cause a false reading if too close to the compass.

Finding Direction

To determine the direction, or bearing, from one point to another, you need a compass as well as a map. Most compasses are marked with the four cardinal points —north, east, south, and west—but some are marked additionally with the number of degrees in a circle (360 north is 0 or 360, east is 90, south is 180, and west is 270). Both kinds are easy to use with a little practice. The illustrations on the reverse side show how to read direction on the map. One thing to remember is that a compass does not really point to true north, except by coincidence in some areas. The compass needle is attracted by magnetic force, which varies in different parts of the world and is constantly changing. When you read north on a compass, you're really reading the direction of the magnetic north pole.

A diagram in the map margin will show the difference (declination) at the centre of the map between compass north (magnetic north indicated by the MN symbol) and true north (polar north indicated by the "star" symbol). This diagram also provides the declination between true north and the orientation of the Universal Transverse Mercator (UTM) grid north (indicated by the GN symbol).

The declination diagram is only representational, and true values of the angles of declination should be taken from the numbers provided rather than from the directional lines. Because the magnetic declination is computed at the time the map is made, and because the position of magnetic north is constantly changing, the declination factor provided on any given map may not be current. Contact the National Geophysical Data Centre (NGDC) to obtain current and historical magnetic declination information for any place in the United States.

Taking a compass bearing from a map
- Draw a straight line on the map passing through your location and your destination and extending across any one of the map borders.
- Centre the compass where your drawn line intersects the map border, align the compass axis N-S or E-W with the border line, and read on the compass circle the true bearing of your drawn line. Be careful to get the bearing in the correct sense because a straight line will have two values 180° apart. Remember north is 0, east is 90, and so on.
- To use this bearing, you must compensate for magnetic declination. If the MN arrow on the map magnetic declination diagram is to the right of the true north line, subtract the MN value. If the arrow is to the left of the line, add the value.

Reading a Heading

- Lay your map on the ground - it can be facing any old direction.
- Find your current location on the map and where you want to go.
- Lay your compass on the map so one edge makes a perfect line from where you are to where you want to be. If the distance is too far, use a straight-edge of some kind to line up the two points - a piece of paper, edge of another map, tent pole, anything that is straight. Then, place your compass edge up against this line.
- Holding the compass in place, turn the compass dial until the orienting lines are parallel to the north-south meridian lines on the map. This is making North on your compass dial match North on the map. (don't worry about the needle yet)
- Now, you have taken the bearing. The direction at the index pointer is the direction in which you must head to reach your destination. In this case, it is about 85 degrees.
- Pick up your map and put it away.
- Now you need to pay attention to your compass needle! Hold your compass flat in your hand and turn your body and compass until RED is in the Shed. Of course, you are now facing the direction in which you need to travel.

Orient the Map

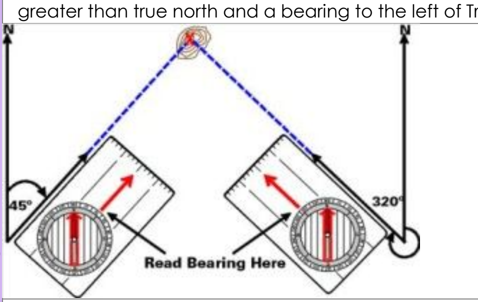
A map represents the real world. By orienting a map, you are positioning it so its North is actually pointing north. When you orient a map and know where you are on the map, you can look in a certain direction and see a real landmark and find it on the map. Orienting, or aligning, the map is really easy with just 4 steps:
- Lay your map out on a relatively flat, smooth surface.
- Turn your declination-adjusted compass dial so due North is at the index pointer.
- Place your compass on your map with the edge of the baseplate parallel to the north-south meridians on the map. Notice the orienteering lines and direction-of-travel arrow are all parallel with the map lines.
- Turn the map and compass together until the compass needle is "boxed" in the orienting arrow (Red in the Shed).

Now, the map is oriented to the real world. If you know where you are on the map, you should be able to look in any direction and see the objects represented on the map in the same direction. If you know where you are on your map, you can also orient your map by distant features. If you can see a known mountain in one direction and a lake off another way, then just lay the map out and turn it so the corresponding marks on the map align with the distant features.

Finding Direction

The first thing you need to know is where you are in relation to magnetic north. You can find this information by looking on your map legend. If you look at a map of North America you will see the line roughly marking 0° declination. If you are on the line where the declination is 0 degrees, then you don't have to worry about any of this, since magnetic north and map north are equivalent. If you are to the right of that line, your compass will point toward the line (to the left) and hence the declination is to the west. If you are to the left of the line, your compass will point toward the line (to the right) and hence the declination is to the east. The compass is used primarily to take bearings. A bearing is a horizontal angle measured clockwise from north (either magnetic north or true north) to some point (either a point on a map or a point in the real world).

Bearings are used to accurately travel to a destination or to locate your position. If you are working from your map, it is called a map bearing and the angle you are measuring is the angle measured clockwise from true north on your map to this other point on the map. If you are taking a bearing off a real point on the landscape with a compass, you are using your compass to measure the angle clockwise from magnetic north to this point on the landscape. This is called a magnetic bearing. Remember that the bearing is measured clockwise. If you think of true north as 12 o'clock then a bearing to the right of that (1 o'clock) is greater than true north and a bearing to the left of True north (11 o'clock) is less than true north.



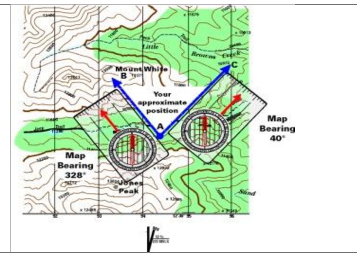
Adjusting for the Local Declination
Another way to deal with declination is to adjust your compass. Some compasses have an outer degree ring that can be unlocked either with a set screw or a latch. This allows you to reset the compass to account for declination. For example, if the declination were 14 degrees East, you could rotate the degree dial to the right so that the magnetic needle was pointing to 14 degrees instead of 360 degrees.

Once you do this, you will no longer have to add or subtract for declination because your compass is aligned to true north. Now when the compass needle is inside the orienting needle, the compass bearing that you read off your compass will be in relation to true north instead of magnetic north. If you have a fixed-ring compass, you can mark the declination angle on the compass ring with a piece of tape.

Make it a habit of keeping your map and compass handy and refer to them every hour or so to locate your position (more often in low visibility). Keep track of your starting time, rest breaks and lunch stops, and general hiking pace. This will also give you an idea of how far you have travelled. Compass readings are also affected by the presence of iron and steel objects. Be sure to look out for—and stay away from—pocket knives, belt buckles, railroad tracks, trucks, electrical lines, and so forth when using a compass in the field.

Position Triangulation

Triangulation is used to locate your position when two or more prominent landmarks are visible. Even if you are not sure where you are, you can find your approximate position as long as you can identify at least 2 prominent landmarks (mountain, end of a lake, bridge, etc.) both on the land and on your map.



1. Orient the map.
2. Look around and locate prominent landmarks.
3. Find the landmarks on the map (preferably at least 90 degrees apart).
4. Determine the bearing of one of the landmarks.
5. Place the compass on the map so that one side of the base plate points toward the landmark.
6. Keeping the edge of the base plate on the symbol, turn the entire compass on the map until the orienting arrow and the compass needle point to north on the map.
7. Draw a line on the map along the edge of the base plate, intersecting the prominent landmark symbol. Your position is somewhere along this line.
8. Repeat this procedure for the other prominent landmark. The second landmark should be as close to 90 degrees from the first as possible. Your approximate position is where the two lines intersect.
9. You can repeat this process a third time to show an area bounded by three lines. You are located within this triangle.
10. If you are located on a prominent feature marked on the map such as a ridge, stream, or road, only one calculation from a prominent landmark should be necessary. Your position will be approximately where the drawn line intersects this linear feature.

Magnetic Variance

True North: (also known as Geographic North or Map North) is the geographic north pole where all longitude lines meet. All maps are laid out with true north directly at the top. Unfortunately for the wilderness traveller, true north is not at the same point on the earth as the magnetic north Pole which is where your compass points.
Magnetic North: Think of the earth as a giant magnet. The shape of the earth's magnetic field is roughly the same shape as the field of a bar magnet. However, the earth's magnetic field is inclined at about 11° from the axis of rotation of the earth, so this means that the earth's magnetic pole doesn't correspond to the Geographic North Pole and because the earth's core is molten, the magnetic field is always shifting slightly.
Grid North: The direction of a grid line which is parallel to the central meridian on the National Grid.

Differences in Norths
The horizontal angular difference between True North and Magnetic North is called MAGNETIC VARIATION or DECLINATION. The horizontal angular difference between Grid North and Magnetic North is called GRID MAGNETIC ANGLE. It is this angle which needs to be applied when converting between magnetic and grid bearings. Differences between the three north's are given on our 1:50 000 scale OS Landranger and OS Explorer 1:25 000 maps. On OS Landranger Maps, the difference between True North and Grid North is given for each corner of the map and is shown in the legend as is the difference between True North and Magnetic North. The information is shown diagrammatically in the middle of the North margin. In both cases the year for which the value was compiled is given and once its value has been corrected for the current year, its value can be accepted for the whole sheet.

Calculate Magnetic Variation
Example – Penzance
The Magnetic North to Grid North is predicted to be 0° 00' west of grid north at the centre of the sheet in July 2014, with an estimated rate of change of 11' east a year. The difference between True North and Grid North at the sheet corners are given and, by interpolation, the difference at Penzance (approximately central to the map), is that True North is 2° 40' east of Grid North. Thus the predicted difference in 2014 between Magnetic North and True North is 2° 40' – 0° 00' plus 2° 40'.

Example – Lowestoft
Magnetic North to Grid North is predicted to be 3° 18' west of grid north at the centre of the sheet in July 2014, with an estimated rate of change of 10' east a year. The difference between True North and Grid North at the sheet corners are given and, by interpolation, the difference at Lowestoft, which is close to the SE corner, is that True North is 3° 00' west of Grid North. Thus the difference between Magnetic North and True North is predicted to be 0° 18' in 2014 – 3° 18' minus 3° 00'.

Grid Magnetic Angle Calculator
The magnetic data shown on Ordnance Survey maps are supplied by the British Geological Survey (BGS). The BGS website includes a tool which will calculate the angle between grid north (British National Grid) and magnetic north at a given location from either coordinates or post code.

Declination
The angular difference between true north and magnetic north is known as the declination and is marked in degrees on your map. Depending on where you are, the angle between true north and magnetic north is different. In the U.S., the angle of declination varies from about 20 degrees west in Maine to about 21 degrees east in Washington. The magnetic field lines of the earth are constantly changing, moving slowly westward (½to 1 degree every five years). This is why it is important to have a recent map. An old map will show a declination that is no longer accurate, and all your calculations using that declination angle will be incorrect. As you will see, understanding this distinction becomes important when navigating with a map and a compass.

Which North to Use
So we have two types of north to contend with. When you look at your map, it is drawn in relation to true north;, when you look at your compass, it points to magnetic north. T to make the map and compass work together you must decide on one North as your point of reference and base all your calculations on that. As you can see the following chart, failure to take declination into account can put you way off target.

Declination or Degrees Off Course
- 1° = 920 ft (280m)
- 5° = 4,600 ft (1,402m)
- 10° = 9,170 ft (2,795m)

Lensatic Compass

The lensatic compass--also called a military compass--is a precision instrument that when used with a topographical map can guide the adventurous off marked trails into wilderness areas with confidence. The lensatic compass is used to set course bearings, orient yourself to a map and follow a course over land. Carrying and being able to navigate with a map and lensatic compass is a good idea, even when you are travelling with a GPS unit. Electronics do fail, so being able to get to your destination safely with a map and compass is an invaluable skill.

Taking a Compass Bearing	**Step 1:** Open the lensatic compass so that the cover is at a 90 degree angle and the lens bracket is at a 30 degree angle to the case. Check to make sure the dial is floating freely. **Step 2:** Insert your thumb into the thumb loop. **Step 3:** Hold the lensatic compass so it is resting on your thumb and bent index finger. **Step 4:** Raise the compass to eye level. **Step 5**: Line up a distant object with the sight wire and the centre of the sighting groove in the lens bracket. **Step 6:** Read the course bearing (azimuth) while keeping your head and compass still. There are two sets of numbers; degrees are in red and mils are in black.
Setting a Course	**Step 1:** Open the lensatic compass completely. **Step 2:** Place the compass on a level map with the azimuth directly under the index line. If you want to follow a 90 degree bearing, put the 90 degree mark under the index line. **Step 3:** Hold the compass in this position and rotate the bezel until the luminous indicator is over the north "N" arrow. The course is now set. To check your course, open the compass and line up the luminous indicator with the "N" arrow. Do not move the bezel.
Following a Course	**Step 1:** Open the lensatic compass with the cover at a 90 degree angle and the lens bracket at a 30 degree angle to the case. **Step 2:** Point the compass along the desired course bearing. **Step 3:** Line up an easily identifiable object with the sighting groove and the sighting wire. **Step 4:** Keep this object in sight as you travel.
Tips & Warnings	● Practice using the lensatic compass using known courses. ● If you lose sight of your distant object when following a course, immediately stop and locate a new object to guide you. ● If there are no objects to sight when following a course, find one to the side. When you reach the object, travel perpendicular to your course of travel to get back on course. Sight a new object and resume travel. ● Never use a compass on or near metal or magnetic fields. This will affect the accuracy of your readings.

3 Maps

Types of Maps

Physical Map	A physical map shows the most used features of an area and covers most aspects of the other types of maps. ● It shows the physical features of a place or country, like rivers, mountains, forests and lakes as well as man-made features like hospitals, police stations and shops. ● The physical features are usually shown in different colours. ● Rivers and lakes are shown in blue, places of low elevation are shown in dark green and as the elevation increases, the colour becomes light green and eventually orange. ● Mountains are shown in brown.
Planimetric Map	A planimetric map presents only the horizontal positions for the features represented. It is distinguished from a topographic map by the omission of relief, normally represented by contour lines. Sometimes, it is called a line map.
Topographic Map	A topographic map shows the terrain features and elevations for 4WDing, hiking and exploration. In topographic maps, differences in elevation and changes in landscape are shown with the help of contour lines and their spacing's. This map type is the most valuable in a SHTF situation where you're bugging out on foot or in a vehicle. It can be used for finding alternative routes on foot if one of them becomes impassable.
Geographic Maps	Geographic maps provide an overall idea of the mapped area in relation to climate, population, relief, vegetation, and hydrography. They also show the general location of major urban areas.
Satellite Map	A satellite map shows the terrain features via images taken from space and stitched together and often has the most detail. It does not contain place names. You can see everything in great detail from 3x3m ponds, houses with solar panels to cars parked on the street. This type of map can be valuable in a SHTF situation to spot resources you wouldn't see on any other map. Aerial photographs can be used as map supplements or substitutes to help you analyse the terrain, plan your route, or guide your movement.
Photomap	A photomap is a reproduction of an aerial photograph upon which grid lines, marginal data, place names, route numbers, important elevations, boundaries, and approximate scale and direction have been added. It's basically a satellite map with place and street names overlayed for easier reading.
Photomosaic	A photomosaic is an assembly of aerial photographs that is commonly called a mosaic in topographic usage. Mosaics are useful when time does not permit the compilation of a more accurate map. The accuracy of a mosaic depends on the method employed in its preparation and may vary from simply a good pictorial effect of the ground to that of a planimetric map.
Joint Operations Graphics	Joint operations graphics are based on the format of standard 1:250,000 medium-scale military topographic maps, but they contain additional information needed in joint air-ground operations. Along the north and east edges of the graphic, detail is extended beyond the standard map sheet to provide overlap with adjacent sheets. These maps are produced both in ground and air formats. Each version is identified in the lower margin as either joint operations graphic (air) or joint operations graphic (ground). The topographic information is identical on both, but the ground version shows elevations and contour in meters and the air version shows them in feet. Layer (elevation) tinting and relief shading are added as an aid to interpolating relief. Both versions emphasize air landing facilities (shown in purple), but the air version has additional symbols to identify aids and obstructions to air navigation.
City/Utility Maps	City/utility maps are maps of urban areas showing streets, water ducts, electricity and telephone lines, and sewers.
Military City Map	A military city map is a topographic map (usually at 1:12,550 scale, sometimes up to 1:5,000), showing the details of a city. It delineates streets and shows street names, important buildings, and other elements of the urban landscape important to navigation and military operations in urban terrain. The scale of a military city map depends on the importance and size of the city, density of detail, and available intelligence information.

Special Maps	Special maps are for special purposes such as trafficability, communications, and assault maps. They are usually in the form of an overprint in the scales smaller than 1:100,000 but larger than 1:1,000,000. A special purpose map is one that has been designed or modified to give information not covered on a standard map. The wide range of subjects that could be covered under the heading of special purpose maps prohibits, within the scope of this manual, more than a brief mention of a few important ones.	**Subjects** ● Terrain features ● Drainage characteristics ● Vegetation ● Climate ● Coasts and landing beaches ● Roads and bridges ● Railroads ● Airfields	● Urban areas ● Electric power ● Fuels ● Surface water resources ● Ground water resources ● Natural construction materials ● Cross-country movements ● Suitability for airfield construction ● Airborne operations

Resource Map	Resource maps pinpoint resources in a certain area such as woodland, crops, gold mines and local wildlife. Economic or resource maps show the different resources present in the area or economic activity prevalent. They show the kind of crops that are grown and the minerals found in places. Symbols and letters are used to depict the activity or resource present in the area.
Road Map	Road maps show all the roads in varying colours based on importance and helps you reach a destination. It is known in some countries as a refidex. Road map is the most widely used map which shows different roads, highways or railways present in the area. It is a very detailed map and is generally used for direction purposes. Road maps are usually made individually, city-wise. There are road maps present for an entire country too, but they cannot be made very detailed.
Symbol Maps	Symbol maps are often used in specialized places such as national parks, walking tracks and theme parks to show you where you are and points of interest. On maps different symbols represent different things, for example black dots represent cities, circled stars represent capitals. Different types of lines represent roads, highways and railways. Trees and forests are depicted in green, mountains in brown and rivers and lakes in blue. This done for making it easier for us to spot these features and study the map.
Atlases	Atlases are collections of maps of regions, countries, continents, or the world. Such maps are accurate only to a degree and can be used for general information only.

Map Features

These are the map features that can be found on most maps.

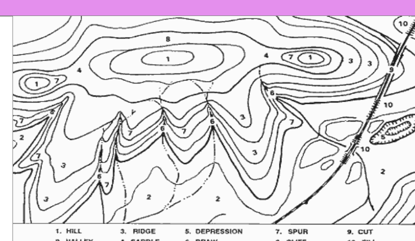
Sheet Name	The sheet name is found in bold print at the centre of the top and in the lower left area of the map margin. A map is generally named for the largest settlement contained within the area covered by the sheet, or for the largest natural feature located within the area at the time the map was drawn.
Sheet Number	The sheet number is found in bold print in both the upper right and lower left areas of the margin, and in the centre box of the adjoining sheets diagram, which is found in the lower right margin. It is used as a reference number to link specific maps to overlays, operations orders, and plans. For maps at 1:100,000 scale and larger, sheet numbers are based on an arbitrary system that makes possible the ready orientation of maps at scales of 1:100,000, 1:50,000, and 1:25,000.
Series Name	The map series name is found in bold print in the upper left corner of the margin. The name given to the series is generally that of a major political subdivision such as a state within the United States or a European nation. A map series usually includes a group of similar maps at the same scale and on the same sheet lines or format designed to cover a particular geographic area. It may also be a group of maps that serve a common purpose such as the military city maps.
Scale	The scale is found both in the upper left margin after the series name, and in the centre of the lower margin. The scale note is a representative fraction that gives the ratio of a map distance to the corresponding distance on the earth's surface. For example, the scale note 1:50,000 indicates that one unit of measure on the map equals 50,000 units of the same measure on the ground.
Series Number	The series number is found in both the upper right margin and the lower left margin. It is a sequence reference expressed either as a four-digit numeral (1125) or as a letter, followed by a three- or four-digit numeral (M661, T7110).
Edition Number	The edition number is found in bold print in the upper right area of the top margin and the lower left area of the bottom margin. Editions are numbered consecutively; therefore, if you have more than one edition, the highest numbered sheet is the most recent. Most military maps are now published by the NGA, but older editions of maps may have been produced by the U.S. Army Map Service. Still others may have been drawn, at least in part, by the U.S. Army Corps of Engineers, the U.S. Geological Survey, or other agencies affiliated or not with the United States or allied governments. The credit line, telling who produced the map, is just above the legend. The map information date is found immediately below the word "LEGEND" in the lower left margin of the map. This date is important when determining how accurately the map data might be expected to match what you will encounter on the ground.
Index to Boundaries	The index to boundaries diagram appears in the lower or right margin of all sheets. This diagram, which is a miniature of the map, shows the boundaries that occur within the map area such as county lines and state boundaries.
Adjoining Sheets Diagram	Maps at all standard scales contain a diagram that illustrates the adjoining sheets. On maps at 1:100,000 and larger scales and at 1:1,000,000 scale, the diagram is called the index to adjoining sheets. It consists of as many rectangles representing adjoining sheets as are necessary to surround the rectangle that represents the sheet under consideration. The diagram usually contains nine rectangles, but the number may vary depending on the locations of the adjoining sheets. All represented sheets are identified by their sheet numbers. Sheets of an adjoining series, whether published or planned, that are at the same scale are represented by dashed lines. The series number of the adjoining series is indicated along the appropriate side of the division line between the series.
Elevation Guide	The elevation guide is normally found in the lower right margin. It is a miniature characterization of the terrain shown. The terrain is represented by bands of elevation, spot elevations, and major drainage features. The elevation guide provides the map reader with a means of quick recognition of major landforms.
Declination Diagram	The declination diagram is located in the lower margin of large-scale maps and indicates the angular relationships of true north, grid north, and magnetic north. On maps at 1:250,000 scale, this information is expressed as a note in the lower margin. In recent edition maps, there is a note indicating the conversion of azimuths from grid to magnetic and from magnetic to grid next to the declination diagram.
Bar Scales	Bar scales are located in the centre of the lower margin. They are rulers used to convert map distance to ground distance. Maps have three or more bar scales, each in a different unit of measure. Care should be exercised when using the scales, especially in the selection of the unit of measure that is needed.
Contour Interval Note	The contour interval note is found in the centre of the lower margin normally below the bar scales. It states the vertical distance between adjacent contour lines of the map. When supplementary contours are used, the interval is indicated. In recent edition maps, the contour interval is given in meters instead of feet.

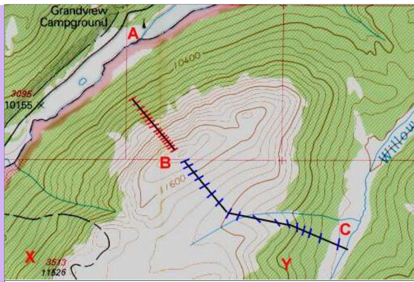
Spheroid Note	The spheroid note is located in the centre of the lower margin. Spheriods (ellipsoids) have specific parameters that define the X Y Z axis of the earth. The spheriod is an integral part of the datum.
Grid Note	The grid note is located in the centre of the lower margin. It gives information pertaining to the grid system used and the interval between grid lines, and it identifies the UTM grid zone number.
Projection Note	The projection system is the framework of the map. For military maps, this framework is of the conformal type; that is, small areas of the surface of the earth retain their true shapes on the projection; measured angles closely approximate true values; and the scale factor is the same in all directions from a point. The projection note is located in the centre of the lower margin. Between 80 degrees south and 84 degrees north, maps at scales larger than 1:500,000 are based on the transverse Mercator projection. The note reads TRANSVERSE MERCATOR PROJECTION.
Vertical Datum Note	The vertical datum note is located in the centre of the lower margin. The vertical datum or vertical-control datum is defined as any level surface taken as a surface of reference from which to determine elevations. In the United States, Canada, and Europe, the vertical datum refers to the mean sea level surface. However, in parts of Asia and Africa, the vertical-control datum may vary locally and is based on an assumed elevation that has no connection to any sea level surface. Map readers should habitually check the vertical datum note on maps, particularly if the map is used for low-level aircraft navigation, naval gunfire support, or missile target acquisition.
Horizontal Datum Note	The horizontal datum note is located in the centre of the lower margin. The horizontal datum or horizontal-control datum is defined as a geodetic reference point (of which five quantities are known: latitude, longitude, azimuth of a line from this point, and two constants, which are the parameters of reference ellipsoid). These are the basis for horizontal-control surveys. The horizontal-control datum may extend over a continent or be limited to a small local area. Maps and charts produced by NGA are produced on 32 different horizontal-control data. Map readers should habitually check the horizontal datum note on every map or chart, especially adjacent map sheets, to ensure the products are based on the same horizontal datum. If products are based on different horizontal-control data, coordinate transformations to a common datum must be performed. UTM coordinates from the same point computed on different data may differ as much as 900 meters.
Control Note	The control note is located in the centre of the lower margin. It indicates the special agencies involved in the control of the technical aspects of all the information that is disseminated on the map.
Preparation Note	The preparation note is located in the centre of the lower margin. It indicates the agency responsible for preparing the map.
Printing Note	The printing note is also located in the centre of the lower margin. It indicates the agency responsible for printing the map and the date the map was printed. The printing data should not be used to determine when the map information was obtained.
Grid Reference Box	The grid reference box is normally located in the centre of the lower margin. It contains instructions for composing a grid reference.
Unit Imprint and Symbol	The unit imprint and symbol is on the left side of the lower margin. It identifies the agency that prepared and printed the map with its respective symbol. This information is important to the map user in evaluating the reliability of the map.
Legend	The legend is located in the lower left margin. It illustrates and identifies the topographic symbols used to depict some of the more prominent features on the map. The symbols are not always the same on every map. Always refer to the legend to avoid errors when reading a map.
Glossary	The glossary is an explanation of technical terms or a translation of terms on maps of foreign areas where the native language is other than English.
Classification	Certain maps require a note indicating the security classification. This is shown in the upper and lower margins.
Protractor Scale	The protractor scale may appear in the upper margin on some maps. It is used to lay out the magnetic-grid declination for the map, which, in turn, is used to orient the map sheet with the aid of the lensatic compass.
Coverage Diagram	On maps at scales of 1:100,000 and larger, a coverage diagram may be used. It is normally in the lower or right margin and indicates the methods by which the map was made, dates of photography, and reliability of the sources. On maps at 1:250,000 scale, the coverage diagram is replaced by a reliability diagram.
Special Notes	A special note is any statement of general information that relates to the mapped area. It is normally found in the lower right margin. For example: This map is red-light readable.
User's Note	The user's note is normally located in the lower right-hand margin. It requests cooperation in correcting errors or omissions on the map. Errors should be marked and the map forwarded to the agency identified in the note.
Conversion Graph	Normally found in the right margin, the conversion graph indicates the conversion of different units of measure used on the map.

Reading Maps

A Topographic Map includes contour lines drawn to represent changes in elevation. When you follow a path on a topographic map that crosses these contour lines, you will be either climbing or descending. A path running parallel to contour lines is relatively flat. When reading a topographic map, you need to visualize in your mind's eye a 3-dimensional view of what the symbols and contour lines are representing. The most important thing to remember is that CLOSE contour lines mean STEEP terrain and OPEN contour lines mean FLAT terrain. Shaded relief added to a topographic map makes it more realistic and helps visualize the real landscape.

This example of a very simple topographic map shows many common features. Keep your eyes open to see these features on other maps and you will start to understand how a topo map works.





Even without elevation numbers, clues that #1 is a hill include streams converging away from the hilltop, contour lines pointing sharply towards the hilltop (indicating draws), contour lines pointing widely away from the hilltop (indicating rounded ridges). Using contour lines, you can tell a lot about the terrain, including steepness, ruggedness, and ground cover. On the image above, look at point A. There are no contour lines around this location so it is relatively flat here and a good place for a campground by the lake. You can tell from the elevation listed at marker 3095 that the campground is at 10155 feet. You can also tell the elevation change between each contour line by looking at the Index lines. Notice that the Index line near point B is labelled 11600 feet and the one due north of it is labelled 10400 feet - that is a difference of 1200 feet. Between these two Index lines are two more Index lines so each index line represents a change in 400 feet of elevation - 10400, 10800, 11200, and 11600.

Count the lines between two index lines and you should see there are 4 lines which cause the 400 feet between the two index lines to be divided into 5 intervals, each one being 80 feet in elevation. So, now we know that on this map every contour line represents 80 feet of elevation change. If you follow a single contour line, your elevation remains constant. For example, starting at point X and following the Index line to the Northeast, around, and down South to point Y, you would stay at about 10,800 feet.

When you cross contour lines, you are either hiking up or down. Look at the two routes to get to the peak at point B - the red route and the blue route. Each path reaches the top, but the blue route is three times as long as the red route. That means it covers more distance to gain the same elevation so it is a more gradual slope - and probably an easier hike. Going up the red route may require a lot of scrambling and hard work.

Using the map above, pretend you are camped at the Grandview Campground but you heard there is great fishing in Willow Creek at point C over the mountain to the Southeast. How could you get there? Well, a straight line to the Southeast would be shortest on the map, but would include a climb of over 1500 feet! Instead, heading East from camp and circling the north side of the mountain will result in a longer distance covered but only about 325 feet in elevation! That may be a much better hike.

One other thing to take into consideration. Notice that the ground is coloured green up to about the 10,800 foot index line. The white area above that is open ground while the green area is forested. This can be good or bad. The forest can offer shade and coolness, but on the other hand it may be thick and difficult to navigate.

Map Scale

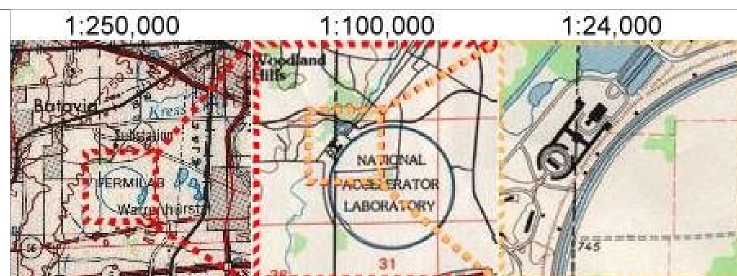
Any scale can be used for a map, but a few common scales have been settled on for use by most organizations:

- 1:24,000 - primary scale used by USGS for mapping the United States in topographic form. 1 inch on the map equals 24000 inches in the real world, or in metric 1 meter equals 24km. This scale is used on the over 54,000 quadrangle maps covering America.
- 1:63,360 - 1 inch equals 1 mile
- 1:50,000
- 1:250,000
- 1:1,000,000

The smaller the number on the bottom of the map scale, the more detailed the map will be. A 1:10,000 map will show objects 100 times as large as a 1:100,000 map but will only show 1/100th the land area on the same sized piece of paper. Here is an example of a Bar Scale found on a map. The scale shows that about 1.25 inches equals 5 miles. The smaller increments to the left of zero are each 1 mile and are used to estimate smaller distances. Notice the scale is 1/250000 - that means 1 inch on the map is equal to 250,000 inches on the real land. (5 miles = 5*5280 feet = 5*5280*12 inches = 316800 inches. 316800 inches / 250000 = 1.27 inches). By including a map scale, if the map is photocopied and reduced in size, the scale can still be used. Otherwise, 1 inch would no longer equal what it should.

Maps are considered large scale maps or small scale maps. A large scale map shows greater detail because the scale is a larger fraction than a small scale map.
Large scale maps have a scale of 1:50,000 or greater (1:24,000, 1:10,000, etc). Maps with scales from 1:50,000 to 1:250,000 are considered intermediate.

Small scale maps are those with scales smaller than 1:250,000. A map of the world that fits on two pages of letter sized paper would be very small scale with a scale of around 1:100,000,000. Right are 3 views of the same location on maps with different scales.



Digital Scale

The following table shows the map scale compared to a digital maps zoom rating. However this may vary based on your screens DPI and other varying factors. The scale depends on your monitor's PPI and on the latitude (because of the Mercator projection).

1	Find the size of your display and calculate the ppi. W = 2.45in ÷ 1080px = 441ppi H = 4.35in ÷ 1920px = 441ppi (441ppi)
2	After finding the ppi of the screen the map is on convert that to pixels/cm. (1 Inch = 2.54 cm) ppi ÷ 2.54 (173.62 pp/cm)
3	Divide 1 cm by the number of pixels. (1 / 173.62 = 0.0057597...)
4	Multiply that by 256 which is the pixels in 1 tile. (0.005759… x 256 = 1.4744845...) This returns the distance on screen for 256 pixels or 1 tile.
5	Convert the result into m by dividing by 100. (0.0147448...m)
6	Divide the equator diameter (40,075,160m) by the result from the last sum. (40,075,160 / 0.0147448… = 2,717,909,874.68...)
7	The result from the last sum is the scale of the map for a computer monitor with 441ppi.

8	To return the scale for other zoom levels simply divide the zoom 0 level by 2 to go up a zoom level. (Zoom 0 / 2 = Zoom 1) (Zoom 1 / 2 = Zoom 2)

Scale Levels

Zoom Level	Zoom 0	Zoom 1	Zoom 2	Zoom 3	Zoom 4	Zoom 5	Zoom 6	Zoom 7	Zoom 8	Zoom 9	Zoom 10
Scale 96 ppi	1:554,678,932	1:277,339,466	1:138,669,733	1:69,334,866	1:34,667,433	1:17,333,716	1:8,666,858	1:4,333,429	1:2,166,714	1:1,083,357	1:541,678
Scale 120 ppi	1:739,571,909	1:369,785,954	1:184,892,977	1:92,446,488	1:46,223,244	1:23,111,622	1:11,555,811	1:5,777,905	1:2,888,952	1:1,444,476	1:722,238
Scale 570 ppi	1:3,512,986,158	1:1,756,493,079	1:878,246,539	1:439,123,269	1:219,561,634	1:109,780,817	1:54,890,408	1:27,445,204	1:13,722,602	1:6,861,301	1:3,430,650
Zoom Level	**Zoom 11**	**Zoom 12**	**Zoom 13**	**Zoom 14**	**Zoom 15**	**Zoom 16**	**Zoom 17**	**Zoom 18**	**Zoom 19**	**Zoom 20**	
Scale 96 ppi	1:270,839	1:135,419	1:67,709	1:33,854	1:16,927	1:8,463	1:4,231	1:2,115	1:1057	1:528	
Scale 120 ppi	1:361,119	1:180,559	1:90,279	1:45,139	1:22,569	1:11,284	1:5,642	1:2,821	1:1,410	1:705	
Scale 570 ppi	1:1,715,325	1:857,662	1:428,831	1:214,415	1:107,207	1:53,603	1:26,801	1:13,400	1:6,700	1:3,350	

Digital Map Tiles

This table shows the number of map tiles covering the entire globe when using a digital map at a certain zoom level.

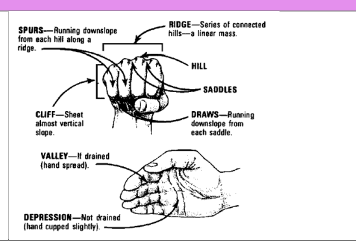
- Zoom Level 0 - 1 Tile
- Zoom Level 1 - 4 Tiles
- Zoom Level 2 - 16 Tiles
- Zoom Level 3 - 64 Tiles
- Zoom Level 4 - 256 Tiles
- Zoom Level 5 - 1,024 Tiles
- Zoom Level 6 - 4,096 Tiles
- Zoom Level 7 - 16,384 Tiles
- Zoom Level 8 - 65,536 Tiles
- Zoom Level 9 - 262,144 Tiles
- Zoom Level 10 - 1,048,576 Tiles
- Zoom Level 11 - 4,194,304 Tiles
- Zoom Level 12 - 16,777,216 Tiles
- Zoom Level 13 - 67,108,864 Tiles
- Zoom Level 14 - 268,435,456 Tiles
- Zoom Level 15 - 1,073,741,824 Tiles
- Zoom Level 16 - 4,294,967,296 Tiles
- Zoom Level 17 - 17,179,869,184 Tiles
- Zoom Level 18 - 68,719,476,736 Tiles
- Zoom Level 19 - 274,877,906,944 Tiles
- Zoom Level 20 - 1,099,511,627,776 Tiles

Map Symbols

Topographic Contours	**Index** Number written on line	**Intermediate** Between Index lines	**Supplementary** Added to flat areas to show measurements	**Depression** Such as volcano top or crater	**Cut; Fill** Roadway levelling terrain						
Vegetation	**Woodland** Trees at least 6feet tall	**Scrub** Low brush	**Orchard** Planted vegetation	**Vineyard** Cultivated vines	**Mangrove** Dense, tropical trees						
Surface Features	**Levee**	**Sand or mud area** dunes or shifting sand	**Intricate Surface Area**	**Gravel Beach or Glacial Moraine**	**Tailings Pond**						
Mines and Caves	**Quarry or Open Pit Mine**	**Gravel, Sand, Clay, or Borrow Pit**	**Mine Tunnel or Cave Entrance**	**Prospect; Mine Shaft**	**Mine Dump**	**Mine Tailings**					
Glaciers and Snowfields	**Limit** Blue denotes coverage	**Form Lines** Show shape, not elevation									
Buildings and Related	**Building**	**School; Church**	**Built-Up Area**	**Racetrack**	**Airport**	**Landing Strip**	**Well (Other than Water); Windmill**	**Tanks**	**Covered Reservoir**	**Campground / Picnic**	**Cemetery: Small; Large** Cem
Roads and Related	**Primary Highway**	**Secondary Highway**	**Light Duty Road**	**Unimproved Road**	**Trail**	**Dual Highway**	**Dual Highway with Median Strip**	**Road Under Construction** U. C.	**Underpass; Overpass**	**Bridge**	**Tunnel**
Railroads and Related	**Standard Gauge Single Track; Station**	**Standard Gauge Multiple Track**	**Abandoned**	**Under Construction**	**Narrow Gauge Single Track**	**Narrow Gauge Multiple Track**	**Railroad in Street**	**Juxtaposition**	**Roundhouse / Turntable**		
Transmission Lines / Pipes	**Power Transmission Line: Pole; Tower**	**Telephone Line** Telephone	**Aboveground Oil or Gas Pipeline**	**Underground Oil or Gas Pipeline** Pipeline							
Boundaries	**National**	**State or Territorial**	**County**	**Civil Township**	**Incorporated City**	**Park, Reservation, or Monument**	**Small Park**				
Rivers / Lakes	**Intermittent Stream**	**Intermittent River**	**Disappearing Stream**	**Perennial Stream**	**Perennial River**	**Small Falls; Small Rapids**	**Large Falls; Large Rapids**	**Masonry Dam**	**Dam with Rock**	**Dam Carrying Road**	**Perennial Lake; Intermittent Lake or Pond**
Rivers / Lakes	**Dry Lake**	**Narrow Wash**	**Wide Wash** Wash	**Canal, Flume, or Aqueduct with Lock**	**Elevated Aqueduct, Flume or Conduit**	**Aqueduct Tunnel**	**Well or Spring**				
Submerged Areas / Bogs	**Marsh or Swamp**	**Submerged Marsh or Swamp**	**Wooded Marsh or Swamp**	**Submerged Wooded Marsh or Swamp**	**Rice Field** Rice	**Land Subject to Inundation**					

Identify Terrain Features

Terrain features are identified in the same manner on all maps, regardless of the contour interval, but you must realize that a hill in the Rocky Mountains will be much bigger than one in south Florida. You must be able to recognize all the terrain features to locate a point on the ground or to navigate from one point to another. The five major terrain features are: Hill, Ridge, Valley, Saddle, and Depression. The three minor terrain features are: Draw, Spur and Cliff. Terrain features can be learned using the fist or hand to show what each would look like on the ground.



Hill	A point or small area of high ground. When you are on a hilltop, the ground slopes down in all directions.	Ridge	A line of high ground with height variations along its crest. The ridge is not simply a line of hills; all points of the ridge crest are higher than the ground on both sides of the ridge.	Valley	Reasonably level ground bordered on the sides by higher ground. A valley may or may not contain a stream course. A valley generally has manoeuvre room within its confines. Contour lines indicating a valley are U-shaped and tend to parallel a stream before crossing it. The course of the contour line crossing the stream always points upstream.	Saddle	A dip or low point along the crest of a ridge. A saddle is not necessarily the lower ground between two hilltops; it may be a break along an otherwise level ridge crest.	Depression	A low point or hole in the ground, surrounded on all sides by higher ground.	Draw	Similar to a valley, except that it normally is a less developed stream course in which there is generally no level ground and, therefore, little or no manoeuvre room. The ground slopes upward on each side and toward the head of the draw. Draws are caused by flash floods and can be found on flat terrain but are more often found along the sides of ridges. Contour lines indicating a draw are shaped like a "V" with the point of the "V" toward the head of the draw (high ground).	Spur	A usually short, continuously sloping line of higher ground, normally jutting out from the side of a ridge. A spur is often formed by two thoroughly parallel streams cutting draws down the side of a ridge	Cliff	A vertical or near-vertical slope. A cliff may be shown on a map by contour lines being close together, touching, or by a ticked "carrying" contour line. The ticks always point toward lower ground.	
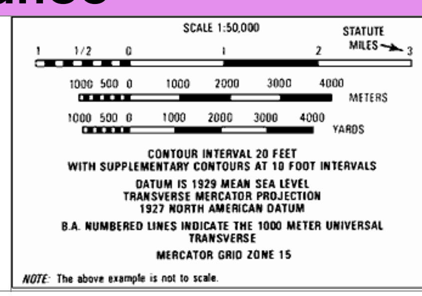
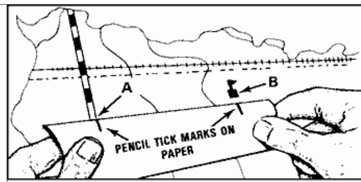
Measure Distance

Measure distance on a military map using ruler or paper and the bar scales. Soldiers can use their maps to measure the distance between two places. The maps are drawn to scale. This means that a certain distance on a map equals a certain distance on the earth.

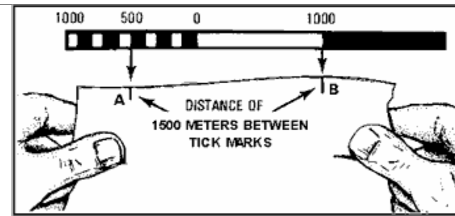
The scale is printed at the bottom and top of each map (Scale 1:50,000). This means that 1 inch on the map equals 50,000 inches on the ground. To change map distance to miles, meters, or yards, use the bar scales at the bottom of the map.



Take a ruler or the edge of a piece of paper and mark on it the straight line distance between your two points.



Then, put the ruler or the paper just under one of the bar scales and read the ground distance in miles, meters, or yards. The bar scale here shows a ground distance of 1,500 meters.

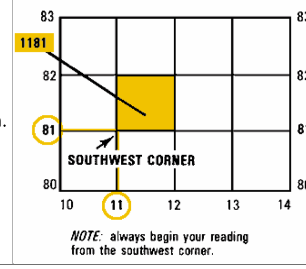


4 Finding Location

Finding Location Using Grid Coordinates

The map has vertical lines (top to bottom) and horizontal lines (left to right). These lines form small squares 1,000 meters on each side called grid squares. The lines that form grid squares are numbered along the outside edge of the map picture. No two grid squares have the same number. The precision of a point location is shown by the number of digits in the coordinates: the more digits, the more precise the location.

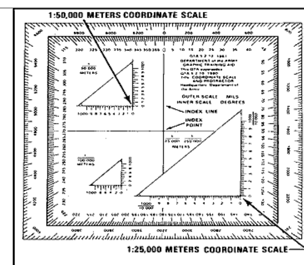
1996-a 1,000 meter grid square.
192961-to the nearest 100 meters.
19269614-to the nearest 10 meters.



Your address is grid square 1181. How do you know this? Start from the left and read right until you come to 11, the first half of your address. Then read up to 81, the other half. Your address is somewhere in grid square 1181.

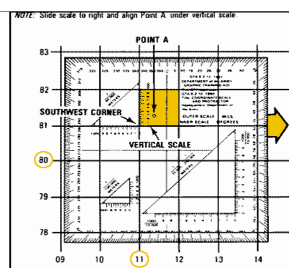
Grid square 1181 gives your general neighbourhood, but there is a lot of ground inside that grid square. To make your address more accurate, just add another number to the first half and another number to the second half-so your address has six numbers instead of four. To get those extra numbers, pretend that each grid square has ten lines inside it running north and south, and another 10 running east and west. This makes 100 smaller squares. You can estimate where these imaginary lines are. Suppose you are halfway between grid line 11 and grid line 12. Then the next number is 5 and the first half of your address is 115. Now suppose you are also 3/10 of the way between grid line 81 and grid line 82. Then the second half of your address is 813. (If you were exactly on line 81, the second part would be 810). Your address is 115813.

The most accurate way to determine the coordinates of a point on a map is to use a coordinate scale. You do not have to use imaginary lines; you can find the exact coordinates using a Coordinate Scale and Protractor. This device has two coordinating scales, 1:25,000 meters and 1:50,000 meters. Make sure you use the correct scale.



First, locate the grid square in which the point (for example, Point A, Figure 2) is located (the point should already be plotted on the map).

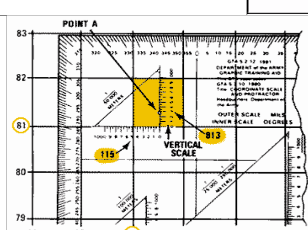
The number of the vertical grid line on the left (west) side of the grid square is the first and second digits of the coordinates. The number of the horizontal grid line on the bottom (south) side of the grid square is the fourth and fifth digits of the coordinates.



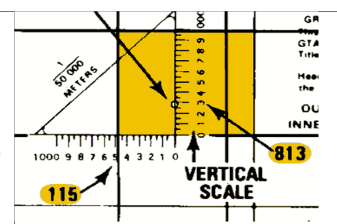
To determine the third and sixth digits of the coordinates, place the coordinate scale on the bottom horizontal grid line of the grid square containing Point A.

Check to see that the zeros of the coordinate scale are in the lower left hand (southwest) corner of the map grid square.

Slide the scale to the right, keeping the bottom of the scale on the bottom grid line until Point A is under the vertical (right hand) scale (Figures 3 and 4).



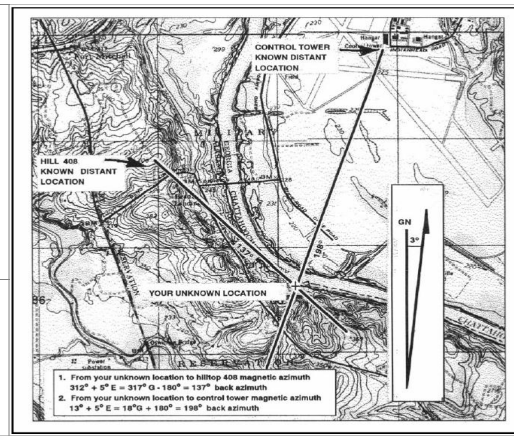
On the bottom scale, the 100 meter mark nearest the vertical grid line provides the third digit, 5. On the vertical scale, the 100 meter mark nearest Point A provides the sixth digit, 3. Therefore, the six-digit grid coordinate is 115813



Finding Location Using Resection

Resection is the method of locating one's position on a map by determining the grid azimuth to at least two well-defined locations that can be pinpointed on the map. For greater accuracy, the desired method of resection would be to use three or more well-defined locations.

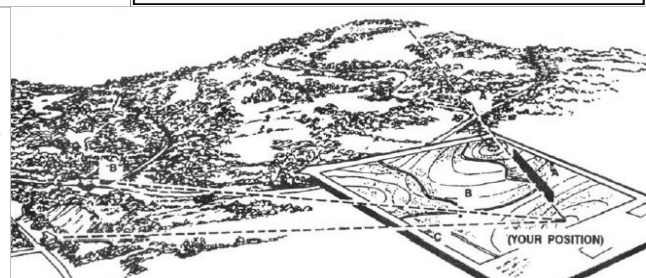
When using the map and compass method:
1. Orient the map using the compass.
2. Identify two or three known distant locations on the ground and mark them on the map.
3. Measure the magnetic azimuth to one of the known positions from your location using a compass.
4. Convert the magnetic azimuth to a grid azimuth.
5. Convert the grid azimuth to a back azimuth. Using a protractor, draw a line for the back azimuth on the map from the known position back toward your unknown position.
6. Repeat 3, 4, and 5 for a second position and a third position, if desired.
7. The intersection of the lines is your location. Determine the grid coordinates to the desired accuracy.



Map text to the right (If it's not readable)
1. From your unknown location to hilltop 408 magnetic azimuth 312° + 5° E = 317°G - 180° = 137° back azimuth.

2. From your unknown location to control tower magnetic azimuth 13° + 5° E = 18°G + 180° = 198° back azimuth.

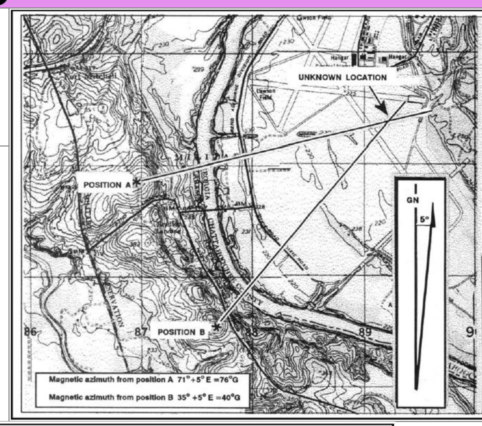
When using the straightedge method:
1. Orient the map on a flat surface by the terrain association method.
2. Locate at least two known distant locations or prominent features on the ground and mark them on the map.
3. Lay a straightedge on the map using a known position as a pivot point. Rotate the straightedge until the known position on the map is aligned with the known position on the ground.
4. Draw a line along the straightedge away from the known position on the ground toward your position.
5. Repeat 3 and 4 using a second known position.
6. The intersection of the lines on the map is your location. Determine the grid coordinates to the desired accuracy.



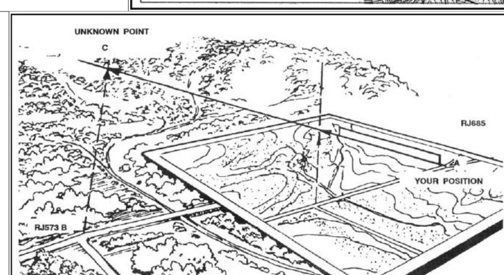
Finding Location Using Intersection

Intersection is the location of an unknown point by successively occupying at least two (preferably three) known positions on the ground and then map sighting on the unknown location. It is used to locate distant or inaccessible points or objects such as enemy targets and danger areas. There are two methods of intersection: the map and compass method and the straightedge method.

When using the map and compass method:
1. Orient the map using the compass.
2. Locate and mark your position on the map.
3. Determine the magnetic azimuth to the unknown position using the compass.
4. Convert the magnetic azimuth to grid azimuth.
5. Draw a line on the map from your position on this grid azimuth.
6. Move to a second known point and repeat steps 1, 2, 3, 4, and 5.
7. The location of the unknown position is where the lines cross on the map. Determine the grid coordinates to the desired accuracy.



The straight edge method is used when a compass is not available. When using it:
1. Orient the map on a flat surface by the terrain association method.
2. Locate and mark your position on the map.
3. Lay a straight edge on the map with one end at the user's position (A) as a pivot point; then, rotate the straightedge until the unknown point is sighted along the edge.
4. Draw a line along the straight edge.
5. Repeat the above steps at position (B) and check for accuracy.
6. The intersection of the lines on the map is the location of the unknown point. Determine the grid coordinates to the desired accuracy.



5 Hiking

Pace Counting

What is a pace?
A pace is equivalent to two natural steps. Starting with your right foot as the first step, when your left foot hits the ground you can count that as one pace.

Why should you know your pace?
Your pace can be used to keep track of distances travelled while hiking. Most people won't use pacing to record long distances but it is possible if you have a system (pacing beads, etc.) to help you keep a pace count.

You will most likely use your pacing skills while backpacking when you find yourself needing to choose a campsite a certain distance such as 200 to 400 feet away from water, trails, or historical sites because of backcountry regulations or general leave no trace practices. A single pace is the stepping of both feet (left and right) one time each incrementing the pace each time the same foot hits the ground.

A pace is equal to one natural step, about 30 inches (76cm) long. To accurately use the pace count method, you must know how many paces it takes you to walk 100 meters. To determine this, you must walk an accurately measured course and count the number of paces you take. A pace course can be as short as 100 meters or as long as 600 meters. The pace course, regardless of length, must be on similar terrain to that you will be walking over. It does no good to walk a course on flat terrain and then try to use that pace count on hilly terrain.

To determine your pace count on a 600-meter course, count the paces it takes you to walk the 600 meters, then divide the total paces by 6. The answer will give you the average paces it takes you to walk 100 meters. It is important that each person who navigates while dismounted knows his pace count. There are many methods to keep track of the distance travelled when using the pace count. Some of these methods are: put a pebble in your pocket every time you have walked 100 meters according to your pace count; tie knots in a string; or put marks in a notebook. Do not try to remember the count; always use one of these methods or design your own method.

Certain conditions affect your pace count in the field, and you must allow for them by making adjustments.

Slopes: Your pace lengthens on a down slope and shortens on an upgrade. Keeping this in mind, if it normally takes you 120 paces to walk 100 meters, your pace count may increase to 130 or more when walking up a slope.
Winds: A head wind shortens the pace and a tail wind increases it.
Surfaces: Sand, gravel, mud, snow, and similar surface materials tend to shorten the pace.
Elements: Falling snow, rain, or ice cause the pace to be reduced in length.
Clothing: Excess clothing and boots with poor traction affect the pace length.
Visibility: Poor visibility, such as in fog, rain, or darkness, will shorten your pace.

Planning Routes

With a map, a compass, some time, and all the knowledge you've learned so far, you can plan out your next wilderness trek from the comfort of your own warm home. Why bother doing this?

● You'll know how far each day's hike will be.
● You'll know where to set up camp.
● You'll know when to expect strenuous and easy terrain.
● You'll be more familiar with the area in general so if you do get lost or injured, you have better chances for survival.
● You'll leave a copy of your trek plan with other people to help with rescue efforts if things go wrong.

Waiting for water to boil for dinner is a great time to check out tomorrow's route and discuss what to expect on the trail ahead. Every day on the trail should include a time to review how well you are following your plan and what adjustments need to be made.

● Get oriented with where you are on the map - your current position.
● Figure out where on the map you want to go - your destination.
● Examine the space between the two points. Look for obstacles such as swamps, lakes, rivers, cliffs, mountains, and such that you may need to go around rather than through or over.
● Find the easiest, prettiest, shortest, or in some way best path to your destination - its up to you.
● From your starting point, put your compass on your map and Read your Heading for the first leg of your trek by adjusting the orienting lines of the compass with the meridian lines on the map and reading the direction at the index pointer.
● Using the map scale, estimate how far this leg will be.
● Considering the contour lines and terrain features, estimate how long this leg will take to cover. Remember, going uphill will take longer. Higher elevations will take longer. Having no trail will take longer. Thick forests, large rock fields, sand, ... will take longer.
● Record your details on your trek plan and repeat for each leg of your trek.

Switchbacks

A switchback is a trail up a steep hill or mountain that is like a zigzag pattern instead of a straight trail. The zigzag pattern protects the hill and the trail from excessive erosion. Trails that go straight up and down steep hills don't stay nice trails for long. Erosion turns those trails into gullies because water moves faster down steep straight-aways and it hollows out the trail and washes all the soil and vegetation down hill. Switchbacks help prevent erosion because they help keep the trail at a consistent gradient. Trail planners build other erosion control devices like rolling grade dips into switchbacks also. Switchbacks are also good because they make it easier to climb steep hills. "Short-cutting" a switchback is bad trail etiquette because it kills vegetation and loosens soil creating a new trail straight up and down the hill, which will in time get large and hollowed out from erosion. Do your part to keep our trails beautiful and control erosion. Walk softly, Leave No Trace, and stay on the designated trail.

6 Navigating

Piloting

Piloting (also called pilotage) involves navigating an aircraft by visual reference to landmarks, or a water vessel in restricted waters and fixing its position as precisely as possible at frequent intervals. More so than in other phases of navigation, proper preparation and attention to detail are important. Procedures vary from vessel to vessel, and between military, commercial, and private vessels. A military navigation team will nearly always consist of several people. A military navigator might have bearing takers stationed at the gyro repeaters on the bridge wings for taking simultaneous bearings, while the civilian navigator must often take and plot them himself. While the military navigator will have a bearing book and someone to record entries for each fix, the civilian navigator will simply pilot the bearings on the chart as they are taken and not record them at all.

If the ship is equipped with an ECDIS, it is reasonable for the navigator to simply monitor the progress of the ship along the chosen track, visually ensuring that the ship is proceeding as desired, checking the compass, sounder and other indicators only occasionally. If a pilot is aboard, as is often the case in the most restricted of waters, his judgement can generally be relied upon, further easing the workload. But should the ECDIS fail, the navigator will have to rely on his skill in the manual and time-tested procedures.

Celestial Navigation

Celestial navigation systems are based on observation of the positions of the Sun, Moon, Planets and navigational stars. Such systems are in use as well for terrestrial navigating as for interstellar navigating. By knowing which point on the rotating earth a celestial object is above and measuring its height above the observer's horizon, the navigator can determine his distance from that subpoint. A nautical almanac and a marine chronometer are used to compute the subpoint on earth a celestial body is over, and a sextant is used to measure the body's angular height above the horizon. That height can then be used to compute distance from the subpoint to create a circular line of position. A navigator shoots a number of stars in succession to give a series of overlapping lines of position. Where they intersect is the celestial fix. The moon and sun may also be used. The sun can also be used by itself to shoot a succession of lines of position (best done around local noon) to determine a position.

Marine Chronometer
In order to accurately measure longitude, the precise time of a sextant sighting (down to the second, if possible) must be recorded. Each second of error is equivalent to 15 seconds of longitude error, which at the equator is a position error of .25 of a nautical mile, about the accuracy limit of manual celestial navigation. The spring-driven marine chronometer is a precision timepiece used aboard ship to provide accurate time for celestial observations. A chronometer differs from a spring-driven watch principally in that it contains a variable lever device to maintain even pressure on the mainspring, and a special balance designed to compensate for temperature variations. A spring-driven chronometer is set approximately to Greenwich mean time (GMT) and is not reset until the instrument is overhauled and cleaned, usually at three-year intervals. The difference between GMT and chronometer time is carefully determined and applied as a correction to all chronometer readings. Spring-driven chronometers must be wound at about the same time each day. Quartz crystal marine chronometers have replaced spring-driven chronometers aboard many ships because of their greater accuracy. They are maintained on GMT directly from radio time signals. This eliminates chronometer error and watch error corrections. Should the second hand be in error by a readable amount, it can be reset electrically.

The basic element for time generation is a quartz crystal oscillator. The quartz crystal is temperature compensated and is hermetically sealed in an evacuated envelope. A calibrated adjustment capability is provided to adjust for the aging of the crystal. The chronometer is designed to operate for a minimum of 1 year on a single set of batteries. Observations may be timed and ship's clocks set with a comparing watch, which is set to chronometer time and taken to the bridge wing for recording sight times. In practice, a wrist watch coordinated to the nearest second with the chronometer will be adequate. A stop watch, either spring wound or digital, may also be used for celestial observations. In this case, the watch is started at a known GMT by chronometer, and the elapsed time of each sight added to this to obtain GMT of the sight. All chronometers and watches should be checked regularly with a radio time signal. Times and frequencies of radio time signals are listed in publications such as Radio Navigational Aids.

The Marine Sextant
The second critical component of celestial navigation is to measure the angle formed at the observer's eye between the celestial body and the sensible horizon. The sextant, an optical instrument, is used to perform this function. The sextant consists of two primary assemblies. The frame is a rigid triangular structure with a pivot at the top and a graduated segment of a circle, referred to as the "arc", at the bottom. The second component is the index arm, which is attached to the pivot at the top of the frame. At the bottom is an endless vernier which clamps into teeth on the bottom of the "arc". The optical system consists of two mirrors and, generally, a low power telescope.

One mirror, referred to as the "index mirror" is fixed to the top of the index arm, over the pivot. As the index arm is moved, this mirror rotates, and the graduated scale on the arc indicates the measured angle ("altitude"). The second mirror, referred to as the "horizon glass", is fixed to the front of the frame. One half of the horizon glass is silvered and the other half is clear. Light from the celestial body strikes the index mirror and is reflected to the silvered portion of the horizon glass, then back to the observer's eye through the telescope.

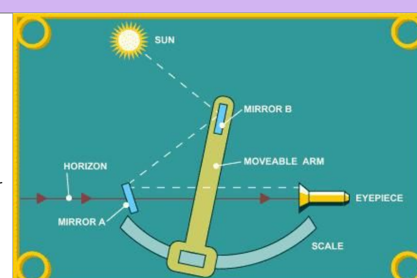
The observer manipulates the index arm so the reflected image of the body in the horizon glass is just resting on the visual horizon, seen through the clear side of the horizon glass. Adjustment of the sextant consists of checking and aligning all the optical elements to eliminate "index correction". Index correction should be checked, using the horizon or more preferably a star, each time the sextant is used. The practice of taking celestial observations from the deck of a rolling ship, often through cloud cover and with a hazy horizon, is by far the most challenging part of celestial navigation.

Sextant
A sextant is a doubly reflecting navigation instrument that measures the angular distance between two visible objects. The primary use of a sextant is to measure the angle between an astronomical object and the horizon for the purposes of celestial navigation. The estimation of this angle, the altitude, is known as sighting or shooting the object, or taking a sight. The angle, and the time when it was measured, can be used to calculate a position line on a nautical or aeronautical chart—for example, sighting the Sun at noon or Polaris at night (in the Northern Hemisphere) to estimate latitude. Sighting the height of a landmark can give a measure of distance off and, held horizontally, a sextant can measure angles between objects for a position on a chart. A sextant can also be used to measure the lunar distance between the moon and another celestial object (such as a star or planet) in order to determine Greenwich Mean Time and hence longitude.

Using a Sextant

The sextant makes use of two mirrors. With this sextant, one of the mirrors (mirror A in the diagram) is half-silvered, which allows some light to pass through. In navigating, you look at the horizon through this mirror. The other mirror (mirror B in the diagram) is attached to a movable arm. Light from an object, let's say the sun, reflects off this mirror.

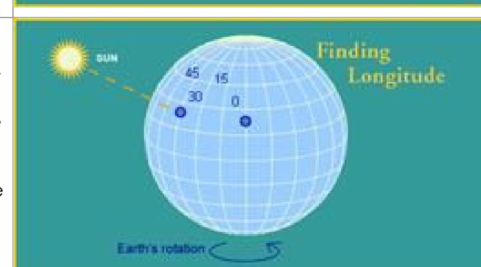
The arm can be moved to a position where the sun's reflection off the mirror also reflects off mirror A and through the eyepiece. What you see when this happens is one object (the sun) superimposed on the other (the horizon). The angle between the two objects is then read off the scale. What makes a sextant so useful in navigation is its accuracy. It can measure an angle with precision to the nearest ten seconds. (A degree is divided into 60 minutes; a minute is divided into 60 seconds.)



There's no way around it: Celestial navigation using a sextant is a complex and involved process that involves a fair amount of calculating, correcting, referring to tables, knowledge of the heavens and the Earth, as well as a lot of common sense. (No wonder it's been so quickly replaced by the satellite-dependent Global Positioning System, or GPS). But the basic principles behind celestial navigation are fairly straightforward. Here are a few examples that show how a sextant can be used to find location...

Finding latitude is easy enough. The first thing you need to do is measure the angle between the horizon and the sun when the sun is at its highest point, which is right around noontime on your watch. A quick look at your trusty tables tells you which line of latitude the sun should be above on that particular day. For example, let's say it's noon on December 21, and the sun is directly overhead. Well, on that day the sun is above the Tropic of Capricorn, so your latitude would have to be 23.5 degrees S. It's a good thing, if you're a navigator, that the Earth spins around at such an even pace.

Every hour it moves 15 degrees. This means that if the sun is above the longitude of 0 degrees at noon, one hour later it will be above 15 degrees West. Now if you have a chronometer (this is just a fancy name meaning "extremely accurate clock"), you can find your longitude. Let's say that the sun is directly overhead and your chronometer, which was set to noon when you were at 0 degrees, says it's 3 o'clock position.



This means that three hours ago the sun was overhead at this latitude at 0 degrees longitude. In those three hours, the sun moved 15 degrees 3 times, or 45 degrees. So you're at 45 degrees West. Of course, the fact that the sun was directly overhead (which very rarely happens) made it especially convenient for finding your longitude, but you could have found your longitude anyway, with the help of your tables. Celestial navigation is the process whereby angles between objects in the sky (celestial objects) and the horizon are used to locate one's position on the globe. At any given instant of time, any celestial object (e.g. the Moon, Jupiter, navigational star Spica) will be located directly over a particular geographic position on the Earth.

This geographic position is known as the celestial object's sub-point, and its location (e.g. its latitude and longitude) can be determined by referring to tables in a nautical or air almanac. The measured angle between the celestial object and the horizon is directly related to the distance between the subpoint and the observer, and this measurement is used to define a circle on the surface of the Earth called a celestial line of position (LOP). The size and location of this circular line of position can be determined using mathematical or graphical methods (discussed below). The LOP is significant because the celestial object would be observed to be at the same angle above the horizon from any point along its circumference at that instant.

Finding Angle of Object

The sextant is a navigational aid that consists of a small sighting scope, mirrors, a movable arm, and a mirror 60-degree wooden or metal arc (a sixth of a circle, from which the instrument's name is derived). You can use a sextant to determine the position (called the "shoot") in the sky of the sun, moon, or other celestial body, as well as your longitude. Although its design looks complicated, with an understanding of how it works and practice, you can reliably use it to find your position.

1	Know, if possible, your position above sea level. If you're not using the sextant from aboard a ship at sea, you'll have to correct your sighting for your height above sea level. We'll discuss the correction later; for now, you just need to know your elevation above sea level.
2	Sight the horizon by looking through the horizon mirror. The horizon mirror is only partially silvered, allowing you to look through it and through the sighting scope beyond it. ● The horizon line forms the baseline for the angle of elevation for the object you're determining the position of. ● Your sextant may not regard the horizon line as being 0 degrees. If it doesn't, you'll have to correct the angle measure of the object you're trying to determine by the same amount as the horizon line error. This error is called index error.
3	Move the sextant's index arm until the object you're trying to find the position of is also visible on the horizon. A second mirror, the index mirror, is mounted on the moving arm. Moving the arm rotates the disk the index mirror is on until light hitting the index mirror hits the reflective portion of the horizon mirror, making the object the light comes from appear to rest on the horizon. ● Sextants designed for looking at the sun include shade glasses to protect your eyes from the sun's rays.
4	Clamp the index arm in place. The clamp is a flip-lock that prevents the arm from moving freely.
5	Fine-tune the position of the arm by turning the micrometre knob until the object rests on the horizon. Make the adjustments gradually while swaying the sextant from side to side until the object just touches the horizon.
6	Record the time at which you made your sighting. You'll need to record the time in hours, minutes, and seconds, starting with the seconds first to avoid errors. ● Quickly recording the time is especially important if you're using a sextant in marine navigation.
7	Record the angle measure. You can read the angle of elevation for the object as follows: ● The degrees of elevation will be at the centre of the index bar (the part of the index arm the clamp and micrometre knob are attached to) in a window over the sextant arc. The index bar may have a small magnifying glass to help you read the graduations on the sextant arc. ● The minutes and seconds can be read from the graduations on the micrometre knob.
8	Correct the angle measure according to your position and the object you're sighting. The angle measure you found with the sextant needs to be corrected for each of the following things: ● Index error. This error is caused when your sextant doesn't read the horizon as 0 degrees, but as more or less than 0. If your sextant reads the horizon angle as greater than 0 (a positive), subtract the horizon angle from the angle measure of the object. If your sextant reads the horizon angle as less than 0 (a negative), add the number of degrees difference to the angle measure of the object. ● Dip. This correction adjusts for your position above sea level. Find your elevation in feet (if in meters, multiply by 3.28), then multiply the square root of your elevation by 0.98 to find the amount to correct the angle measure by. ● Refraction. Light rays bend when passing through a substance; this bending is called refraction. The thicker the atmosphere, the greater the refraction. You can get the correct refraction correction for where you are by consulting the Nautical Almanac. ● Parallax. You need to correct for parallax if you're observing the sun, moon, or a planet with your sextant. This correction factor is available from the Nautical Almanac.

● Semi-diameter. If you're observing an object with a significant apparent diameter (the sun or moon), you need to find the apparent distance from its edge to its centre. This correction factor is available from the Nautical Almanac.
When all of these corrections are applied, you have the object's angle of elevation.

Finding Your Latitude at Daytime

1	Find the sun's angle of elevation at its highest point. This occurs at noon, local time (standard time). Follow the instructions in "Part One: Finding Angle of Elevation for an Observed Object."
2	Consult reference tables to find the latitude the sun should be directly over on the day you're observing. The sun appears directly overhead (at zenith, 90 degrees elevation) at the equator (0 degrees latitude) on the vernal and autumnal equinoxes (the first days of spring and fall). ● From the March equinox, the place where the sun appears directly overhead moves northward until the June solstice, then it moves back toward the equator until the September equinox. The latitude where the sun is directly overhead on the June solstice is the Tropic of Cancer, 23.5 degrees North latitude. ● From the September equinox, the place where the sun appears directly overhead moves southward until the December solstice, then it moves back toward the equator until the March equinox. The latitude where the sun is directly overhead on the December solstice is the Tropic of Capricorn, 23.5 degrees South latitude. ● If you are north of the Tropic of Cancer, the sun will always appear south of you at its highest point. If you are south of the Tropic of Capricorn, the sun will always appear north of you at its highest point. If you are between the tropics, the sun may appear either to your north or south at its highest point, or directly overhead, given the time of year.

3	Find the difference between the elevation angle of the sun and the zenith. If the sun appears south of you at an elevation angle of 49 degrees, subtract 49 from 90 to produce a difference of 41. ● If you are making this observation on either the June or September equinox, this difference is your latitude, in this case 41 degrees North latitude. If the sun had appeared north of you at this same elevation on either of the equinoxes, your latitude would be 41 degrees South latitude. If it isn't one of the equinoxes, you have more work to do. ● If the latitude at which the sun is directly overhead is north of the equator and the sun appears to your south at its highest point, add this latitude (the solar declination) to the remaining angle to get your latitude. If the sun appeared overhead at a latitude of 20 degrees North latitude when you saw it at an elevation of 49 degrees from your position, your latitude would be 61 degrees North latitude (90 – 49 + 20). Likewise, if the latitude at which the sun is directly overhead is south of the equator and the sun appears to your north at its highest point, you would add the latitude to the remaining angle to get your latitude.

● If the latitude at which the sun is directly overhead is south of the equator and the sun appears to your south at its highest point, subtract this latitude from the remaining angle to get your latitude. If the sun appeared overhead at a latitude of 20 degrees South latitude when you saw it at an elevation of 49 degrees from your position, your latitude would be 21 degrees North latitude (90 – 49 – 20). Likewise, if the latitude at which the sun is directly overhead is north of the equator and the sun appears to your north at its highest point, you would subtract the latitude from the remaining angle to get your latitude.

Finding Your Latitude at Night

1. Find Polaris, the North Star. Polaris is the brightest star in the constellation Ursa Minor (the Little Bear, Little Dipper). It is located at the end of the Little Bear's tail/Little Dipper's handle. If you have trouble spotting it, there are two ways to find it.
● Sight along the two stars at the outer end of the bowl in the Big Dipper in the direction the bowl opens. These pointer stars will lead your eye to Polaris.
● Sight from the Great Square in Pegasus through the constellation Cassiopeia (resembling an "M" or "W," depending on its position in the sky). When the Big Dipper is below the horizon, this is a substitute method to find Polaris.

Find Polaris' altitude with your sextant. See "Part One: Finding Angle of Elevation for an Observed Object" for instructions for how to do this. The angle of elevation for Polaris will be the same as your latitude.
● This method works only for locations in the Northern Hemisphere, as Polaris is not visible for locations south of the equator.

Sextant Almanacs

● The almanacs are vital in finding your location around the world and are updated yearly.
http://www.backbearing.com/almanac.html
The file size of the Sun Almanac is around 300kb.

● Sight Reduction Tables and others can be found at http://www.backbearing.com/tables.html. They also have excel sheets which automatically calculate a few of the fields.

The Nautical Almanac
● https://www.nauticalalmanac.it/en/navigation-astronomy/the-nautical-almanac.html

Inertial Navigation

Dead Reckoning
o

Inertial Navigation
Inertial navigation system is a dead reckoning type of navigation system that computes its position based on motion sensors. Once the initial latitude and longitude is established, the system receives impulses from motion detectors that measure the acceleration along three or more axes enabling it to continually and accurately calculate the current latitude and longitude.

Electronic Navigation

Radio Navigation

A radio direction finder or RDF is a device for finding the direction to a radio source. Due to radio's ability to travel very long distances "over the horizon", it makes a particularly good navigation system for ships and aircraft that might be flying at a distance from land. RDFs works by rotating a directional antenna and listening for the direction in which the signal from a known station comes through most strongly. This sort of system was widely used in the 1930s and 1940s.

RDF antennas are easy to spot on German World War II aircraft, as loops under the rear section of the fuselage, whereas most US aircraft enclosed the antenna in a small teardrop-shaped fairing. In navigational applications, RDF signals are provided in the form of radio beacons, the radio version of a lighthouse. The signal is typically a simple AM broadcast of a morse code series of letters, which the RDF can tune in to see if the beacon is "on the air". Most modern detectors can also tune in any commercial radio stations, which is particularly useful due to their high power and location near major cities.

Radar Navigation

When a vessel is within radar range of land or special radar aids to navigation, the navigator can take distances and angular bearings to charted objects and use these to establish arcs of position and lines of position on a chart. A fix consisting of only radar information is called a radar fix. Types of radar fixes include "range and bearing to a single object," "two or more bearings," "tangent bearings," and "two or more ranges." Parallel indexing is a technique defined by William Burger in the 1957 book The Radar Observer's Handbook. This technique involves creating a line on the screen that is parallel to the ship's course, but offset to the left or right by some distance. This parallel line allows the navigator to maintain a given distance away from hazards.

Some techniques have been developed for special situations. One, known as the "contour method," involves marking a transparent plastic template on the radar screen and moving it to the chart to fix a position. Another special technique, known as the Franklin Continuous Radar Plot Technique, involves drawing the path a radar object should follow on the radar display if the ship stays on its planned course. During the transit, the navigator can check that the ship is on track by checking that the pip lies on the drawn line.

Satellite Navigation

Global Navigation Satellite System or GNSS is the term for satellite navigation systems that provide positioning with global coverage. A GNSS allow small electronic receivers to determine their location (longitude, latitude, and altitude) to within a few metres using time signals transmitted along a line of sight by radio from satellites. Receivers on the ground with a fixed position can also be used to calculate the precise time as a reference for scientific experiments. As of October 2011, only the United States NAVSTAR Global Positioning System (GPS) and the Russian GLONASS are fully globally operational GNSSs. The European Union's Galileo positioning system is a next generation GNSS in the initial deployment phase, scheduled to be operational by 2013. China has indicated it may expand its regional Beidou navigation system into a global system.

More than two dozen GPS satellites are in medium Earth orbit, transmitting signals allowing GPS receivers to determine the receiver's location, speed and direction. Since the first experimental satellite was launched in 1978, GPS has become an indispensable aid to navigation around the world, and an important tool for map-making and land surveying. GPS also provides a precise time reference used in many applications including scientific study of earthquakes, and synchronization of telecommunications networks. Developed by the United States Department of Defence, GPS is officially named NAVSTAR GPS (NAVigation Satellite Timing And Ranging Global Positioning System). The satellite constellation is managed by the United States Air Force 50th Space Wing. The cost of maintaining the system is approximately US$750 million per year, including the replacement of aging satellites, and research and development. Despite this fact, GPS is free for civilian use as a public good. Modern smartphones act as personal GPS navigators for civilians who own them. Typically a compass is also provided to determine direction when not moving.

7 Navigation Instruments

Some of the instruments used in navigation.

Charts / Maps	A map is a symbolic depiction emphasizing relationships between elements of some space, such as objects, regions, or themes.
Magnetic Compass	A compass is an instrument used for navigation and orientation that shows direction relative to the geographic cardinal directions (or points).
Gyro Compass	A gyrocompass is a type of non-magnetic compass which is based on a fast-spinning disc and the rotation of the Earth (or another planetary body if used elsewhere in the universe) to find geographical direction automatically.
Sextant	A sextant is a doubly reflecting navigation instrument that measures the angular distance between two visible objects. The primary use of a sextant is to measure the angle between an astronomical object and the horizon for the purposes of celestial navigation.
GPS	A GPS navigation device, GPS receiver, or simply GPS is a device that is capable of receiving information from GPS satellites and then to calculate the device's geographical position.
Binoculars	

8 Day Navigation

Sun Movement
It is taken for granted the sun rises in the east and sets in the west. This is quite misleading. In fact, depending on an observer's latitude and the season, the sun could rise and set up to 50 degrees off of true east and west.

● Summer/Winter Solstice: (21 June/21 December) Two times during the year when the sun has no apparent northward or southward motion.
● Vernal/Autumnal Equinox: (20 March/23 September) Two times during the year when the sun crosses the celestial equator and the length of day and night are approximately equal.

Watch Compass

Using a watch to determine direction within the tropics is more complicated, since there are two solar maxima. The sun may lie to the north or south (or at midday be directly overhead), depending upon the time of the year. Because time on our planet is divided into 24 broad time zones, the sun is not normally directly south or at its highest point in the sky at exactly midday. The watch-as-compass method is therefore an approximate guide to direction only. The most exact method of finding direction without using a compass is to mark and measure the shadows that occur around midday. The shortest shadow cast by an object always points exactly north. The watch method can be in error, especially in the lower latitudes, and may cause circling. To avoid this, make a shadow clock and set your watch to the time indicated. After travelling for an hour, take another shadow-clock reading. Reset your watch if necessary.

Northern Hemisphere
To use your watch as an approximate compass outside of the tropics in the northern hemisphere, hold the watch horizontal and point the hour hand at the sun. Half way between that point and the twelve o'clock mark on your watch points to the south.

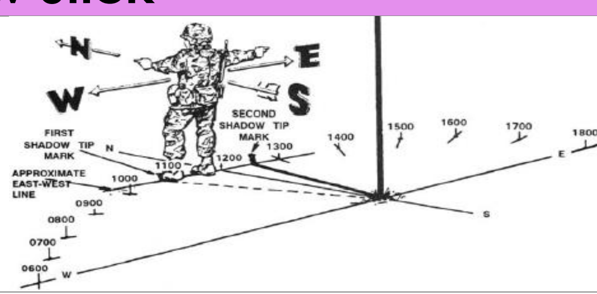
Aim Hour Hand at Sun
Between Hour Hand and 12 is South.

Southern Hemisphere
Hold the watch horizontal and point the twelve o'clock mark in the direction of the sun. The north-south line is half way between the hour hand and the twelve o'clock mark.

Aim 12 at Sun
Between Hour Hand and 12 is North.

Shadow Stick

This technique will achieve a cardinal direction within 10 degrees of accuracy if done within two hours of local apparent noon. This technique may be impractical near the polar regions as shadows tend to be very long; similarly, in the tropics shadows are generally very small.



1. Get a straight, 3-6 foot stick free of branches and pointed at the ends and 3-5 small markers: i.e. sticks, rocks.
2. Place the stick upright in the ground and mark the shadow tip with a marker.
3. Wait 10-15 minutes and mark shadow tip again with a marker.
4. Repeat this until all of the markers are used.
5. Draw a line connecting the marks.
6. The markers will form a West—East line.
7. Put your left foot on the first marker and your right foot on the last marker, you will then be facing north.

9 Night Navigation

Whenever using any type of shadow casting device to determine direction, “local apparent noon” (or the sun’s highest point during the day) must be known. Local apparent noon can be determined by the following methods.

1. Knowing sunrise and sunset from mission orders, i.e., sunrise 0630 and sunset 1930. Take the total amount of daylight (13 hours), divide by 2 (6 hours 30 minutes), and add to sunrise (0630 plus 6 hours 30 minutes). Based on this example, local apparent noon would be 1300.
2. Using the string method. The string method is used to find two equidistant marks before and after estimated solar noon. The centre point between these two marks represents local apparent noon.

Constellation Identification

The official definition of a constellation is an area of the sky with defined boundaries, all stars and any other objects within that boundary are considered part of the constellation. In modern scientific language stars that form patterns are known as asterisms, asterisms usually fall within a single constellation and bare the same name but they can also be part of multiple constellations. There are 88 official constellations which are recognized by the International Astronomical Union.

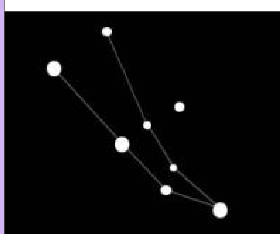
Brightness
The number next to each star in the pictures below is its apparent magnitude, its brightness from our point of view on Earth, the lower the number the brighter the star in the night sky.

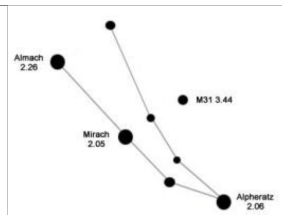
Position Description
Dec: NH 10p > NWH 1a
OH = Overhead
Means this system is only seen in December on the North Horizon at 10pm moving to the North West Horizon and will disappear at 1am.
No > means only partially visible.

Some constellations are only visible in the northern hemisphere, while others are only visible in the southern hemisphere. Constellations that are visible in both hemispheres may appear upside down in the southern hemisphere. A few constellations can be viewed all year long but most are seasonal and can only be viewed at certain times of the year. Distant galaxies and nebulae also form parts of constellations. The sun is the only known star in our galaxy which is not part of a constellation.

Andromeda

Andromeda is visible in both the Northern and Southern hemispheres. In the Northern hemisphere Andromeda can be seen from August to February. In the Southern hemisphere the constellation can be viewed from October to December.



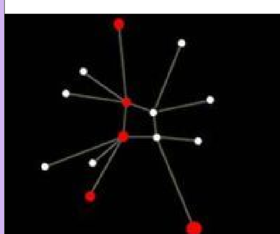


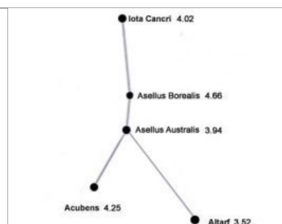
Northern Hemis Position
Country: U.S.A
Aug-Sep: NEH 10p > OH
Oct-Nov: E 8p > NWH
Jan-Dec: OH 6p > NW

Southern Hemis Position
Country: A.U.S
Oct-Nov: NEH 10p > NWH
Dec: NH 10p > NWH 1a

Cancer

Cancer is visible in both the Northern and Southern hemispheres. In the Northern hemisphere the constellation can be seen from late autumn to spring. In the Southern hemisphere Cancer can be seen in the summer and autumn months, note that it will appear upside down. Most of the stars that make up Cancer are quite faint, as a result it is one of the dimmest constellations.



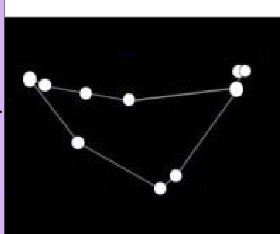


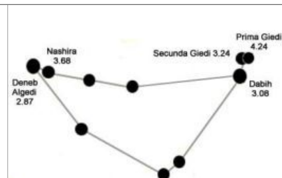
Northern Hemis Position
Country: U.S.A
Dec: E 10p > W 7a
Jan-Feb: E 6p > 6a
Apr-Jun: SW 9a > 1a

Southern Hemis Position
Country: A.U.S
Jan-Mar: NEH 11p > W
Apr-May: N 7p > 10p-2a

Capricornus

The constellation of Capricornus, more commonly known as Capricorn, is visible in both the Northern and Southern hemispheres. In the Northern hemisphere Capricornus can be seen from July to November. In the Northern hemisphere you will need a clear view of the southern horizon to observe the constellation. In the Southern hemisphere Capricornus can be viewed from early winter to late spring.





Northern Hemis Position
Country: U.S.A
Jul: SEH 12a > W
Aug-Sep: SE 10p > SWH 4a
Oct-Nov: S 8p > SWH 12a

Southern Hemis Position

Jul: EH 10p > OH > WH 3a
Aug-Sep: E 8p > W
Oct-Dec: N 10p > W 3a

Cassiopeia

Cassiopeia is visible all year in the Northern hemisphere. The constellation is visible in some northerly regions of the Southern hemisphere in late spring. The combination of its simple 'w' shape and the brightness of its stars makes Cassiopeia one of the most easily recognizable constellations in the night sky.

Cassiopeia

Nov-Dec: N 10p > W 2a

Cygnus

Cygnus is one the most easily recognizable and brightest constellations in the night sky. The constellation is prominent in the Northern hemisphere but can also be viewed in the Southern hemisphere. In the Northern hemisphere the constellation can be seen from June to December. In the Southern hemisphere Cygnus can be viewed low on the northern horizon in the winter months.

Jul-Aug: NEH 10p > W
Sep-Oct: NEH 7p > NW 12a

Draco

The Draco constellation never sets below the horizon, as a result it is visible all year in the Northern hemisphere. Constellations that don't set are known as circumpolar constellations. Draco is one of five circumpolar constellations in the Northern hemisphere. The constellation of Draco is only partially visible in some northerly regions of the Southern hemisphere during the winter months. Despite being one of the largest constellations it is not particularly noticeable in the night sky due to the dimness of most of its stars.

Apr: N 8p > 12a

Hercules

Hercules is one of the largest constellations in the night sky but doesn't contain any very bright stars. The constellation is visible in both the Northern and Southern hemispheres. In the Northern hemisphere Hercules can be seen from April to November. In the Southern hemisphere Hercules can be viewed from June to September. In the Southern hemisphere Hercules will appear upside down.

Leo

Leo contains several bright stars making it one the most easily recognizable constellations in the night sky. The constellation is visible in both the Northern and Southern hemispheres. In the Northern hemisphere the constellation can be seen from January to June. The stars that make up the bowl of the 'Big Dipper' asterism point towards the constellation in the Northern hemisphere.

Libra

Libra is a fairly small and dim constellation with no very bright stars. The constellation is visible in both the Northern and Southern hemispheres. In the Northern hemisphere Libra can be seen from April to July. In the Southern hemisphere the constellation can be viewed in the autumn and winter months. Locating the bright star Arcturus in the neighbouring constellation of Scorpius makes it easier to find Libra, follow the star up and to the west.

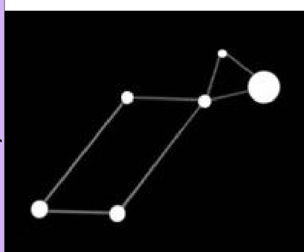
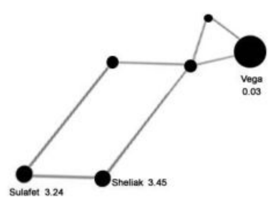
Lyra

Lyra is visible in both the Northern and Southern hemispheres. In the Northern hemisphere the constellation can be seen from April to December. In the Southern hemisphere Lyra can be viewed low on the northern horizon in the winter months. The brightest star in this small constellation is Vega, which is also the fifth brightest star in the night sky.





Northern Hemis Position
Country: U.S.A

Orion

Orion is visible in both the Northern and Southern hemispheres. In the Northern hemisphere the constellation can be seen from late autumn to early spring. In the Southern hemisphere Orion can be seen in the summer months, note that it will appear upside down. The constellation mainly consists of bright blue supergiant stars, the most notable exception being the red supergiant Betelgeuse which lies on Orion's shoulder. Betelgeuse is also the largest star in the constellation, it has 1,000 times the radius of the sun.

Apr: NW 8p > H 12a

Pegasus

Pegasus is a large constellation and easily identifiable due to its bright asterism known as "The Square of Pegasus". Asterisms are groups of stars that form simple patterns but are part of one or more constellations. Pegasus is visible in both the Northern and Southern hemispheres. In the Northern hemisphere Pegasus can be seen from July to January. In the Southern hemisphere the constellation can be viewed from August to December. In the Southern hemisphere Pegasus will appear upside down.

Sep-Oct: NE 8p > N
Nov-Dec: NW 10p > H 1a

Perseus

Perseus

Perseus is visible from August to March in the Northern hemisphere. It is visible in northerly areas of the Southern hemisphere from mid spring to early summer. Perseus is relatively bright and can be at least partially viewed even in well lit areas. The annual Perseids meteor shower emanates from the direction of the constellation. The Perseids occur from mid July to mid August, at times one meteor can be seen every minute. The shower happens as a result of Earth passing through a trail of debris left by the comet Swift-Tuttle.

Nov: NEH 10p > W
Dec-Jan: NE 10p > NW

Pisces

Pisces is a large but faint constellation containing no bright stars. The constellation is only fully visible in areas away from light pollution. Pisces is visible in both the Northern and Southern hemispheres. In the Northern hemisphere Pisces can be seen from August to January. In the Southern hemisphere Pisces can be viewed in the months of Spring, it will appear upside down in comparison to how it appears in the Northern hemisphere.

Nov: NE 10p > WH 4a
Dec: NW 11p-2a

Sagittarius

Sagittarius is a relatively large constellation which is mainly visible in the southern hemisphere. In the Northern hemisphere the constellation can be viewed low on the horizon from August to October. In the Southern hemisphere Sagittarius can be viewed from June to November. The constellation of Sagittarius is often depicted as a teapot shaped asterism in star maps.

Scorpius

Scorpius is a large and bright constellation which is mainly visible in the southern hemisphere. In the Northern hemisphere the constellation can be seen in July and August. In the Southern hemisphere Scorpius can be viewed from March to October. In the Southern hemisphere Scorpius lies within the centre of the Milky Way, appearing as a faint band stretching across the sky.

Ursa Major

Ursa Major is visible all year in the Northern hemisphere. The constellation is partially visible in some northerly regions of the Southern hemisphere. Ursa Major is Latin for Great Bear, although the constellation is based on Greek mythology. Ursa Major is associated with the nearby constellation of Ursa Minor (Little Bear). The 'Big Dipper', which is part of the Ursa Major constellation, is highlighted in yellow in the first picture.

Apr-Jun: NE 7p > W 2a
Jul-Sep: NW 7-8p
Oct-Dec: NE 5-6p

Virgo

Virgo is the second largest constellation and is visible in both the Northern and Southern hemispheres. In the Northern hemisphere Virgo can be seen from March to July. In the Southern hemisphere the constellation can be viewed in the Autumn and Winter months, it will appear upside down in comparison with the Northern hemisphere. The constellation of Virgo is highly populated with galaxies, there are several galaxy clusters located within its boundaries, each of which is home to hundreds or even thousands of galaxies.

Star Navigation

Finding North (Northern Hemisphere)

Less than 60 of about 5,000 stars visible to the eye are used by navigators. The stars seen as we look up at the sky at night are not evenly scattered across the whole sky. Instead they are in groups called constellations. The constellations that we see depends partly on where we are located on the earth, the time of the year, and the time of the night. The night changes with the seasons because of the journey of the earth around the sun, and it also changes from hour to hour because the turning of the earth makes some constellations seem to travel in a circle. But there is one star that is in almost exactly the same place in the sky all night long every night.

It is the North Star, also known as the Polar Star or Polaris. The North Star is less than 1 degree off true north and does not move from its place because the axis of the earth is pointed toward it. The North Star is in the group of stars called the Little Dipper. It is the last star in the handle of the dipper. There are two stars in the Big Dipper, which are a big help when trying to find the North Star. They are called the Pointers, and an imaginary line drawn through them five times their distance points to the North Star. Many stars are brighter than the North Star, but none is more important because of its location. However, the North Star can only be seen in the northern hemisphere so it cannot serve as a guide south of the equator. The farther one goes north, the higher the North Star is in the sky, and above latitude 70 degrees, it is too high in the sky to be useful.

Finding North (Southern Hemisphere)

10 Date & Time

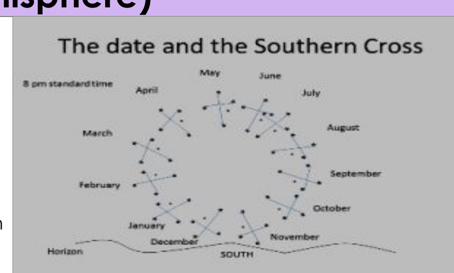
Date

(Northern Hemisphere)

Southern Cross Date (Southern Hemisphere)

To find the Southern Cross look for the two bright stars known as the Pointers that always point to the Cross. The two stars are Alpha Centauri and Beta Centauri, which is the one closer to the Cross in the sky. There are a number of other stars in the shape of a cross in the vicinity such as the ones making up the False Cross, but they are less bright than the stars of the Southern Cross, have a less compact grouping and do not have the Pointer stars. The diagram at the top shows the position of the Southern Cross at 8 pm standard time (or 9 pm daylight savings time) for each month of the year.

The Southern Cross not only spins around the southern sky once a year, it also does a complete circle each 24 hours. Actually it makes the complete circle in 23 hours 56 minutes and 4 seconds or one sidereal day.



The approximately four minutes difference between an ordinary day and a sidereal day is significant for it makes the Southern Cross rise four minutes earlier each day, which is 30 minutes a week or two hours per month. And that two hours a month leads to the monthly change in orientation illustrated at the top.

Time

Sometimes you may have no clock nearby to tell the time with if SHTF. The following tips will help you calculate the time to a fairly accurate degree.

Using Fingers

Start by planting your feet towards the sun, extending one arm fully in front of you, and rotating your wrist so your palm is facing you horizontally. Close your fingers together and align your pinky with the horizon. Now, count how many finger widths it takes to reach the sun. Depending on the season and time of day, you may need to continue stacking one hand over the other to keep count. Four finger widths represent one hour of sunlight, so unless you have exceptionally thin (or thick!) fingers, a count of eight finger widths during a southern Ontario July would equal two hours of remaining sunlight (roughly 7:30 p.m.).

Using Sun's Position

The sun rises in the east and sets in the west. Know the number of daylight hours in your location based on season. With this in mind, you can divide the sky into an imaginary arc from east to west consisting of 16 equal segments to represent the approximate time. An example being - sunrise would be due east at about 5:30 a.m. and sunset would be due west towards 9:30 p.m.

Using Shadows

The position of the sun in the sky overhead causes our shadows to be shortest around noon, and longest in the early morning and late evening. Shadows move and if you can manage to find north, you can use a stick as a makeshift sundial, reading the direction and length of your shadow to get a rough estimate of the time of day.

Shadow Stick

An extension of the shadow stick method for finding North.
1. Find North as per usual using the Shadow Stick method as seen in the Day Navigation section.
2. To find the time of day, move the stick to the intersection of the east-west line and the north-south line, and set it vertically in the ground. The west part of the east-west line indicates 0600 hours, and the east part is 1800 hours, anywhere on earth, because the basic rule always applies.
3. The north-south line now becomes the noon line. The shadow of the stick is an hour hand in the shadow clock, and with it you can estimate the time using the noon line and the 6 o'clock line as your guides. Depending on your location and the season, the shadow may move either clockwise or counter clockwise, but this does not alter your manner of reading the shadow clock.

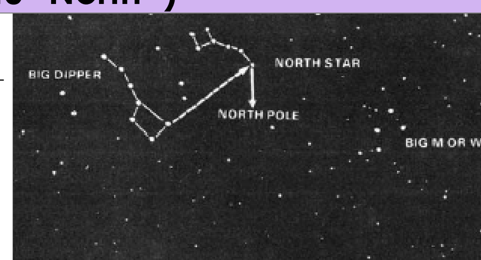
Shadow Stick

The shadow clock is not a timepiece in the ordinary sense. It makes every day 12 unequal hours long, and always reads 0600 hours at sunrise and 1800 hours at sunset. The shadow clock time is closest to conventional clock time at midday, but the spacing of the other hours compared to conventional time varies somewhat with the locality and the date. However, it does provide a satisfactory means of telling time in the absence of properly set watches. The shadow-tip system is not intended for use in polar regions, which the Department of Defence defines as being above 60 degrees latitude in either hemisphere. Distressed persons in these areas are advised to stay in one place so that search/rescue teams can easily find them. The presence and location of all aircraft and ground parties in polar regions are reported to and checked regularly by governmental or other agencies, and any need for help becomes quickly known.

Using Stars (Northern Hemisphere) (40° North+)

Before you begin learning how to tell time using the Big Dipper and the North Star, keep in mind that because these are mostly Northern Hemisphere stars. Those residing in mid-Northern Hemisphere latitudes – 40 degrees North and above – are best positioned to use them to tell time. Find the Big Dipper and the North Star. To locate the North Star, trace an imaginary line extending from the two outermost stars in the bowl of the Big Dipper.

Now, picture a clock with the North Star at its centre, and draw an imaginary line starting from the North Star through the 2 pointer stars of the Big Dipper – Dubhe and Merak. Assume that this is the hour hand of your imaginary star clock. The clock you created in the sky is a 24-hour clock.



Unlike on a regular analog clock face where an hour takes up 30 degrees of a full circle, the imaginary hour hand on the star clock moves only 15 degrees per hour. What's more, this hour hand moves counter-clockwise. Draw another imaginary line straight up from the North Star. This line will mark midnight or the passing of 24 hours. To tell time, look at where the hour hand points to in relation to the reference line. Remember, each 15-degree movement corresponds with the passing of 1 hour.

Using Stars (Northern Hemisphere) (40° North+)

Now, look at the calendar for the date. If it is March 6, you do not need to do any calculations. The time on your imaginary clock will be the actual time.

For example, if the pointer hour hand points straight to the top of the imaginary clock, the time will be midnight. If it points 30 degrees to the right of the reference line, the time would be 22:00 or 10 pm.

To account for Daylight Saving Time (DST), add 1 hour to the calculation in the months that DST is in place at your location.

Using Stars (Southern Hemisphere)

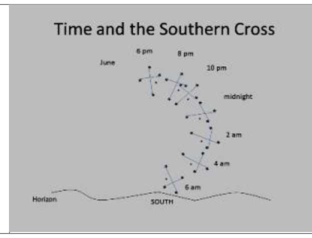
NAVIGATION

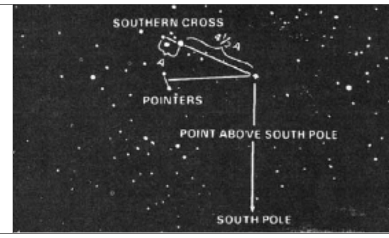
Date & Time

Time

Using Stars (Southern Hemisphere)

As the Southern Cross spins around the sky once a day we can use it to find the time as long as we know the date. The diagram above illustrates how the Cross changes its orientation during a night in mid June. A similar scheme can be used during other months. For example, for August subtract four hours from the times shown on the diagram so that then the Cross is in the same orientation at 8 pm as it is at midnight in June.





Depending on the star selected for navigation, azimuth checks are necessary. A star near the north horizon serves for about half an hour. When moving south, azimuth checks should be made every 15 minutes. When travelling east or west, the difficulty of staying on azimuth is caused more by the likelihood of the star climbing too high in the sky or losing itself behind the western horizon than it is by the star changing direction angle. When this happens, it is necessary to change to another guide star. The Southern Cross is the main constellation used as a guide south of the equator, and the general directions for using north and south stars are reversed. When navigating using the stars as guides, the user must know the different constellation shapes and their locations throughout the world.

Geography

Locations around the world and the risks associated with them

"Without Geography, You're Nowhere."
Unknown

Introduction

This section contains every country on earth categorized by continent and contains the risks and vital information about each. Each country contains Crime, Threats, Laws, Health Risks, Weather, Lat/Long and GPS Position.

Purpose	The aim of GEOGRAPHY is to provide details of the countries, crime, laws, health risks and weather around the planet. The information is designed to help you understand different cultures and to help you survive in another country if you have to travel. It also includes a highly detailed world map for a better insight into where each country is located.
Lost?	• If you need to translate words or sentences, see the LANGUAGE section. • If you're looking for a list of common buildings today, see the LOCATIONS section. • For information on the different types of terrain, see the SURVIVAL section. • If you're looking for information on the different types of populations that make up the world, see the POPULATION section. • For information on navigating around the globe, see the NAVIGATION section.

Contents

1 The World

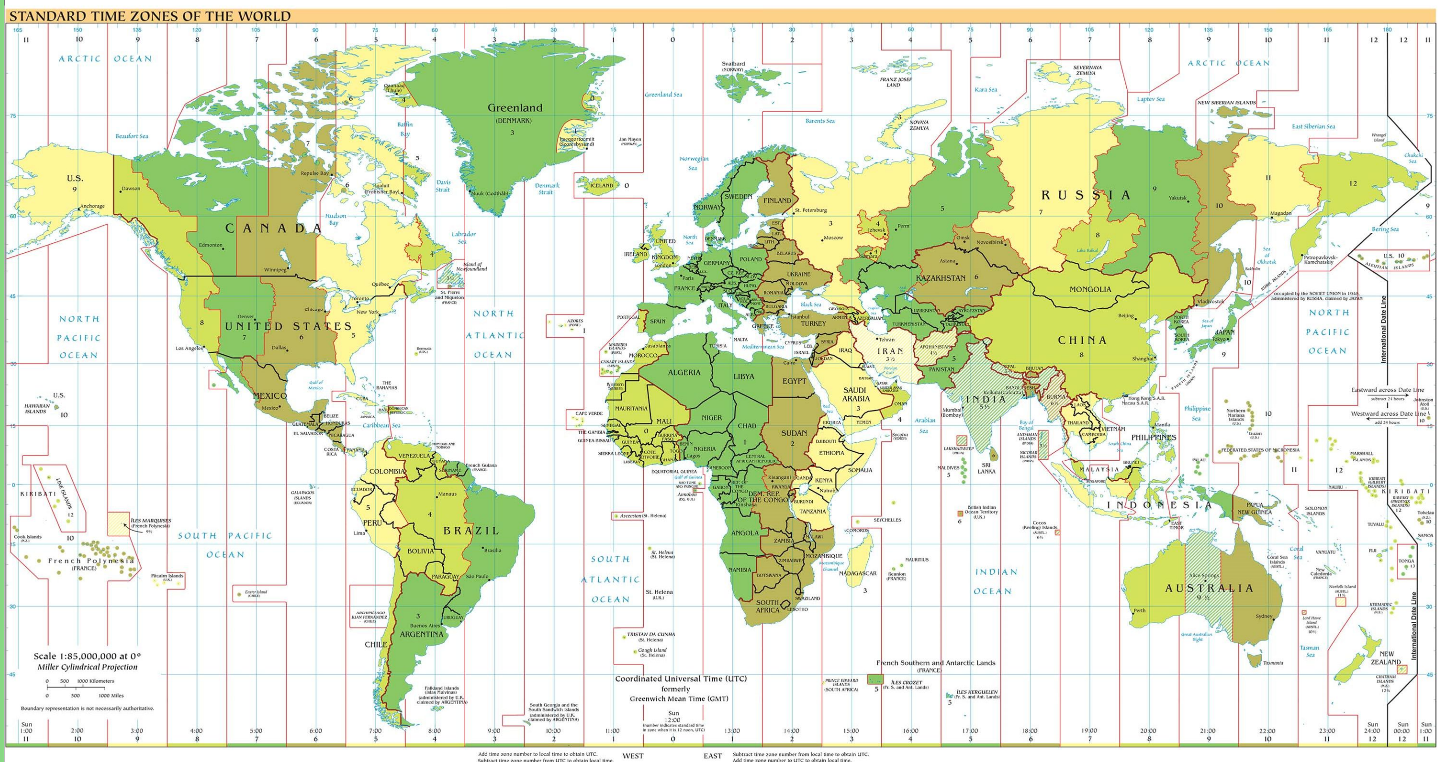
This is a detailed world map split in half, consisting of 110 pieces to retain the detail. This can be used for finding your position or taking note of where events are happening in the world. It could also be used as a basic bug out route map if you have lost your main map and don't have digital backups. This map takes up about 3.75Mb so these pages can be deleted if you want a smaller file size. It's split into 20 columns with 10 rows and allows two extra rows of overlap between the sections for easier reading.

Western Hemisphere

Eastern Hemisphere

Time Zones

These are the different time zones around the world. The colours of the divisions refer to the time zone colours at the bottom. Some zones may be out of sync slightly depending on when you're reading this.

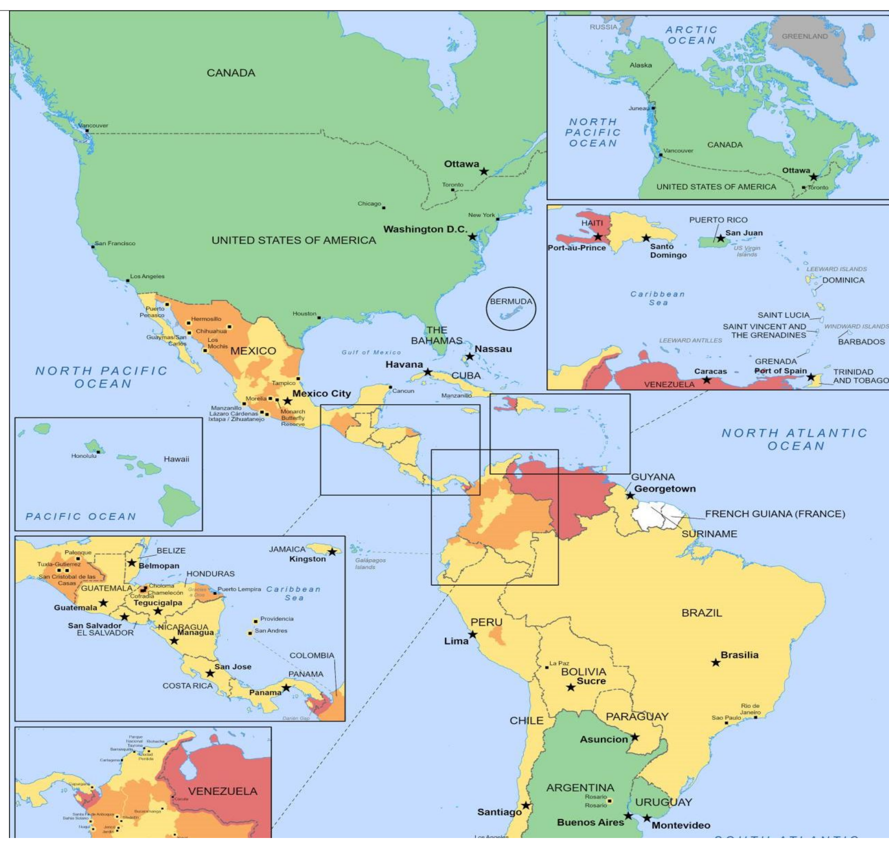


2 Americas

North America, South America, Central America and the Caribbean.

The colour shading and travel advice on the map is the advice given by the Australian Government and is accurate as of the 20th Feb 2025.

However countries risk ratings rarely change so this could be considered accurate advice going into the forseeable future.



This map is presented for information only. The Department of Foreign Affairs and Trade accepts no responsibility for errors or omission of any geographic feature. Nomenclature and territorial boundaries may not necessarily reflect Australian Government policy. For the more detailed travel advice, including intra-country levels visit smartraveller.gov.au. Subheadings

		1. Caribbean	2. Central America	3. North America	4. South America		

1 Caribbean

Antigua and Barbuda

	**Threat Level** N/A	**Latitude / Longitude** **Antigua** 17.074656, -61.817521 **Barbuda** 17.626624, -61.771303 **GPS Position** 17° 37' 35.8464" N 61° 46' 16.6908" W
Crime	There have been incidents of violent crime including murder, armed robbery and sexual assault in Antigua and Barbuda. ● Make sure your accommodation is secure – this also applies if you are staying on a yacht . ● Take care when walking alone off the busy main roads. ● Avoid isolated areas, including beaches, particularly after dark. ● Only use licensed taxis. ● Take particular care around large gatherings, including street and beach parties, especially after dark or during the festival season. ● Do not carry large amounts of cash or jewellery. ● Leave valuables and travel documents in a safety deposit box or secure hotel safe.	
Laws	● It is illegal to possess drugs. There are severe penalties for all drug offences. Pack all luggage yourself and do not carry anything through customs for anyone else. ● It is illegal for anyone, including children, to dress in camouflage clothing. ● Attitudes towards the LGBT+ community are mostly conservative in the Caribbean. ● Antigua and Barbuda no longer has legislation against same-sex sexual acts. However, showing affection in public may attract unwanted and negative attention. It is uncommon for opposite or same-sex couples to show affection in public.	
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). We recommend that you take precautions against being bitten by mosquitoes, including using insect repellent at all times, wearing long, loose-fitting, light coloured clothing and ensuring your accommodation is mosquito proof. Seek medical advice if you have a fever, muscle pain, rash or severe headaches as they are symptoms of both dengue fever and the chikungunya virus. ● Zika virus ● Dengue Fever ● Chikungunya	
Weather	**Hurricanes** The hurricane season in the Caribbean normally runs from June to November. Monitor local and international weather updates from the Antigua and Barbuda Meteorological Services, the World Meteorological Organization and the US National Hurricane Center and follow the advice of the local authorities, including any evacuation orders. The island of Barbuda was hit by hurricanes in 2017. Many buildings were destroyed and reconstruction work is still taking place. If you're planning to visit Barbuda, you should: ● Monitor local and international weather updates , follow the advice of the local authorities, make sure your accommodation is secure. **Earthquakes** Earthquakes are a risk in Antigua and Barbuda. Tremors are felt occasionally in the Caribbean. The US Federal Emergency Management Agency website has advice about what to do before, during and after an earthquake.	
Other	N/A	

Aruba

	**Threat Level** N/A	**Latitude / Longitude** 12.521110, -69.968338 **GPS Position** 12° 31' 15.996" N 69° 58' 6.0168" W
Crime	There is a risk of petty theft and there are occasionally incidents of street crime. To reduce the risk to yourself and your belongings: ● Avoid walking in remote areas at night ● Do not take valuables or cash to the beach ● Do not leave bags in your vehicle ● Make sure purses and bags are closed and not easy to grab Although there is no recent history of terrorism in Aruba, attacks cannot be ruled out. Aruba is used as a drug passageway from South America to Europe and North America. There can be drug-related violent crime.	
Laws	● It's a legal requirement to carry ID. Always keep a copy of your passport with you. ● There are severe penalties for all drug offences. Do not leave bags unattended or agree to carry a package for anyone. ● Taxis are not metered. To avoid being overcharged, agree the fare in local currency with the driver before you set off. Only use licensed taxis.	
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). ● Zika virus ● Dengue Fever ● Chikungunya	
Weather	● The hurricane season is June to November. Monitor local media reports and follow the instructions of local emergency officials. Most hurricanes pass to the north of Aruba, which has no record of a recent major hurricane. There are occasional tropical storms.	

Other	● If you're travelling through Aruba, you need to fill in an embarkation/disembarkation card.

The Bahamas

	**Threat Level** Moderate threat level to personal safety, take extra precautions here.		Exercise a high degree of caution in the Bahamas because of high levels of serious crime, mainly on the islands of New Providence and Grand Bahama. Pay close attention to your personal security at all times.	**Latitude / Longitude** 24.696627, -78.038849 **GPS Position** 24° 41' 47.8572'' N 78° 2' 19.8564'' W

Crime

Crime	● The Bahamas has high levels of violent crime, including muggings, armed robbery, home invasion and sexual assault. This increases during the holidays. Be aware of your surroundings, even in areas normally considered safe. ● Avoid downtown Nassau, as murders are common. New Providence and Grand Bahama are also violent crime hotspots. Never get out of your car to remove items blocking the road.

Laws

Laws	● Don't use or carry illegal drugs. Penalties for drug offences are severe. They include fines and long prison sentences. ● Serious crimes can attract the death penalty, including aggravated murder, terrorism, treason and war crimes. ● American authorities may conduct thorough drug searches in The Bahamas. Pack your own luggage. Don't carry anything through customs for other people. ● The legal age for same-sex relations is 18. However, it's still not widely accepted. Avoid being affectionate in public.

Health Risks

Health Risks	● Health risks in The Bahamas are similar to those in Australia and U.S.A. Medical services are limited. If you're severely ill or injured, you might need evacuation to the US. Make sure your travel insurance covers this.

Weather

Weather	● In September 2019, Hurricane Dorian caused severe damage to the Abaco Islands and Grand Bahama. There are shelter, food, water and medical shortages and power and communication outages. The ports and airports on these islands are closed. Follow the advice of local authorities. ● Sexual assault is common. Don't visit deserted beaches or walk alone, especially after dark. ● Food and drink spiking is a risk in tourist resorts. Never leave your food or drink unattended. ● Natural disasters, such as hurricanes, occur in The Bahamas. Medical facilities can't handle major emergencies. Be prepared to evacuate at short notice.

Other

Other	● Travellers visiting for 90 days or less with a valid return or onward ticket don't need a visa. ● Bahmanian dollars (BSD) and US dollars are both accepted currencies. Exchange currency at commercial banks or currency exchange offices. It's illegal to leave The Bahamas with more than BSD200. ● Many places accept credit cards. There are ATMs on the larger islands. Only use ATMs in controlled areas such as airports, banks, casinos and hotels. ● Use registered taxis. Taxis don't use meters. Negotiate the price before you leave. ● Carry your yellow fever vaccination certificate. You may need to show it to enter.

Barbados

	**Threat Level** N/A	**Latitude / Longitude** 13.193887, -59.543198 **GPS Position** 13° 11' 37.9932'' N 59° 32' 35.5128'' W

Crime	There have been incidents of violent crime, including: ● Armed robbery ● Sexual assault ● Gang-related shootings There has been an increase in gang-related murders involving guns. Some incidents have taken place in populated and public areas.
Laws	● It is illegal to possess drugs. There are severe penalties for all drug offences. Pack your luggage yourself and do not carry anything through customs for anyone else. ● It is illegal for anyone, including children, to wear camouflage clothing.
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). ● Zika virus ● Dengue Fever ● Chikungunya ● Swimming is not recommended on many of the east-coast beaches where currents are particularly strong. Follow local warnings.
Weather	● All oceanic regions of the world can experience tsunamis, including the Caribbean. ● The hurricane season normally runs from June to November. ● Earthquakes are a potential risk in Barbados, and there are occasional tremors. Follow the advice of the local authorities. ● Check the alert level of the underwater volcano 'Kick 'em Jenny', located 5 miles off the coast of Grenada.
Other	● Fire: 311, Police: 211, Ambulance: 511

Cuba

	**Threat Level** Exercise normal safety precautions.		**Latitude / Longitude** 21.521757, -77.781167 **GPS Position** 21° 31' 18.3252'' N 77° 46' 52.2012'' W

Crime	● Violent crime, such as robbery and assault, occurs. Be aware of your surroundings. ● Petty crime, such as theft, is common on public transport, in tourist areas and at the airport. Only use established tour operators and registered taxis. Don't put valuables in your checked luggage.

Laws	● Don't use or carry illegal drugs. Penalties for drug offences are severe. They include long prison sentences. Always carry photo ID. Officials can detain you if you don't have it. ● It's illegal to photograph military or police sites, harbours, and rail and airport facilities. Check with officials before taking photos. ● Get local legal advice before preaching a religion or importing religious material. It may be illegal. ● Cuba doesn't recognise dual nationality. Dual nationals may need permission to enter the country. Contact a Cuban embassy or consulate for details before you travel.
Health Risks	● Many medications are in short supply or unavailable. Ensure you bring enough for your entire trip. ● Insect-borne diseases, including dengue and chikungunya, are common. Ensure your accommodation is insect-proof. Use insect repellent. ● Zika virus is a risk, but isn't widespread. If you're pregnant, discuss your travel plans with your doctor. ● Waterborne, foodborne and other infectious diseases are common. These include typhoid and hepatitis. Drink only boiled or bottled water. Avoid raw or undercooked food. ● Public medical facilities in Havana are basic. Private clinics are well-equipped, but only one in Havana treats foreigners. All clinics require upfront payment. Ensure your travel insurance covers medical evacuation.
Weather	● The hurricane season is June to November. Hurricanes can cause flooding and disrupt services. Know your hotel or cruise ship's evacuation plan. Find your nearest shelter. ● Cuba is in an active earthquake zone. Tsunamis can also happen. Know the tsunami warning signs and move to high ground straight away. Don't wait for official alerts.
Other	● You need a visa to enter. If you're a tourist, get a tourist card through your travel agent, airline or a Cuban embassy or consulate. For other types of visits, get a visa through a Cuban embassy or consulate. ● Ensure you have comprehensive travel insurance. You'll need to show proof to enter the country. ● Cuba has 2 official currencies: the Cuban Convertible Peso (CUC) and the National Peso (CUP). Foreigners will always use the CUC. Don't take CUC bills out of the country. ● Cuba's complicated banking arrangements can make it hard to access money. Carry cash, cards and traveller's cheques from non-US banks. Take an emergency supply of cash, including enough to leave Cuba if your bank cards don't work. ● Avoid public transport. Many vehicles are poorly maintained.

Dominica

	Threat Level N/A							**Latitude / Longitude** 15.414999, -61.370976 **GPS Position** 15° 24' 53.9964" N 61° 22' 15.5136" W

Crime	● Although there's no recent history of terrorism in Dominica, attacks cannot be ruled out. ● Protests and demonstrations sometimes occur in Dominica. There have been instances of police using tear gas to disperse protesters.
Laws	● To enter Dominica, you must have a certificate to prove you've had a yellow fever vaccination if you're coming from a country listed as a transmission risk. It is illegal for anyone, including children, to dress in camouflage clothing. There are severe penalties for drug offences. Pack all your luggage yourself and do not carry anything through customs for anyone else.
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). ● Zika virus ● Dengue Fever ● Chikungunya
Weather	● The hurricane season is June to November when landslides, mudslides, flooding and disruptions to essential services may occur.
Other	● There is a departure tax of 86 East Caribbean dollars or 33 US dollars. It is usually included in the cost of your plane ticket. You also need to pay departure tax if travelling by ferry. ● Declare cash or travellers cheques if the value is 10,000 East Caribbean dollars or more. You will get a certified declaration to show you brought it in with you. ● Take care when swimming. Currents can be stronger than they look and not all beaches have lifeguards or warning flags.

Dominican Republic

Threat Level Moderate threat level to personal safety, take extra precautions here.							**Latitude / Longitude** 18.735693, -70.162651 **GPS Position** 18° 44' 8.4948" N 70° 9' 45.5436" W

Crime	● The violent crime rate is high. Crime occurs in tourist areas. Conceal your valuables. Don't use public transport. ● Women are at risk of sexual assault. Avoid travelling alone. ● Credit card and ATM fraud are common. Use ATMs in daylight hours at hotels, shopping centres or other controlled areas. ● Bank card cloning and identity theft are a risk in the Dominican Republic. ● When travelling to the airport, use official airport taxis. Travel during daylight hours.
Laws	● Don't carry or use illegal drugs. There are severe penalties for drug offences, including long prison sentences. ● Don't drive if you've used alcohol or drugs. You could be arrested and detained. ● If you're a dual national, travel on your other passport. ● Always carry copies of the photo page of your passport and entry stamp with you.
Health Risks	● HIV/AIDS infection rates are high. If you're involved in high-risk activities, take precautions. ● Cholera and other waterborne and foodborne diseases are common. Boil drinking water or drink bottled water. Avoid ice cubes. ● Mosquito-borne illnesses are common during the wet season from May to November. These include dengue and malaria. Check your accommodation is insect-proof. Use insect repellent. ● Zika virus is widespread. If you're pregnant, discuss your travel plans with your doctor. ● Rabies is a high risk. It can be fatal if left untreated. Avoid contact with animals, especially dogs, cats and mongooses (small cat-like animals). If you're bitten or scratched, get immediate medical attention.
Weather	● The hurricane season in the Caribbean normally runs from June to November. ● Earthquakes are a risk in the Dominican Republic. If an earthquake happens, follow the advice of the local authorities. ● There is a risk of tsunamis from earthquakes at sea. Follow the instructions of the local authorities if there are warnings of an approaching tsunami.
Other	● When you arrive, you must buy a tourist card. It's valid for 30 days. Check with your nearest Dominican Republic embassy or consulate for up-to-date visa rules. ● Strict exit requirements apply to children aged under 18 who are travelling alone, with one parent or with another adult. Ask your nearest Dominican Republic embassy or consulate about the regulations before you travel. ● You can't exchange Australian dollars for Dominican Pesos (DOP). You can exchange US dollars at banks or official exchange offices. Take US dollars with you. ● Use a pre-booked taxi or those provided by hotels. Don't use unofficial taxis or 'carros publicos'. Travellers have been robbed and assaulted in unofficial taxis. ● Take particular care if riding a motorbike or scooter. The Dominican Republic has a high death rate from road accidents involving motorbikes and scooters. ● If you're involved in a road accident, you must file a report with the Dominican Republic authorities.

Grenada

	**Threat Level** N/A	**Latitude / Longitude** 12.116500, -61.679 **GPS Position** 12° 6' 59.4" N 61° 40' 44.4" W

GEOGRAPHY · Americas · Caribbean · Grenada

Crime	● Although there's no recent history of terrorism in Grenada, attacks cannot be ruled out. ● Most crime in Grenada is non-violent and opportunistic, such as thefts of unattended items or burglaries from villas or cars. There are occasional violent crimes including armed robbery and sexual assault.
Laws	● To enter Grenada, you must have a certificate to prove you've had a yellow fever vaccination if you're coming from a country listed as a transmission risk. ● There are strict rules about goods you can take into or out of Grenada. You must declare anything that may be prohibited or subject to tax or duty. ● It's illegal for anyone, including children, to dress in camouflage clothing. ● There are severe penalties for all drug offences. Pack all luggage yourself and do not carry anything through customs for anyone else.
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). ● Zika virus ● Dengue Fever ● Chikungunya
Weather	● The hurricane season is June to November when landslides, mudslides, flooding and disruptions to essential services may occur. Monitor local media reports and follow the instructions of local emergency officials. All oceanic regions of the world can experience tsunamis, including the Caribbean.
Other	● You can visit Grenada without a visa. On entry, you'll be allowed to stay for a maximum period of 3 months. ● Taxis are not metered. There are standard taxi fares for most destinations. To avoid being overcharged, agree the fare in local currency with the driver before you set off. You can often pay in US dollars as well as East Caribbean dollars.

Haiti

GEOGRAPHY · Americas · Caribbean · Haiti

	**Threat Level** Moderate threat level to personal safety, take extra precautions here.	**Threat Level** Areas of Bel Air, Carrefour, Cité Soleil and Martissant in Port au Prince, reconsider your need to travel.		**Latitude / Longitude** 18.971187, -72.285215 **GPS Position** 18° 58' 16.2732" N 72° 17' 6.774" W

Crime	● Violent crime is common in Haiti, including murder, armed robbery, kidnapping, assault, sexual assault and carjacking. The risk increases at night and in isolated areas. Be alert to your surroundings. Don't go out after dark. ● Public transport is unsafe. Avoid taxis, tap taps (vans with a covered tray area) and motorcycle taxis. ● Ask permission before taking photos, especially in remote areas. Travellers have been assaulted for taking photos. ● Demonstrations, protests and strikes happen often. These can turn violent. Avoid crowds. Carry ID and documents for your vehicle, in case you pass a security checkpoint.
Laws	● Don't use or carry illegal drugs. Penalties for drug offences are severe and include long prison sentences. Conditions in Haitian prisons are very poor. ● LGBTI traveller's rights aren't legally restricted. But there's significant social stigma. LGBTI travellers may face discrimination, harassment or violence. Avoid being affectionate in public.
Health Risks	● The rate of HIV/AIDS infection is high. Take precautions if you're engaging in high-risk activities. ● Insect-borne illnesses include malaria, dengue and Zika virus. Ensure your accommodation is insect-proof. Use insect repellent. If you're pregnant, talk to your doctor about Zika virus before you travel. ● Haiti has had an ongoing cholera outbreak since 2010. Other common foodborne and waterborne diseases include hepatitis and typhoid. Drink boiled or bottled water with intact seals. Avoid raw or undercooked food. ● Disease outbreaks are common and medical facilities are scarce. If you become seriously ill or injured, you'll need medical evacuation to the US. Get comprehensive travel insurance.
Weather	● The Atlantic hurricane season runs from June to November. During this period, tropical storms can quickly develop into major hurricanes. ● Earthquakes are a risk in Haiti.
Other	● Travel requirements can change at short notice. Contact your nearest embassy or the Consulate of Haiti for the latest updates. ● Be aware of entry fees. Foreign visitors must pay an arrival fee at the airport. Visitors crossing by land from the Dominican Republic must pay a tourist fee. ● If you're planning to do volunteer work, arrange a placement before you go. You're unlikely to find one when you arrive. ● If you're travelling to Haiti via the US, you must also meet US entry or transit requirements. Contact your nearest US embassy or consulate for advice. ● You may need a valid yellow fever vaccination certificate if you're travelling to Haiti from a country with a risk of yellow fever. Get vaccinated before you travel. ● The local currency is the Haitian Gourde (HTG). US dollars are also widely accepted. Change foreign currency and traveller's cheques at established banks. Don't exchange money on the street. ● Road travel is dangerous. If you're driving, keep your fuel tank at least half-full. Fuel supply is often disrupted. ● Be careful if driving to the Dominican Republic. Vehicles have been carjacked on the Dominican side of the border. Queues at the border crossings are long. Make sure you and any passengers have the correct vehicle and travel documents.

Jamaica

GEOGRAPHY · Americas · Caribbean · Jamaica

	**Threat Level** Moderate threat level to personal safety, take extra precautions here.		**Latitude / Longitude** 18.109581, -77.297508 **GPS Position** 18° 6' 34.4916" N 77° 17' 51.0288" W

Crime	● Violent crime is a serious problem. Crimes include gang-related armed robbery and murder. Be alert. Don't carry valuables. Avoid walking alone or on beaches at night. ● If you're attacked or robbed, don't resist. Criminals are often armed. You could be killed or seriously injured. ● Avoid Mountain View Avenue when going to and from Norman Manley International Airport. ● Food and drink spiking happens. This can lead to sexual assault, robbery and other crimes. Don't leave your food or drink unattended. ● Crime often occurs on public transport and in unofficial taxis. Use only established tour operators and registered taxis.
Laws	● Don't use or carry illegal drugs. Penalties for drug offences are severe. You can be jailed for having illegal drugs. You'll be screened for drugs when leaving Jamaica. ● Know the local laws before you travel. Same-sex relationships, swearing and public nudity are illegal. It's also illegal to buy, sell or wear camouflage-style clothing. ● Wear an appropriate helmet on a moped, motor scooter or motorbike. It's against the law not to. ● Jamaica has the death penalty for serious crimes, such as murder.

Health Risks	● HIV/AIDS is widespread in Jamaica. Take precautions if you're engaging in high-risk activities. ● Mosquito-borne illnesses, especially dengue, are common. Check your accommodation is insect-proof. Use insect repellent. ● Cases of Zika virus have been reported. If you're pregnant, discuss travel plans with your doctor before you leave. ● Foodborne and waterborne diseases are common. Drink only bottled water. Get your vaccinations up to date before you travel.
Weather	● Hurricane season is normally from June to November. We are seeing more uncharacteristic weather in Jamaica and the region is increasingly vulnerable to climate change impacts.
Other	● You don't need a visa if you're travelling for leisure and staying less than 6 months. ● You don't need a visa if you're travelling for business and staying less than 30 days. ● ATMs aren't widely available outside Kingston and Montego Bay. Only use ATMs in secure locations, such as hotels. ● Travellers using unofficial taxis have been robbed and assaulted. Use taxis authorised by the Jamaican United Travellers' Association. ● Carry your yellow fever vaccination certificate. You may need to show it to enter Jamaica.

Puerto Rico

Threat Level
High threat level to personal safety, take a range of extra precautions here.

Latitude / Longitude
18.220833, -66.590149

Saint Kitts and Nevis

Threat Level
N/A

Latitude / Longitude
17.357822, -62.782998

GPS Position
17° 21' 28.1592'' N
62° 46' 58.7928'' W

Crime	● Although there is no recent history of terrorism in St Kitts and Nevis, attacks cannot be ruled out. ● There have been incidents of serious crime including murder, armed robbery and sexual assault.
Laws	● It is illegal for anyone, including children, to dress in camouflage clothing. You could get a 250 Eastern Caribbean dollar (EC dollar) fine and 3 months in prison. ● There are severe penalties for all drug offences, particularly drug trafficking. If convicted at Magistrates Court, you could get a fine of up to 400,000 EC dollars or 3 times the street value, whichever is higher, and up to 10 years in prison.
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). ● Zika virus ● Dengue Fever ● Chikungunya
Weather	● All oceanic regions of the world can experience tsunamis, including the Caribbean. ● The hurricane season runs from June to November. ● During especially hot and dry periods, a single spark or flame can start a wildfire. Report any fires to the emergency services immediately. If you start a wildfire (or attempt to start one), you can get up to 10 years in prison. ● Earthquakes are a risk in St Kitts and Nevis. ● Mount Liamuiga is a potentially active volcano and is likely to erupt in the future. The University of West Indies (UWI) Seismic Research Centre monitors volcanic activity on St Kitts and Nevis.
Other	● Emergencies: Call 911 and ask for an ambulance.

Saint Lucia

Threat Level
N/A

Latitude / Longitude
13.909444, -60.978893

GPS Position
13° 54' 33.9984'' N
60° 58' 44.0148'' W

Crime	● Although there's no recent history of terrorism in St Lucia, attacks cannot be ruled out. ● Most visits are trouble free but robberies and opportunistic crime may occur during the periods of and around large-scale events such as the Saint Lucia Jazz and Arts Festival in May and Saint Lucia Carnival in July. If you are attending a large-scale event take sensible precautions and be aware of your surroundings at all times. Avoid displaying jewellery or valuable items that may attract attention of criminals. Do not leave your drinks unattended, practice caution at crowded events and have a clear plan to return home safely after attending any events. ● There have been incidents of crime in St Lucia including murder, armed robbery and sexual assault. ● There is a continuing serious risk of homicides, primarily gang related and involving guns. Some incidents have taken place in public areas.
Laws	● It's illegal for anyone, including children, to dress in camouflage clothing. ● There are severe penalties for all drug offences. Pack all luggage yourself and do not carry anything through customs for anyone else. ● Travellers without a St Lucian driving licence must get a temporary driving permit. ● Taxis are not metered. Standard taxi fares exist for most destinations. Agree the fare in local currency with the driver before you set off. You can often pay in US dollars as well as East Caribbean dollars.
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). ● Zika virus ● Dengue Fever ● Chikungunya ● The main government hospital can cope with many types of treatment, but serious cases may mean emergency evacuation.

Weather	● All oceanic regions of the world can experience tsunamis, including the Caribbean. ● The hurricane season in the Caribbean normally runs from June to November. ● Earthquakes are a risk in the Caribbean and tremors are occasionally felt in St Lucia. ● Check the alert level of the underwater volcano 'Kick 'em Jenny', located 5 miles off the coast of Grenada. ● Check the alert level for La Soufriere volcano, located on the nearby island of St Vincent. Its eruption in 2021 sent ash over St Lucia, which caused some disruption.
Other	● Medical treatment in St Lucia can be expensive. Make sure you have adequate travel health insurance and accessible funds to cover the cost of any medical treatment and repatriation.

Saint Vincent and the Grenadines

	**Threat Level** N/A								**Latitude / Longitude** 13.247433, -61.190967 **GPS Position** 13° 14' 50.7588" N 61° 11' 27.4812" W

Crime	● Most visits are trouble-free, but there have been crimes including murder, armed robbery and assault. ● St Vincent and the Grenadines' Vincy Mas carnival takes place in early July. Theft and opportunistic crime may increase during carnival. Only use licensed taxis and take particular care at late-night street parties. ● Drink spiking - Do not leave drinks unattended.
Laws	● There are severe penalties for all drug offences. Pack your own luggage and do not carry anything through customs for anyone else. ● It's illegal for anyone, including children, to dress in camouflage clothing.
Health Risks	● Mosquito-borne illnesses, such as Zika virus, dengue and chikungunya, occur commonly in the Caribbean region, especially during the rainy season (June to December). ● Zika virus ● Dengue Fever ● Chikungunya
Weather	● All oceanic regions of the world can experience tsunamis, including the Caribbean. ● There was a lot of damage to tourist infrastructure on Mayreau and Union caused by Hurricane Beryl which struck the islands in July 2024. Smaller islands are also still affected such as the atolls of Palm Island and Petit St Vincent in Tobago Cays. This has affected hotel availability and other facilities including services at the airport. If you plan to visit Mayreau, Union or the smaller islands, confirm arrangements with your travel agent or accommodation provider. ● Earthquakes are a risk. ● The last explosive eruption of La Soufrière volcano on St Vincent was in 2021. You should also monitor the alert level of the underwater volcano Kick 'em Jenny, located 5 miles off the coast of nearby Grenada.
Other	

Trinidad and Tobago

	**Threat Level** Moderate threat level to personal safety, take extra precautions here.							**Latitude / Longitude** 10.691803, -61.222503 **GPS Position** 10° 41' 30.4908" N 61° 13' 21.0108" W

Crime	● Violent crime such as murder, kidnapping, shootings, armed robbery, rape, carjacking and home invasions are common. Take care at all times, when travelling by road and when using ATMs, especially after dark. ● Bag snatching, pickpocketing and theft from cars is common. Keep valuables out of sight, your car doors locked and car windows up. ● A terrorist attack could happen at any time. Be alert to possible threats, monitor the media and follow the advice of local authorities.
Laws	● Travellers leaving Trinidad and Tobago are thoroughly screened for drugs. ● Serious crimes, including murder and treason, can attract the death penalty. ● Same-sex relationships are illegal. Other illegal activities include public nudity, indecent language, and civilians wearing army or police clothes. ● Carrying ammunition when you enter, exit or travel around Trinidad and Tobago is illegal. This includes bullets, bullet casings and spent ammunition. Be careful what you buy. Items such as jewellery and key rings may contain these materials.
Health Risks	● HIV/AIDS infection rates are high. Take precautions if you're engaging in high-risk activities. ● Insect-borne diseases like yellow fever, Zika virus, chikungunya and dengue are widespread. Get vaccinated against yellow fever. If you're pregnant, ask your doctor about the risk of Zika virus before you travel. Protect yourself from mosquitos. ● Foodborne, waterborne, parasitic and infectious diseases like hepatitis A are common. Boil drinking water or drink bottled water. ● Medical facilities vary in quality. You may need to pay before doctors will treat you.
Weather	● Hurricanes and severe weather can cause flooding, landslides and mudslides. This may affect travel or disrupt access to services. Know evacuation plans and the location of your local shelter. ● Earthquakes can occur. Be aware of safety measures for each place you visit.
Other	● You don't need a visa to travel to Trinidad and Tobago as a tourist. You'll have to pay a visa waiver fee when you arrive. For other travel reasons, you'll need a visa. ● Carry your yellow fever vaccination certificate. You may need to show it to enter. ● ATMs are widely available. You can exchange foreign currency at commercial banks and official exchange bureaux. ● To drive you'll need both a valid driver's licence and a valid International Driving Permit (IDP). Get your IDP before you leave your country. Avoid driving at night or in the early morning. ● Avoid public transport, maxi taxis and shared taxis.

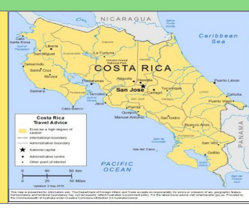
Belize

	**Threat Level** Moderate threat level to personal safety, take extra precautions here.								**Latitude / Longitude** 17.189877, -88.49765 **GPS Position** 17° 11' 23.5572" N 88° 29' 51.54" W

Crime	● Violent crime may affect foreigners in Belize. There's gang-related violence in the southern parts of Belize City. Don't travel alone, especially after dark. ● Avoid demonstrations and large public gatherings. These can turn violent. ● Although there is no recent history of terrorism in Belize, attacks cannot be ruled out. ● Political demonstrations take place in Belize City and Belmopan, but most are peaceful. ● Belize has one of the highest per capita murder rates in the world. Other violent crime, including armed robbery, shootings, domestic abuse and sexual assault are also a concern. ● Serious gang-related violence occurs most frequently in Belize City, particularly in the area to the south of the Haulover Creek (known as Southside). Tourists are not normally the targets of gang violence, but anyone near an incident could be affected. ● Armed criminals have been active in the remote forested areas of Belize, particularly the border area with Guatemala and close to tourist sites there. However, the area is patrolled by the Belize Defence Force and there have been no reported incidents involving tourists. ● Tourists, in general, are vulnerable to theft of cash, credit cards, phones and other personal belongings, including in tourist destinations such as San Pedro, Caye Caulker, Placencia and San Ignacio.
Laws	● Don't use or carry illegal drugs. Penalties for drug offences include long sentences in local jails. Marijuana is illegal. ● Belize has the death penalty for serious crimes, such as treason and murder. ● Find out about local laws before you go. It's illegal to carry pre-Columbian artefacts without a permit. It's also illegal to photograph official buildings. ● Same-sex relationships were decriminalised in 2016. LGBTI travellers face discrimination and violence in some regions. Avoid public displays of affection.
Health Risks	● The rate of HIV/AIDS infection is high. Take precautions if you're engaging in high-risk activities. ● Some cases of Zika virus have been reported. If you're pregnant, discuss your travel plans with your doctor before you travel. ● Insect-borne diseases, including chikungunya and malaria, occur in Belize. Check your accommodation is insect-proof. Use insect repellent. ● Waterborne, foodborne and other infectious diseases are common. Drink boiled or bottled water. Get your vaccinations up to date before you travel.
Weather	● Monitor local weather reports for hurricanes and other natural disasters.
Other	● You need a visa to enter Belize. You can get a tourist visa on arrival. ● If you're not visiting as a tourist, you need to apply for a visa in advance. Contact the Consulate of Belize for up-to-date information on visas. ● If you're travelling via the US, ensure you also meet US entry or transit requirements. ● Children aged 17 and under who are travelling on their own, or with an adult who is not their parent, must carry a notarised letter to prove parental responsibility, or consent to travel from the parent or guardian. ● Carry your yellow fever vaccination certificate. You'll need to show it if you're coming from a country where yellow fever is a risk. ● If you leave Belize by land, or by water crossing to Guatemala or Mexico, you must pay a departure tax of 40 Belize dollars or 20 US dollars at the border. If leaving by air, the tax is usually included in the airfare. ● Driving conditions may be hazardous, especially during the rainy season, due to: Roads with potholes, unpaved dirt shoulders and few lane markings, narrow or unpaved roads, roads often unlit, lack of emergency road assistance, flooded temporary bridges and causeways during severe weather in southern parts of the country, particularly in Stann Creek and Toledo.

Costa Rica

Threat Level
Moderate threat level to personal safety, take extra precautions here.



Latitude / Longitude
9.748917, -83.753428

GPS Position
9° 44' 56.1012" N
83° 45' 12.3408" W

Crime	● Violent crime is common in Costa Rica, including carjackings and 'express kidnappings'. Criminals often target tourist areas, resorts, transport hubs and public transport. Drink spiking with methanol is common and has killed people. Be aware of your surroundings. Plan to arrive or leave the airport during daylight hours. Don't leave your drinks unattended, especially in stores or bars. ● Petty crime is common. Avoid carrying valuables where possible. Use established tour operators and officially registered taxis. ● Credit card fraud is a risk. Street money changers often pass fake currency. Only change money at banks or official exchanges. ● Nationwide strikes and roadblocks have occurred since September 2018. Public gatherings sometimes turn violent. Don't attempt to cross roadblocks or protests. Make alternative transport plans in case of disruptions. ● Muggings and theft are significant problems, particularly on the Atlantic coast. ● There have been incidents where thieves slash a tyre and then offer to help change it, while an accomplice steals from the car. ● Avoid walking alone in poorly lit or remote areas at night. Gangs occasionally carry out muggings and armed robberies. A number of foreign nationals including one British national have gone missing in recent years, with some incidents related to criminal activity. ● If you're using a hire car, do not stop your car for strangers signalling for help – they could be carjackers. ● Criminals sometimes cause deliberate collisions to stop vehicles and commit robberies or other crimes. If you think a collision was a deliberate act by another driver to make you stop, drive on until you reach a safe place like a police station or garage. You will need to be able to explain your actions to the traffic police. ● Rapes and sexual assaults have increased, some of which appear targeted toward tourists. Avoid leaving drinks unattended in bars.
	● People, have died or suffered serious illness caused by alcoholic drinks containing methanol. Criminal gangs have apparently used methanol in the manufacture of cheap brands of local spirits, including vodka and 'guaro' (cane liquor). Take care when buying spirit-based drinks. The Pan American Health Organisation (PAHO) says that methanol can cause headaches, dizziness, nausea and vomiting, seriously damage the optic nerve, and can cause respiratory or cardiac failure. If you, or someone you are travelling with, shows signs of methanol poisoning, seek immediate medical attention. To protect yourself from methanol poisoning: Buy alcoholic beverages only from licensed liquor stores, buy drinks only at licensed bars and hotels, avoid home-made alcoholic drinks, check bottle seals are intact, check labels for poor print quality or incorrect spelling
Laws	● Don't use or carry illegal drugs. Penalties for drug offences are severe. They include long sentences in local jails. It's illegal to photograph public buildings in Costa Rica. If you're unsure about a site, ask an official before you take photos. ● Get permission before photographing anyone, especially women and children.
Health Risks	● Malaria is a serious risk in Limon and Puntarenas, including near the border with Panama. Consider taking anti-malarial medication if you're travelling to these areas. ● Cases of Zika virus have been reported. If you're pregnant, talk to your doctor about your travel plans. ● Risk of mosquito-borne illnesses increases during the wet season from April to November. Make sure your accommodation is insect-proof. Use insect repellent. ● Common waterborne, foodborne and other infectious diseases include tuberculosis, typhoid, hepatitis and rabies. Boil drinking water or drink bottled water. Get your vaccinations up to date before you travel. ● While swimming on any beach in Costa Rica, bear in mind that rip currents are very common and there are often no lifeguards. Seek reliable local advice. Drownings are the second most common cause of accidental death and in recent years have averaged 50 to 60 per year, a third of whom were tourists.
Weather	● The hurricane season usually runs from June to November – the same as the hurricane season in the Caribbean. ● The June-November period is also the peak rainy season. Flooding and landslides may occur, resulting in road closures and driving hazards. ● There is a risk of earthquakes: movements greater than magnitude 6 occur periodically. Local infrastructure is well-prepared, and earthquakes seldom have widespread effects. ● Costa Rica has 16 volcanoes, several of which are considered active. The risk of eruptions is always present. The most recent significant eruption was at Volcan Rincon de la Vieja on 21 April 2023. Check news reports and follow local advice before travelling to any areas around volcanoes. Avoid volcanic areas during and immediately after heavy rainfall when there's increased risk of lava flows. Ash plumes can affect air quality and have an impact on health. If you have any pre-existing respiratory conditions, you might be at increased risk of triggering or worsening your symptoms. A properly fitted face mask may provide some protection.
Other	● If you're travelling via the US, ensure you also meet US entry or transit requirements. ● Check the travel requirements for children. You may need extra documents if only one parent or guardian is travelling with a child. Children with dual Costa Rican nationality need notarised written consent from both parents to leave the country. ● Carry your yellow fever vaccination certificate. You may need to show it when you arrive. ● Have several ways to access money. You can't exchange Australian dollars for Costa Rican Colones, but you can exchange US dollars. Credit cards are widely accepted. ● Due to the risk of robbery and assault in unofficial taxis, only use licensed taxis. You can buy prepaid vouchers for airport taxis in front of the San José airport terminal.

El Salvador

Threat Level
Moderate threat level to personal safety, take extra precautions here.

Latitude / Longitude
13.794185, -88.89653

GPS Position
13° 47' 39.066'' N
88° 53' 47.508'' W

Crime

- El Salvador has until recently had one of the highest crime rates in Latin America. The risks of violent and petty crime remain, despite recent progress.
- Violent crime, often involving guns and street gangs, is widespread. It increases at night. Don't travel alone or after dark.
- Gang-related crime is common. Gangs have killed police, bombed cars and public transport, and set grenades in public places. Pay close attention to your surroundings. Ensure your accommodation is secure.
- Petty crime is common around transport hubs and tourist areas. Safeguard your belongings.
- Road travel outside the capital, San Salvador, is dangerous. Criminals target highways and the road to the international airport. Plan to arrive or depart the airport during the day. Keep vehicle doors and windows locked.
- There is a small risk of unexploded weapons, such as landmines, in remote areas. If you're going off-road, take local advice and avoid such areas if warned.
- Protests and public gatherings can turn violent. Don't take part in any political activities. Authorities may detain or deport you.
- There have been isolated attacks on tourists, including robberies, carjackings and violent assaults. Within San Salvador, the areas of Santa Elena, San Benito and Maquilishuat have better security, as do most of the larger shopping malls.
- The risk of kidnapping to foreigners or visitors is relatively low, despite an increase in kidnapping of Salvadorans. You might wish to share your location or plans with a trusted person, particularly if taking public transport or a taxi. Kidnap gangs generally target rich Salvadorans rather than visitors.
- Scam artists target foreign visitors and residents. Scams come in many forms and can cause great financial loss. Warn your friends and family to be sceptical if they're asked to transfer funds to you in El Salvador. Tell them to contact you to check you've made this request.

- El Salvador's government has declared a state of exception (emergency) in response to a sharp rise in gang-related murders. The state of exception started in 2022 and has remained in place since. The murder rate has fallen significantly, but the authorities are concerned the gangs could regroup. The state of exception gives police additional powers, resulting in a much higher number of arrests, sometimes without much evidence. It also allows police to detain people for much longer before trial. Many ordinary legal safeguards have also been weakened or removed. For example, joint legal hearings for over 100 people are common. Some embassies have struggled to get consular access to their citizens. If you're arrested, the El Salvador government may not allow the British Embassy to give you consular assistance or make sure you receive legal representation. Mistreatment and human rights violations, sometimes resulting in death, happen in detention facilities. Security operations and gang-related violence do not usually affect tourists and visitors. Security operations have taken place across the country, particularly in Soyapango, Ilopango, Mejicanos, San Martin and San Marcos. In 2022 the Salvadoran Legislative Assembly designated gang members as terrorists and established harsher penalties for them. Government communications and social media posts now sometimes refer to suspected gang members as terrorists.

Laws

- Don't use or carry illegal drugs. Penalties for drug offences are severe. They include long prison sentences.
- Take care when driving. If you injure or kill someone in a road accident, authorities may arrest or detain you for a local trial.
- It's illegal to photograph official buildings. Check with local authorities before taking photos.
- Dual nationals may have to complete national service. Contact the El Salvador embassy or consulate before you travel.

Health Risks

- Insect-borne illnesses are common, especially during the wet season. Chikungunya is widespread. Malaria is a risk in rural areas. Use insect repellent. Ensure your accommodation is insect-proof.
- Zika virus is widespread. If you're pregnant, discuss your travel plans with your doctor. Consider deferring non-essential travel.
- HIV/AIDS is a significant risk. Take precautions if you're taking part in high-risk activities.
- Other common infectious diseases include tuberculosis, hepatitis, typhoid and rabies. Drink boiled or bottled water. Avoid raw or undercooked food. If an animal bites or scratches you, get medical help immediately.
- Medical facilities are basic. If you're seriously ill or injured, you'll need medical evacuation to the US. Ensure your travel insurance covers this.
- Rivers tend to be contaminated and unsafe to swim or bathe in.

Weather

- The hurricane season is from June to November. Hurricanes can disrupt essential services. Know where your nearest shelter is.
- The rainy season normally runs from June to November – the same time as the hurricane season in the Caribbean. During the rainy season you can expect frequent, heavy rain, thunderstorms and possible tropical depressions. Landslides and flooding can affect roads. Mountain areas are particularly vulnerable to landslides.
- El Salvador has active volcanoes. Ask local authorities about safe areas to trek or climb.
- There are frequent minor earth tremors and occasional earthquakes in El Salvador.
- Fire risk increases during the dry season, particularly in San Salvador. During especially hot and dry periods a single spark or flame can start a wildfire.

Other

- You need a visa to enter El Salvador. You can get a Central American Border Control Agreement (CA-4) visa on arrival if you're staying as a tourist for 90 days or less.
- If you're travelling for other reasons or staying longer than 90 days, get a visa before you arrive. Contact the embassy or consulate of El Salvador for up-to-date information.
- You'll need to show your valid yellow fever vaccination certificate to enter El Salvador.
- The official currency is the US Dollar. Exchange for other currencies isn't available. Most places don't accept credit cards. ATMs can be unreliable. Only change money and use ATMs in banks, hotels or shopping malls.
- Landmines and unexploded remnants of war are common in rural El Salvador. Chalatenango and Morazán districts are high-risk. Use only paved roads and well-travelled paths.
- Avoid using public transport. It's often overcrowded, poorly maintained and unsafe.
- Take particular care when driving to or from the border with Guatemala. There have been violent attacks on vehicles, particularly on the Guatemalan side of the border. Criminals often target vehicles with El Salvador number plates. It's better to cross borders in the morning, giving you time to reach your destination before dark. Borders sometimes close in the early evening.

Guatemala

Threat Level
Moderate threat level to personal safety, take extra precautions here.

Latitude / Longitude
15.783471, -90.230759

GPS Position
15° 47' 0.4956'' N
90° 13' 50.7324'' W

Crime

- Guatemala has one of the highest violent crime rates in Latin America. Although most of the serious crime involves local gangs, you could be caught up in incidents as they can happen in tourist areas. No parts of Guatemala City are free from crime, including Zone 10 (Zona Viva), which is popular with tourists and foreign residents. Take care in Zone 1 where tourists have been targeted by criminals, this is the historical centre where cheaper hotels are located and several bus routes end.
- There is a state of emergency in the departments of Alta Verapeaz, El Progreso, Izabal, Peten and Zacapa. Follow instructions issued by local authorities, carry your personal identification with you and approach checkpoints cautiously.
- Violent crime, including murder, carjacking and kidnapping, is common. It increases at night. Take extra care after dark. Only use ATMs during daylight.
- Border crossings have a high crime rate. Only cross during daylight hours. Allow enough time to reach a major city before dark.
- Criminals target travellers at the airport and driving to hotels. Use only pre-paid or radio taxis. Don't flag taxis on the street or use taxi stands. Always keep vehicle windows and doors locked, even when moving.
- Violent attacks, including sexual assault and gun crime, can take place anywhere and any time . Attackers have killed and injured victims who resisted. There is a low arrest and conviction rate. Carjacking and armed robbery are common on the main road (Carretera Salvador) leading from Guatemala City to the border with El Salvador.
- Scams involving tourist vehicles are common. Be wary of strangers offering a service you didn't ask for.
- Incidents of political violence, strikes and large demonstrations can occur, often with little or no notice. Most demonstrations are peaceful, but they can turn violent. Protestors may block roads and public facilities, including the international airport, without notice.
- Criminals may attack motorised boats or sailing boats in Rio Dulce and Livingston. Before you book boat travel, check the company has good security measures.

- Avoid travelling on public buses (repainted US school buses). There has been an increase in armed attacks by local gangs on bus drivers and conductors, often resulting in serious injury or death. These attacks have included the use of explosives. There have also been violent muggings, rapes and assaults against foreigners. Private intercity coach services are generally safer, but gangs have also attacked these during daylight hours, even on main roads.
- Criminals posing as police officers have committed theft, extortion and sexual assault against visitors to Guatemala.
- Foreign visitors are at risk of scams. Scams come in many forms and can lead to great financial loss. Warn your friends and family to be sceptical if they're asked to transfer funds to you in Guatemala. Tell them to contact you to check that you've made this request.
- Express kidnappings – short term opportunistic abductions, aimed at extracting cash from the victim – are common in Guatemala. Victims can be targeted or selected at random. They are held while criminals withdraw money from their bank accounts using their cash cards. Many cases involve victims that have been picked up by taxis (registered or illegal) hailed from the street. Be aware of your surroundings and always let someone you trust know your whereabouts, especially after dark. Business people and visitors perceived to be wealthy may be targeted by kidnappers in search of payouts. Be discreet about discussing your financial or business affairs in places where you may be overheard by others, and when arranging meetings use a secure location. If you are a victim of kidnapping, follow the kidnapper's instructions.

Laws	● You must pay airport departure tax of 30 US dollars (or the same amount in Guatemalan quetzal). This is normally included in the price of your ticket. ● Check with local officials before taking photos. It's illegal to photograph government buildings, military sites, the Presidential Palace and airports. ● Ask permission before taking photos of women and children. ● There are severe penalties for drug trafficking and the use of drugs. Guatemalan prisons are overcrowded, violent and dirty. ● To enter or exit Guatemala, children aged 17 and under travelling alone or with only one parent or legal guardian must have a notarised letter in Spanish from the parents or guardians not travelling with them. ● All male Guatemalan citizens aged between 18 and 50 must complete military service. This includes dual nationals. If you're a male dual citizen, contact an embassy or consulate of Guatemala before you travel. ● Same-sex relationships are mostly accepted in Guatemala City. In other parts of Guatemala, this may not be the case. Consider avoiding public displays of affection if you're outside the capital. ● It is a legal requirement to always carry ID. ● It is illegal to sell alcoholic and fermented beverages from 1am to 6am.
Health Risks	● Zika virus is widespread. If you're pregnant, discuss your travel plans with your doctor. ● Malaria occurs year-round in areas below 1500m. Consider taking anti-malarial medication if you're travelling to these areas. ● Other insect-borne diseases include dengue, Chagas disease, river blindness and leishmaniasis. Ensure your accommodation is insect-proof. Use insect repellent. ● HIV/AIDS is a significant risk. Take precautions if you're taking part in high-risk activities. ● Foodborne, waterborne and other infectious diseases include hepatitis, typhoid and tuberculosis. Drink boiled or bottled water. Avoid raw or undercooked food. ● Medical facilities in Guatemala City are adequate. They're limited elsewhere. If you're seriously ill or injured, you may need medical evacuation. Ensure your travel insurance covers this.
Weather	● The hurricane season is June to November, but storms can happen at any time. The wet season is May to November. Landslides, mudslides and flooding may occur. ● Guatemala has 4 active volcanoes. Know where your nearest shelter is. Know how to protect yourself in the event of an eruption. If you climb a volcano, use experienced guides and follow local advice. ● The rainy season in Guatemala normally runs from June to November – the same time as the hurricane season in the Caribbean. Heavy rains cause frequent flooding and landslides, and roads and bridges often collapse. ● There are frequent minor earth tremors and there is a risk of earthquakes in Guatemala. ● There is a risk of volcanic eruptions in Guatemala.
Other	● You won't need a visa if you're a tourist staying 90 days or less. You'll need to show a return ticket and proof that you have enough money for your visit. ● Guatemalan customs or immigration officials sometimes ask travellers crossing land borders to pay an 'entry fee'. This is illegal. If you are asked to pay a fee, ask for an official receipt. ● If you're travelling for other reasons or want to stay longer, you'll need a visa. Contact an embassy or consulate of Guatemala for details. ● If you're visiting a country where yellow fever is present, carry your yellow fever vaccination certificate. You'll need to show it to enter Guatemala. ● The local currency is the Guatemala Quetzal. You can't import or export the Quetzal. Exchange US dollars for local currency once you arrive. ● Have multiple ways to access money. ATMs can be unreliable, but most places accept credit cards. ● Inter-city travel after dark anywhere in Guatemala is dangerous. If you're driving, get local advice on road conditions, including security risks. ● Public buses and chicken buses (converted school buses) are often unsafe. Avoid these. Gangs have also attacked tour buses and luxury coaches. Only travel on tour buses and inter-city buses with good security arrangements. ● Check ATMs for evidence of tampering. Affected machines may not be easy to spot. It's safer to change money in hotels, at banks or at foreign exchange offices.

Honduras
